There were omitted in this bill some items from Maine that were in the last bill. But as Boston was one of the first items, and as I am from Massachusetts, although I have not the honor to represent any part of Boston, I naturally was somewhat surprised to find that in the bill as presented to us as members of the committee, and as furnished by the board of engineers, the continuance of the Boston project was not included.

I was astonished, because it has been shown on this floor time and time again that there is no harbor in the United States as important in the conduct of commercial affairs, or in the conduct of preparedness for national defense, as the harbor of Boston. If any place needs 40 feet depth, Boston Harbor needs it.

I failed during the hearings before the committee to secure any satisfactory explanation of why that item was omitted from the bill. I will not go into any argument as to the merits of the Boston project, because it already appears in the CONGRESSIONAL RECORD. One of the first speeches I heard when I came to Congress was from a Representative from Massachusetts, from the city of Boston, who now holds the highly responsible position of postmaster of Boston. He spoke for an hour and elaborated upon the merits of Boston Harbor. I have done the same thing in previous Congresses, and I will not take the time of the committee in that respect at the present time. I can not explain to the gentleman from Wisconsin why that item of $400,000 is excluded from this bill.

Mr. LENROOT. Will the gentleman yield?

Mr. TREADWAY. I will.

Mr. LENROOT. This general board included Boston Harbor as a matter of military necessity, but their recommendations did not require any appropriation, did it?

Mr. TREADWAY. I will say that there was no reference whatever to the 40-foot project in Boston Harbor when the first committee print was presented to the committee. Later on I called on Gen. Black and he informed me that he could not say that the 40-foot project was a military necessity, but if we thought best to include the item for the adoption of the Boston project without a cent to carry out the project, he would recommend it to the committee, and that is what Gen. Black did. He recommended the adoption of the project with no money to prosecute the work. That is the reason why to-day the item appears here without any appropriation whatever. Now I would like very much to move the adoption of an amendment, which I will do, that the sum of $400,000 be appropriated to carry out this recommendation.

The CHAIRMAN. The gentleman from Massachusetts offers an amendment which the Clerk will report.

Mr. SMALL. Mr. Chairman, I understand that the gentleman from Wisconsin [Mr. LENROOT] asked to return to this for no other purpose than to make an inquiry.

Mr. LENROOT. That was my only purpose in making the request.

Mr. TREADWAY. If the gentleman feels that I am intruding by offering the amendment, I shall withdraw it.

Mr. SMALL. Go ahead.

The CHAIRMAN. Will the gentleman kindly inform the Clerk where he desires to offer his amendment—at what point in the bill?

Mr. TREADWAY. After the word "Massachusetts" insert the words "Continuing the improvement, $400,000 and."

The Clerk read as follows:

Page 2, line 1, after the word "Massachusetts" insert the words "Continuing the improvement, $400,000 and."

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Massachusetts.

Mr. SMALL. Mr. Chairman, I am obliged to ask the committee not to adopt that amendment. It has not the recommendation of the Secretary of War or the Chief of Engineers, and for other reasons which I could state it is not advisable or necessary at this time. In making that statement I have no intention of disparaging in the slightest degree the commercial importance of the great harbor of Boston.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Massachusetts.

The amendment was rejected.

Mr. TREADWAY. Mr. Chairman, when the committee offered an amendment a few moments ago we had just completed the reading of the end of line 10, and I moved to strike out the last word there and then yielded, and I would like the privilege of making that motion again.

The CHAIRMAN. Does the gentleman desire to offer an amendment?

Mr. TREADWAY. I move to strike out the last word. During the progress of the general debate considerable was said about the merits or demerits of the so-called grouping system, and I am very glad indeed that the first item of that nature appears in the Massachusetts items. Here we have 13 projects grouped, and the amount appropriated therefor is $24,000. During the progress of the preparation of the bill in the last Congress the only one of those 13 items that was recommended by the engineers or that was carried in the bill was that of the Mystic River, the amount being $24,000. In other words, we here see a very fine example of the grouping system. The only project the engineers recommended as desiring to have an appropriation for is placed in the bill, and then there have been grouped with that item 12 other items which previously they have asked no appropriation for whatsoever. If that item previously recommended needed the $24,000, it becomes discretionary with the engineers whether they shall use the $24,000 where they recommend it to be needed a year ago or transfer the entire item and subdivide it among 12 other projects.

Mr. DUPRÉ. Mr. Chairman, will the gentleman yield?

Mr. TREADWAY. Yes.

Mr. DUPRÉ. Did not the representative of the War Department who appeared before our committee indicate that it would be the policy of the department under such conditions as the gentleman has indicated to utilize the money appropriated for those particular items where a special recommendation had been made?

Mr. TREADWAY. If that be true, and quite likely it was so represented, then what earthly object is there in asking Congress to include those 12 other items? If those 12 other items need no money for maintenance, why not say so? Why leave this whole thing discretionary in the hands of the engineers? It is exactly what I am speaking about as an example of the bad feature of the so-called grouping system. It is another effort to remove from the hands of Congress the authority over its own appropriations.

Mr. DUPRÉ. Does not the gentleman admit the possibility of need for an appropriation in Glocester?

Mr. TREADWAY. Every single one of those items bears an amount on the balance sheet, as carried by the engineers, entirely sufficient for any emergencies that may arise. It is all right to apologize and exercise it, but it is cloaking the very idea we are condemning under this sort of a scheme.

Mr. DUPRÉ. Did not the gentleman offer an amendment to turn over the whole thing to the President of the United States, and now he does not want to turn over a small item like this?

Mr. TREADWAY. I did not offer any such amendment.

Mr. DUPRÉ. The gentleman offered a substitute for the amendment offered by the gentleman from New Jersey.

Mr. TREADWAY. I offered an amendment that has nothing whatever to do with the criticism that I am now making. I offered an amendment asking the President to approve specifically as war propositions every measure that we put into the bill.

Mr. DUPRÉ. And now the gentleman does not want the Chief of Engineers to prorate an amount of money among 14 items.

Mr. TREADWAY. I will say to the gentleman that I am using this illustration as a most excellent example of the fallacy of this policy that we are asked to adopt.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired. Without objection, the proforma amendment will be withdrawn and the Clerk will read.

The Clerk read as follows:

Duck Island, Branford, New Haven, Milford, Bridgeport, Southport, Norwalk, Five Mile River Stamford and Greenwich Harbors, Westport Harbor and Saugatuck River, breakwaters at New Haven, and Housatonic River, Conn.: For maintenance, $71,000.

Mr. STAFFORD. Mr. Chairman, I move to strike out the last word. I notice in this item harbors named that have not

been carried in river and harbor appropriation bills for years and years, and I would like to have some one explain the expediency and nature of providing for maintenance of river and harbor work where there may be no occasion for such work, and having them grouped and designated in this fashion, so that nobody knows how much money will be expended on any one harbor or on any one river during the next fiscal year.

Mr. SMALL. Does the gentleman prefer I should answer that now?

Mr. STAFFORD. I rose to get some information, because the gentleman has not in general debate made any extended explanation of this policy.

Mr. SMALL. I did endeavor to explain it in general debate, but it gives me pleasure to make this explanation now:

In the first place, the grouping system is certainly more than 25 years old in the river and harbor bills; so it is not new. The grouping system has been in use during the incumbency as chairmen of Mr. Burton, Mr. ALEXANDER, and Mr. Sparkman, and there has scarcely ever been a bill in which these groups have not been included in this form, although I admit that the system has been amplified in this bill.

Mr. STAFFORD. I have followed rivers and harbors bills for nearly 14 years back, but I do not recall ever before of any 14 or 16 projects being grouped together, as is instanced throughout this bill, in any former bill. I may recall items where they included two or three projects, but nothing of the wholesale extent as carried in this bill. Does the gentleman mean to say——

Mr. SMALL. There are numerous instances in past bills of projects grouped.

Mr. STAFFORD. The grouping of 12 or 14 or 16 items?

Mr. SMALL. I am not positive of the number, but in all prior bills there have been groups of projects containing as many different items as some which appear in this bill.

Let me make this statement for the information of the gentleman: You take this item. The gentleman has the bill before him. In those items there, beginning with Duck Island, the only projects for which estimates are made are New Haven, $14,000; Bridgeport, $24,000; Norwalk, $8,000; Stanford, $14,000; Greenwich, $3,000; Housatonic River, $8,000; making a total of $71,000. Now, the appropriation for maintenance will be expended upon those projects for which estimates are made. The only reason for including the other projects is this: In the first place, I will state that they have all at some time or other been under improvement by the United States. They are all navigable rivers and come within the jurisdiction of the Federal Government, and the advantage of including them is this: In all of those rivers along the Atlantic coast and, in fact, in all other sections, deterioration of channels is caused by flood conditions, or by storms, or other events, and when such unanticipated condition occurs, unless we have some provision of this kind, they must wait until another river and harbor bill is passed before there are any funds to restore the channel, unless, perchance, there is some available balance existing to the credit of that project.

Mr. STAFFORD. It has this advantage, that it enables the money to be used up on other projects which the committee did not intend it should be utilized on?

Mr. SMALL. Not used up, but used, if essential, to restore any channel which has deteriorated because of unanticipated conditions, and if it is in the public interest.

The CHAIRMAN. The time of the gentleman has expired.

Mr. STAFFORD. I ask unanimous consent that the gentleman's time, or my time, be extended five minutes.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. DUPRÉ. I want to call the gentleman's attention to the rivers and harbors act of July 27, 1916, which under the caption items of Rock Hill, Queenstown, and other streams in Maryland, there were 12 items contained in one appropriation, for which $12,000 was appropriated.

Mr. STAFFORD. It was not general in the bill?

Mr. DUPRÉ. I have not had opportunity to go over the bill, but I found this one in order to call your attention to it.

Mr. STAFFORD. While I have the floor I wish to make some general inquiries that I might make later, but which may be pertinent here. Do I understand this appropriation is available for dredging of the rivers at these respective places?

Mr. SMALL. The report of the Chief of Engineers shows the respective purposes for which the money is to be expended. On some of these rivers it is to restore dikes, or breakwaters, or retaining walls, and on some of them to restore channels where silt has been deposited and they have shoaled up.

Mr. STAFFORD. I understand it is the policy of the committee——

Mr. SMALL. The purpose differs in accordance with the necessity.

Mr. STAFFORD. I understand it is the policy of the committee to make appropriations for the dredging of rivers along the Atlantic shore line, the Pacific shore line, and the Gulf coast line. Now, I would like to inquire why it is in Great Lake cities like my home city of Milwaukee, which is one of the principal ports on the Great Lakes and has large lake traffic——

Mr. SMALL. It is a very important port.

Mr. STAFFORD (continuing). That the municipality undertakes the expense of maintaining the dredging in the inner harbor and no money whatsoever is appropriated by the National Government for that purpose?

Mr. SMALL. I think an investigation would show, although I have not recently examined the reports on Milwaukee Harbor, that all the municipality does is to dredge in a slip or pier, which is regarded as a municipal burden.

Mr. STAFFORD. The municipality of Milwaukee, if the gentleman will permit, undertakes the complete cost of dredging that great interior waterway, the Milwaukee and Menominee Rivers, which carry hundreds of thousands of tons of lake traffic, without any contribution on the part of the National Government. I am rising to protest against this one-sided policy, whereby you have that expense borne by the Federal Government in one part of the country and have the entire expense borne by the municipality in other sections of the country.

Mr. SMALL. I agree with the gentleman; there should be no discrimination, and I am not aware of any, but I will be glad, on his suggestion, to look into it.

Mr. STAFFORD. I had that same reply four years ago from the then chairman of the Committee on Rivers and Harbors when I called this unfair method of appropriation to the attention of the committee.

Mr. DUPRÉ. It may be that the city of Milwaukee is unfortunately represented here. [Laughter.]

Mr. STAFFORD. Oh, the city of Milwaukee is not represented here by a Representative who is giving his attention to have pork dangling before his eyes, as is the case with some gentlemen representing districts along the Mississippi.

Mr. SMALL. I will say to the gentleman in all seriousness that the engineers do not recommend any specific sum as being necessary for the maintenance of Milwaukee Harbor.

Mr. STAFFORD. That is what I am criticizing. They only provide for the improvement of the outer channel, and make no provision whatever for the dredging of the interior channel, and place all that burden on the municipality. I protest against the unfairness of favoring one section with improvements of that kind and not favoring other sections of the country equally.

Mr. SMALL. All has been done there that has been recommended in any report.

The CHAIRMAN. The time of the gentleman has expired. All time has expired. The Clerk will read.

The Clerk read as follows:

Burlington Harbor, Vt.; Plattsburg and Port Henry Harbors, N. Y.; and Narrows of Lake Champlain, N. Y. and Vt.: For maintenance, $5,000; for improvement of Narrows of Lake Champlain in accordance with the report submitted in House Document No. 1387, Sixty-second Congress, third session, and subject to the conditions set forth in said document, $300,000; for completing improvement of Port Henry Harbor in accordance with the report submitted in House Document No. 369, Sixty-fourth Congress, first session, and subject to the conditions set forth in said document, $71,500; in all, $376,500.

Mr. FREAR. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Wisconsin moves to strike out the last word.

Mr. FREAR. I do not intend to question this project, excepting that I desire to make an inquiry. On page 3 of the report, House Document No. 1387, at the bottom of the page, the engineers say:

The board, however, is not satisfied that the cut-off at Maple Bend and Chilton Bend may not be omitted without serious inconvenience to navigation and with a very material reduction in cost and recommends that a further study be made of the proposed channel at these localities.

Now, there is nothing indicated there as to what is proposed. Has that change been made in the cut-off, mentioned here? The engineers have left the matter in an indefinite way.

I also desire to inquire about one or two other matters that seem to be treated in the same way by the engineers.

Mr. SMALL. Where is that?

Mr. FREAR. At the bottom of page 3. The board says it means a considerable expense and that it can be considerably

reduced. But there is nothing here to indicate what is their position in regard to it.

Mr. SMALL. The gentleman will find, frequently, in reading these reports that the Chief of Engineers, in discussing the detailed reports made by district engineers and then by the Board of Engineers, will say that he is not convinced that a certain recommendation is advisable, and that further study will be given to it; and when a new project is adopted in accordance with the document it is with the understanding that that further study will be given, with a view to eliminating or changing or modifying the character of the improvement, as the case may be.

Mr. FREAR. That is left undecided at this time?

Mr. SMALL. Yes; it is left undecided at this time.

Mr. FREAR. Then, on page 10, at the top of the page, it is said:

It is doubtful if the commercial value of this waterway, measured by the tonnage which it carries to-day, would justify expenditures on the Narrows of Lake Champlain for anything further than maintaining past improvement.

And so forth.

Then they go on to speak of the canal project in New York, where they hold that if that is carried on, this must be continued, as a part of it; and then following, on page 15, the report says:

The business originating at the port of Whitehall is relatively small. The wharves at this port are all privately owned.

Again, on page 16, it is said that the wharves at Fort Henry are privately owned. At the city of Burlington it is the same, and also at Plattsburg, N. Y. Then, turning to page 16 of the report, it says:

The bill as reported provides for the construction of adequate terminal docks, equipped with the most modern appliances for the handling, storage, and transshipment of freight at Whitehall, Fort Henry, Plattsburg, and Rouses Point, on Lake Champlain, and at all important ports on the Hudson River and the Erie Canal.

Have they been constructed pursuant to that bill?

Mr. PARKER of New York. Yes. I was going to call the attention of the gentleman to the fact that the State of New York has appropriated about $8,000,000, of which a portion goes to various places along the Champlain Canal.

Mr. FREAR. I was wondering whether that has been done.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Olcott, Charlotte, Pultneyville, Great Sodus Bay, Little Sodus Bay, Oswego, Cape Vincent, and Ogdensburg Harbors, N. Y.: For maintenance, $33,500.

Mr. MADDEN. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Illinois moves to strike out the last word.

Mr. MADDEN. Mr. Chairman, I have criticized the policy of grouping these different projects and making it impossible for any person to understand for what project the money is to be expended. I have always advocated in the river and harbor bill as much detail as possible, so that every person may be clear as to what the money is to be expended for. But it seems to have been the conclusion of the Committee on Rivers and Harbors on this occasion that it would be wise to so group the items that no person would know where the money was to be expended. A number of meritorious items will be grouped with a number of items that are not meritorious, and discretion is given to some executive officer to say whether the money is to be spent on the meritorious projects or on those that are not meritorious.

I think the policy is a bad one. It ought not to be pursued. We ought to frown it down on every occasion that is possible, and should say to the committee that it is not in the judgment of the House as wise a policy as it would be to give as much detail as possible in the making up of this important bill.

While I have been in favor and still am in favor of giving the President of the United States the power to say whether or not this is a war measure, rather than to say that we are without any information that will lead us to a proper conclusion, I am unalterably opposed to a combination of items being grouped in a single paragraph without any information as to what expenditures are to be made upon each item in the paragraph.

This bill is a marvel of grouping. It certainly is not anything like as meritorious in its make-up as former river and harbor bills, and I would like to suggest to the chairman of the committee and to the gentlemen who are members of the committee that it would meet with more general approval on the part of the membership of the House if the bill were so made up that the Members of the House who are not members of the committee might have some information as to what the items are for and how much money is to be expended upon them. I can not condemn too strongly this practice of making bills in groups of this sort. The practice in years gone by was followed by many committees of the House, and we have been getting away from that practice and making the bills more in detail, so that every person in the House as well as every person in the country who would want the information could be in possession of it by merely reading the bill.

There is no man, no matter how intelligent he may be, who can tell by reading this bill, or many of the sections of the bill, whether any money is to be expended on improper items in a given paragraph or whether all the money provided for in the paragraph is to be expended on a single item, or whether that item is worthy of consideration. It seems to me that we are entitled as Members of the House, called upon to vote for the bill, responsible for the expenditure of the public money as we are, to the information which ought to be contained in the bill. This bill contains no information in most of the paragraphs that would enable any man to reach an honest and intelligent conclusion as to what he ought to do in connection with the expenditure of the public money.

I withdraw the pro forma amendment.

Mr. SMALL. Mr. Chairman, I hesitate to take the time of the committee, but in order that everyone may understand this matter I wish to say that there is available to every Member of the House the annual report of the Chief of Engineers. Any Member by consulting this report may obtain detailed information. For instance, in the Great Sodus Bay the estimate is $21,500; that is the amount carried. On page 1519 of the last report of the Chief of Engineers is found the estimate for Great Sodus Bay. For Little Sodus Bay $12,000 is estimated, as appears on pages 1521 and 1522 of the last annual report of the Chief of Engineers.

I think it would have been better, perhaps, if the committee had included in their report a statement of the items for which estimates were made, and that will be done hereafter.

Mr. MADDEN. The gentleman does not pretend to say that the statement contained in the report of engineers is any part of the law when this bill is passed, does he?

Mr. SMALL. We make the bill, based on the recommendations and estimates.

Mr. MADDEN. Yes; but the bill covers certain items without any specific instructions to anybody to spend any money on any one of the items.

Mr. SMALL. It carries an appropriation, and then the expenditures of the appropriation rests in the discretion of the Chief of Engineers, subject primarily to his duty to expend it on this project or projects for which estimates are made, unless in the meantime there has been some deterioration of the channel or impairment of the work, making it necessary to divert some part of it.

Mr. MADDEN. Does not the gentleman think, however, that any person who reads this bill ought to be able to give the information, from reading the bill, as to what is to be expended on a project described in the bill?

Mr. SMALL. That was not regarded as necessary.

Mr. LONGWORTH. Will the gentleman yield?

Mr. SMALL. I will.

Mr. LONGWORTH. I do not know as I quite understood the gentleman. I understood him to say that the estimates on the two Sodus Bay items in the bill covered the total amount in the bill?

Mr. SMALL. Exactly.

Mr. LONGWORTH. Then why did the committee include the other project?

Mr. SMALL. In order to provide for unanticipated needs. For instance, take Olcott or Charlotte. At the time this recommendation was made, June 30, 1916, there appeared to be required no expenditure. That was either because they had an available balance on hand which the engineer considered sufficient for the ensuing fiscal year or because in the condition of the improvement no further expenditure was necessary. But by the time the appropriations in this bill become available, assuming that this bill becomes a law by July 1, 1917, a year will have elapsed and some flood may have occurred, or by reason of some condition not anticipated Charlotte Bay may require an expenditure, and it would have to wait another year o more unless it is now included in the group as appears in the bill.

Mr. LONGWORTH. Under these circumstances the engineers would not expend this amount of money on the two Sodus Bays alone, but would spend a certain portion of this for some of the other projects?

Mr. SMALL. Yes.

The Clerk read as follows:

East River, N. Y.: Continuing improvement in accordance with the report submitted in House Document No. 188, Sixty-third Congress, first session, $1,250,000: *Provided*, That a depth of 40 feet is authorized across Diamond Reef: *Provided further*, That the unexpended balances of appropriations heretofore made and authorized for a depth of 35 feet across Diamond Reef are hereby made available for a depth of 40 feet. *And provided further*, That so much as may be necessary of this and any other appropriations made herein or hereafter for specific portions of New York Harbor and its immediate tributaries may be allotted by the Secretary of War for the maintenance of these waterways by the collection and removal of drift.

Mr. SMALL. Mr. Chairman, I offer the following committee amendment.

The Clerk read as follows:

Amend, pages 4 and 5, by changing paragraph for East River, N. Y., to read as follows:

"East River, N. Y.: For improvement in accordance with the report submitted in House Document No. 188, Sixty-third Congress, first session, and for a 40-foot channel through East River and Hell Gate, in accordance with the report submitted in House Document No. 140, Sixty-fifth Congress, first session, $1,250,000.

"*Provided*, That the unexpended balances of appropriations heretofore made and authorized for the improvement of East River and Hell Gate are hereby made available for improvement in accordance with the report submitted in said document.

"*Provided further*, That a depth of 40 feet is authorized across Diamond Reef: *And provided further*, That so much as may be necessary of this and any other appropriations made herein or hereafter for specific portions of New York Harbor and its immediate tributaries may be allotted by the Secretary of War for the maintenance of these waterways by the collection and removal of drift."

Mr. SMALL. Mr. Chairman, just a brief statement. As the item for East River was originally reported it provided for 40 feet from the lower bay to the navy yard in East River, but did not provide for 40 feet through Hell Gate at the upper end of East River running into Long Island Sound. The naval officers and the Secretary of the Navy were quite insistent for strategic reasons that we should have also 40 feet from East River into Long Island Sound. They took it up with the Secretary of War, resulting in a general recommendation. The committee then considered it and agreed to it.

By reason of 40 feet through Hell Gate it became necessary to adopt another project and refer to another document, thus requiring the paragraph to be rewritten; but the amendment offered only changes the paragraph in the bill by increasing to 40 feet the depth through Hell Gate to Long Island Sound.

Mr. MADDEN. Will the gentleman yield?

Mr. SMALL. Yes.

Mr. MADDEN. Does the gentleman from North Carolina know how much this addition of 5 feet through Hell Gate will add to the cost?

Mr. SMALL. A little more than $2,000,000.

Mr. MADDEN. Two million dollars more than the original cost contemplated?

Mr. SMALL. Yes.

Mr. MADDEN. So that instead of $1,200,000, as provided in this amendment——

Mr. SMALL. That is simply the initial appropriation.

Mr. MADDEN. How much is the total cost?

Mr. HULBERT. The total cost of the old project was $13,400,000.

Mr. SMALL. The gentleman from New York is right. The original 35-foot project from the lower bay through East River, Hell Gate, and Long Island Sound for 35 feet was at a total cost of about thirteen and one-half million dollars.

Mr. MADDEN. And we have added $2,000,000 to that.

Mr. SMALL. If I may answer just a little more fully——

Mr. MADDEN. Certainly.

Mr. SMALL. The last naval bill directed the Secretary of War and the Secretary of the Navy to report any further improvement in our harbors necessary to the operation of the fleet, and this is one improvement which they recommended; that is to say, increasing from 35 to 40 feet the main channel only from the lower bay, between the Battery and Governors Island, in East River and up through Hell Gate into Long Island Sound.

Mr. MADDEN. But that makes the total cost of this project $15,400,000 then, according to the statement of the gentleman from North Carolina?

Mr. HULBERT. Thirteen million.

Mr. MADDEN. Thirteen million, and $2,000,000 more for the added depth.

Mr. SMALL. The actual total cost now, as nearly as we can approximate it, is $18,216,000.

Mr. MADDEN. And at the rate of $1,250,000 a year it will take about 15 years to complete it, instead of three years, as the gentleman from New York [Mr. HULBERT] said a day or two ago.

Mr. HULBERT. The gentleman is confusing the project for $13,400,000, which provides not only for 35 feet in the main channel but approaches to the dock as well, with the statement which I made the other day, that the work of removing the shoal known as Diamond Reef off the Battery, and the work of blasting out Hell Gate, so that there would be a depth of 40 feet at both places, thereby giving a through channel, with a minimum depth of 40 feet from deep water in the upper bay to Long Island Sound, would be done in less than three years' time.

Mr. MADDEN. How much of this total cost would be expended in the improvement suggested by the gentleman from New York [Mr. HULBERT]?

Mr. HULBERT. I understand the total amount at Diamond Reef would be about $3,000,000, and the total amount at Hell Gate about $5,000,000.

Mr. MADDEN. That makes $8,000,000.

Mr. HULBERT. No; there is already appropriated $750,000 for Diamond Reef, to which there is added $1,250,000 at this time, which makes a total of $2,000,000.

Mr. MADDEN. Two million dollars divided into $11,000,000 will make it practically six years before it is completed.

Mr. HULBERT. The gentleman should divide it into $8,000,000 and not into $11,000,000.

Mr. MADDEN. The gentleman said $8,000,000 and $3,000,000, did he not?

The CHAIRMAN. The time of the gentleman has expired.

Mr. FREAR. Mr. Chairman, I desire to make an inquiry more particularly of the chairman, in reference to a policy which seems to be newly undertaken by the committee, and I want to direct his attention to Col. Newcomer's testimony at the top of page 5 of the hearing, wherein, speaking of this Hell Gate project, he says:

Thirty-five feet is ample for all commercial needs.

And subsequently, upon the query of the gentleman from New York [Mr. HULBERT]—

Do you say 40 feet is more than commercial needs require?

Col Newcomer replied—

It is, because they do not need any more than that in the East River.

He was referring to the commercial needs. Then he goes on to say at the top of page 5:

But the Navy wants a greater depth, and primarily that should be provided for from some other fund than the river and harbor fund, because the latter is intended mainly for commercial needs.

Now, I never understood before the distinction that has been drawn by the engineers between the commercial needs and the military or naval needs so far as particular appropriations are concerned. Of course Col. Newcomer says, on page 118 of the committee hearings, that there is no naval need, and he claims that this project at flood tide will accommodate the largest battleship, drawing 33 feet, and leave 7 feet in excess; but I am not discussing that.

Mr. HULBERT. Will the gentleman yield?

Mr. FREAR. I am glad to do so, provided the gentleman can give any light on that question as to why we are taking out this money for naval needs if it properly should be confined to commercial needs.

Mr. HULBERT. I wanted to ask the gentleman, as a member of the Committee on Rivers and Harbors, whether he concurs in the suggestion of Col. Newcomer that the amount should be found in some separate fund, or whether he believes it is in the province of this committee, in this bill, to accommodate both the commercial and the naval needs with regard to the specific authorization of this channel?

Mr. FREAR. That is not the point here at all.

Mr. HULBERT. Oh, yes; it is.

Mr. FREAR. No; not at all. Apparently there has been a distinction drawn heretofore by the engineers. That is the suggestion contained in the testimony here, and for that reason I make the inquiry; not what my judgment may be, but what has been the practice.

Mr. MADDEN. Who makes the recommendation about the naval needs?

Mr. FREAR. There is no recommendation, so far as I know, here.

Mr. MADDEN. Is there nothing before the Rivers and Harbors Committee to indicate that there is a naval need?

Mr. HULBERT. If I can get recognition, I am going to put it before the House.

Mr. MADDEN. I am asking for information.

Mr. FREAR. I was speaking of the testimony before our committee.

Mr. HULBERT. The gentleman, if he were present at all the hearings, heard the recommendation from the Navy Department.

Mr. FREAR. Col. Newcomer, when he was present before the committee, and I was present at that hearing, stated as follows to the committee:

Col. NEWCOMER. It seems to me that 35 feet at Hell Gate is really adequate, for this reason: The depth of 35 feet, with 5 feet of tide, gives you practically 40 feet. The draft of our heaviest battleship contemplated is about 33 feet. It seems to me that 35 feet will answer.

That was the statement made by Col. Newcomer.

Mr. HULBERT. Mr. Chairman, will the gentleman yield?

Mr. FREAR. In a moment, when I finish my statement. I am not criticizing his statement except that I call attention to this fact, that afterwards apparently the question arose as to which fund the money was to be drawn from on account of some recommendation of the general board for the 40-foot propositions, which, I take it, is in that report. I yield to the gentleman from New York.

Mr. HULBERT. Does the gentleman concede the necessity for a 40-foot channel at Diamond Reef?

Mr. FREAR. I do not concede the necessity for commercial needs, and I offer the opinion of Col. Newcomer here as repeatedly presented to the committee.

Mr. HULBERT. I am talking about Diamond Reef.

Mr. FREAR. Oh, I have been talking about Hell Gate.

Mr. HULBERT. I ask the gentleman if he concedes the necessity for a 40-foot channel for Diamond Reef?

Mr. FREAR. That is a question. A 35-foot channel seems sufficient at all places unless it may be required because of the turning of the channel where a 40-foot depth may be needed. I am not an expert, and I have offered Col. Newcomer's. He is the only engineer who came before the committee. I am not opposing the project, but have inquired as to the funds mentioned by the engineer in the hearings.

Mr. HULBERT. Mr. Chairman, I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. HULBERT. Mr. Chairman, the last river and harbor appropriation bill contained an appropriation authorizing the deepening of the East River at Diamond Reef to 35 feet. The present bill contains an authorization to carry the depth to 40 feet, and the additional 5 feet are provided for, because the Army engineers, supported by the testimony of Col. Newcomer, contend that as a means of ready access to and egress from Brooklyn Navy Yard it is essential to have 40 feet, because, under existing conditions, it is impossible for capital ships of the Navy to secure an entrance to the navy yard, except at high tide. Mr. Chairman, if it is necessary to have 40 feet at the southern entrance to the navy yard, then it stands to reason that it is necessary to have 40 feet to the northern entrance, if the same character of vessels are to use the navy yard through the northern channel. When this matter came up in the Committee on Rivers and Harbors after the reporting of this bill, there was submitted to the committee a letter from the Secretary of the Navy, which I desire to read in order to place this matter accurately and forcefully before the Members of the House. That letter is as follows:

NAVY DEPARTMENT,
Washington.

Hon. JOHN H. SMALL, M. C.,
Chairman Committee on Rivers and Harbors,
House of Representatives, Washington, D. C.

MY DEAR MR. SMALL: In a letter of May 7, 1917, regarding the approaches to the navy yard at New York, I quoted from the General Board as follows:

"Deepen, widen, and straighten channels through Hell Gate to Long Island Sound to a depth of 35 feet, and eventually to 40 feet, with a channel adapted to the use of vessels up to 1,000 feet in length."

While deepening and straightening the channel through Hell Gate will be of unquestioned advantage to the commercial interests of the country, the strategic value to the Navy is so great that I believe consideration should be given to securing this channel of 40 feet depth at the present time. While in the beginning a concession was made to obtain a depth of 35 feet and ultimately 40 feet, it is considered that it would be highly desirable, both from an economical standpoint and from a strategical standpoint, to have the work, after it was once begun, continued until the depth of 40 feet had been obtained throughout, and the straightening of the channel, in order to allow the easy and free passage of large ships as well as to prevent the formation of tidal eddies and currents, had been accomplished.

It will be readily understood that with a 40-foot depth of channel leading in to the navy yard from the south and an equal depth through Hell Gate would practically double the strength of our fleet if concentrated in Long Island Sound, for the reason that the exits at Ambrose Channel and Montauk Point are so far apart that it would take double the force to contain our fleet in these waters in order to guard the outlets at both of these points to prevent the egress of our fleet.

A deep channel through each entrance is desired in order to permit of the passage of vessels at all stages of the tide and without undue risk to the large and very expensive battleships of the near future, and also to permit the passage of these vessels through either entrance after having been injured in an engagement off the coast in the immediate vicinity. New York, being the center of commercial interests on our coast and the great commercial activity and wealth extending particularly to the northward of this point, increases the probability of an engagement somewhere in the vicinity of the eastern end of Long Island Sound. This also increases the desirability of having a deep channel through Hell Gate in order to carry a vessel or vessels safely through that may have been injured in an engagement in the vicinity of Block Island or Montauk Point.

Sincerely, yours,

JOSEPHUS DANIELS.

There also came to the committee under date of May 15, 1917, a letter from the Secretary of War, which letter I desire to read:

WAR DEPARTMENT,
Washington, May 15, 1917.

Mr. JOHN H. SMALL,
Chairman Committee on Rivers and Harbors,
House of Representatives.

MY DEAR MR. SMALL: In the river and harbor bill, which I ventured to send for the consideration of your committee and for introduction into the House, I undertook, as you know, to provide for the continuance of necessary projects and the introduction of such new projects only as were directly concerned with the national defense in the present emergency. Many very desirable projects had to be omitted in view of the situation, and I have desired as far as possible to refrain from suggesting additions to the program contained in the bill. I have, however, taken up with the Secretary of the Navy the situation respecting the channel through Hell Gate in the harbor of New York, and after a full discussion of the subject the Secretary of the Navy has written you a letter in which he recommends that the bill be amended so as to provide for a 40-foot channel at that point. The bill under consideration looks to a present depth of 35 feet, and my judgment at the time the bill was drawn was that while the ultimate depth of 40 feet was contemplated the present improvement to 35 feet was all that could be at this time undertaken. As the result of mature reflection and in view of the recommendation of the Secretary of the Navy I beg leave to concur in the suggestion that an amendment be introduced providing for the present increase in this proposed depth to 40 feet. In other words, I am seconding the recommendation of the Secretary of the Navy, and I trust that you and your associates on the committee will find it possible to make this one change in the proposed measure.

Cordially, yours,

NEWTON D. BAKER,
Secretary of War.

Mr. Chairman, the Chief of Engineers has stated that the adoption of the 40-foot channel project at Diamond Reef instead of a 35-foot channel will result in a very substantial saving; and if you can save by constructing a 40-foot channel in the first instance in one place you can do the same in the other; and I submit it will result in a saving of millions of dollars to this Government if in the beginning they will make their contracts to deepen this channel upon the 40-foot basis instead of the 35, because it is conceded that after you have constructed a channel to a depth of 35 feet you will have to go over the same thing again in order to get 40 feet.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. HULBERT. Yes.

Mr. MADDEN. I do not know anything about the location of the subways through which the passengers are carried under the river, but will the blasting of the rock at Hell Gate have anything to do with seriously damaging any of these tunnels?

Mr. HULBERT. They are a long distance away. Hell Gate is at Ninety-first, and the nearest subway connects Forty-second Street with Long Island city opposite Thirty-fourth Street. My belief is they will not, and that is the belief that has been expressed to me by engineers in New York with whom I have discussed the situation.

Mr. MADDEN. Is there any provision made for the protection of the city of New York or the people who travel in these subways in case they do damage them?

Mr. HULBERT. That is a detail to be arranged by the department when the work is authorized and undertaken.

The CHAIRMAN. The time of the gentlemen from New York has expired.

Mr. LAGUARDIA. Mr. Chairman, I want to say to the gentleman from Illinois [Mr. MADDEN] that the people of New York are indeed very grateful to him for his kindly interest toward their welfare and safety in using the tunnels of their city, and I assure the gentleman from Illinois that we will be well able to protect the citizens of New York in traveling through these tunnels.

Mr. MADDEN. Oh, the gentleman does not want to take himself too seriously.

Mr. LAGUARDIA. I am not.

Mr. MADDEN. Members of the House have a right to ask questions where life is at stake.

Mr. LAGUARDIA. We have managed those subways pretty well. The city of New York built them, and we transport millions of people in them every year.

Mr. MADDEN. I understand, but there is danger of injury from blasting the rock over them, and it may be just as well to call it to the attention of the House and the country.

Mr. LAGUARDIA. There seems to be always danger when any money is to be appropriated for the State of New York.

Mr. MOORE of Pennsylvania. Is there any danger of blasting the subways of Chicago?

Mr. LAGUARDIA. I do not know anything about the subways of Chicago. I have only five minutes, and I refuse to yield further. I have learned that from the gentleman from Illinois [Mr. MADDEN].

The committee amendment and the provision for the improvement of the Hudson River and the East River is not a local matter. It is a national matter and of national importance. We have this situation in New York: Battleships in the Brooklyn Navy Yard can only leave or enter the port at high tide. Can you gentlemen imagine the situation where there would be a call for help, where these battleships would be called out for immediate duty, and they would be obliged to flash out the message, "We can not come now; wait for eight hours until high tide." It does seem strange——

Mr. STAFFORD. Mr. Chairman——

Mr. LAGUARDIA. I refuse to yield. It does seem strange that in this bill, where you have water hyacinths, where you have little bits of creeks and mudholes of doubtful commercial importance, there should be any hesitancy on the part of this House in passing without a murmur or protest this very important measure for improvement in New York Harbor.

Mr. Chairman, I want to read the following telegrams:

The following are the telegrams referred to:

NEW YORK, N. Y., *June 14, 1917.*

Hon. F. H. LAGUARDIA,
Washington, D. C.:

Believe appropriations for purposes mentioned your telegram are of first order of importance.

JOHN PURROY MITCHEL, *Mayor.*

—

NEW YORK, N. Y., *June 14, 1917.*

Hon. F. H. LAGUARDIA,
House of Representatives, Washington, D. C.:

We consider the provisions in rivers and harbors bill for deepening channels across Diamond Reef and Hell Gate in the East River and for dredging the Hudson River of the most urgent importance, both as a necessary measure for national defense and to meet the pressing needs of commerce at this port. We have no detailed knowledge of the other items in the bill, but are creditably informed that they have been recommended by the Board of Army Engineers, and approved by the Secretaries of the Navy and of War as proper and necessary measures for the national defense.

THE MERCHANTS' ASSOCIATION OF NEW YORK.

—

NEW YORK, *June 14, 1917.*

Hon. F. H. LAGUARDIA,
Washington, D. C.:

River and harbor bill not perfect in all phases, but Diamond Reef and Hell Gate, East River, and Hudson River dredging so urgent to New York that minor defects in measure must be accepted; are advised certain items, though apparently unnecessary, are indirect consequences of main features. New York needs the improvements.

REAL ESTATE BOARD OF NEW YORK.

—

NEW YORK, N. Y., *June 14, 1917.*

Hon. F. H. LAGUARDIA,
House of Representatives, Washington, D. C.:

We consider necessities of Diamond Reef and Hell Gate alone under present conditions war measures of first importance and urge passage of this bill.

E. H. OUTERBRIDGE,
President New York Chamber of Commerce.

—

NEW YORK, *June 14, 1917.*

Hon. F. H. LAGUARDIA,
House of Representatives, Washington, D. C.:

Telegram received. Am not sufficiently familiar with projects in other parts of the country to express opinion concerning their merits. My knowledge of the thoroughness with which the United States engineering officers work, with the careful supervision exercised by the Chief of Engineers, gives me greatest confidence in their recommendations. Projects affecting the port of New York are of vital importance both to city and entire Nation, are urgently needed as measures of national defense, and are required for development of commerce. In my opinion all Representatives of State of New York should use every effort possible to secure required appropriations as promptly as possible.

R. A. C. SMITH,
Commissioner of Docks.

Mr. LAGUARDIA. From these telegrams, Mr. Chairman, you will see that the city of New York, through its mayor, who, by the way, has given the great metropolitan city an efficient, economical, and businesslike administration and who can speak with authority on this subject, and the dock commissioner of the greater city, who has made a special study of port improvements, as well as commercial organizations representing a large part of the Nation's commerce, concur in this project and are willing to take it at the expense of having to take with it the many small projects so severely criticized on the floor of this House. I confess that I have not an intimate knowledge of each and every item contained in this bill, but I fail to see how there can be any dispute on the facts and necessity of these projects. Either a stream is a ditch or a river, either it is navigable or a mudhole. When the chairman of this committee and the members who concur with him state on the floor of the House that each item has the approval of the War Department and is of commercial or military necessity they assume full responsibility for the entire bill, and in the absence of proof to the contrary I shall support it. I have failed to hear convincing objection to any specific item. Most of the gentlemen who have opposed the bill have indulged only in generalities, a thing not difficult to do with a river and harbor bill.

There can be no doubt as to the immediate need of the removal of Diamond Reef in the East River and the immediate commencement of the Hell Gate project. My colleague from New York [Mr. HULBERT], in his interesting and instructive talk on the bill covered every detail, and there is no necessity at this time to elaborate upon his statement.

For the benefit of the distinguished gentleman from Illinois [Mr. MADDEN], who inquired the other day whether the docks in the city of New York were not all privately owned, I will read the following figures: We have in New York 578 miles of straight shore line; of this, 128 belongs to the city of New York and 450 miles privately owned. Measuring around piers and shore we have 163 miles owned by the city and 579 miles belonging to private parties, a total of 742 miles.

The wharf property was acquired by the city at a cost of $43,062,162. The construction of piers, bulkheads, and terminals cost the city of New York $71,515,826. These items, together with repairs and maintenance, represent a total of $135,529,572 which the city of New York has invested in her port. It is a fair estimate to multiply this amount by four to obtain the amount representing the investments of private owners. The city of New York has recently constructed new piers along the North River and the East River and has done everything within its power to keep the port modern and capable of handling the constantly increasing traffic. Only recently a pier 1,740 feet long by 175 feet wide was completed at Thirty-fifth Street, in South Brooklyn. There are 252 piers owned by the city and 582 privately owned. We have a $4,000,000 pier near Forty-second Street, Manhattan, which can not be used to its full extent owing to low water and which awaits the action of this bill before it can be dredged. I hope that the gentleman from Illinois will consider these figures.

During the year 1916 the tonnage engaged in foreign trade which entered the port of New York was 14,330,700. I emphasize foreign trade to make it clear to some of the gentlemen who are accustomed to river statistics that this does not include ferries, lighters, barges, or river boats. The values of the imports and exports were given to you in detail by my colleague from New York and I need no repeat them now. Suffice it to say that in 1913, 46.2 per cent of the entire foreign commerce of the United States passed through the port of New York. And in comparison with this let me say that the total appropriation of the United States from the time of the first river and harbor bill to and including 1913 was $789,288,370.50. Out of this, for the same period of time, $21,301,639.35, equal to 2.68 per cent, was expended in the port of New York. It seems that nature in its infinite wisdom guarded against geographical selfishness and mudhole proclivities of American Congressmen and provided for the American people the great natural port of New York. But even nature seems to have failed in allowing for the ingenuity of man and the rapidity of progress. With the large steamers of the day and our immerse battleships our traffic in and out of the port of New York along the East River is limited to high tide. The purpose of the Diamond Reef item is to remove this encumbrance so that vessels may enter and leave the port at all times regardless of the tide.

The Hell Gate project already sufficiently explained is imperative in order to give our shipping another outlet to the sea via Long Island Sound. The gentleman has had occasion to examine the maps and I need not now go into detail. I wish to emphasize the fact that these improvements in the port of New York affect the welfare of the whole Nation. You can not compare it with any other item in this bill. I would like to see it included in a bill of itself, but this is not the time to endeavor to correct all evils. As long as it is necessary to obtain these needed appropriations in a bill of this kind I shall follow the judgment of men in my city who have given this subject consideration and study all of their lives, and who urge me and my colleagues from the Greater City to bring about the passage of this bill owing to the urgency and necessity of the proposed improvements, and I shall vote for the bill.

Mr. MADDEN. Mr. Chairman, I think we have had a long and strenuous day, and I make the point of no quorum.

Mr. LAGUARDIA. Mr. Chairman, I ask unanimous consent to revise and extend my remarks.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. SMALL. I hope the gentleman will not make the point of no quorum.

Mr. HULBERT. Let us get a vote on this amendment.

Mr. MADDEN. I think there is not any objection to the amendment.

Mr. SMALL. Will the gentleman withhold his point for a moment?

Mr. MADDEN. Yes.

Mr. SMALL. I hope there is a quorum present, but even if there is not, I hope the gentleman will withdraw his point of no quorum. We had to-day the most generous debate on the amendment of the gentleman from New Jersey [Mr. PARKER], and we have made very little progress on the bill.

Mr. MADDEN. We are just getting into the heart of the bill. If the gentleman will agree to rise at half past 5, I will withdraw my point.

Mr. SMALL. Mr. Chairman, I move that the committee do now rise.

The CHAIRMAN. Does the gentleman from Illinois [Mr. MADDEN] withdraw his point of no quorum?

Mr. MADDEN. Yes; if the gentleman wishes to rise.

Mr. SMALL. Mr. Chairman, I ask for a vote on the committee amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from North Carolina [Mr. SMALL].

The question was taken, and the amendment was agreed to.

Mr. SMALL. Whatever the procedure is, I want to ascertain in the proper way whether there is a quorum here or not. A parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. SMALL. Is it the proper procedure to move to rise and then ask for tellers?

The CHAIRMAN. The gentleman from Illinois makes the point of no quorum. The Chair will have to count to ascertain whether or not a quorum is present. If the gentleman moves to rise, he can demand a vote by tellers on the motion.

Mr. SMALL. If we move to rise, the count will only have to be 100?

The CHAIRMAN. There will have to be 100 present for a quorum.

Mr. SMALL. Then I move that the committee rise.

The CHAIRMAN. The question is on the motion of the gentleman from North Carolina [Mr. SMALL] that the committee do now rise.

The motion was rejected.

Mr. MADDEN. Mr. Chairman, I make the point of no quorum.

Mr. SMALL. Mr. Chairman, I ask for tellers.

The CHAIRMAN. It is too late to ask for tellers now.

Mr. SMALL. Mr. Chairman, I was interrupted at the moment and——

The CHAIRMAN. Does the gentleman move that the committee do now rise?

Mr. SMALL. Yes.

The CHAIRMAN. The gentleman from North Carolina moves that the committee do now rise.

The question was taken, and the Chairman announced that the noes appeared to have it.

Mr. MADDEN and Mr. CALDWELL demanded tellers.

Tellers were ordered, and Mr. MADDEN and Mr. SMALL took their places as tellers.

The committee divided; and the tellers reported—ayes 5, noes 61.

So the committee refused to rise.

Mr. MOORE of Pennsylvania. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. MOORE of Pennsylvania. There are a number of gentlemen present who have not passed through the tellers. Can they be counted?

Mr. MADDEN. No quorum, Mr. Chairman.

The CHAIRMAN. Does the gentleman insist on the point of no quorum?

Mr. MADDEN. Yes.

The CHAIRMAN. The Chair will count.

Mr. MADDEN. We just had a count, Mr. Chairman.

The CHAIRMAN. One hundred Members are present, a quorum. The Clerk will read.

The Clerk read as follows:

Keyport and Shoal Harbors, Woodbridge, Cheesequake, Matawan, and Compton Creeks, Elizabeth, Raritan, South, and Shrewsbury Rivers, and Raritan Bay, N. J.: For maintenance, $58,000.

Mr. MEEKER. Mr. Chairman, I move to strike out the last word.

In my time I will ask the Clerk to read the announcement in the Washington Evening Star as to what the Council of National Defense is now doing in regard to inland waterway transportation.

The CHAIRMAN. Without objection, the Clerk will read.

The Clerk read as follows:

COMMITTEE NAMED ON INLAND TRANSPORTATION—COUNCIL OF NATIONAL DEFENSE ANNOUNCES GEN. BLACK, CHIEF OF ENGINEERS, WILL BE CHAIRMAN.

The Council of National Defense to-day announced the creation of an inland water transportation committee, with Gen. W. M. Black, Chief of Engineers, United States Army, as chairman. Daniel Willard, chairman of the advisory commission of the council, who has special charge of matters relating to transportation, is a member ex officio. The other members of the committee are: Walter S. Dickey, vice chairman, Kansas City, Mo., president Kansas City-Missouri River Navigation Co.; George E. Bartell, president of the Philadelphia Bourse; Capt. J. F. Ellison, Cincinnati, former secretary of the National River and Harbors Congress; Joy Morton, Chicago, director in many financial, mercantile, and transportation companies; James E. Smith, St. Louis, president Mississippi Valley Waterways Association; M. J. Sanders, president New Orleans Board of Trade, representing Harrison-Leyland Lines. Lieut. Col. C. Kellon, of the Corps of Engineers, will act as secretary of the committee.

It will be the function of the new committee to bring together the companies engaged in inland water transportation, including those on the Great Lakes, in order better to meet the war situation and increase and make more efficient the freight-carrying facilities of the country's waterways.

Mr. MILLER of Minnesota. Will the gentleman from Missouri yield for an inquiry?

The CHAIRMAN. The gentleman from Missouri [Mr. MEEKER] is recognized.

Mr. MILLER of Minnesota. I want to make an inquiry of the gentleman.

Mr. MEEKER. Yes.

Mr. MILLER of Minnesota. I notice this council evidently wants the cooperation of transportation lines on the Great Lakes, but there is nobody on the Great Lakes represented on it.

Mr. MEEKER. Joy Morton, of Chicago, is on it. Chicago, you know, is a village on the lake. [Laughter.] This clipping, however, was read for the information of the gentleman from Wisconsin.

Mr. MADDEN. That has been published in the newspapers for a week past.

Mr. MILLER of Minnesota. I would like to ask the gentleman from Missouri an additional question.

Mr. MEEKER. Very well.

Mr. MILLER of Minnesota. And I would like to ask the gentleman from Pennsylvania [Mr. MOORE] a question, if he will be kind enough to answer.

Mr. MOORE of Pennsylvania. Does the gentleman think I ought to commit myself as to Chicago?

Mr. MILLER of Minnesota. No. I would like to know who is this gentleman from Chicago?

Mr. MADDEN. He is in the salt business.

Mr. MOORE. I understand he is a very distinguished gentleman.

Mr. SMALL. Mr. Chairman, what is pending?

The CHAIRMAN. The gentleman from Missouri moved to strike out the last word.

Mr. MILLER of Minnesota. I ask this as a serious question.

Mr. MADDEN. Mr. Joy Morton, of Chicago, is an extensive dealer in salt.

Mr. MILLER of Minnesota. Has he any experience with respect to water transportation?

Mr. MADDEN. I think he has been trying to ship some salt down the Mississippi River.

Mr. MILLER of Minnesota. I have no doubt he is a fine public-spirited citizen, but with no expert knowledge on the subject of water transportation.

Mr. SMALL. Mr. Chairman, I make the point of order that we are not discussing any item.

The CHAIRMAN. The gentleman from Missouri moved to strike out the last word.

Mr. MILLER of Minnesota. I have no desire to delay the consideration of the bill, but this matter has been injected into the discussion and it is pertinent to the bill; and inasmuch as the names of the members composing the commission have been read, it is rather pertinent to inquire as to the personnel of the commission. I beg leave to submit that the greatest commerce of the world—and I pause right there for rhetorical effect [laughter]—without exception is on the Great Lakes, and here is a commission designed to aid the commerce of the country by means of transportation by water of all the commodities that are piled up and anxious to be transported in the United States, and there is not a man conversant with lake transportation now on the commission. But I am glad to see

that they have a gentleman from Philadelphia, who is president of the Bourse, on the commission. Perhaps he has some knowledge of money. Perhaps he has had experience in flatboat operations.

Mr. GILLETT. Mr. Chairman, I think it is only fair, now that it is half-past 5, that I should ask the gentleman from North Carolina [Mr. SMALL] what is the purpose of the committee as to sitting this evening, if it is possible to keep a quorum?

Mr. SMALL. As I said earlier in the day, Mr. Chairman, it was our purpose to have the House remain in session until 7 o'clock, but in view of the anxiety of some gentlemen to get away I have suggested 6 o'clock, but with the understanding that there will be no objection to meeting at 11 o'clock to-morrow.

Mr. GILLETT. At what time did the gentleman expect to adjourn to-morrow?

Mr. SMALL. We had not considered that.

Mr. GILLETT. It will be Saturday afternoon, and if there is an agreement to be made I think it would be wise to make it now, in order to avoid further points of order.

Mr. CLARK of Missouri. I would like to inquire, if this is a free conversation, whether the gentleman from North Carolina expects to finish this bill to-morrow?

Mr. SMALL. We do. We would like to, and we expect to complete the bill to-morrow afternoon, and we think we can do it if the discussion is confined to the items in the bill.

Mr. CLARK of Missouri. Why not take a recess now until 8 o'clock and have a night session, and get through with this thing? [Applause.] That would give everybody a chance to go home and get their dinner and come back feeling well.

Mr. MADDEN. Mr. Chairman, I certainly do not think we ought to do anything of that sort. We have been here all day. We are here all day, many of us, while a good many men are not here at all, and I think when Members stay in this House from 11 o'clock until 6 at night, with the bad air that we breathe here, we have been here all the time that we ought to be.

Mr. CLARK of Missouri. I will ask this question: Do not you think, if we speed up, we will get away quicker this summer than if we dawdle around as we have been doing heretofore?

Mr. MADDEN. If we sit here until 8 o'clock to-night and other nights, there will be nights when we shall be waiting for action by the Senate, and we will have many idle days with time on our hands, and we shall be here with nothing to do in the daytime.

Mr. CLARK of Missouri. The day of miracles is past, but perhaps the Senate may get a move on it. [Laughter.]

Mr. MADDEN. I do not think we ought to sit in this bad air until 8 o'clock on any night unless there is an emergency, and there is no emergency now.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Cold Spring and Absecon Inlets, Absecon and Tuckerton Creeks, and Toms River, N. J.: For maintenance, $35,000.

Mr. STAFFORD. Mr. Chairman, I move to strike out the last word. This is an illustration of the bad policy of grouping various projects for maintenance, concerning which criticism has been lodged against this bill. Here we have a paragraph containing some five separate items, three or more of which have no estimates, so far as I have been able to ascertain, for maintenance work during the coming year. I looked at the index of the report of the majority of the committee and found no reference whatsoever to a majority of these items. The gentleman, in defense of this policy, refers you to the report, and yet when you look at the report you find no mention whatever of the respective items. I took occasion to try to ascertain as to Cold Spring Inlet. The report presented by the committee shows that they have no information as to tonnage, and yet they are recommending the allowance of an appropriation of $35,000 to be made available for that project.

Absecon Inlet is referred to. Everyone who has visited Atlantic City knows something about Absecon Inlet and has noticed the dredge there engaged continuously at work in trying to keep open a 12-foot channel running from the ocean into the upper inlet, which dredging is necessary every time they have a storm there. It was originally projected in view of the establishment of a line of steamers from New York to Atlantic City, but that soon was found to be unprofitable and it was abandoned. As far as I know, Absecon Inlet has no commerce to-day whatever, except some small sloops that can get in through the natural channel without the necessity of a 12-foot channel.

Mr. HULBERT. Will the gentleman yield?

Mr. STAFFORD. I will be glad to yield.

Mr. HULBERT. Does the gentleman know that the line of steamers between Atlantic City and New York was discontinued because in this high market for steamers they were able to sell their steamers at a higher price than the freight could earn for them on their investment, and not because of the lack of business there?

Mr. STAFFORD. Whatever the cause, it shows that there is no necessity whatsoever for the maintenance of this channel during these existing times.

Mr. HULBERT. What are we going to do with the ships that are building now?

Mr. STAFFORD. I do not suppose that any ships are going to be used in a chimerical project, which is shown to be chimerical by reason of the fact that the people who came from New York down to Atlantic City had such unsettled stomachs, by reason of the high life they led, that they preferred to go by rail rather than by boat.

Mr. HULBERT. New York people do not go to Atlantic City.

Mr. STAFFORD. That only shows the ignorance of the gentleman, so far as that cosmopolitan resort is concerned. Of course there are a few New York people who are satisfied with Coney Island as their resort.

Mr. JAMES. Mr. Chairman, there is no reference to the Cold Spring Inlet project in the majority report, but Col. Lockwood has said of it:

The project of improvement, if carried to completion, will be of material benefit to the city of Cape May as a pleasure resort, by filling the adjacent swamp lands, obliterating mosquito breeding beds, and furnishing opportunity for expansion for building sites.

Mr. STAFFORD. That shows the character of this grouping. The engineers make no recommendation whatsoever and no estimates, and yet the gentlemen of the committee, in their omnibus policy of including everything and everybody, apparently in order to get support for this measure, group in here items for which no estimate of any character has been made. I will ask the chairman of the committee [Mr. SMALL] whether there has been any estimate made for three of these items by the district engineers?

Mr. SMALL. Mr. Chairman, if the gentleman had taken the trouble to examine the annual reports of the Chief of Engineers he would have found the information which I am now giving him.

Mr. STAFFORD. I will direct special inquiry as to whether there is any estimate for maintenance for Cold Spring Inlet, Absecon Creek, and Toms River?

Mr. SMALL. There was no estimate for Cold Spring. There was an estimate of $45,000 for Absecon Inlet, which has been reduced to $30,000, and there was an estimate of $5,000 for Tuckerton Creek, making a total of $35,000 carried in the bill.

Mr. STAFFORD. That simply confirms what I said. There is no estimate for three of these projects, Cold Spring, Absecon Creek, and Toms River; and yet, despite the failure of the engineers to make an estimate, they are included in this paragraph.

Mr. SMALL. That has been explained time and again. The gentleman simply does not like the explanation.

Mr. STAFFORD. I do not believe it is a proper policy for this Congress to adopt. We should seek at all times to hold control over the purse strings and not leave it merely to the district engineers or somebody else to determine how this money shall be spent. In the opinion of Members of the House it may well be that some of this money should not be spent on Toms River or on Cold Spring Inlet, for which there is no report of tonnage, or on these other items. The gentlemen may justify the appropriation for the other items, but not for these for which there is no estimate.

Mr. FREAR. Mr. Chairman——

Mr. SMALL. Does the gentleman want to discuss this item?

Mr. FREAR. I want to put in some data in regard to this item.

Mr. SMALL. I was going to move to close debate. I ask unanimous consent that debate close in five minutes.

The CHAIRMAN. The gentleman asks unanimous consent that debate on this item and amendments thereto close in five minutes.

Mr. MOORE of Pennsylvania. I should like to have five minutes. These gentlemen are attacking the project.

Mr. SMALL. I ask unanimous consent that debate on this item and amendments thereto close in 10 minutes.

The CHAIRMAN. The gentleman asks unanimous consent that debate on this paragraph and amendments thereto close in 10 minutes. Is there objection?

There was no objection.

Mr. FREAR. Mr. Chairman, ordinarily I present official reports and leave the House to draw its own conclusions. In the Cold Springs and Absecon Inlets and Toms River, N. J., items there is a balance of $75,000 shown to be on hand March 1, according to the balance sheets.

This item calls for $35,000, a small amount comparatively, for maintenance, but I desire to show how this money can be used on certain items.

Cold Springs Inlet will be found in Document 388, page 5. In the 1916 Engineer's report, page 2083, he says that it is not practicable to obtain any commercial statistics for Cold Springs Inlet in 1915. Yet we have appropriated $961,200 for that project to date.

That was the report made on that project several years ago; and this last year, after spending over $900,000, there is no commerce developed or reported. Engineer Flagler said, on page 5 of the same document, that the improvement "will increase the attractive features of Cape May to visitors, and a good harbor would doubtless have a very advantageous effect. It would also permit the resumption of yacht races, which at one time they had at Cape May and which form one of the most attractive features of the season." That is the Army engineer's report concerning commercial necessities of Cold Springs Inlet.

Now, coming to Absecon Inlet, which had about 5,000 tons of commerce this last year, the engineer said, in the former report, that there was going to be a large profit through saving of freight rates when the project was completed.

On page 7 of Document No. 1395 it was estimated by the engineer that they would save $502,000 annually in freight rates on the tonnage on this project when the project was completed. It is completed now, and how much tonnage did we have last year? Five thousand two hundred and thirty-five tons. They were going to save a half million dollars in freight expenses annually, and yet only 5,000 tons of freight were handled altogether.

Let us take Toms River, another project. The engineers said in regard to that—

> Toms River is located on one of the principal automobile lines of travel Dredging it to a suitable depth would increase the traffic, owing to the ease with which owners could communicate with the yachts at this point.

They could come down with their automobiles and get out on the yachts; that was an important consideration. Four thousand nine hundred and ninety tons was the amount of commerce on Toms River in 1915. So, here are three items in the grouping system—Cold Spring Inlet, Absecon Inlet, and Toms River—all of a kind, apparently. I have not spoken of the grouping system before, but how can any Member take that grouping system as proposed and ascertain what money is to be used and where? The Chief of Engineers can use it on any one of these projects, which now have balances of $75,000, and none of which are necessary for any commercial needs or possess any value in proportion to the money that has been expended on them.

The CHAIRMAN. The time of the gentleman has expired.

Mr. COSTELLO. Mr. Chairman, the statement made by the last speaker, the gentleman from Wisconsin, does not convey fairly the situation. Cold Spring Inlet last year was a rendezvous for the entire submarine fleet of the United States and for many battleships. Absecon Inlet is a harbor of refuge for all seagoing yachts along the coast, and it is something that the United States Government ought to support.

Mr. MOORE of Pennsylvania. Mr. Chairman, the gentleman from Pennsylvania [Mr. COSTELLO] yields the balance of his time to me. I am glad that my colleague [Mr. COSTELLO] made his statement, because he knows whereof he speaks. The gentleman from Wisconsin [Mr. STAFFORD] is an occasional visitor at Atlantic City, after his arduous labors here at the Capitol, but he gets so hilarious on the boardwalk he comes back thinking he knows all about the waterways question. He estimates the commerce and tonnage from the angle of the boardwalk which he perambulates with great gusto as a Member of Congress. [Laughter.] My other friend from Wisconsin [Mr. FREAR] is not so familiar with Atlantic City, because he does not go down there so often. He is more sedate than his colleague, but gets equally mixed in statements of facts and figures, which he confuses.

Mr. HULBERT. Will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes; although I have only a minute.

Mr. HULBERT. Do they sell Milwaukee's hilarious fluid at Atlantic City?

Mr. MOORE of Pennsylvania. They do; and the gentleman from Wisconsin has never been known to go back on his home product. [Laughter.]

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

The Clerk read as follows:

> Schuylkill River, Pa.: For improvement in accordance with the report submitted in House Document No. 1270, Sixty-fourth Congress, first session and subject to the conditions set forth in said document, $300,000.

Mr. STAFFORD. Mr. Chairman, I move to strike out the last word. As I understand this item in reference to the Schuylkill River, it is a new project, never before undertaken by the Government, and planned, as far as I am able to learn, for a channel with a depth of 35 feet in a river that is largely used as a conduit for sewage supplied by the city of Philadelphia. [Laughter.] If I am mistaken, I will yield to the gentleman from North Carolina.

Mr. SMALL. The gentleman is mistaken; it is not for sewage purposes.

Mr. STAFFORD. As I read the report, the statement is that the Schuylkill is used largely for conveying the sewage of Philadelphia down to the Delaware River, and it is now the purpose to excavate the sewage of this foul stream to the depth of 35 feet at the Government expense.

It is true that I have occasion to visit the city where my parents were born, and on my visits there——

Mr. MOORE of Pennsylvania. Did the gentleman come from that sewage district to which he refers? It is not in the bill.

Mr. STAFFORD. I decline to yield. I have had occasion to see the number of ships that ply that famous Schuylkill River. I remember it in years gone by as being utilized largely for the conveyance of coal barges from the Schuylkill mines, but that is almost a thing of the past. The river is narrower and shallower now than then; it is getting filled up with silt from the upper sources, and now it is proposed to have the Government excavate it to a depth of 35 feet.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. STAFFORD. I yield.

Mr. MADDEN. I understood the gentleman to say that they used to use it for the transportation of barges, and that now they use it for the transportation of sewage.

Mr. STAFFORD. Yes. In those days they utilized it somewhat for the transportation of sewage also, and also to obtain drinking water for the denizens of Philadelphia.

Mr. MOORE of Pennsylvania. The Philadelphia water does not appeal to the gentleman as does the beverage that made Milwaukee famous.

Mr. STAFFORD. Of course there are some breweries up around Brewery Town in Philadelphia located along this stream, and the beer manufactured there is not as good, of course, as that which made Milwaukee famous. You have got to have good water in order to make good beer. I am not surprised at the gentleman for being envious of the beverage that made Milwaukee famous. Perhaps his purpose in having this dredged out is to furnish an easy conveyance to the sea of the sewage of Philadelphia and the communities above, but as far as I know, on the Schuylkill below the dam at Lemon Hill there is little or no tonnage, and where most of the abutting shore line is bounded by industrial establishments that do not permit of the building of piers and wharves. And here we are starting a project that will involve the expenditure of a million dollars, perhaps, for some development that is chimerical. There is neither military necessity nor commercial necessity connected with this work. The river at the navy yard is improved. This plans a deep channel of 35 feet for the greater part of the distance. I do not know what is back of it, whether the energy of the gentleman from Philadelphia, who is the main spokesman, though not on the committee, for not only the items concerning Philadelphia, but all of the items in the bill. But everyone acquainted with the facts will agree that there is no pressing need, if need at all, of spending more than $1,650,000 for deepening the channel of this stream, with little or no tonnage, and with little in prospect.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. COSTELLO rose.

Mr. SMALL. Mr. Chairman, I ask unanimous consent that all debate on this section and all amendments thereto close in three minutes.

The CHAIRMAN. Is there objection?

Mr. MOORE of Pennsylvania. I ask unanimous consent for enough time in which to reply to a personal attack.

Mr. STAFFORD. I had no purpose in making a violent attack.

Mr. SMALL. I withdraw my request.

Mr. COSTELLO. Mr. Chairman, about one-third of the commerce of the city of Philadelphia, about 3,000,000 tons, went out of that stream last year. It also affords an entrance to the navy yard. The gentleman from Wisconsin left Philadelphia at so early an age that he has lost all sense of information or knowledge that he did possess about it. Here are located the great elevators and the great oil-refining industries and other large industries of Philadelphia. This item is one of the best items in the bill.

Mr. MOORE of Pennsylvania. Mr. Chairman, I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MOORE of Pennsylvania. Mr. Chairman, I know the gentleman from Wisconsin [Mr. STAFFORD]—distinguishing him from the other brilliant waterway experts of that State—is not serious in his attack upon the Schuylkill River, but I am inclined to think there was a sting in his personal references to one of the Representatives from Philadelphia, and for that reason I shall have to reply to him in brief. The gentleman from Wisconsin is an authority upon parliamentary law. I think all of us in the House recognize that when he rises to a point of order it is time to quiet down and wait with bated breath his interpretation of the law, even as it has been handed down from the days of Carlisle.

But the trouble with the gentleman from Wisconsin is that while he is a great parliamentarian and occasionally crosses the Delaware on his way to Atlantic City for those thoughtful board walk perambulations which I recently attempted to describe, he is not well posted on waterways. Not that his own State of Wisconsin is not well provided with appropriations, for those in the vicinity of the Great Lakes have been very careful to see to it that very ample appropriations have been made there; it is because the gentleman from Wisconsin gets it into his head once in a while that it is his bounden duty to pick flaws in the projects which he does not understand. The other day, for instance, when the gentleman from Wisconsin was interrogating the gentleman from New York [Mr. DEMPSEY] and was showing how much he knew about waterways, this very interesting colloquy occurred:

Mr. DEMPSEY. I do not think there is a steel plant or furnace in the United States that is not located where it has water facilities. I do not know of any.

Mr. STAFFORD. Take, for instance, the great Cambria Steel Works. They are located on the Conemaugh River, at Johnstown, and they get their freight both by rail and by boat.

Has anyone in this House ever been on the Conemaugh River at Johnstown where, according to this new waterways expert from Wisconsin, they get their freight both by rail and "by boat"? If we have such a Member and he has ever been able to pass under the bridge at Johnstown in a canoe, I would like him to present himself. [Laughter.] And yet the distinguished gentleman from Wisconsin, who tells us they get ore by boat on the Conemaugh at Johnstown, knows all about the Schuylkill River, the Absecon Inlet, and the Delaware River, and would have them stricken from the bill.

But the gentleman from Wisconsin, interrogating the gentleman from New York [Mr. DEMPSEY], went on to say:

Take the furnaces in Pennsylvania. They get their ore part by lake and part by rail.

We touch on the lakes in Pennsylvania up yonder by Erie. Perhaps that is what the gentleman referred to. But Mr. DEMPSEY said:

That is true, for instance, at Buffalo. The gentleman is entirely right. They get their limestone by rail. I think they get all their limestone by rail.

But Mr. STAFFORD, Wisconsin waterway expert, said:

Take the Bethlehem Works; take the Cambria Works—I can enumerate some of the largest works where they get their ore largely by rail and partly by rail and partly by water.

Here is an experienced Member of the House telling new Members of this body how they ought to vote on the waterway question. He tells them he knows about the Delaware and Schuylkill Rivers, great commerce carriers in peace and war, because he makes an occasional trip to Atlantic City, and then he solemnly assures them that the Conemaugh carries ore to the Cambria Steel Co. and that Bethlehem also gets its ore by water. The Lehigh River would rejoice at such a statement. [Applause.]

The Clerk read as follows:

Delaware River, Pa., N. J., and Del.: Continuing improvement and for maintenance from Allegheny Avenue, Philadelphia, to the sea, $1,870,000; for maintenance of improvement from Allegheny Avenue, Philadelphia, to Lalor Street, Trenton, $40,000; in all, $1,910,000.

Mr. TREADWAY. Mr. Chairman, I move to strike out the last word.

The gentleman from Pennsylvania [Mr. MOORE] who has just taken his seat, made some comments on the minority report. Of course, he is very free in his criticism of other Members and asks always for great accuracy. It is advisable, perhaps, to look for the same merit in yourself that you expect to secure from others.

Now, he said that the minority members, as I recall it, had made the statement that we were not in favor of any kind of a river and harbor bill, and that we had stated that this bill was entirely pork. I take exception to that remark, and I did at the time, and asked the gentleman to make a fair statement about it.

I desire to call his attention to the part of the report signed by the minority, on page 5, where the minority said:

The minority are convinced that the only items that can be justified at this time are of two classes. First, items of maintenance for meritorious projects that would retain the present channel depth or are of such commercial importance as to require continual attention. Second, such harbor improvements as are of value and importance in the general plan of better preparedness, considering both the commercial requirements and naval needs.

I desire to call the gentleman's attention to that statement in the report, which with his great desire for accuracy at all times he should have seen when he was offering the criticism he did against the minority report. It is not always well to be continually expecting the great virture of accuracy in everyone else and omitting to have it in yourself.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last word. We might as well cross these bridges as we come to them. The gentleman from Massachusetts [Mr. TREADWAY] has indicated that I was unfair in my criticism of the minority report. I am glad he has called attention to my omission to commend the minority for its approval of the Delaware River. I do not now know how they could have done anything else but approve a project of that commercial importance and of such naval and military importance to the Nation. That statement holds also for the Schuylkill, which is also carried in the bill.

But I observe the gentleman from Massachusetts, in his minority report—he and his colleagues—reflected upon certain other projects in which Members of the House are earnestly interested and which they have advocated because they believe in those projects. I give the gentleman from Massachusetts [Mr. TREADWAY] and his committee credit for praising worthy projects in the bill, but because he has approved the Delaware it does not follow that he should reject all other projects in this bill. I believe we should be liberal with our colleagues and with other sections of the country aside from our own. I criticized the minority report because I thought it manifestly unfair to certain sections of the country. And the minority may not be altogether unworthy of criticism.

Witness the gentleman from Massachusetts. He favors in his minority report a worthy and commendable project like the Delaware River, which he could not very well disapprove. We thank him for that, but the gentleman from Massachusetts, who opposes many other projects in the bill, takes advantage of the first opportunity that comes to him when the Massachusetts paragraph is reached to inject into the proceedings of the House an amendment for an extra $400,000 for his own port of Boston in advance of a favorable report by the United States Army engineers.

Now, every other project in this bill is approved by the United States Army engineers and the War Department, but the gentleman from Massachusetts was not satisfied. There was something not in the bill which he would like to have had in the bill. If the committee did not put the $400,000 Boston item in the bill it was the misfortune of the gentleman from Massachusetts, but the gentleman rose in his time and place and endeavored to get it in, and that to a certain extent neutralizes his opposition to other projects in the bill.

Mr. WATSON of Pennsylvania. Mr. Chairman, I want to speak in favor of this section which provides $40,000 to open the channel from Trenton to the sea. We all recall that Christmas eve when Washington crossed the Delaware, marched on to Trenton, and raised that flag of liberty, which, thank God, has never yet been hauled down by any nation. [Applause.] If there is any patriotism in this House, the Members will not fail to give to the city of Trenton, now a population of nearly 200,000, a waterway to the Atlantic. [Applause.] This channel is one of the connecting links of the great inland routes which my distinguished colleague, Mr. MOORE, from Pennsylvania, has fought so gloriously and so wonderfully on the floor of this House for many years, to give to the American people a watercourse from Maine to the shores of Florida. [Applause.] I therefore believe that this bill should be passed as

a whole, even if it was for nothing more than to give old historical Trenton an outlet to the sea. [Applause.]

Mr. SMALL. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. HARRISON of Mississippi, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 4285) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, and had come to no resolution thereon.

EXTENSION OF REMARKS.

Mr. TILSON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing therein a letter received from the Grand Army Post of my home town.

The SPEAKER. The gentleman from Connecticut asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

Mr. JAMES. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing a speech made yesterday on Flag Day at the Central High School by the gentleman from Pennsylvania [Mr. KELLY].

The SPEAKER. The gentleman from Michigan asks unanimous consent to extend his remarks in the RECORD by inserting a speech delivered by Congressman KELLY yesterday, Flag Day. Is there objection?

There was no objection.

Mr. LAZARO. Mr. Speaker, I ask unanimous consent to extend my remarks by inserting an editorial from the New Orleans Medical and Surgical Journal on the subject of salvarsan.

The SPEAKER. Is there objection to the gentleman's request?

There was no objection.

Following is the editorial referred to:

SALVARSAN OR ARSENOBENZOL.

[From the New Orleans Medical and Surgical Journal, June, 1917.]

We were preparing a convincing editorial urging congressional action for the purpose of voiding or suspending the patent rights on salvarsan, but what's the use? We learn that Mr. EMERSON, from one of the Ohio districts, has already introduced a bill which is entitled "A bill to abrogate the patent upon the article known as salvarsan," which has the advantage of being both clear and concise. It has been referred to the Patent Committee, and reads as follows:

"Whereas the use of salvarsan is now necessary to the medical profession and the output of the article is so handicapped because of certain patent rights: Therefore

"*Be it enacted, etc.*, That the patent rights issued upon the article known as salvarsan is hereby abrogated and set aside and declared null and void."

The only thing for us to do is to urge our Congressmen to give their active support to the measure.

Whatever place future observation will grant to the chemical in the permanent cure of syphilis, it is generally conceded that it exerts the most prompt effect in controlling lesions, and in that manner, if in no other, it is of most valuable aid in treatment. Its scarcity at intervals during more than two years has been seriously felt, but was due mainly to the prohibitive rights secured for it in this country. It can be and is being made in several countries, but could not be made and sold here or imported into this country under any other name, hence the intolerable monopoly and the impossibility of using a definite chemical compound for the good of the sick.

We hope rapid congressional action will correct the abuse, and we know that salvarsan under any other name will act just as well.

HOUR OF MEETING TO-MORROW—11 O'CLOCK A. M.

Mr. RAINEY. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock to-morrow morning.

The SPEAKER. The gentleman from Illinois asks unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock to-morrow morning. Is there objection?

Mr. GILLETT. Reserving the right to object, Mr. Speaker, I would like to ask the gentleman if he would couple with that request a suggestion that on to-morrow (Saturday) afternoon adjournment will be had at some reasonable hour. If he will agree to that, I shall have no objection.

Mr. SMALL. Mr. Speaker, I realize, of course, that we must have unanimous consent to meet at 11 o'clock to-morrow, but to-morrow afternoon is Saturday afternoon, and I do not think gentlemen ought to impose any conditions by asking to have the time set for adjournment to-morrow afternoon.

Mr. GILLETT. Personally I am willing that it should be a good, long, liberal afternoon, but I do not think we ought to be kept here late Saturday night.

The SPEAKER. Is there objection?

Mr. GILLETT. I shall object unless there is some arrangement on that point.

Mr. MEEKER. The Speaker himself during the session of the committee this afternoon urged that we should do everything in our power to get this bill out of the way to-morrow. With all deference to the Speaker, I think surely we shall have plenty of time in the next few weeks waiting on the Senate, and we should be willing to keep in session to-morrow and finish this bill if possible.

Mr. GILLETT. I, too, have great deference for the Speaker, but many Members have assured me that it will not be possible to complete this bill to-morrow, and I do not see why we should be tied down all day to-morrow uselessly.

Mr. SMALL. I will leave it to the gentleman from Illinois [Mr. RAINEY] and other gentlemen to arrange.

Mr. RAINEY. Would not the gentleman from Massachusetts be willing to meet at 11 o'clock to-morrow?

Mr. GILLETT. I would be willing to meet at 11 o'clock to-morrow morning and run to 5 o'clock.

Mr. RAINEY. Would half past 5 to-morrow afternoon be satisfactory to the gentleman as the time to adjourn to-morrow?

Mr. GILLETT. Yes.

Mr. RAINEY. The gentleman from North Carolina assures me that it will be satisfactory to him to adjourn at half past 5 to-morrow. Mr. Speaker, I renew my request that the House, when it adjourns to-day, adjourn until 11 o'clock to-morrow morning.

Mr. GILLETT. Does the gentleman from North Carolina make that agreement?

The SPEAKER. Is there objection to the 11 o'clock proposition?

Mr. MADDEN. And the half past 5 proposition?

The SPEAKER. And coupled with that is an informal agreement with the gentleman from North Carolina [Mr. SMALL] that he will move that the committee rise to-morrow not later than half past 5. Is there objection?

There was no objection.

EXTENSION OF REMARKS.

Mr. HULBERT. Mr. Speaker, I ask unanimous consent to extend my remarks by printing two letters on the subject of conscription and a letter on the subject of aeronautics.

The SPEAKER. The gentleman from New York asks unanimous consent to extend his remarks in the RECORD as indicated. Is there objection?

There was no objection.

Mr. VOLSTEAD. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. The gentleman from Minnesota asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

FOOD CONTROL.

Mr. HAUGEN. Mr. Speaker, I ask unanimous consent to file a minority report (No. 75, pt. 2) on the food-control bill (H. R. 4961).

The SPEAKER. The gentleman from Iowa asks unanimous consent to file a minority report on the food-control bill. Is there objection?

There was no objection.

ADJOURNMENT.

Mr. RAINEY. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 5 minutes p. m.) the House adjourned, pursuant to the order previously made, until to-morrow, Saturday, June 16, 1917, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. Letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on preliminary examination and survey of Key West Harbor, Fla., with a view to removing the middle ground (H. Doc. No. 185); to the Committee on Rivers and Harbors, and ordered to be printed, with illustrations.

2. Letter from the Secretary of the Treasury, transmitting copy of a communication from the Secretary of the Navy submitting an estimate of appropriation for recreation purposes for enlisted men of the Navy at training stations and camps now established or which may hereafter be established (H. Doc. No. 186); to the Committee on Appropriations and ordered to be printed.

3. Letter from the Secretary of the Treasury, transmitting copy of a communication of the Secretary of the Navy submitting an additional estimate of appropriation for mainte-

nance, Bureau of Supplies and Accounts, for the service of the fiscal year ending June 30, 1918 (H. Doc. No. 187); to the Committee on Appropriations and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. FERRIS, from the Committee on the Public Lands, to which was referred the bill (H. R. 4991) providing for the counting of service in the Army or Navy of the United States as equivalent to residence and cultivation upon homestead entries, and in the event of the soldier's death in such service providing for the issuance of patent for such land to his widow or minor children, reported the same with amendment, accompanied by a report (No. 81), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. RUSSELL: A bill (H. R. 5032) extending the arm of the United States Civil Service Commission; to the Committee on Reform in the Civil Service.

By Mr. FRANCIS: A bill (H. R. 5033) extending the franking privilege through the mails to officers and enlisted men in the Army, Navy, and Marine Corps of the United States; to the Committee on the Post Office and Post Roads.

By Mr. JACOWAY: A bill (H. R. 5034) to authorize condemnation proceedings of lands for military purposes; to the Committee on Military Affairs.

By Mr. MILLER of Minnesota: A bill (H. R. 5035) to amend a paragraph of section 1 of "An act making appropriations for the support of the Military Academy for the fiscal year ending June 30, 1917, and for other purposes"; to the Committee on Appropriations.

By Mr. LAGUARDIA: A resolution (H. Res. 103) to designate a day on which the people of this country may express their sympathy by contributing toward the relief of the Russians in the war zones; to the Committee on Foreign Affairs.

By Mr. EDMONDS: A joint resolution (H. J. Res. 102) to prevent speculation in bituminous coal; to the Committee on Interstate and Foreign Commerce.

By Mr. HUMPHREYS: A concurrent resolution (H. Con. Res. 13) to provide for the printing of the address of Hon. FREDERICK C. HICKS, of New York, on "The Flag of the United States"; to the Committee on Printing.

By Mr. FULLER of Illinois: Memorial of the Legislature of the State of Illinois, favoring action by the United States Government to bring about self-government for Ireland and Poland; to the Committee on Foreign Affairs.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BARNHART: A bill (H. R. 5036) granting a pension to Florence A. Warrington; to the Committee on Invalid Pensions.

By Mr. BLAND: A bill (H. R. 5037) for the relief of Frank Hardesty; to the Committee on Claims.

By Mr. DILL: A bill (H. R. 5038) granting a pension to Edward L. Burnett; to the Committee on Pensions.

By Mr. DOWELL: A bill (H. R. 5039) granting an increase of pension to Joseph M. Johnston; to the Committee on Invalid Pensions.

By Mr. KEARNS: A bill (H. R. 5040) granting a pension to Edward D. Boothby; to the Committee on Pensions.

Also, a bill (H. R. 5041) granting a pension to Rufus Adamson; to the Committee on Pensions.

Also, a bill (H. R. 5042) granting a pension to Winfred W. Rockwell; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5043) granting a pension to Lulu Hendrixson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5044) granting an increase of pension to Henry Jones; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5045) granting an increase of pension to Thomas Cullum; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5046) granting an increase of pension to Maria P. Evans; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5047) granting an increase of pension to John C. Rinehart; to the Committee on Invalid Pensions.

Also, a bill (H. R 5048) granting an increase of pension to Stephen Young; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5049) granting an increase of pension to James T. Pitts; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5050) granting an increase of pension to Melvina Brunk; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5051) granting an increase of pension to Rebecca J. Bridge; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5052) granting an increase of pension to Amos McKinley; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5053) granting an increase of pension to Silas H. Shepherd; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5054) granting an increase of pension to George W. Anderson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5055) granting an increase of pension to Lorain Marsh; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5056) granting an increase of pension to James Leming; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5057) granting an increase of pension to William S. Lattimer; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5058) granting an increase of pension to Doctor E. Davis; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5059) granting an increase of pension to Leander J. Day; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5060) granting an increase of pension to Leonidas W. Day; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5061) granting an increase of pension to John Jones; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5062) granting an increase of pension to James A. Nichols; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5063) granting an increase of pension to Cread Milstead; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5064) granting a pension to Adaline Young Swearingen; to the Committee on Invalid Pensions.

By Mr. LANGLEY: A bill (H. R. 5065) granting an increase of pension to Isaac Whittaker; to the Committee on Invalid Pensions.

By Mr. NEELY: A bill (H. R. 5066) granting an increase of pension to Owen Moore; to the Committee on Invalid Pensions.

By Mr. OSBORNE: A bill (H. R. 5067) for the relief of Austin G. Tainter; to the Committee on Claims.

By Mr. RAMSEYER: A bill (H. R. 5068) granting a pension to Mary C. Halloway; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5069) granting a pension to Peter Dell; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5070) granting an increase of pension to Ezra Stevens; to the Committee on Invalid Pensions.

By Mr. SANDERS of Indiana: A bill (H. R. 5071) granting a pension to Edward Brockway; to the Committee on Pensions.

By Mr. WOOD of Indiana: House resolution (H. Res. 102) to pay Edward F. Warfel, clerk of Daniel W. Comstock, deceased, $125; to the Committee on Accounts.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Petition of the International Stereotypers' and Electrotypers' Union, protesting against the proposed increase of the postage rate on second-class matter and opposing the zone system; to the Committee on Ways and Means.

Also (by request), petition of the International Stereotypers' and Electrotypers' Union, favoring the conscription of all foodstuffs and the regulation of prices and distribution; to the Committee on Agriculture.

Also (by request), petition of United Garment Workers' Union No. 131, protesting against the abrogation of existing laws or agreements restricting or regulating immigration; to the Committee on Immigration and Naturalization.

Also (by request), petition of the Ladies' Auxiliary, Ancient Order of Hibernians in America, relative to the freedom of Ireland; to the Committee on Foreign Affairs.

Also (by request), petition of James McClintock, rector of St. Barnabas Protestant Episcopal Church; Lee E. Rife, pastor of Norris Square United Presbyterian Church; and John Parks, pastor of the Fifth Reformed Presbyterian Church, all of Philadelphia, signing for 14 churches of various denominations, in favor of prohibition as a war measure; to the Committee on the Judiciary.

By Mr. ANTHONY: Petitions of C. E. Holman and others, of Highland, and Samuel Hensi and others, of White Cloud, Kans., and vicinity, favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. BLAND: Petition of 500 citizens of Lyons and Levity City, Ind., relative to the liquor question; to the Committee on the Judiciary.

By Mr. BURROUGHS: Petition of Belknap County (N. H.) Pomona Grange, praying for legislation fixing maximum and

minimum prices for foodstuffs in order to stop the manipulating and gambling in the necessities of life; to the Committee on Agriculture.

By Mr. COOPER of Ohio: Petition of citizens of Hubbard and the Woman's Christian Temperance Union of North Benton, Ohio, favoring prohibition as war measure; to the Committee on the Judiciary.

By Mr. DALE of New York: Petition of the New York State Automobile Association, protesting against the proposed tax of 1 per cent on list price of automobiles from the factory, with no reduction for age or wear and tear of car; to the Committee on Ways and Means.

By Mr. DOWELL: Memorial of the Allied Temperance Committee of Iowa, relative to prohibition as a war measure; to the Committee on the Judiciary.

By Mr. DRUKKER: Petition of sundry citizens of Paterson, N. J., favoring woman suffrage; to the Committee on the Judiciary.

By Mr. FAIRFIELD: Petitions of 2,710 residents of Fort Wayne; Anderson Methodist Church, with a membership of 1,200; 45 residents of Valentine; Whitley County Sunday School Association, with a membership of 4,000; Woodburn Woman's Christian Temperance Union; Auburn Sunday schools, with a membership of 750; residents of Fremont totaling 320; Noble County Woman's Christian Temperance Union; Wolcotville Methodist Episcopal Church, with a membership of 200; Fort Wayne Box Co.; 260 residents of Coesse; Kendallville Methodist Church, with a membership of 400; Columbia City Civic League of 600 members; Jasonville residents totaling 203; Howe Military School; Twelfth District State Federation of Clubs, with a membership of 1,500; Steuben County Sunday School Association; Ashley Methodist Episcopal Church; Ligonier Methodist Church, with membership of 300; 400 residents of Waterloo, attending a public meeting; 200 residents of Larwill; Ray Sunday school convention of 250; 100 residents of Avilla; all in the State of Indiana, respectfully requesting Congress to enact Nation-wide prohibition as a war measure; to the Committee on the Judiciary.

By Mr. FOSS: Petition of sundry citizens of Evanston, Ill., favoring food conservation and national prohibition; to the Committee on the Judiciary.

By Mr. FREEMAN: Petition of A. G. Rowley and others, of South Coventry, Conn., favoring food conservation and prohibition; to the Committee on the Judiciary.

Also, petition of the Windham Association of Congregational Churches and Ministers of Connecticut, favoring national prohibition; to the Committee on the Judiciary.

Also, petition of the Manufacturers' Association of Connecticut, favoring the passage of the bill to provide daylight saving; to the Committee on Interstate and Foreign Commerce.

By Mr. FULLER of Illinois: Memorial of the Merchants' Association of New York, favoring legislation for food control; to the Committee on Agriculture.

Also, petition of Swan Lindskeld and 106 others, of Rockford, Ill., favoring prohibition as a war measure; to the Committee on the Judiciary.

Also, petition of Gartner & Bender, of Chicago, Ill., opposing an increase of postage on post cards; to the Committee on Ways and Means.

Also, petition of the Joliet, Ill., Manufacturing Co., protesting against an increase in letter postage; to the Committee on Ways and Means.

By Mr. GANDY: Memorial of the congregation of the First Presbyterian Church of Sturgis, and sundry citizens of Faith and Hot Springs, S. Dak., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. HAMILTON of New York: Petition of citizens of Jamestown, N. Y., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. HASTINGS: Memorial of the Oklahoma State Board of Agriculture, regarding the food situation; to the Committee on Agriculture.

By Mr. HERSEY: Petition of the union meeting of churches of Bangor, Me., Rev. B. P. Brown, moderator, urging Congress to pass a national prohibitory law; to the Committee on the Judiciary.

By Mr. KENNEDY of Rhode Island: Petition of Harry Tattersall, John Lee, Robert J. Clear, Louis McGowan, William T. Connolly, Fred Wright, Frank J. Wilde, George F. Street, Joseph Hilton, John Richardson, Norman H. Smith, Howard D. Hawkins, Hugh McKeon, Charles V. Andrews, James H. Whalen, E. A. Fiske, J. C. Singele, John McKnight, L. A. Asquith, and James Haigh, all of Pawtucket; Lester D. Patt, Joseph Steveson, Everett I. Patt, and James Jamieson, all of Central Falls; and Lester B. Davenport, of Lincoln, all in the State of Rhode Island, favoring food-control legislation; to the Committee on Agriculture.

By Mr. KIESS of Pennsylvania: Petition of citizens of North Bingham, Pa., favoring national prohibition; to the Committee on the Judiciary.

By Mr. LINTHICUM: Petition of John R. Hooper, of Baltimore, Md., praying that a tax of 2 cents be put upon all checks; to the Committee on Ways and Means.

Also, petition of the Frederick W. Lipps Co. requesting strenuous opposition to the proposition to tax confectionery, as follows: 5-cent packages 1 cent, 10-cent packages 1½ cents, 15-cent packages 2 cents, 20-cent packages 2½ cents, 25-cent packages 3 cents; to the Committee on Ways and Means.

Also, petition of the Neudecker Tobacco Co. vigorously protesting the passage of the law taxing profits at the rate of 16 per cent on an amount exceeding the average profits for three years, namely, 1911, 1912, 1913; to the Committee on Ways and Means.

Also, petition of Miss Lulie P. Hooper, of Baltimore, Md., urging the creation of zones around all military camps; to the Committee on Military Affairs.

Also, petition of sundry citizens of Maryland, favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. LONERGAN: Resolution of the Connecticut State Association of Letter Carriers, opposing contributory pension; to the Committee on the Post Office and Post Roads.

By Mr. LUNN: Petition of Rev. John Landry and members of the Methodist Church, of Canajoharie, N. Y., praying for prohibition of the manufacture of alcoholic liquors as a measure of food conservation, and for the immediate prohibition of the sale of liquors for beverage purposes in order to conserve the health, wealth, labor, transport facilities, and military efficiency of the people; to the Committee on the Judiciary.

Also, petition of James N. Lorber and sundry citizens of Broadalbin, N. Y., praying for prohibition of the manufacture of alcoholic liquors as a measure of food conservation, and for the immediate prohibition of the sale of liquors for beverage purposes in order to conserve the health, wealth, labor, transport facilities, and military efficiency of the people; to the Committee on the Judiciary.

Also, petition of Rev. Walter C. Carrol and members of the Methodist Episcopal Church of Northampton, N. Y., praying for the immediate enactment of prohibition of the manufacture of alcoholic liquors as a measure of food conservation and for the immediate prohibition of the sale of liquors for beverage purposes in order to conserve the health, wealth, labor, transport facilities, and military efficiency of the people; to the Committee on the Judiciary.

Also, petition of Mary Derby Drew and members of the parent teachers' association of the Van Corlear School, Schenectady, N. Y., praying for enactment of effective prohibition of the use of any kind of foodstuff during the war for the manufacture of intoxicating beverages, and to limit liquors on hand to nonbeverage uses; also to protest against increasing the tax on liquors thus raising a higher revenue barrier to securing national prohibition; to the Committee on the Judiciary.

Also, petition of Rev. L. A. Bard and sundry members of the Methodist Episcopal Churches of Scotia and Center, Glenville, N. Y., praying for enactment of total prohibition of the manufacture and sale of intoxicating liquors, including wine and beer, during the war; also against increased taxation of liquor business; to the Committee on the Judiciary.

Also, petition of Ernest Miste and members of the Baraca Class of the First Baptist Church of Gloversville, N. Y., praying the enactment of prohibition in the manufacture of alcoholic liquors, and to limit the liquors on hand to nonbeverage uses, as a measure to conserve foodstuffs; to the Committee on the Judiciary.

Also, petition of Rev. Lewis E. Corter and members of the Ministerial Association of Schenectady, N. Y., and vicinity, praying for the entire prohibition of the manufacture and sale of intoxicating liquors during the period of the war; to the Committee on the Judiciary.

Also, petition of Mr. A. W. Henshaw, the joint boards of elders, deacons, and trustees of the Union Presbyterian Church, of Schenectady, N. Y., praying for the enactment of prohibition of the use of grain for the manufacture of alcoholic liquor in the United States during the period of the war; to the Committee on the Judiciary.

By Mr. McKENZIE: Memorial of citizens of Milledgeville, Ill., favoring national prohibition; to the Committee on the Judiciary.

By Mr. MAGEE: Petition of residents of the village of Marcellus, N. Y., in favor of national prohibition; to the Committee on the Judiciary.

Also, petition of Mr. R. H. Herring, of 123 Westminster Avenue, Syracuse, N. Y., in favor of national prohibition; to the Committee on the Judiciary.

By Mr. MILLER of Minnesota: Petition of sundry citizens of Deer River, Minn., favoring national prohibition; to the Committee on the Judiciary.

By Mr. MORIN: Petition of the Wolfe Tome Club of Pittsburgh, Pa., pledging the loyal service which the Irish race has ever given in times of national crisis and urging that this Government insist that England withdraw her forces from Ireland and renounce all claim to rule over an unwilling people; to the Committee on Foreign Affairs.

By Mr. O'SHAUNESSY: Petition of members of the women's class of the First Baptist Church of Providence, R. I., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. POLK: Memorial of Pomona Grange No. 1, Stanton, Del., relative to prohibition during the war; to the Committee on the Judiciary.

By Mr. POWERS: Petition of the Baptist Church of Livingston, Ky., for the interning of all saloons, barrooms, and other places where intoxicating liquors are sold as a war measure; to the Committee on Military Affairs.

By Mr. RAKER: Petition of 20 citizens of Whitmore, Cal., against the conscription act; to the Committee on Military Affairs.

Also, petition of E. W. Murphy, of Los Angeles, Cal., favoring the bill for the revision of postal rates; to the Committee on the Post Office and Post Roads.

Also, petition of Dr. Harry P. Beaser, of Fresno, Cal., indorsing the dental section of the national-defense bill; to the Committee on Military Affairs.

Also, petition of Henry B. Halfield, of Berkeley, Cal., against exempting from tax gifts, bequests, etc.; to the Committee on Ways and Means.

Also, petition of John L. Seaton, of San Jose, Cal., relative to exempting from tax bequests for educational and scientific purposes; to the Committee on Ways and Means.

By Mr. ROWE: Petition of the Champlain Silk Mills, of New York, relative to legislation proposed in House bill 4630; to the Committee on Agriculture.

Also, petitions of Franklin Avenue Presbyterian Church and sundry citizens of Brooklyn, N. Y., favoring prohibition as a war measure; to the Committee on the Judiciary.

Also, petition of the Brewer Bag Co., of New York, favoring House resolution 73, relative to interference with American trade and shipping; to the Committee on Foreign Affairs.

Also, petitions of J. A. Auble and S. J. Rees, of Brooklyn, N. Y., against an increase of second-class postage; to the Committee on Ways and Means.

By Mr. SANDERS of New York: Petition of Mr. Sherman Russell and 11 other residents of Stafford, Genesee County, N. Y., favoring national prohibition as a war measure; to the Committee on Military Affairs.

By Mr. SNELL: Petition of citizens of Westville, N. Y., for full national prohibition of the manufacture, sale, and transportation of intoxicating beverages for the period of the war in conservation of the man power, military and industrial efficiency, and the food supply of the Nation, and that all liquors now in bonded warehouses and elsewhere shall be commandeered by the Government and redistilled for undrinkable alcohol, to be purchased by the Government for war purposes, and that we oppose an increase in the tax on intoxicating liquors as a means of raising a revenue to prosecute the war; to the Committee on the Judiciary.

Also, petition of citizens of Harrietstown, N. Y., for full national prohibition of the manufacture, sale, and transportation of intoxicating beverages for the period of the war in conservation of the man power, military and industrial efficiency, and the food supply of the Nation, and that all liquors now in bonded warehouses and elsewhere shall be commandeered by the Government and redistilled for undrinkable alcohol, to be purchased by the Government for war purposes, and that we oppose an increase in the tax on intoxicating liquors as a means of raising a revenue to prosecute the war; to the Committee on the Judiciary.

By Mr. TAGUE: Petition of the Massachusetts State Federation of Women's Clubs, favoring prohibition as a war measure; to the Committee on the Judiciary.

Also, petitions of Samuel W. McCall and the War Emergency Committee of the Baking Industry, favoring the conservation of food products; to the Committee on Agriculture.

By Mr. TIMBERLAKE: Petition of sundry citizens of Merino, Colo., favoring prohibition as a war measure; to the Committee on the Judiciary.

SENATE.

SATURDAY, *June 16, 1917.*

(Legislative day of Friday, June 15, 1917.)

The Senate reassembled at 12 o'clock m., on the expiration of the recess.

CONSERVATION OF FOOD AND FUEL.

Mr. GORE. Mr. President, out of order I desire to say that I am directed by the Committee on Agriculture and Forestry to report back the bill which I send to the desk, without amendment and without recommendation. It is the so-called Lever bill in relation to food conservation.

The VICE PRESIDENT. The bill will be read by title.

The SECRETARY. A bill (S. 2463) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel.

Mr. HARDWICK. Mr. President, I desire to give notice that in connection with the bill just reported at the proper time I shall raise the constitutional question that the Senate has no right to originate bills that undertake to raise revenue as this bill does, and that that matter shall be submitted to the judgment of the Senate before any action is taken by the Senate on the measure.

Mr. GALLINGER. Did I understand the Senator from Oklahoma to say that the bill is reported without recommendation?

Mr. GORE. Yes, sir; that is my statement.

Mr. GALLINGER. Have the committee given it careful consideration?

Mr. GORE. I will say, Mr. President, that there have been several bills in relation to this subject generally, varying slightly in detail but not at all, I will say, varying in principle. From time to time the committee has considered measures of this character. Indeed we had elaborate hearings on the subject generally but not on this particular bill. The bill is reported without recommendation for final action by the Senate for reasons I deem it unnecessary to explain at this time, but which the committee may take occasion to explain later.

Mr. GALLINGER. As I have casually glanced at the bill during its somewhat tempestuous voyage in the House I have thought it was a bill of great consequence. I observed that it was referred to the committee on yesterday, and I wondered how much attention the committee had given to it before making the report.

Mr. GORE. I will say the substance and the principles and the details involved in the bill have received a great deal of attention at the hands of the committee, certainly at the hands of members of the committee. We had hearings extending over three or four weeks on the subject of the bill.

Mr. VARDAMAN. I ask the Senator if the bill has been printed?

Mr. GORE. It has been printed. The members of the committee will express their individual judgment concerning the matter, but it is deemed desirable by some that the discussion should begin, because the friends of the measure think that its efficiency and efficacy will largely depend upon the date of its passage, and unless it should be enacted into law before the present harvest is marketed it would lose much that it is desired to accomplish by the measure.

Mr. GALLINGER. I will ask the Senator further whether a written report will be submitted with the bill?

Mr. GORE. There is no written report concerning the measure because no amendments have been recommended by the committee. I may say to the Senator that there is quite a diversity of views among the members of the committee in regard to this proposed legislation.

Mr. GALLINGER. I thought that was probably so.

Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Hollis	Newlands	Smith, Md.
Brady	Husting	Norris	Smith, Mich.
Brandegee	Johnson, S. Dak.	Owen	Smith, S. C.
Chamberlain	Jones, Wash.	Page	Smoot
Culberson	Kendrick	Phelan	Sterling
Cummins	Kenyon	Pittman	Swanson
Curtis	King	Poindexter	Thomas
Dillingham	Kirby	Pomerene	Thompson
Fernald	Lewis	Ransdell	Trammell
Gallinger	Lodge	Reed	Vardaman
Gerry	McCumber	Robinson	Wadsworth
Gore	McKellar	Shafroth	Warren
Gronna	McLean	Sheppard	Watson
Hale	McNary	Simmons	Williams
Hardwick	Nelson	Smith, Ariz.	
Hitchcock	New	Smith, Ga.	

Mr. CURTIS. I announce the absence of the junior Senator from Maryland [Mr. FRANCE] on account of illness. I will allow this announcement to stand for the day.

Mr. SMITH of Michigan. I desire to announce the unavoidable absence of my colleague [Mr. TOWNSEND] on account of sickness in his family. I wish to have this announcement stand for the day.

Mr. THOMPSON. I desire to announce that the junior Senator from Delaware [Mr. WOLCOTT] is necessarily absent on official business.

Mr. NELSON. I wish to state that my colleague [Mr. KELLOGG] is necessarily absent on account of important business. He is paired with the senior Senator from North Carolina [Mr. SIMMONS].

Mr. McKELLAR. I desire to announce that my colleague [Mr. SHIELDS] is absent because of illness.

Mr. POMERENE. I was requested to announce that the senior Senator from Delaware [Mr. SAULSBURY] is absent on account of important business.

Mr. LEWIS. I desire to announce that the junior Senator from Kentucky [Mr. BECKHAM] is detained on important business.

The VICE PRESIDENT. Sixty-two Senators have answered to the roll call. There is a quorum present.

HEARINGS BEFORE THE COMMITTEE ON PUBLIC LANDS.

Mr. THOMPSON, from the Committee to Audit and Control the Contingent Expenses of the Senate, to which was referred Senate resolution 84, submitted by Mr. MYERS on the 14th instant, reported it without amendment, and it was considered by unanimous consent and agreed to, as follows:

Resolved, That the Committee on Public Lands, or any subcommittee thereof, be, and hereby is, authorized during the Sixty-fifth Congress, to send for persons, books, and papers, to administer oaths, and to employ a stenographer, at a cost not exceeding $1 per printed page, to report such hearings as may be had in connection with any subject which may be pending before said committee, the expenses thereof to be paid out of the contingent fund of the Senate, and that the committee, or any subcommittee thereof, may sit during the sessions or recess of the Senate.

PETITIONS.

Mr. GALLINGER presented a petition of the Good Neighbors' Circle of the King's Daughters of the First Congregational Church of Concord, N. H., praying for national prohibition, which was ordered to lie on the table.

He also presented a petition of Belknap County Pomona Grange, No. 4, Patrons of Husbandry, of Laconia, N. H., praying for the fixing of maximum and minimum prices on food products, which was referred to the Committee on Agriculture and Forestry.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. GALLINGER:

A bill (S. 2465) providing for the purchase of the "Dean tract," so called, in the District of Columbia, for a public park; to the Committee on the District of Columbia.

By Mr. POMERENE:

A bill (S. 2466) granting a pension to Lafayette Fasnaugh (with accompanying papers); to the Committee on Pensions.

By Mr. WATSON:

A bill (S. 2467) fixing the status as naturalized citizens of enlisted men, commissioned officers of the Army, Navy, or Marine Corps; to the Committee on Military Affairs.

WAR REVENUE.

Mr. HOLLIS submitted an amendment intended to be proposed by him to the bill (H. R. 4280) to provide revenue to defray war expenses, and for other purposes, which was referred to the Committee on Finance and ordered to be printed.

REGULATION OF FOOD PRICES.

Mr. HOLLIS. Mr. President, I ask unanimous consent to have placed in the RECORD, without reading, an article on "The Federal power to regulate commodity prices under the commerce clause," by Mr. Edward A. Adler, a distinguished lawyer of Boston, Mass.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NOTES ON THE FEDERAL POWER TO REGULATE COMMODITY PRICES UNDER THE COMMERCE CLAUSE.

[Copyrighted 1917 by Edward A. Adler.]

The question of power must not be confused with considerations of expediency and administrative details. It is also to be observed at the outset that the power of a State to regulate prices results from its sovereignty, while that of the United States must be derived from the Constitution.

A.—LEGISLATIVE POWER IN GENERAL OVER PRICES AND RATES.

1. HISTORICAL.

As is well known, price regulation, historically considered, is one of the most commonplace phenomena. In England the following price-fixing statutes, among others, may be noted:

23 Edward III (1349); the statute of laborers, fixing prices of all kinds; 37 Edward III (1363), poultry; 25 Henry VIII (1533), chapter 2, produce; 25 Henry VIII, chapter 8, books; 25 Henry VIII (1543), beer barrels; 16 and 17 Charles II, coal; 3 P. and M., rates of land carriage.

In our own country the Colony of Massachusetts Bay, at a general court held in "Newe Towne" on September 1, 1635, passed the following enactment:

"Whereas two former laws, the one concerning the wages of workmen, the other concerning the prices of commodities, were for divers good considerations repealed, this present court now, for avoiding such mischiefs as may follow thereupon by such ill-disposed persons as may take liberty to oppress and wrong their neighbors by taking excessive wages for work or unreasonable prices for such necessary merchandises or other commodities as shall pass from man to man, it is therefore now ordered that if any man shall offend in any of the said cases against the true intent of this law he shall be punished by fine or imprisonment according to the quality of the offense as the court upon lawful trial and conviction shall adjudge."

In 1777 an elaborate tariff of charges for labor and merchandise was enacted for the city of Boston, but was repealed in the same year. In 1780 the State of New York, on suggestion of the Continental Congress, passed "An act for a general limitation of prices and to prevent engrossing and holding within the State," which provided that the prices of all articles of domestic produce (as well as farming and common labor and the wages of tradesmen and mechanics) should not exceed certain rates, which were specified in great detail as to commodities, ranging from rendered hog lard to manufactured steel and new scythes; and further provided that if any person having more of any such article or articles than might be necessary for his family's use or subsistence or for carrying on his trade or business should refuse to sell the overplus, or a reasonable part thereof, to any person who might be in want of the same for his family's use or subsistence or for carrying on his trade or business, the persons desiring to purchase might apply to any justice of the peace where the person having such overplus resided; and if it should be evident to the justice that the party complained of was possessed of a greater quantity than was thus necessary, the justice might issue a warrant to the constable empowering him to call to his assistance as many persons as might be necessary and take such proportion of the overplus as might be necessary for the supply of the complainant, the same to be sold to the complainant, and the money, after deducting $10 for the justice's fees, together with other necessary and reasonable costs for the constable and his assistants, to be lodged in the hands of the justice, to be by him delivered to the owner when he applies for the same.

These statutes were typical of many others and suffice for illustration. By slow degrees, however, and step by step with economic change, exertion of the power of price control died out in this country and by the close of the Civil War was practically nonexistent, although a general memory of the regulation of canal, turnpike, mill, ferry, and wharfage tolls still lingered in the judicial mind. So true was this that when the regulation of railroad rates was first proposed it was strenuously resisted.

2. RECRUDESCENCE OF PRICE REGULATION.

One of the first acts of this character was a statute of Iowa, passed in 1874, entitled "An act to establish reasonable maximum rates of charges for the transportation of freight and passengers on the different railroads of this State." The constitutionality of this statute was tested in Chicago, Burlington & Quincy R. R. Co. *v.* Iowa (94 U. S., 155, 1876). It was argued that the act, so far as it prescribed the rates of compensation for the transportation of persons and property, was not a police regulation and could not be maintained under the police power of the State. But the court (Waite, C. J.) pointed out that it was a mistake to assume that because this general legislative power had long lain dormant it had thereby ceased to exist. The Chief Justice said:

"In 1691, during the third year of the reign of William and Mary, Parliament provided for the regulation of the rates of charges by common carriers. This statute remained in force, with some amendment, until 1827, when it was repealed, and it has never been reenacted. No one supposes that the power to restore its provisions has been lost. A change of circumstances seemed to render such a regulation no longer necessary, and it was abandoned for the time. The power was not surrendered. That remains for future exercise, when required. So here the power of regulation existed from the beginning, but it was not exercised until in the judgment of the body politic the condition of things was such as to render it necessary for the common good."

In the same year the celebrated case of Munn *v.* Illinois (94 U. S., 113, 1876) came before the same court. This case involved the constitutionality of a statute of Illinois, fixing the maximum charges for the storage of grain in warehouses at Chicago and other places in the State having not less than 100,000 inhabitants. It appeared that at that time there were in Chicago 14 warehouses adapted to this particular business, owned by about 30 persons comprised in 9 business firms, and that the prices charged and received for storage were such as were agreed upon and established from year to year and published in one or more newspapers in the month of January of each year as the established rate for the year then next ensuing. The court, in sustaining the statute, used the following language paraphrased from the remarks of Lord Chief Justice Hale in his treatise De Portibus Maris:

"Looking, then, to the common law, from whence came the right which the Constitution protects, we find that when private property is 'affected with a public interest, it ceases to be juris privati only' * * * property does become clothed with a public interest when used in a manner to make it of public consequence and affect the community at large. When, therefore, one devotes his property to a use in which the public has an interest, he, in effect, grants to the public an interest in that use, and must submit to be controlled by the public for the common good, to the extent of the interest he has thus created."

Reference was also made to the remarks of Lord Ellenborough in the case of Allnutt *v.* Inglis (12 East, 527, 1810) to the effect that—

"There is no doubt that the general principle is favored, both in law and justice, that every man may fix what price he pleases upon his

own property or the use of it; but if for a particular purpose the public have a right to resort to his premises and make use of them, and he have a monopoly in them for that purpose, if he will take the benefit of that monopoly he must, as an equivalent, perform the duty attached to it on reasonable terms."

A similar situation came before the Supreme Court in the case of Budd *v.* New York (143 U. S., 517, 1892), involving an act of the Legislature of New York, providing for a maximum charge for elevating, receiving, weighing, and discharging grain. Munn *v.* Illinois was reviewed and reaffirmed. Mr. Justice Brewer, with whom Justices Field and Brown concurred, dissented.

"Everything the manner and extent of whose use affects the well being of others," he said, "is property in whose use the public has an interest. Take, for instance, the only store in a little village. All the public of that village are interested in it; interested in the quantity and quality of the goods on its shelves, and their prices, in the time at which it opens and closes, and, generally, in the way in which it is managed; in short, interested in the use. Does it follow that that village public has a right to control these matters? That which is true of the single small store in the village is also true of the largest mercantile establishment in the great city. The magnitude of the business does not change the principle. There may be more individuals interested, a larger public, but still the public. The country merchant who has a small warehouse in which the neighboring farmers are wont to store their potatoes and grain preparatory to shipment occupies the same position as the proprietor of the largest elevator in New York. The public has in each case an interest in the use, and the same interest, no more and no less. I can not bring myself to believe that when the owner of property has by his industry, skill, and money made a certain piece of his property of large value to many, he has thereby deprived himself of the full dominion over it which he had when it was of comparatively little value; nor can I believe that the control of the public over one's property or business is at all dependent upon the extent to which the public is benefited by it.

"Surely the matters in which the public has the most interest are the supplies of food and clothing, yet can it be that by reason of this interest the State may fix the price at which the butcher must sell his meat, or the vendor of boots and shoes his goods? Men are endowed by their Creator with certain inalienable rights, 'life, liberty, and the pursuit of happiness'; and to 'secure,' not grant or create, these rights governments are instituted. That property which a man has acquired he retains full control of subject to these limitations: First, that he shall not use it to his neighbor's injury, and that does not mean that he must use it for his neighbor's benefit; second, that if he devotes it to a public use he gives to the public a right to control that use; and, third, that whenever the public needs require, the public may take it upon payment of due compensation.

"It is suggested that there is a monopoly, and that that justifies legislative interference. There are two kinds of monopoly: one of law, the other of fact. The one exists when exclusive privileges are granted. Such a monopoly, the law which creates alone can break, and being the creation of law justifies legislative control. A monopoly of fact any one can break, and there is no necessity for legislative interference. It exists where any one by his money and labor furnishes facilities for business which no one else has. A man puts up in a city the only building suitable for offices. He has therefore a monopoly of that business; but it is a monopoly of fact, which any one can break who, with like business courage, put his means into a similar building. Because of the monopoly feature, subject thus easily to be broken, may the legislature regulate the price at which he will lease his offices? So here there are no exclusive privileges given to these elevators. They are not upon public ground. If the business is profitable anyone can build another; the field is open for all the elevators and all the competition that may be desired. If there be a monopoly it is one of fact and not of law, and one which any individual can break."

3. MODERN AMERICAN THEORY OF REGULATION AS APPLIED TO BUSINESSES.

Until quite recently there has been great confusion in the minds of American lawyers as to the true basis of the power of regulation in general and of business in particular, and this confusion has persisted to some extent to the present time. It would carry us too far afield to go into the subject generally in this memorandum and to deal with the power to regulate (which is really the power to legislate) in its widest aspects. We will confine ourselves to businesses which are by many supposed to be beyond the power of regulation unless they are public. Declare them public, first describe them as "public utilities," and then, curiously enough, those who entertain these views have little difficulty in conceding the power to regulate.

Consider the opinion of the court (Chief Justice Waite) in Munn *v.* Illinois and the dissenting opinion of Mr. Justice Brewer in Budd *v.* New York. At first glance these two opinions seem to be irreconcilable, but in reality they are not so. Chief Justice Waite did not state the whole truth and nothing but the truth when he said that when "one devotes his property to a use in which the public has an interest, he, in effect, grants to the public an interest in that use and must submit to be controlled by the public for the common good." The one thing that the owners of the elevators contended that they did not do was "to grant" a public right. Justice Brewer was quite right when he declared that "the country merchant who has a small warehouse in which the neighboring farmers are wont to store their potatoes and grain preparatory to shipment occupies the same position as the proprietor of the largest elevator in New York. The public has in each case an interest in the use, and the same interest, no more and no less."

The great source of difficulty lay in the failure of both justices to perceive or, at least, fully to state what I have pointed out at length in my essay on "Business jurisprudence" and on "Labor, capital, and business at common law" (Harvard Law Review, December, 1914, and January, 1916), namely, that at common law there is no such thing as private business, that all business from its nature is and must be public, and that the only way in which one business differs from another is in the degree of public interest.

In some respects a more accurate statement of the basis of the right to regulate was made by the Court of Appeals of New York in People *v.* Budd (Budd *v.* N. Y., below) (117 N. Y., 127, 1889), as follows:

"The attempts made to place the right of public regulation in these cases upon the ground of special privilege conferred by the public on those affected can not, we think, be supported. The underlying principle is that business of certain kinds hold such a peculiar relation to public interests that there is superinduced upon it the right of public regulation. We rest the power of the legislature to control and regulate elevator charges on the nature and extent of the business, the existence of a virtual monopoly, the benefit derived from the canal, creating the business and making it possible, the interest to trade and commerce, the relation of the business to the prosperity and welfare of the State, and the practice of legislation in analogous cases. These circumstances, collectively, create an exceptional case and justify legislative regulation."

Some two years after the decision in Budd *v.* New York, the nature and extent of the legislative power to control prices and rates was further illuminated in the case of Brass *v.* Stoeser (153 U. S., 391, 1894). This case involved a statute of North Dakota, regulating grain warehouses and the weighing and handling of grain, fixing rates of storage, and requiring owners to keep insurance for the benefit of those storing grain with them. In the case before the court there was no monopoly such as might have been considered to exist in the terminal warehouses in Chicago and Buffalo. It appeared that there were literally hundreds of elevators scattered throughout the State; that at every station there was land purchasable at $1.25 to $40 per acre; and that a granary sufficient to store the average product of a Dakota farm could be erected at a cost not exceeding $150. But the Supreme Court said:

"When it is once admitted, as it is admitted here, that it is competent for the legislative power to control the business of elevating and storing grain, whether carried on by individuals or associations, in cities of one size and in some circumstances, it follows that such power may be legally exerted over the same business when carried on in smaller cities and in other circumstances. It may be conceded that that would not be wise legislation which provided the same regulations in every case and overlooked differences in the facts that called for regulations. But, as we have no right to revise the wisdom or expediency of the law in question, so we would not be justified in imputing an improper exercise of discretion to the Legislature of North Dakota. It may be true that, in the cases cited, the judges who expressed the conclusions of the court entered, at some length, into a defense of the propriety of the laws which they were considering, and that some of the reasons given for sustaining them went rather to their expediency than to their validity. Such efforts, on the part of judges, to justify to citizens the ways of legislatures are not without value, though they are liable to be met by the assertion of opposite views as to the practical wisdom of the law, and thus the real question at issue, namely, the power of the legislature to act at all, is obscured. Still, in the present instance, the obvious aim of the reasoning that prevailed was to show that the subject matter of these enactments fell within the legitimate sphere of legislative power, and that, so far as the laws and Constitution of the United States were concerned, the legislation in question deprived no person of his property without due process of law, and did not interfere with Federal jurisdiction over interstate commerce."

So the law stood for the next 20 years, when, in the case of German Alliance Insurance Company *v.* Kansas (233 U. S., 389, 1914), Mr. Justice McKenna made a notable contribution to American legal theory. This case involved a Kansas statute entitled "An act relating to fire insurance, and to provide for the regulation and control of rates of premium thereon, and to prevent discrimination therein." There was nothing in the nature of monopoly as commonly understood. There were many fire insurance companies in Kansas doing business in each other's territory. It was purely a "private" business in the sense in which those words are usually employed. Speaking of the opposition encountered in the Bull and Munn cases, the court says (409):

"Every consideration was adduced, based on the private character of the business regulated, and, for that reason, the constitutional immunity from regulation, with all the power of argument and illustration of which that great judge (Justice Brewer) was a master. The considerations urged did not prevail. Against them the court opposed the ever-existing police power in government and its necessary exercise for the public good and declared its entire accommodation to the limitations of the Constitution. The court was not deterred by the charge (repeated in the case at bar) that its decision had the sweeping and dangerous comprehension of subjecting to legislative regulation all the businesses and affairs of life and the prices of all commodities."

Again, referring to Brass *v.* Stoeser:

"It extended the principle of the two other cases and denuded it of the limiting element which was supposed to beset it—that to justify regulation of a business the business must have a monopolistic character."

Continuing (411):

"The cases need no explanatory or fortifying comment. They demonstrate that a business, by circumstances and its nature, may rise from private to be of public concern and be subject, in consequence, to governmental regulation."

The opinion in this case is epoch making, and no abstract can do it justice. The following extracts, however, are of special importance in the present connection (p. 413):

"Complainant feels the necessity of accounting for the regulatory State legislation and refers it to the exertion of the police power but, while expressing the power in the broad language of the cases, seeks to restrict its application. Counsel states that this power may be exerted to 'pass laws whose purpose is the health, safety, morals, and the general welfare of the people.' The admission is very comprehensive. What makes for the general welfare is necessarily in the first instance a matter of legislative judgment and a judicial review of such judgment is limited. 'The scope of judicial inquiry in deciding the question of power is not to be confused with the scope of legislative considerations in dealing with the matter of policy. Whether the enactment is wise or unwise, whether it is based on sound economic theory, whether it is the best means to achieve the desired result, whether, in short, the legislative discretion within its prescribed limits should be exercised in a particular manner, are matters for the judgment of the legislature, and the earnest conflict of serious opinion does not suffice to bring them within the range of judicial cognizance.' Chicago, Burlington & Quincy Railroad Co. *v.* McGuire (219 U. S., 549, 569)."

"The principle we apply is definite and old and has, as we have pointed out, illustrating examples. And both by the expression of the principle and the citation of the examples we have tried to confine our decision to the regulation of the business of insurance, it having become 'clothed with a public interest' and therefore subject 'to be controlled by the public for the common good.'"

"If there may be controversy as to the business having such character, there can be no controversy as to what follows from such character if it be established. It is idle, therefore, to debate whether the liberty of contract guaranteed by the Constitution of the United States is more intimately involved in price regulation than in the other forms of regulation as to the validity of which there is no dispute. The order of their enactment certainly can not be considered an element in

their legality. It would be very rudimentary to say that measures of government are determined by circumstances, by the presence or imminence of conditions, and of the legislative judgment of the means or the policy of removing or preventing them. The power to regulate interstate commerce existed for a century before the interstate-commerce act was passed, and the commission constituted by it was not given authority to fix rates until some years afterwards. Of the agencies which those measures were enacted to regulate at the time of the creation of the power, there was no prophecy or conception. Nor was regulation immediate upon their existence. It was exerted only when the size, number, and influence of those agencies had so increased and developed as to seem to make it imperative. Other illustrations readily occur which repel the intimation that the inactivity of a power, however prolonged, militates against its legality when it is exercised. (United States v. Delaware & Hudson Co., 213 U. S., 366.) It is oftener the existence of necessity rather than the prescience of it which dictates legislation. And so with the regulations of the business of insurance. They have proceeded step by step, differing in different jurisdictions. If we are brought to a comparison of them in relation to the power of government, how can it be said that fixing the price of insurance is beyond that power and the other instances of regulation are not?"

4. CONCLUSION.

At the present time the power of the State to legislate as to prices is indisputable. (See as to Stock Yards, 183 U. S., 79; Street Railways, 187 Mass., 436; Ferries, 109 Mass., 506; Bridges, 8 Fed., 190; Turnpike Roads, 164 U. S., 578; Telegraphs, 98 Fed., 335; Telephones, 105 Ind., 250; Artificial and Natural Gas, 71 Fed., 610; Water, 110 U. S., 347; Irrigation, 89 Fed. 274; Wharfage, 121 U. S., 444; Milling, 88 Me., 102; 40 W. Va., 480; Log Booming, 50 Fed., 902; Maximum Fee for Soliciting Pensions, 157 U. S., 160.)

Practically every American State has a commission to regulate the prices of services of so-called public utilities, and the list of services placed in the "public utility" group is an ever-increasing one. It is quite evident that the argument against the power of a State to fix prices generally must stand or fall with the acceptance or rejection of the "public utility" or "monopoly" theories of the basis of regulation. Since the decision of German Alliance Insurance Co. v. Kansas (233 U. S., 389, 1914), the Supreme Court has completely broken away from the old-fashioned notion that a concern must be a monopoly or enjoy the franchise or be like a common carrier before it can be regulated or become an object of public interest. What the court now directs its attention to is the business. Indeed, a careful reading of the opinions in Munn v. Illinois (194 U. S., 113, 1876), Budd v. New York (143 U. S., 517, 1892) and Brass v. Stoeser (153 U. S., 391, 1894) will show that the court has always had its mind intent upon the business, but has been confused in its reasoning by the thought that there was such a thing as private business, a proposition which I have attempted to refute in my studies in the Harvard Law Review already referred to.

In the German Alliance case the Supreme Court abandons all fanciful "public utility" distinctions and lays down the absolute rule that "The basis of the ready concession of the power of regulation is the public interest.' On page 416 they say:

"We may venture to observe that the price of insurance is not fixed over the counters of the companies by what Adam Smith calls 'the higgling of the market,' but is formed in the counsels of the underwriters, promulgated in schedules of practically controlling constancy which the applicant for insurance is powerless to oppose, and which, therefore, has led to the assertion that the business of insurance is of a monopolistic character and that 'it is illusory to speak of liberty of contract.' It is in the alternative presented of accepting the rates of the companies or refraining from insurance, business necessity impelling, if not compelling, that we may discover the inducements of the Kansas statute, and the problem presented is whether the legislature could regard it of as much moment to the public that they who seek insurance should no more be constrained by arbitrary terms than they who seek transportation by railroads, steam or street, or by coaches whose itinerary may be only a few city blocks, or who seek the use of grain elevators, or be secured in a night's accommodation at a wayside inn, or in the weight of a 5-cent loaf of bread. We do not say this to belittle such rights or to exaggerate the effect of insurance, but to exhibit the principle which exists in all and brings all under the same governmental power."

Throughout the cases one can trace the progressive application of one general principle—that of the exercise of the police power for the general welfare—to new cases and subject matter. Any limitation based upon the nature of the commodity or service affected is impossible. Take the case of natural gas, the right to regulate the price of which would readily be conceded. It has been expressly held that natural gas "is as much a commodity as iron ore, coal, or petroleum, or other products of the earth, and can be transported, bought, and sold as other products." (221 U. S., 256.) Conversely, iron ore, coal, or petroleum, or other products are no less commodities than natural gas.

This branch of the inquiry may be concluded with a reference to the case of Oklahoma Gin Co. v. State (158 Pac., 629), decided by the Supreme Court of Oklahoma on March 14, 1916, sustaining an order of the Oklahoma Corporation Commission under a statute, section 13 of which, based on the constitution of the State, was as follows:

"Whenever any business, by reason of its nature, extent, or the existence of a virtual monopoly therein, is such that the public must use the same, or its services, or the consideration by it given or taken or offered, or the commodities bought or sold therein are offered or taken by purchase or sale in such a manner as to make it of public consequence, or to affect the community at large as to supply, demand, or price or rate thereof, or said business is conducted in violation of the first section of this act, said business is a public business, and subject to be controlled by the State, by the corporation commission, or by an action in any district court of the State, as to all of its practices, prices, rates, and charges. And it is hereby declared to be the duty of any person, firm, or corporation engaged in any public business to render its services and offer its commodities, or either, upon reasonable terms, without discrimination, and adequately to the needs of the public, considering the facilities of said business."

The order sustained was the following:

"It is therefore ordered that the defendant, the Chandler Cotton Oil Co., a corporation; D. R. Owens, L. H. Rooney, Kate Gordon, and the Oklahoma Gin Co., gin custom cotton in the town of Chandler for 50 cents per 100 pounds lint cotton, with minimum charge of $2.50 per bale; that defendants furnish the standard bagging and ties at a price not to exceed 15 per cent above the wholesale cost thereof, with a minimum charge for bagging and ties of $1 per bale, and for the year 1913, the price of bagging and ties shall not exceed $1.15 per standard pattern. That the order heretofore issue by the commission for the year 1912, which was set aside upon the defendants giving bond to refund the difference to the parties entitled thereto of the amount charged and the amount finally fixed as the legal rate for ginning at Chandler, is hereby reinstated, and the reasonable charge for 1912 is 50 cents per 100 pounds for lint cotton, with a minimum of $2.50 per bale, with an additional charge of $1 for bagging and ties.

"The defendants are further ordered to permit any person who may have cotton ginned to go upon the premises for the purpose of getting the cotton and the seed; that the parties having cotton ginned shall call for the seed at the time the cotton is ginned, or as soon thereafter as may be convenient to the owner of the gin. That the refunds herein described shall be made by the 1st day of December, 1913. That this order shall be in full force and effect on and after the 1st day of November, 1913."

B.—THE POWER OF THE NATIONAL GOVERNMENT WITHIN THE SCOPE OF THE COMMERCE CLAUSE IS AS GREAT AS THAT OF ANY STATE.

As stated by Judge Cooley in his work on Constitutional Limitations (p. 732):

"It is not doubted that Congress has the power to go beyond the general regulations of Congress which it is accustomed to establish and to descend to the minutest directions if it should be deemed advisable, and that to whatever extent ground shall be covered by those directions, the exercise of State power is excluded. Congress may establish police regulations as well as the States, confining their operations to the subjects over which it is given control by the Constitution; but as the general police power can better be exercised under the provision of the local authority, and mischiefs are not likely to spring therefrom so long as the power to arrest collision resides in the National Congress, the regulations which are made by Congress do not often exclude the establishment of others by the State covering very many particulars."

Again, Judge Hughes, in the Minnesota Rate cases (230 U. S., 352, 398) made this summary statement:

"The powers of Congress to regulate commerce among the several States is supreme and plenary. It is 'complete in itself, may be exercised to its utmost extent, and acknowledges no limitations other than are prescribed in the Constitution.' (Gibbons v. Ogden, 9 Wheat., 1, 196.) * * * The words 'among the several States' distinguish between the commerce which concerns more States than one and that commerce which is confined within one State and does not affect other States. 'The genius and character of the whole Government,' said Chief Justice Marshal, 'seem to be that its action is to be applied to all the external concerns of the Nation, and to those internal concerns which affect the States generally; but not to those which are completely within a particular State, which do not affect other States, and with which it is not necessary to interfere, for the purpose of executing some of the general powers of the Government. The completely internal commerce of a State then may be considered as reserved for the State itself.' (Id., p. 195.) This reservation to the States manifestly is only of that authority which is consistent with and not opposed to the grant to Congress. There is no room in our scheme of Government for the assertion of State power in hostility to the authorized exercise of Federal power. The authority of Congress extends to every part of interstate commerce, and to every instrumentality or agency by which it is carried on; and the full control by Congress of the subjects committed to its regulation is not to be denied or thwarted by the commingling of interstate and intrastate operations. This is not to say that the Nation may deal with the internal concerns of the State as such, but that the execution by Congress of its constitutional power to regulate interstate commerce is not limited by the fact that intrastate transactions may have become so interwoven therewith that the effective government of the former incidentally controls the latter. This conclusion necessarily results from the supremacy of the national power within its appointed sphere."

To the same effect are the remarks of Chief Justice White in sustaining the constitutionality of the Adamson Act, which included the following:

"In the presence of this vast body of acknowledged powers there would seem to be no ground for disputing the power which was exercised in the act which is before us so as to prescribe by law for the absence of a standard of wages caused by the failure to exercise the private rights as a result of the dispute between the parties; that is, to exert the legislative will for the purpose of settling the dispute and bind both parties to the duty of acceptance and compliance to that end that no individual dispute or difference might bring ruin to the vast interests concerned in the movement of interstate commerce, for the express purpose of protecting and preserving which the plenary legislative authority granted to Congress was reposed. This result is further demonstrated, as we have suggested, by considering how completely the purpose intended to be accomplished by the regulations which have been adopted in the past would be rendered unavailing or their enactment inexplicable if the power was not possessed to meet a situation like the one with which the statute dealt. What would be the value of the right to a reasonable rate if all movement in interstate commerce could be stopped as a result of a mere dispute between the parties or their failure to exert a primary private right concerning a matter of interstate commerce? Again, what purpose would be subserved by all the regulations established to secure the enjoyment by the public of an efficient and reasonable service if there was no power in government to prevent all service from being destroyed? Further yet, what benefits would flow to society by recognizing the right, because of the public interest, to regulate the relation of employer and employee and of the employees among themselves and to give to the latter peculiar and special rights safeguarding their persons, protecting them in case of accident and giving efficient remedies for that purpose, if there was no power to remedy a situation created by a dispute between employers and employees as to rate of wages, which if not remedied, would leave the public helpless, the whole people ruined and all the homes of the land submitted to a danger of the most serious character? And finally, to what derision would it not reduce the proposition that government had power to enforce the duty of operation if that power did not extend to doing that which is essential to prevent operation from being completely stopped by filling the interregnum created by an absence of a conventional standard of wages because of a dispute on that subject between the employers and employees by a legislative standard binding on employers and employees for such a time as might be deemed by the legislature reasonably adequate to enable normal conditions to come about as the result of agreements as to wages between the parties?"

It must be apparent that the power of the National Government in the field of that commerce which concerns the people of the United States generally is in no way different from the power of the State over that commerce which concerns only the people within its borders. In some respects it might be said that the Federal Government has traveled further in the exercise of its power than have the States. The Adamson Act, for example, is a piece of legislation that in many respects is more far-reaching in its effect and implications than anything heretofore done by the States, and it is to be noted that the Supreme Court was unanimous in sustaining the power of the National Government in this field, subject only to the condition that it concerned commerce among the States. The dissenters did not deny the power. They differed on the question whether the statute related to commerce among the States or was a regulation of such commerce. Note their language.

Pitney, J.: "I am convinced in the first place that the act can not be sustained as a regulation of commerce, because it has no such object, operation, or effect.

"The primary and fundamental constitutional defect that I find in the act now under consideration is precisely this: That it undertakes to regulate the relations of common carriers by railroad to their employees in respect to a particular matter—an increase of wages—that has no real and substantial connection with the interstate commerce in which the carriers and their employees are engaged."

Day, J.: "I am not prepared to deny the Congress, in view of its constitutional authority to regulate commerce among the States, the right to fix by lawful enactment the wages to be paid to those engaged in such commerce in the operation of trains carrying passengers and freight. While the railroads of the country are privately owned, they are engaged in a public service, and because of that fact are subject in large measure to governmental control."

McReynolds, J.: "I have not heretofore supposed that such action was a regulation of commerce within the fair intendment of those words as used in the Constitution; and the argument advanced in support of the contrary view is unsatisfactory to my mind. I can not therefore concur in the conclusion that it was within the power of Congress to enact the statute."

The concurring opinion of Mr. Justice McKenna dealt merely with the meaning of the act. As to the matter of power he had no doubt.

"When one enters into interstate commerce," he says, "one enters into a service in which the public has an interest and subjects one's self to its behests. And this is no limitation of liberty; it is the consequence of liberty exercised, the obligation of his undertaking, and constrains no more than any contract constrains. The obligation of a contract is the law under which it is made and submission to regulation is a condition which attaches to one who enters into or accepts employment in a business in which the public has an interest."

In short, as Chief Justice Marshall said (Gibbons *v.* Ogden, 9 Wheat., 1, 197):

"If, as has always been understood, the sovereignty of Congress, though limited to specified objects, is plenary as to those objects, the power over commerce with foreign nations and among the several States is vested in Congress as absolutely as it would be in a single government having in its constitution the same restrictions on the exercise of the power as are found in the Constitution of the United States."

Finally it may be taken as settled that:

"If any one proposition could command the universal assent of mankind we might expect it would be this: That the Government of the Union, though limited in its powers, is supreme within its sphere of action. This would seem to result necessarily from its nature. It is a government of all; its powers are delegated by all; it represents all and acts for all." (Marshall, C. J., in McCulloch *v.* Maryland, 4 Wheat., 316.)

C. THIS POWER HAS BEEN EXERCISED BY THE NATIONAL GOVERNMENT IN A NUMBER OF WAYS.

As stated by Judge McPherson in Shawnee Milling Co. *v.* Temple (179 Fed., 517, 524, 1910), sustaining the constitutionality of the Federal pure food and drugs act:

"Congress has enacted a safety-appliance law for the preservation of life and limb. Congress has enacted the antitrust statute to prevent immorality in contracts and business affairs. Congress has enacted the live-stock sanitation act to prevent cruelty to animals. Congress has enacted the cattle contagious-disease act to more effectively suppress and prevent the spread of contagious and infectious diseases of live stock. Congress has enacted a statute to enable the Secretary of Agriculture to establish and maintain quarantine districts. Congress has enacted the meat-inspection act. Congress has enacted a second employer's liability act. Congress has enacted the obscene-literature act. Congress has enacted the lottery statute, above referred to. Congress has enacted (but a year ago) statutes prohibiting the sending of liquors by interstate shipment with the privilege of the vendor to have the liquors delivered C. O. D. and to prohibit shipments of liquors except when the name and address of the consignee and the quantity and kind of liquor is plainly labeled on the package. These statutes, police regulations in many respects, are alike in principle to the act of June 30, 1906, under consideration. Can it be possible they are all void?"

But it is interesting to note that in hardly any case has Congress asserted the full measure or anything approaching the full measure of its power. Examine, for instance, the following statutes:

(1) An act to regulate commerce (24 Stat. L., 379, 1887). This act was limited to "any common carrier or carriers engaged in the transportation of passengers or property" among the States, etc., but with the proviso that provisions of the act are not applied "to the transportation of passengers or property or to the receiving, delivering, storage, or handling of property wholly within one State and not shipped to or from a foreign country from or to any State or Territory." This statute has been frequently amended, and its comprehensiveness at the present time as to rates, service, connections, etc., is too well known to require repetition here.

(2) An act for preventing the manufacture, sale, or transportation of adulterated or misbranded or poisonous or deleterious foods, drugs, medicines, and liquors, and for regulating traffic therein, and for other purposes (34 Stat. L., 768, 1906). This act prohibited "the introduction into any state * * * from any other State * * * or from any foreign country * * * of any article of food or drugs" within the purview of the act and applied to persons shipping, receiving, and delivering.

(3) An act to promote the safety of employees and travelers upon railroads by limiting the hours of service thereon (34 Stat. L., 1415, 1907). This act was made to apply "to any common carrier or carriers * * * engaged in the transportation of passengers or property by railroad" between States, and "railroad" was defined so as to include "all bridges and ferries used or operated in connection with any railroad, and also all the road in use by any common carrier operating a railroad, whether owned or operated under a contract, agreement, or lease"; the term "employee" as used in the act was defined to mean person "actually engaged in or connected with the movement of any train."

(4) An act relating to liability of common carriers in the District of Columbia and Territories and common carriers engaged in commerce between the States and between the States and foreign nations to their employees (32 Stat. L., 232, 1906). This act applied to "every common carrier engaged in trade or commerce * * * between the several States" and made it liable "to any of its employees." This statute was held unconstitutional in Two hundred and seventh United States, 463 (1908) under a false conception, as I believe, of the commerce power, a phase of the matter which will be treated below.

(5) An act relating to the liability of common carriers by and to their employees in certain cases (35 Stat. L., 65, 1908). This statute was passed after the preceding one was declared unconstitutional and was restricted to "every common carrier while engaged in commerce" between the States for the benefit of "any person suffering injury while he is employed by such carrier in such commerce."

(6) Federal farm-loan act (July 17, 1916). This act reaches down to the farmers and the soil and provides that "10 or more natural persons who are the owners or about to become the owners of farm land qualified as security for a mortgage loan under section 12 of this act may unite to form a national farm-loan association"; also that "no persons but borrowers on farm-land mortgages shall be members or shareholders of national farm-loan associations"; also that loans may be made "for the following purposes, and no other:

"(a) To provide for the purchase of land for agricultural uses.

"(b) To provide for the purchase of equipment, fertilizers, and live stock necessary for the proper and reasonable operation of the mortgaged farm; the term 'equipment' to be defined by the Federal Farm Loan Board.

"(c) To provide buildings and for the improvement of farm lands; the term 'improvement' to be defined by the Federal Farm Loan Board.

"(d) To liquidate indebtedness of the owner of the land mortgaged existing at the time of the organization of the first national farm-loan association established in or for the county in which the land mortgaged is situated, or indebtedness subsequently incurred for purposes mentioned in this section."

(7) An act relating to bills of lading in interstate and foreign commerce (Aug. 29, 1916). This act only embraces bills of lading "issued by any common carrier for the transportation of goods in any Territory of the United States or the District of Columbia or from a place in a State to a place in a foreign country, or from a place in one State to a place in another State, or from a place in one State to a place in the same State through another State or foreign country."

(8) Warehouse act (Aug. 11, 1916). "Warehouse" as used in the act was defined to mean "every building, structure, or other protected inclosure in which any agricultural product is or may be stored for interstate or foreign commerce."

(9) An act to prevent interstate commerce in the products of child labor, and for other purposes (Sept. 1, 1916). This act merely provides that "no producer, manufacturer, or dealer shall ship or deliver for shipment in interstate or foreign commerce any article or commodity the product of any mine or quarry situated in the United States" upon which child labor had been employed.

(10) An act to establish an eight-hour day for employees of carriers engaged in interstate and foreign commerce, or for other purposes (Sept. 3, 5, 1916). This act was limited to employees of "any common carrier by railroad, except railroads independently owned and operated not exceeding 100 miles in length, electric street railroads, and electric interurban railroads, which is subject to the provisions of the act of February 4, 1887, entitled 'An act to regulate commerce,' as amended, and who are now or who may hereafter be actually engaged in any capacity in the operation of trains used for the transportation of persons or property on railroads, except railroads independently owned and operated not exceeding 100 miles in length, electric street railroads, and electric interurban railroads, from any State or Territory of the United States or the District of Columbia to any other State or Territory of the United States or the District of Columbia, or from one place in a Territory to another place in the same Territory, or from any place in the United States to an adjacent foreign country, or from any place in the United States through a foreign country to any other place in the United States: *Provided*, That the above exceptions shall not apply to railroads though less than 100 miles in length whose principal business is leasing or furnishing terminal or transfer facilities to other railroads or are themselves engaged in transfers of freight between railroads or between railroads and industrial plants."

The many different ways in which the general power to regulate commerce among the States has been exerted as illustrated by the statutes above set forth make an interesting study. While many of them apply to transportation, at least in some of its phases, others apply to commodities. All of them are limited and qualified in such a way as to show that while a deduction can be made from them and the cases decided under them as to some of the things that the commerce clause embraces, no such deduction can be drawn as to all that it embraces or the full extent of the power of Congress to regulate commerce among the States. With the exception of the farm-loan act the theory behind most of them is evidently that the power to regulate commerce among the States is limited to actual transportation between the States, articles in the course of such transportation or persons or instrumentalities actually engaged in such work. For example, in a case arising under the second employer's liability act (Shanks *v.* Delaware, Lackawanna & Western Railroad, 239 U. S., 556, 1916), where a railroad which was engaged in both interstate and intrastate transportation conducted a machine shop for repairing locomotives used in such transportation, and an employee, while taking down and putting up fixtures in such machine shop, was injured, it was held that he could not recover although on other occasions his employment related to interstate commerce. The court said (p. 558):

"Having in mind the nature and usual course of business to which the act relates and the evident purpose of Congress in adopting the act, we think it speaks of interstate commerce not in a technical legal sense but in a practical one better suited to the occasion. (See Swift & Co. *v.* United States, 196 U. S., 375, 398.) And that the true test of employment in such commerce in the sense intended is, Was the employee at the time of the injury engaged in interstate transportation or in work so closely related to it as to be practically part of it?"

That this is too narrow a view of the nature and scope of the power to regulate commerce among the States as such, we shall now proceed to show:

D. NATURE AND SCOPE OF THE POWER OF CONGRESS TO REGULATE COMMERCE AMONG THE STATES.

1. SOURCES OF CONFUSION.

Very little has been added to the interpretation of the commerce clause since the time of Chief Justice Marshall. In Gibbons v. Ogden (9 Wheat., 1, p. 195), he says:

"The genius and character of the whole government seem to be that its action is to be applied to all the external concerns of the Nation and to those internal concerns which affect the States generally, but not to those which are completely within a particular State, which do not affect other States, and with which it is not necessary to interfere, for the purpose of executing some of the general powers of the Government. The completely internal commerce of a State, then, may be considered as reserved for the State itself."

This passage is sometimes quoted as authority for the proposition that the National Government can not deal with the internal commerce of a State, but in reality it is direct authority for the contrary proposition when such action is necessary for the national good. The "internal concerns which affect the States generally" must necessarily have their situs in a State. The Chief Justice does not deny national authority to concerns which are within a particular State but to those "which are completely within a particular State," and "which do not affect other States, and with which it is not necessary to interfere, for the purpose of executing some of the general powers of the Government." The proposition involves two parts, but the first is the one commonly repeated, while the second is all but forgotten.

This is but one of the common sources of confused thought. Another results from failure to make any distinction between commerce and the power to regulate commerce. It is generally assumed that the vital thing is whether an article or commodity is moving in interstate commerce, whereas the only question is whether the regulation proposed or act done has a reasonable relation to commerce among the States. This sort of confusion is illustrated by the reasoning in Kidd v. Pearson (128 U. S., 1, 20), where the court said:

"No distinction is more popular to the common mind or more clearly expressed in economic and political literature than that between manufactures and commerce. Manufacture is transformation—the fashioning of raw materials into a change of form for use. The functions of commerce are different. The buying and selling and the transportation incidental thereto constitute commerce, and the regulation of commerce in the constitutional sense embraces the regulation at least of such transportation. The legal definition of the term, as given by this court in County of Mobile v. Kimball (102 U. S., 691, 702), is as follows: 'Commerce with foreign countries and among the States, strictly considered, consists in intercourse and traffic, including in these terms navigation and the transportation and transit of persons and property, as well as the purchase, sale, and exchange of commodities.' If it be held that the term includes the regulation of all such manufactures as are intended to be subject of commercial transactions in the future, it is impossible to deny that it would also include all productive industries that contemplate the same thing. The result would be that Congress would be invested, to the exclusion of the States, with the power to regulate, not only to manufactures, but also agriculture, horticulture, stock raising, domestic fisheries, mining—in short, every branch of human industry. For is there one of them that does not contemplate, more or less clearly, an interstate or foreign market? Does not the wheat grower of the Northwest and the cotton planter of the South plant, cultivate, and harvest his crop with an eye on the prices at Liverpool, New York, and Chicago? The power being vested in Congress and denied to the States, it would follow as an inevitable result that the duty would devolve on Congress to regulate all of these delicate, multiform, and vital interests, interests which in their nature are and must be local in all the details of their successful management."

Another fruitful source of confusion arises out of decisions dealing with the relative taxing powers of the State and Federal Governments and so-called "direct" and "indirect" restraints. While on the one hand, it is laid down that—

"The States can not tax interstate commerce, either by laying the tax upon the business which constitutes such commerce or the privilege of engaging in it or upon the receipts, as such, derived from it." (Minn. Rate cases, 230 U. S. 352, 400, 1912).

On the other hand, it was stated by the Supreme Court in Kansas City, M. & B. R. Co. v. Stiles, December, 1916, that—

"Each case must depend on its circumstances, and that while the State could not tax property beyond its borders, it might measure a tax within its authority by capital stock, which in part represented property without the taxing power of the State. * * * The State may not regulate interstate commerce or impose burdens upon it, but it is authorized to levy a tax within its authority, measured by capital in part used in the conduct of such commerce, where the circumstances are such as to indicate no purpose or necessary effect in the tax imposed to burden commerce of that character."

In Kansas Railway v. Kansas (240 U. S., 227, 231, 1916) Justice Hughes said:

"It must be assumed, in accordance with repeated decisions, that the State can not lay a tax on interstate commerce 'in any form' by imposing it either upon the business which constitutes such commerce or the privilege of engaging in it, or upon the receipts, as such, derives from it (citing cases), and, further, in determining whether a tax has such a direct relation to interstate commerce as to be an exercise of power prohibited by the commerce clause, our decision must regard the substance of the exaction—its operation and effect as enforced—and can not depend upon the manner in which the taxing scheme has been characterized (citing cases). * * * It is also manifest that the State is not debarred from imposing a tax upon the granted privilege of being a corporation, because the corporation is engaged in interstate as well as intrastate commerce (citing cases), and agreeably to the principle above mentioned, it has never been and it can not be maintained that an annual tax upon the privilege is in itself, in all cases, repugnant to the Federal power merely because it is measured by authorized or paid-up capital stock."

Referring to the case of Baltic Mining Co. v. Massachusetts (231 U. S., 68), Justice Hughes said:

"It is true that in that case it was pointed out that the taxing act did not apply to corporations engaged in railroad, telegraph, etc., business or to those corporations whose business is interstate commerce, but it was also distinctly stated that the products of the corporation before the court were 'sold and shipped in interstate commerce' and were 'entitled to the protection of the Federal Constitution against burdening commerce of that character.'"

In the Massachusetts Stock Ticker case (Western Union Tel. Co. v. Foster, 224 Mass., 365, June, 1916) the court decided that the transactions involved did not constitute interstate commerce, and said that in the view which it took of the case it became unnecessary to discuss or decide whether the order of the commission might be sustained also as affecting interstate commerce only incidentally and not imposing a direct burden upon it within the principle declared in numerous cases.

It must be apparent that cases of this kind do not define the extent of the power to regulate commerce among the States; that a given law affects commerce among the States only "indirectly" certainly does not prove that the thing affected is not or may not be commerce among the States within the regulatory power of Congress when it chooses to exercise it. Nor does the fact that a given State law affects commerce among the States "directly" show that that law is beyond the power of the State when that law, looked at in a reasonable way, is seen to be an exercise by the State of its power over things within the State and not an attempt to make its legislation operate extraterritorially. As stated by the Supreme Court of Texas in a case decided in January, 1916, justifying an order of the State railroad commission which required interstate trains to wait 30 minutes at a point for connections—

"The order is very plainly not directed against interstate commerce. It is not an attempt to regulate commerce; it has to do merely with the manner of operation of trains. It has no further object than to bring about dispatch and certainty of operation as essentials of efficient service to the public. And it seeks to do no more than require that kind of operation merely within the limits of the State. The effect of its observance upon commerce, whether domestic or interstate, is purely incidental, since as a consequence of its obedience commerce will be affected as the result of only the ordinary operation of trains upon their schedule time. It is no more of a regulation of commerce, and in particular it is no more of a burden upon or interference with commerce in its effect than familiar enactments requiring competency of train operatives as a means of affording safety to passengers and coemployees."

A number of decisions turn merely upon the construction of State law. Take, for example, the case of Davis v. Commonwealth of Virginia (236 U. S., 697, 1915). The headnote reads as follows:

"The business of taking in one State orders for portraits made in another State is interstate commerce, and if the original order contemplates an option on the part of the purchaser to have a frame also sent from the other States, the business is one affair and exempt from imposition of license fee by the State in which the sale is made."

The court below thought the purchase of the frames was to be regarded as a separate transaction occurring wholly in Virginia. If the Supreme Court had taken the same view of the facts, doubtless it would have sustained the imposition of the license fee, and therefore all that it was necessary to decide was that the practice in question did not fall within the meaning of the statute or ordinance.

In Sligh v. Kirkwood (237 U. S., 52), a statute of Florida was sustained, which undertook to make it unlawful for anyone to "sell, offer for sale, ship, or deliver for shipment any citrus fruits which were immature or otherwise unfit for consumption." And this in spite of the Federal food and drugs act. Now it is difficult to think of a statute affecting commerce more "directly" than this statute, but it was sustained merely because the action of the State was not regarded as incompatible with the national requirements.

In the case of Wilmington Transportation Co. v. California Railroad Commission (236 U. S., 151, 1915) the Supreme Court even held that the State might in the absence of any action by Congress prevent through proper orders of its railroad commission exhorbitant charges for transportation having both origin and termination within the State though part of such transportation was over the high seas. Yet it would be a mistake to cite this case as authority for the proposition that the transportation upon the high seas was not foreign commerce and that the State regulation was not a "direct" burden upon that commerce.

The concluding and very searching remarks of Mr. Justice McKenna in the case of Hall v. Geiger-Jones Co. (242 U. S., 539, 558), decided last January and dealing with the blue-sky laws, make it apparent that many opinions concerning direct and indirect restraints and goods in the original package must ere long be revised in the light of more enlightened views as to what commerce among the States really means. In that case it was contended that the law under review was a burden on interstate commerce and contravened the commerce clause of the Constitution. He said:

"We might, indeed, ask, When do the designated securities cease migration in interstate commerce and settle to the jurisdiction of the State? Material things, choses in possession, pass out of interstate commerce when they emerge from the original package. Do choses in action have a longer immunity? It is to be remembered that though they may differ in manner of transfer, they are in the same form in the hands of the purchaser as they are in the hands of the seller, and in the hands of both as they are brought into the State. We ask again, Do they never pass out of interstate commerce? Have they always the freedom of the State?

"Is there no point of time at which the State can expose the evil that they may mask? Is anything more necessary for the supremacy of the national power than that they be kept free when in actual transportation, subjected to the jurisdiction of the State only when they are attempted to be sold to the individual purchaser? The question are pertinent, the answer to them one way or the other, of consequence; but we may pass them, for regarding the securities as still in interstate commerce after their transportation to the State is ended and they have reached the hands of dealers in them, their interstate character is only incidentally affected by the statute."

But the greatest of all confusions results from a lack of appreciation of the nature of commerce itself.

2. WHAT "COMMERCE AMONG THE STATES" MEANS.

It is a significant fact that the early opinions of the Supreme Court speak of "commerce among the States," whereas in these later days that expression is seldom used, but instead we find the phrases "interstate commerce," "interstate-commerce business," "the business which constitutes such commerce," and the like. The reason is to be found in confused notions as to the nature of commerce.

Commerce among the States means business intercourse among the States. As stated by Chief Justice Marshall in Gibbons v. Ogden:

"Commerce, undoubtedly, is traffic, but it is something more—it is intercourse. It describes the commercial intercourse between nations

and parts of nations in all its branches and is regulated by prescribing rules for carrying on that intercourse."

The statement of Mr. Justice Johnson in the same case is to the same effect, but has a more modern ring:

"Commerce," he said, "in its simplest signification, means an exchange of goods, but in the advancement of society labor, transportation, intelligence, cars, and various mediums of exchange become commodities, and enter into commerce; the subject, the vehicle, the agent, and their various operations become the objects of commercial regulation. Shipbuilding, the carrying trade, and propagation of seamen are such vital agents of commercial prosperity that the Nation which could not legislate over these subjects would not possess power to regulate commerce."

In other words, commerce is commercial intercourse—business in short—which may involve an infinite number of factors and relations of the greatest intricacy; the power to regulate commerce is a wholly different and much more inclusive thing than the power to legislate as to particular items of commerce. In the case of United States *v.* United Shoe Machinery Co. (234 Fed., 127, June, 1916) the court showed evident confusion on this subject in dealing with the argument that a lease is no more commerce than insurance or manufacturing. The contention was finally disposed of as follows:

"It is sufficient to say that as new methods of transacting business are devised, if they are found to be in effect methods of carrying on commerce in any business, and the means for commercial transactions between the owner of the article, on the one hand, and the person who wants to deal in it or use it in carrying on his business, on the other hand, whether it be manufacturing, selling, trading, leasing, transportation, communication, or information, and it is sent or transported from one State to another, it is interstate commerce, and therefore subject to be regulated by Congress under the commerce clause of the Constitution."

The Sherman Antitrust Act asserts the power of regulation in the broadest way, and its theory is in marked contrast to that of the statutes which have been enumerated. It deals with restraints of commerce among the States in the widest conception of that commerce. It is not limited to transportation or to transit across States' lines. It does not say "every contract, combination in the form of trust or otherwise, or conspiracy in restraint of trade between persons of different States, which restrains trade or commerce among the several States," but does say "every contract, combination in the form of trust or otherwise, or conspiracy in restraint of trade or commerce among the several States or with foreign nations is hereby declared to be illegal." So long as attention is centered upon the subject matter or instrumentalities of commerce instead of business intercourse among the States of national concern no real progress can be made.

3. EVIL RESULTS OF CONFUSION AS TO THE COMMERCE POWER.

The serious consequences which result or may result from a false conception of the commerce power are in no way better illustrated than by the injustice, if not absurdity, of the practical working of many of the acts of Congress. Take, for example, the first Employers' Liability Case (207 U. S., 463). The statute which was held unconstitutional in that case, as above noted, was directed to "every common carrier engaged in trade or commerce * * * between the several States" and in favor of "any of its employees." Mr. Justice Moody, in his dissenting opinion, urged these enlightened views:

"It is settled beyond the necessity of citing cases that the transportation of persons and property is commerce. In other words, that the business of carriers is commerce. Where, therefore, the business is foreign or interstate Congress, it has frequently been decided, has the paramount, if not the sole, power to legislate for its direct control. An obstruction of such commerce by unlawful violence may be made punishable under the laws of the United States, suppressed by the armies of the United States, or, at the instance of the United States, enjoined in its courts. In re Debs, ubi supra. It is difficult to conceive how legislation may effectively control the business if it can not regulate the conduct of those engaged in the business, while engaged in the business, in every act which is performed in the conduct of the business. The business of transportation is not an abstraction. It is the labor of men employed with the aid of instrumentalities, animal and mechanical, in carrying men and things from place to place. In every form of transportation, from the simplest to the most complex, whether the man carries the burden on his back, or drives an animal which carries it, or a locomotive which draws a car which carries it, the one and only constant factor is the labor of mankind. I am quite unable to understand the contention made at the bar that the power of Congress is to regulate commerce among the States and not to regulate persons engaged in commerce among the States, for in the case of transportation at least the labor of those engaged in it is commerce itself. How poor and meager the power would be if, whenever it was exercised, the legislator must pause to consider whether the action proposed regulated commerce or merely regulated the conduct of persons engaged in commerce. The contention derives some plausibility from its vagueness. Of course the power to regulate commerce does not authorize Congress to control the general conduct of persons engaged therein, but, unless it is an idle and useless power, it authorizes Congress to control the conduct of persons engaged in commerce in respect to everything which directly concerns commerce, for that is commerce itself."

But the majority of the court record their views as follows:

"The act then being addressed to all common carriers engaged in interstate commerce, and imposing a liability upon them in favor of any of their employees, without qualification or restriction as to the business in which the carriers or their employees may be engaged at the time of the injury, of necessity includes subjects wholly outside of the power of Congress to regulate commerce. Without stopping to consider the numerous instances where, although a common carrier is engaged in interstate commerce, such carrier may in the nature of things also transact business not interstate commerce, although such local business may indirectly be related to interstate commerce, a few illustrations showing the operation of the statute as to matters wholly independent of interstate commerce will serve to make clear the extent of the power which is exerted by the statute. Take a railroad engaged in interstate commerce, having a purely local branch operated wholly within a State. Take, again, the same road having shops for repairs, and it may be for construction work, as well as a large accounting and clerical force, and having, it may be, storage elevators and warehouses, not to suggest besides the possibility of its being engaged in other independent enterprises. Take a telegraph company engaged in the transmission of interstate and local messages. Take an express company engaged in local as well as interstate business. Take a trolley line moving wholly within a State as to a large part of its business, and yet as to the remainder crossing the State line."

In consequence of this decision the act was amended and reenacted in the terms set forth above, with the result that we now have such decisions as the following:

New York Central R. R. *v.* Carr (238 U. S., 260, 1915). A brakeman on an intrastate car in a train consisting of both intrastate and interstate cars who is engaged in cutting out the intrastate car so that the train may proceed on its interstate business is, while doing so, engaged and employed in "interstate commerce." Page 263. "Each case must be decided in the light of the particular facts with a view of determining whether at the time of the injury the employee is engaged in interstate business or in an act which is so directly and immediately connected with such business as substantially to form a part or a necessary incident thereof."

Waters *v.* Guile (234 Fed., 532, 1916). A brakeman on a train containing cars loaded with interstate freight is engaged in "interstate commerce," though the train runs only between intrastate points.

Grand Trunk Ry. Co. of Canada *v.* Knapp (233 Fed., 950, 1916). A carpenter riding on a train which carried equipment for repair of a bridge used by the railroad company in "interstate commerce" is where the repairs were to be made by him engaged in "interstate commerce."

Louisville & Nashville R. R. Co. *v.* Parker (242 U. S., 13, 1916). A fireman upon a switching engine moving upon a switch track was engaged at the moment of striking a caboose on the main track in transferring an empty car from one switch track to another. This car was not moving in "interstate commerce," but the court held that if the switching movement was simply for the purpose of switching and moving an interstate car "the purpose would control and the business would be interstate."

C., B. & Q. R. R. Co. *v.* Harrington (241 U. S., 177). An employee of the railroad engaged in removing coal from storage tracks to coal chutes is not engaged in "interstate commerce" even if the coal had previously been brought from another State and was to be used by locomotives in interstate hauls.

Raymond *v.* C., M. & St. P. Ry. Co. (233 Fed., 239, 1916). A laborer in a tunnel which when completed was intended to be used by a railroad company to shorten its line over which it transported intrastate and "interstate commerce" is not engaged in interstate commerce.

May it not well be asked in view of these decisions whether the Supreme Court acted wisely in holding the first act unconstitutional? Was not the first act a much better and more enlightened statute? Why, it may be asked, was it not within the constitutional power of Congress under the commerce clause to deal with the transportation system of the country and all its instrumentalities and employees upon the theory that it had become a matter of national concern, and that the things which are interstate and the things which are intrastate had become so intermingled that in its judgment it was impossible to separate them?

In dealing with the safety appliance act, Texas & Pacific Railway Co. *v.* Rigsby, 241 U. S. 33 (1916), where an employee even though he was engaged at the time in intrastate and not interstate commerce was held to have a right of action, the Supreme Court said:

"While it may be conceded, for the purpose of the argument, that the mere question of compensation to persons injured in intrastate commerce is of no concern to Congress, it must be held that the liability of interstate carriers to pay such compensations because of their disregard of regulations established primarily for safeguarding commerce between the States, is a matter within the control of Congress; for unless persons injured in intrastate commerce are to be excluded from the benefit of a remedial action that is provided for persons similarly injured in interstate commerce—a discrimination certainly not required by anything in the Constitution—remedial actions in behalf of intrastate employees and travelers must either be governed by the acts of Congress or else be left subject to regulations by the several States, with probable differences in the law material to its effect as regulatory of the conduct of the carrier. We are therefore brought to the conclusion that the right or private action by an employee injured while engaged in duties unconnected with interstate commerce, but injured through a defect in a safety appliance required by the act of Congress to be made secure, has so intimate a relation to the operation of the act as a regulation of commerce between the States that it is within the constitutional grant of authority over that subject."

It is hard to reconcile this statement with other language of the Supreme Court and it certainly discloses a more enlightened view of of the power of Congress to regulate commerce among the States as applied to transportation.

(4) REAL SCOPE OF THE COMMERCE CLAUSE.

Commerce is a much broader term than transportation, which is only one of the forms of commerce or instruments of commerce. The loose identification of commerce with transportation is probably due to the fact that until recent times the important and "big" business of the country was largely that of railroading.

The term is so broad that it is almost impossible to place limits to the exercise of control by Congress.

When the matter involved relates to commerce and is of national concern, the power of Congress is plenary. In the case of The Daniel Ball (10 Wall., 557, 1870), where the power of Congress was asserted over a vessel plying only between two points within a State, but over what the court regarded as part of a highway of commerce among the States, it was argued that if the position asserted was sustained there would be no such thing as a domestic trade of a State; that Congress might take the entire control of the commerce of the country and extend its regulations to the railroads within a State on which grain or fruit was transported to a distant market. The court replied:

"We answer that the present case relates to transportation on the navigable waters of the United States, and we are not called upon to express an opinion upon the power of Congress over interstate commerce when carried on by land transportation. And we answer further, that we are unable to draw any clear and distinct line between the authority of Congress to regulate an agency employed in commerce between the States, when that agency extends through two or more States, and when it is confined in its action entirely within the limits of a single State. If its authority does not extend to an agency in such commerce, when that agency is confined within the limits of a State, its entire authority over interstate commerce may be defeated. Several agencies combining, each taking up the commodity transported at the boundary line at the one end of a State, and leaving it at the boundary line at the other end, the Federal jurisdiction would be entirely ousted, and the constitutional provision would become a dead letter."

To the same effect is the recent case Seven Cases *v.* United States (239 U. S., 510, 514 1916), where the court said:

"So far as it is objected that this measure, though relating to articles transported in interstate commerce, is an encroachment upon the re-

served powers of the States, the objection is not to be distinguished in substance from that which was overruled in sustaining the white slave act (c. 395, June 25, 1910, 36 Stat., 825). Hoke v. United States (227 U. S., 308). There, after stating that 'if the facility of interstate transportation' can be denied in the case of lotteries, obscene literature, diseased cattle and persons, and impure food and drugs, the like facility could be taken away from 'the systematic enticement of and the enslavement in prostitution and debauchery of women,' the court concluded with the reassertion of the simple principle that Congress is not to be denied the exercise of its constitutional authority over interstate commerce, and its power to adopt not only means necessary but convenient to its exercise, because these means may have the quality of police regulations."

Now, what concerns the United States as a whole is a matter for the determination of Congress. "What makes for the general welfare is necessarily, in the first instance, a matter of legislative judgment and a judicial review of such judgment is limited. 'The scope of judicial inquiry in deciding the question of power is not to be confused with the scope of legislative consideration in dealing with a matter of policy.'" (German Alliance Ins. Co. v. Kansas, 233 U. S., 389.) In the Adamson case the attention of the court was, of course, directed to interstate transportation. But the power to regulate commerce among the States is evidently not confined to transportation (as the legislation of Congress itself shows) and extends to and may affect commodities.

E. EXTENT TO WHICH COMMODITY PRICES ARE SUBJECT TO CONTROL UNDER THE COMMERCE CLAUSE.

In theory it is impossible to set any limit to the power of price control by the Nation if the need exists, but to demonstrate this by actual decisions would be difficult, and no practical necessity for making the attempt seems to exist. This memorandum is confined to commodities which are recognized articles of commerce among the States. As to these, it has been held—

(a) That their movements can not be restrained. The Danbury Hatters' and the Packers' cases are authority for that proposition. In the case of Hood Rubber Co. v. United States Rubber Co. (229 Fed., 583), decided in this district in January of last year, the plaintiff was held entitled to relief under the Sherman Act, although it was not a dealer in lasts, and only desired to buy for its own use, and all purchases would have been intrastate transactions.

(b) A State can not prohibit them from coming in. (Heyman v. Hays, 236 U. S., 178, 183.)

"In American Express Co. v. Iowa (196 U. S., 133, 143), referring to previous rulings concerning the operation of the commerce clause, it was said 'those cases rested upon the broad principle of the freedom of commerce between the States and of the right of a citizen of one State to freely contract to receive merchandise from another State and of the equal right of a citizen of a State to contract to send merchandise into other States'; and again, in West v. Kansas Natural Gas Co. (221 U. S., 229), where the law of a State prohibiting the piping out from the State of natural gas was held to be repugnant to the commerce clause, it was observed (p. 260): 'At this late day it is not necessary to site cases to show that the right to engage in interstate commerce is not the gift of a State and that it can not be regulated or restrained by a State or that a State can not exclude from its limits a corporation engaged in such commerce.'"

To the same effect see Kirkmeyer v. Kansas (236 U. S., 568).

(c) A State can not prohibit them from going out. West (Okla.) v. Kansas Natural Gas Co. (221 U. S., 229, 255, 1911), McKenna, J.:

"Gas, when reduced to possession, is a commodity; it belongs to the owner of the land, and, when reduced to possession, is his individual property subject to sale by him, and may be a subject of intrastate commerce and interstate commerce. The statute of Oklahoma recognizes it to be a subject of intrastate commerce, but seeks to prohibit it from being the subject of interstate commerce, and this is the purpose of its conservation. In other words, the purpose of its conservation is in a sense commercial—the business welfare of the State, as coal might be, or timber. Both of those products might be limited in amount, and the same consideration of the public welfare which would confine gas to the use of the inhabitants of a State would confine them to the inhabitants of the State. If the States have such power a singular situation might result. Pennsylvania might keep its coal, the Northwest its timber, the mining States their minerals. And why may not the products of the field be brought within the principle? Thus enlarged, or without that enlargement, its influence on interstate commerce need not be pointed out. To what consequences does such power tend? If one State has it, all States have it; embargo may be retaliated by embargo, and commerce will be halted at State lines. And yet we have said that 'in matters of foreign and interstate commerce there are no State lines.' In such commerce, instead of the States, a new power appears and a new welfare, a welfare which transcends that of any State. But rather let us say it is constituted of the welfare of all the States and that of each State is made the greater by a division of its resources, natural and created, with every other State, and those of every other State with it. This was the purpose, as it is the result, of the interstate-commerce clause of the Constitution of the United States. If there is to be a turning backward it must be done by the authority of another instrumentality than a court."

Penn. R. R. Co. v. Sonman Shaft Co. (242 U. S., 120, 1916).

It was held to be a duty of a carrier in "interstate commerce" to furnish cars for coal to be loaded at the mine and forwarded promptly for delivery to purchasers in other States, notwithstanding the sale of the coal is f. o. b. at the mine.

Van Devanter, J.: "The coal company sold its coal f. o. b. cars at the mine, and when the cars were loaded the coal was promptly forwarded to the purchasers at points within and without the State, largely to points in other States. This was well understood by both companies—by the coal company when it asked for cars and by the railroad company when it supplied them. Cars were not requested or furnished merely to be used in holding or storing coal, but always to be employed in its immediate transportation. While furnishing some cars for this service, the railroad company failed to furnish as many as the coal company needed and requested. It is plain that supplying the requisite cars was an essential step in the intended movement of the coal and a part of the commerce—whether interstate or intrastate—to which that movement belonged. It was expressly so held in Pennsylvania R. R. Co. v. Clark Coal Co (238 U. S., 456, 465–468). We there said of the sale and delivery of coal f. o. b. at the mine for transportation to purchasers in other States: 'The movement thus initiated is an interstate movement and the facilities required are facilities of interstate commerce.' Here the State court ruled that, as the coal was sold f. o. b. at the mine, the commerce involved was intrastate, even though the coal was going to purchasers outside the State. This was error, but it plainly was without prejudice unless it led the State court to exercise a jurisdiction which it did not possess."

Rosenberger v. Pacific Express Co. (241 U. S. 48, 1916).

A statute of Texas imposing special licenses on express companies maintaining offices for C. O. D. shipments of intoxicating liquors was held unconstitutional as a burden on and interference with interstate commerce and not to justify an express company accepting such a shipment in not delivering the same. It had been argued that the act imposing the burden on the contract to collect on delivery did not reach over into the domain of shipment, was independent of the same, and therefore was not repugnant to the commerce clause. To this the Chief Justice answered:

"The reasoning referred to rests upon a misconception of the elementary notion of interstate commerce as inculcated and upheld from the beginning and as enforced in a line of decisions of this court beginning with the very birth of the Constitution and which in its fundamental aspect has undergone no change or suffered no deviation; that is, that the interstate commerce, which is subject to the control of Congress, embraces the widest freedom, including as a matter of course the right to make all contracts having a proper relation to the subject. Indeed, it must be at once apparent that if the reasoning we are considering were to be entertained, the plenary power of Congress to legislate as to interstate commerce would be at an end and the limitations preventing State legislation directly burdening interstate commerce would no longer obtain and the freedom of interstate commerce which has been enjoyed by all the States would disappear."

In the light of these decisions, there can no longer be any doubt as to the power of Congress under the commerce clause to legislate as to the prices of commodities which are the subject matter of commerce among the States; in other words, as to its power to regulate such commerce. The term "police power" means no more than the power to legislate. The power to regulate commerce among the States is in reality the power to legislate with respect to that commerce—in short, to exercise a police power over it. If price regulation is not a regulation of commerce, it would be difficult to describe it.

In the case of Landon v. Public Utilities Commission of Kansas (234 Fed., 152, 164) the court, speaking by Judge Sanborn, were unanimously of the opinion—

"(1) That the gas purchased or procured in Oklahoma, transported from Oklahoma, and sold or delivered by the receiver or by the gas company to parties in Kansas or Missouri, is an article of interstate commerce, as is the gas procured in Kansas and sold or delivered by them, or either of them, to parties in Missouri; (2) that this gas, which is probably at least 95 per cent of all the gas the receiver or the company handles, does not lose its interstate character by the fact that a small portion, probably not exceeding 4 per cent, of the gas they handle is procured and delivered in Kansas, is an article of intrastate commerce, and is inseparably mingled in the pipes with the interstate gas; (3) that the purchase or procuring of interstate gas in Oklahoma, its transportation, sale, and delivery by the receiver or the gas company to parties in Kansas and Missouri is interstate commerce, and the receiver and the company are engaged in interstate commerce; (4) that the enforcement by a State through its officers of any legislative act preventing interstate commerce in this article of interstate commerce, either by a direct prohibition of such commerce in this article by State law, or by an inhibition of a sale of the article in the State at any price whatever, or at any price above a price so low that the laws of trade make it impossible to purchase or procure it in another State, and to sell and deliver it in the prohibiting State at that price with profit, substantially burdens and unduly interferes with interstate commerce in violation of the commerce clause of the Constitution of the United States."

That Congress not only has the power to control the price of commodities entering into commerce among the States, but that the time is fast approaching when Congress must exercise this power, is emphasized by the case of Manufacturers' Light & Heat Co. v. Ott (215 Fed., 940, 1914). This was a bill to enjoin putting into effect an order of the public-service commission of West Virginia fixing the rates to be charged consumers by a Pennsylvania corporation and certain West Virginia corporations, all of whose stock was held by the Pennsylvania company. The court said (p. 944):

"The regulation of companies engaged in the transportation of gas is expressly excluded from the scope of the interstate-commerce statute. Neither the West Virginia statute nor the orders of the commission purport to interfere in any manner with the transportation of natural gas from West Virginia to other States. Nothing is attempted except regulation of prices of natural gas to the citizens of West Virginia to be charged by corporations operating in West Virginia under State authority. The action of these corporations in uniting their operations with those of like corporations of Ohio and Pennsylvania in pumping gas into a common system of pipes, supplying customers in the three States, may produce the result that some gas from Ohio and Pennsylvania comes into West Virginia, although it is undisputed that a much larger quantity of gas goes out of West Virginia into Ohio and Pennsylvania than can possibly come in from those States. But this overflow of gas from one State to another, according to the pressure from the main gas pipes as common reservoirs, can not affect the power of the State of West Virginia to make reasonable regulations as to rates for gas furnished to its own citizens. West v. Kansas Gas Co. (221 U. S., 229) relied on by complainant, has no application, for in the present case no effort is made to prevent the transportation and sale of natural gas from West Virginia into other States. It is not necessary to decide whether the Congress may not regulate charges for natural gas under such conditions, and under the well-known rule the court should not anticipate that question. In the present state of the law, the Congress having taken no action, it was fairly within the power of the State legislature to provide for the protection of its own citizens against excessive charges. If it be assumed that interstate commerce will be incidentally affected, yet the regulation of the local charges of a natural gas company as a public-service corporation is within the police power of the State until the Congress sees fit to act. The recent and full review of the subject by the Supreme Court in the Minnesota rate cases, Simpson v. Shepard (230 U. S., 352), leaves no room for discussion."

One need only imagine a time when the several State legislate as to the prices of commodities which are the subject of commerce among the States and upon the free circulation of which the general welfare depends, to vividly realize the existence in Congress of the power of price regulation and the necessity of its exercise. If Congress would have that power at that time and under those circumstances, it has the power now, because that depends upon the language of the Constitution and not upon the circumstances. Congress in fact has the right to legislate generally as to business of national concern, as to stock

and produce exchanges, and the coal and oil industries, for example, on the principle of the Munn, Budd, Stoesser, and German Alliance Insurance Co. cases.

National legislation is obviously destined to take the same course that State legislation has already taken, and so far as business of national importance is concerned will without doubt eventually equal and even surpass it. This is not because of any change in the law, but is to be explained by changing conditions, the increasing complexity of our national life, which is daily adding to the number of matters of national concern. Instead of being a thing to be feared this is a consummation devoutly to be wished. It by no means involves a centralization of power, but does imply a unification of business law, a law which shall not interfere with the domestic concerns of the State, and shall be administered alike in the local tribunals throughout the breadth of the land.

EDWARD A. ADLER.

BOSTON, MASS., *May 18, 1917.*

AMENDMENT OF INTERSTATE-COMMERCE ACT.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 2356) to amend the act to regulate commerce, as amended, and for other purposes.

Mr. NEWLANDS. Mr. President, I understand that there is no disposition to prolong the debate, and I ask unanimous consent that the Senate proceed at or before 4 o'clock this afternoon to vote on the bill and pending amendments, and that meanwhile no Senator may speak more than once nor longer than 15 minutes upon the bill or more than once nor longer than 15 minutes upon any amendment offered thereto.

Mr. SMITH of Michigan. Let me ask the Senator if it is very essential that we should vote to-day. Could not the unanimous-consent agreement be so framed that we might vote on Monday morning immediately after convening the Senate?

Mr. NEWLANDS. The Senator understands that we ought to proceed with all possible expedition to the consideration of another bill now pressing upon the attention of the Senate.

Mr. SMITH of Michigan. Senators have engagements which are imperative during the afternoon, matters have been put off and hearings are being held. I think Monday morning would be much more preferable.

Mr. CUMMINS. Mr. President, I am as anxious as the Senator from Nevada can be to see the bill passed. I believe that all Senators who have been engaged in the debate are willing to accept the amendment proposed by the Senator from Minnesota [Mr. NELSON].

Mr. HARDWICK. With an amendment. I understand there is to be an amendment offered to it.

Mr. CUMMINS. I was about to suggest that I think we could conclude the consideration of the bill within an hour.

Mr. SMITH of Georgia. There has been no agreement about any additional amendment, but I will read one which I may offer and which I think will be acceptable. It does not in any way affect the amendment proposed by the Senator from Minnesota. It adds an additional provision for handling congested transportation. This is what I expect to offer:

In addition to the authority hereinbefore conferred upon the President and subject to such priority of shipments as the President may direct by reason of said authority, the Interstate Commerce Commission is hereby authorized whenever in its judgment such action is necessary as an incident to the congested condition of transportation, after such inquiry as it may deem proper, to direct such preferences or priorities in kinds of traffic or shipment or other service to be observed by common carriers under such arrangements, rules, and regulations as the commission may prescribe; and it shall be the duty of the commission where practicable to give priority to shipments of food and fuel. The commission is further authorized to create a division composed of not less than three of its members, and when so created the said division shall have and may exercise the authority herein conferred upon the commission.

I do not make it a condition that this amendment shall be accepted, and I am willing to accept and to vote for the amendment of the Senator from Minnesota.

Mr. CUMMINS. My first impression is that I would not favor the proposed amendment of the Senator from Georgia, because it bears the implication at any rate that the successful prosecution of the war might not require priority or preferences in food or fuel. I think the prosecution of the war may require preferences in both food and fuel. Therefore there would be an inconsistency between the amendment proposed by the Senator from Minnesota and the one proposed by the Senator from Georgia.

Mr. SMITH of Georgia. I will strike out that clause if the Senator desires. I do not propose in any way to restrict control by the President of food and fuel for war purposes. Suppose there is a shortage of coal here in Washington entirely disconnected with the war and private citizens not in the war need coal, that would not be connected with the war or be covered by the Nelson amendment.

Mr. CUMMINS. Does the Senator from Georgia propose in his amendment a continuing statute not limited to the war?

Mr. SMITH of Georgia. During the war only. The whole provision is limited to the war.

Mr. CUMMINS. That very clearly indicates that we intend to take care of the situation created by war. However, be that as it may, I will be very glad to see the amendment of the Senator from Minnesota adopted.

Mr. SMITH of Georgia. I do not seek an agreement to vote for anything else as a condition upon which the Nelson amendment will be supported. I am entirely satisfied with the amendment of the Senator from Minnesota, and I hope it will be adopted. It limits the direction of priorities in transportation to commodities essential to the prosecution of the war. It does not permit direction of priorities in transportation of traffic not needed for war purposes. It does not go to the extent even in allowing priorities which I have been willing to concede.

Mr. NELSON. Mr. President, I have not kept track of the proceedings. Is the bill up now?

Mr. NEWLANDS. The bill is up, and I am about to attempt to secure a unanimous-consent agreement for a vote at 4 o'clock upon the bill and amendments, meanwhile limiting the debate to 15 minutes on the part of each Senator.

Mr. NELSON. Probably if this amendment is accepted, it will not delay the proceeding. If the bill is up, I will offer the amendment.

Mr. REED. There is an amendment pending.

Mr. BRANDEGEE. The Senator from Nevada is asking unanimous consent now.

Mr. NEWLANDS. All right, let the Senator from Minnesota present his amendment now.

Mr. BRANDEGEE. The Senator does not want to secure unanimous consent before——

The VICE PRESIDENT. One moment. The Senator from Nevada has presented a unanimous-consent agreement. Adopting the usual practice before ordering the roll to be called, the Chair will ask whether there is any objection to the agreement upon the part of any Senator present.

Mr. BRANDEGEE. I wish to cooperate with the Senator in getting an agreement, but I desire to ask if he has his proposed agreement written out so that it may be read by the Secretary?

Mr. NEWLANDS. I will ask the Secretary to prepare the order pursuant to the suggestion that I have made.

The SECRETARY. It is proposed by unanimous consent that, at not later than 4 o'clock p. m. to-day, the Senate will proceed to vote, without further debate, on the bill (S. 2356) to amend the act to regulate commerce, as amended, and for other purposes, through the different parliamentary stages to its final disposition——

Mr. SMITH of Georgia. I do not think it best to fix a time to vote on the bill. So far as I am concerned, I am perfectly willing, without any roll call, to limit debate now to 10 minutes on any amendment and on the bill. I think we shall finish the bill by 3 o'clock, but I should like to have Senators here voting on the amendment and hearing what takes place.

Mr. NEWLANDS. I ask unanimous consent that the suggestion of the Senator from Georgia be adopted.

Mr. REED. Mr. President——

Mr. SMITH of Michigan. What is the request, Mr. President?

The VICE PRESIDENT. To limit the debate to 10 minutes.

Mr. NEWLANDS. That from now on debate on the bill and amendments be limited to 10 minutes on the part of each Senator.

Mr. SMITH of Michigan. Is that the understanding?

Mr. NEWLANDS. That is the understanding.

Mr. BRANDEGEE. But for the fact that many times when such agreements have been made we have been almost trapped by all the time being taken up upon one or two amendments I would not object to the suggestion of the Senator from Georgia, if it were to be a part of the agreement that it shall not be in order to move to table an amendment until the Senator who offers it has had an opportunity to explain it.

Mr. SMITH of Georgia. I think that ought to be considered a part of the agreement, and I should be glad to have it embodied in the agreement.

Mr. BRANDEGEE. Under the language proposed all we are agreeing to is that no Senator shall speak more than 10 minutes upon the bill or upon any amendment proposed, but that in itself——

Mr. SMITH of Georgia. And that no motion to table an amendment shall be made.

Mr. BRANDEGEE. That will fix it to-day, but the agreement would leave it so——

Mr. NEWLANDS. I have no objection to that, Mr. President.

Mr. REED. Mr. President, I hope the Senator from Nevada will not insist upon even that agreement at this time. If we

could dispose of the amendment proposed by the Senator from Minnesota [Mr. NELSON], which I regard as a fundamental proposition, I would have no objection to making an agreement to limit the debate to 10 minutes or to 15 minutes by each Senator; but I should like to have that proposition first disposed of, because, as I have said, I think it is fundamental.

Mr. SMITH of Georgia. What is that?

Mr. REED. Answering the Senator from Georgia, I desire to say that I should like to have the amendment of the Senator from Minnesota disposed of before we make any agreement with reference to limiting this debate, because the amendment is a fundamental proposition. If that is disposed of and is accepted as a part of this bill I shall be reasonably content with the bill. There will be one or two matters which I should like to offer, but I can submit them very briefly.

Mr. BRANDEGEE. Mr. President, if the Senator from Missouri will allow me to ask him a question, would the Senator not be satisfied if the unanimous-consent agreement should read that after the amendment to which the Senator from Missouri refers has been disposed of, then this unanimous-consent agreement shall be in operation?

Mr. REED. The unanimous-consent agreement can be called up as soon as the amendment to which I refer has been disposed of.

Mr. SMITH of Georgia. I should like to suggest, in addition, that amendments to be offered must be germane to the bill.

Mr. BRANDEGEE. I think that would raise a question that nobody can decide. I should like to have it so if there were any way of finally deciding the germaneness of amendments, but if that is agreed to we shall spend most of the time appealing to the Senate as to whether or not amendments are germane.

Mr. SMITH of Georgia. If the food-control bill should be offered as an amendment to this bill we would not wish to be bound by a 10-minute debate as to that.

Mr. BRANDEGEE. If the proposition of the Senator from Georgia as to the germaneness of amendments were agreed to, much time of the Senate would be taken up in discussing the question of their germaneness and in appeals from the decision of the Chair——

Mr. SMITH of Georgia. No.

Mr. BRANDEGEE. For Senators would not be content with the ruling of the Chair on the question of the germaneness of amendments.

Mr. SMITH of Georgia. We can not afford to make a 10-minute agreement as to speeches upon amendments at all if under our liberal rule of amendments some independent bill should be offered as an amendment. I believe we can go right on and finish this bill without any agreement in two hours.

Mr. REED. Let us try it.

Mr. SMITH of Georgia. Yes; let us try it.

Mr. NEWLANDS. Well, I shall not press the request for a unanimous-consent agreement.

The VICE PRESIDENT. The pending amendment is the amendment proposed by the Senator from Nevada [Mr. NEWLANDS].

Mr. REED. Mr. President, since we have had so much discussion about the amendment of the Senator from Minnesota [Mr. NELSON], I ask the Senator in charge of the bill if he will not withhold his amendment temporarily and let us dispose of what I call the Nelson amendment?

Mr. NEWLANDS. I have no objection to that, but the Senator from Minnesota has not yet offered the amendment in a formal way.

Mr. NELSON. I will offer my amendment if the Senator from Nevada will temporarily withdraw his amendment.

Mr. NEWLANDS. I will withdraw my amendment.

The VICE PRESIDENT. The Senator from Nevada withdraws his amendment; and the Senator from Minnesota presents an amendment, which will be stated by the Secretary.

Mr. NEWLANDS. Mr. President, I wish to state that I have had no conference with the members of the Committee on Interstate Commerce regarding the proposed amendment of the Senator from Minnesota, and I should like to have it presented and printed.

Mr. NELSON. It has been printed in the RECORD.

Mr. NEWLANDS. I desire to confer with members of the Interstate Commerce Committee in regard to the amendment.

Mr. REED. The amendment is printed in the RECORD.

Mr. NEWLANDS. I know that, but——

Mr. NELSON. If the bill is up for consideration, I offer the amendment which I send to the desk.

Mr. NEWLANDS. While the amendment appears in the RECORD, there does not appear what words in the original bill are to be displaced and what lines of the pending bill shall remain upon the subject.

Mr. HARDWICK. Mr. President, may we not have the amendment which is proposed by the Senator from Minnesota stated at the desk?

Mr. NELSON. I repeat, if the bill is under consideration, I will offer the amendment. As I have said, it has already been printed in the RECORD.

The VICE PRESIDENT. The Senator from Minnesota is in order to offer the amendment.

Mr. NELSON. My amendment is to strike out all of lines 14, 15, 16, 17, 18, 19, 20, and 21, down to the end of the line, including the word "prescribe," and to insert what appears in the RECORD on page 3914.

The VICE PRESIDENT. The Secretary will state the amendment proposed by the Senator from Minnesota.

The SECRETARY. In section 2, page 2, line 14 of the original print, it is proposed to strike out down to and including the word "prescribe," on line 21, and in lieu of the words stricken out to insert:

That during the continuance of the war in which the United States is now engaged the President is authorized, if he finds it necessary for the successful prosecution of the war, to direct that such traffic or such shipments of commodities as may be essential to the prosecution of the war, shall have preference or priority in transportation by any common carrier by railroad or water, under such rules and regulations as he may prescribe.

Mr. THOMAS. Mr. President, my duties on the Committee on Finance have prevented my giving that attention to the arguments which have been directed to and against this bill which their importance and the importance of the bill demand. I have endeavored but imperfectly to inform myself of the progress of the discussion, however, by reading the CONGRESSIONAL RECORD during such few spare moments of my time as have been available for that purpose; and last night I read the bill for the first time since it has been before the Senate.

I have had some curiosity regarding its purpose because of the existing law on the subject, and I have tried to ascertain in what respects it differs from the act of August last, either as enlarging or as placing a limitation upon it. Under that statute the President has the power in time of war to take over and operate the railroads of the country or such of them as, in his judgment, may be necessary. It is very brief but very comprehensive.

The first section of this bill imposes penalties for the disregard of its requirements. The second seems to impose a limitation upon powers which the President already possesses. Whether it is wise to do so may be a debatable question; but, if the authority which we have given the President to take control of the railroads in times of war is one which he should have the right to exercise, I do not believe that we should impose any restrictions upon its exercise. If, on the contrary, it is not a power which he should possess, then the act now upon the statute books should be repealed.

In times of war, Mr. President, there must be concentration of power and authority. It is of the very essence of our military and naval departments that responsibility should be concentered, and obedience to that responsibility made absolute. Any measure which tends to diffuse authority, to create different heads of divisions which may act independently of or even in subordination to a general one, should be avoided, except where absolutely necessary to the public welfare.

Mr. President, any violation of the law as it exists should be punished by the courts, and any penalty exacted for such violation should be inflicted upon the citizen only after conviction by due process of law. Therefore the first section of this bill, in my judgment, would be a desirable piece of legislation as a complement to the present law; but everything else should be stricken out of the bill unless it be the intention of Congress, as I have already stated, to place a limitation upon powers already granted.

Of course, every Senator within the sound of my voice recalls the military appropriation act for the fiscal year 1917, which contains a clause that I had the honor of presenting to the Committee on Military Affairs, and prompted by the then very acute relations between this country and Mexico.

Mr. LA FOLLETTE. Mr. President, I ask that better order may be preserved in the Chamber. It is next to impossible to follow the Senator.

The VICE PRESIDENT rapped with his gavel.

Mr. THOMAS. Mr. President, I am speaking with some difficulty, but I hesitate to be so rude as to object to conversations, which are audible all around me, and which, of course, must be extremely important or they would not be conducted on the floor of the Senate.

That clause reads as follows:

The President in time of war is empowered, through the Secretary of War, to take possession and assume control of any system or systems of transportation or any part thereof, and to utilize the same to the exclusion, as far as may be necessary, of all other traffic thereon for the transfer or transportation of troops, war material, and equipment, or for such other purposes connected with the emergency as may be needful or desirable.

Now, Mr. President, my purpose in framing that amendment was to make it as brief and, at the same time, as comprehensive as possible, to give the President the supreme power of drafting into the service of the country every mile of railway within our borders, if at any time during a period of war such action was necessary in his opinion and in the opinion of his advisers.

Mr. SMITH of Michigan. Does that cover water transportation also?

Mr. THOMAS. It was not designed to cover water transportation, although its terms are broad enough to include them. It is directed to land transportation, and was prompted, although I do not recall the facts distinctly, by the conditions on the Mexican border. The difficulties which the Government then encountered in its efforts rapidly to transport its troops to the border, which were the direct outcome of the conflict between Government business and the regular business of the railroads, prompted the thought from which this amendment proceeded. At that time soldiers en route to the front were being sidetracked while private—if I may use that expression in connection with a public carrier—while private transportation was given the right of way. The demands made by the ordinary passenger traffic upon these roads were at that time so great as to make the acquiring of cars of sufficient capacity for the conveyance of our troops extremely difficult. I saw passing through the city of Toledo on the 16th of last June, while waiting for a belated train, some half dozen or more troop trains composed of cars which doubtless had seen service in the War between the States, cars which were unfit for actual use, and in which the soldiers of the United States were crowded and compelled to occupy during the period of transit from their homes to the Mexican border. I heard many of their very just complaints, especially when they contrasted their own accommodations with the more luxurious trains that swept through that great center of population while they were waiting for orders to move. I thought then that of all the war powers which the Government should possess the control of transportation was perhaps the most important, and that such a power should be given with as few limitations as possible, so that the Government business would not only have the right of way but the Government officials should determine what other traffic should move during times of exigency, in what direction, and to what terminal points, since otherwise, there being divided authority—that of the Government upon the one hand and the railroad companies upon the other—both sorts of traffic would very naturally be injured by the collision and by absence of a common source of supreme authority.

Mr. CUMMINS. Mr. President——

Mr. THOMAS. Just a moment.

Hence this provision of the law, which in my judgment confers upon the President everything, and more than everything, sought to be conferred upon him by the pending bill. I now yield to the Senator from Iowa.

Mr. CUMMINS. May I say for those who had in charge the preparation of the bill now before the Senate that they had in mind the amendment offered by the Senator from Colorado to the military bill? It was not intended in any wise to impair or affect that legislation; and I should like to have the Senator's view with respect to the point at which the present bill conflicts in any way with the former bill. I do not think there is the least conflict. I agree that the President of the United States ought to have the power to take possession of and manage and operate the railroads if necessary for military purposes; but this is intended to give him another power in the event that he does not want to take possession of the railway systems themselves.

Mr. THOMAS. Mr. President, I heard the Senator yesterday state that he did not believe in a division of authority upon so important a subject as this, and in that statement I fully concurred. The bill contained a clause with regard to preferential or preferred shipments which I believe has been modified by the report of June 14. Am I correct in that?

Mr. CUMMINS. So far as the report of the committee is concerned, it gave to the President the right to direct priority or preference in any and all shipments that were necessary for the public security and the national defense. It did not divide the authority in any way. There has been an effort, since the bill came to the Senate, to divide the authority by transferring a portion of it to the Interstate Commerce Commission; but that is not in the bill as reported by the committee.

Mr. THOMAS. No; that is not in the bill, and perhaps I questioned the Senator inaccurately in the form in which I put it. That is one of the controverted propositions which is before the Senate in the shape of amendments which are offered.

Mr. CUMMINS. Well, in the shape of debate. No amendment of that sort has yet been offered, but there has been notice of amendments to be offered.

Mr. THOMAS. I am glad the Senator interrupted me to make that statement, and my necessary absence from the Senate Chamber, and my inability to keep up entirely with the proceedings of the Senate, must be my apology for not being entirely acquainted with what has occurred during the progress of the discussion.

However, coming to the Senator's statement, I may say that wherever the effect of this bill is to impose a limitation upon the powers of the President outlined in the act of 1917, I think it is objectionable. The power which the Senator says this bill seeks to confer upon the President is one which he has under the provisions of the existing law, upon the principle that the greater includes the less.

Mr. HARDWICK. Mr. President——

Mr. THOMAS. I yield to the Senator from Georgia.

Mr. HARDWICK. I wonder if the Senator thinks that the power in the Army appropriation act, which he drafted, includes the power to direct shipments utterly disconnected with the war?

Mr. THOMAS. I have not a particle of doubt but that it gives the President entire control of the traffic of the United States, of whatever character, whenever he acts under it and takes possession of these systems.

Mr. HARDWICK. Will the Senator read the language, though, as to the cases in which he is authorized to do it, and for what purposes?

Mr. THOMAS (reading)—

The President, in time of war—

And we certainly are in time of war now——

Mr. HARDWICK. Yes.

Mr. THOMAS (reading)—

is empowered, through the Secretary of War, to take possession and assume control of any system or systems of transportation or any part thereof—

Which includes all or any portion of the railway system of the country—

and to utilize the same to the exclusion, as far as may be necessary, of all other traffic thereon, for the transfer or transportation of troops, war material, and equipment, or for such other purposes connected with the emergency as may be needful or desirable.

Can the power be broader?

Mr. HARDWICK. The Senator drafted that, and I admit that it is pretty broad; but it seems to me what the Senator had in mind was that the President should have that power if it were necessary to move the troops, their equipment or supplies, or anything reasonably connected with those objects, and for no other purpose. I do not know, of course. That is what I should think the language meant.

Mr. THOMAS. Of course, Mr. President, what I had in mind might be one thing, and the effect of the language used in the act might be somewhat different. It might be broader or it might be narrower.

Mr. HARDWICK. I think that is what the language means, too.

Mr. THOMAS. But I disagree with the Senator in his construction of the language. Who is to determine, under the exercise of a power like this, what shipments may be necessary, and what must give way to that necessity? Who is to determine what are the other purposes connected with the emergency out of which springs into exercise the power given by the Congress of the United States to the President under this provision? Certainly the authority which is empowered to exercise the power thus conferred, to wit, the President of the United States and his advisers.

Mr. HARDWICK. I wonder, though, if we have a right to assume that, in exercising the power, the President will take into full account the reasons and purposes for which it is given, and will undertake to exercise it only for those purposes.

Mr. THOMAS. Why, Mr. President, I have not a doubt of it. I do not think this power is going to be subject to abuse. I do not believe the present President, or any other President of the United States, would assume the responsibility of utilizing this vast authority to the wanton injury of a single individual, however humble,

Mr. HARDWICK. If that is true, then the President will be confined to the interpretation I suggested.

Mr. THOMAS. That would depend upon whether the President's interpretation and that of the Senator from Georgia should happen to agree.

Mr. HARDWICK. If the Senator assumes that he is only going to exercise this power for the purposes that Congress confers it for——

Mr. THOMAS. I assume that, but what are those powers? It depends upon what particular emergency calls forth the exercise of those details with regard to shipments. The war is the emergency under which the railroads are taken possession of; but let us assume, Mr. President, that coal was absolutely essential for our allies in France, or wheat, if you please, or medical supplies. I have no doubt that under this power the President could suspend traffic, interfere with the transportation of such materials, and get them to the seaboard as rapidly as possible. Suppose that there should be a food famine in the city of Chicago, or the exorbitant prices that now prevail there and elsewhere, which is another name for the same thing—because it makes no difference how much food there may be in a place; if the people are unable to comply with the requirements of those possessing it, it means starvation, although it may be starvation in the midst of plenty. Now, let us assume that the attitude of the people of Chicago should, because of that condition, become so threatening, should so menace the peace and security of that great community, as to require the instant relief of the situation by throwing trains loaded with Government supplies into Chicago at once. Does anyone doubt that in time of war the President should have the authority to suspend all other traffic, if necessary, for the purpose of relieving that tense situation? And if he did otherwise would he not be justly reprehensible? Could we not then justly charge him with a disregard of his duty, with the nonperformance of obligations in the anticipation of which Congress passed this act of 1917?

Mr. CUMMINS. Mr. President——

Mr. THOMAS. I yield to the Senator from Iowa.

Mr. CUMMINS. The reply of the Senator from Colorado to the interruption of the Senator from Georgia is absolutely unanswerable, and I do not rise to direct the attention of the Senator from Colorado to that phase of it. I think I failed to make myself understood in a former interruption, however. My suggestion is that the act approved August 29, 1916, requires for its efficiency the taking possession by the President of the railway instrumentality. I am in favor of that; but the President could not do what he is authorized to do by the act of last year unless he took possession of the railway itself and directed and controlled it. Our committee thought that he might find an instance in which it was not necessary to take possession of a railway, and still very necessary, for the very purposes so well stated by the Senator from Colorado, to direct the railway company still in possession of the property as to the order of shipments that were to be made upon it, so as to give to the United States and to the successful prosecution of the war the first right in a congested or confused system of transportation. I do not think there is any conflict between the two from that point of view.

Mr. THOMAS. I understood the Senator. He is always very clear in his statements. I did not further refer to his interruption, because I did understand the distinction which he drew so very clearly.

Mr. CUMMINS. I feared I had not made it clear.

Mr. FLETCHER. Mr. President, may I call the attention of the Senator to another phase of that matter?

Mr. THOMAS. I yield to the Senator from Florida.

Mr. FLETCHER. I was going to suggest another thought in that connection. The national-defense act provides for the taking over of systems of railways, or parts of systems.

Mr. THOMAS. Or all of them.

Mr. FLETCHER. But does it cover waterways? Does it cover also foreign commerce as well as interstate commerce? This provision is intended to reach not only transportation by railways but transportation by water carriers, and it refers not only to interstate commerce but to foreign commerce; so that it would seem to be broader in that respect than the provision in the national-defense act.

Mr. THOMAS. I shall take a very few more minutes of the time of the Senate in what I want to say, and I should have by now concluded but for the interruptions—which, however, are always welcome.

I think that in so far as this bill enlarges the powers of the President so as to include traffic by waterways, which may not be included in the act of 1916, it is unquestionably appropriate. I think that so far as foreign or domestic commerce is concerned, the powers of the President under the existing law are ample to meet any and all exigencies they may present. I think that the first section of the law, which is designed to define offenses against the power hitherto granted, and to provide for their punishment through the processes of the courts, is very desirable if designed as a supplement to the statute of 1916, because every good citizen abhors punishment by military tribunals wherever it is possible to avoid them. They are always arbitrary, and therefore frequently unjust. The right to trial by jury in the courts of the country is too sacred a one, it has cost the Anglo-Saxon people too much blood and too much treasure, to be lightly disregarded or set aside at any time. Consequently, that provision seems to me to be desirable, coupled, of course, with the extension of the President's authority to which the Senator from Florida refers.

But, Mr. President, all efforts to diffuse the authority of the Executive, to make it dependent upon some board, however capable and experienced; upon some other individual, however great the confidence of the public in that individual, constitute, in my judgment, unwise legislation. The concentration of power in times of national peril is an absolute essential to national safety. A diffusion of power at such times will inevitably invite disaster. Hence, the suggestions which have been made regarding the danger of confiding to the President a power which must be exercised by some subordinate, while they may be well founded, are mild, in my judgment, in comparison to the probable dangers, aye, the disasters, which may ensue from a conflict of powers in a great moment fraught with crisis both to the Government and to the people.

I hope, therefore, that so far as that feature of the discussion is concerned, the Senate will reject its application to the bill in hand; and such portions of the bill as may be designed for that purpose should be eliminated.

Mr. NEWLANDS. Mr. President——

Mr. THOMAS. I yield to the Senator from Nevada.

Mr. NEWLANDS. I wish to state to the Senator that the Senator from Minnesota [Mr. NELSON] has offered a substitute for the first sentence of section 2 of the pending bill, with which the Senator is probably familiar.

Mr. THOMAS. I am not familiar with it. I heard it read just before I took the floor.

Mr. NEWLANDS. I will state what it is:

That during the continuance of the war in which the United States is now engaged, the President is authorized, if he finds it necessary for the successful prosecution of the war, to direct that such traffic or such shipments of commodities as may be essential to the prosecution of the war shall have preference or priority in transportation by any common carrier by railroad or water, under such rules and regulations as he may prescribe.

Mr. THOMAS. Let me ask the Senator if that is designed as a substitute for all of section 2?

Mr. NEWLANDS. Oh, no; only for the first sentence, down to the word "prescribe" on line 21.

Mr. THOMAS. I should like it better if it were a substitute for the entire section.

Mr. NEWLANDS. Now, it is stated by those who thus far have been critical of the bill that they are willing to accept the amendment offered by the Senator from Minnesota. I took time for its consideration; I have consulted all the members of the Interstate Commerce Committee on the floor, and the Senator from Virginia [Mr. MARTIN], the leader of the Democratic side, and they all agree that if the acceptance of this amendment will secure the speedy passage of the bill it would be wise to make no objection to it. I will ask the Senator whether he has any objection to it?

Mr. THOMAS. If that is the consensus of opinion, it would be presumptuous in me, having been engaged elsewhere on other business, to object to its adoption. Indeed, I am not objecting to any specific part of the bill. I am merely calling attention to it for the purpose of emphasizing the law as it exists, and also of criticizing that character of legislation which would deprive the President of any part of the power with which, in my judgment, he must be clothed in a great emergency like the present. I think, so far as the amendment is concerned to which the Senator has called my attention, the fact that it includes water transportation as well as railway transportation makes it quite desirable, and if it is otherwise unobjectionable it should be enacted into law.

Mr. NEWLANDS rose.

Mr. THOMAS. Just one word more and I will yield the floor.

Mr. NEWLANDS. I will state that at the conclusion of the Senator's remarks I will ask the Senate to consider the amendment offered by the Senator from Minnesota, and will make no objection to the amendment.

Mr. THOMAS. I will yield the floor in a moment. I merely wish in conclusion to add that there must be a concentration of

authority, because by that means and by that means alone can we fix responsibility and hold those clothed with the duty of its exercise but of its wise, its constant, and its efficient exercise as long as the emergency exists which originally called it forth.

Mr. NEWLANDS. I ask for a vote upon the amendment offered by the Senator from Minnesota.

The VICE PRESIDENT. The question is on agreeing to the amendment offered by the Senator from Minnesota [Mr. NELSON].

The amendment was agreed to.

Mr. NEWLANDS. I now ask for a vote on the amendment offered by me.

The VICE PRESIDENT. The Senator from Nevada offers an amendment which will be read.

The SECRETARY. Strike out the following words, on page 4, line 2, beginning with the word "President":

The President is hereby authorized, whenever in his judgment it becomes necessary in order to expedite transportation and to do justice between carriers, to enter into agreements with two or more carriers looking to a proper division of earnings for a time to be specified and upon kinds of traffic to be prescribed.

And in lieu thereof insert:

The President is hereby authorized, whenever in his judgment it becomes necessary in order to expedite and provide for needed transportation and to do justice between carriers, to permit and authorize carriers to enter into agreements looking to a proper and equitable division of earnings for a time to be specified and upon kinds of traffic to be prescribed.

Mr. NEWLANDS. I will state that that is a committee amendment.

Mr. REED. Mr. President, on two or three occasions I have tried to state what I understand to be the import of this amendment. I simply desire to make that statement and to occupy only a moment in so doing. I do not desire to argue the question.

As the bill stands and as it was originally reported by the committee, as I understand its language, if the President finds it necessary in order to expedite transportation and to do justice between carriers, the President is authorized to enter into agreements with two or more carriers looking to a proper division of the profits. Thus under the bill as it was reported by the committee in any agreement for the pooling of profits the President's presence and consent and supervision are necessary. Of course, it would not be his individual presence but probably some expert or man designated by him.

Under the language as it is now submitted in the amendment, as I understand that language, the President would merely give permission to make pooling arrangements, and thereupon, that order having been made, the railway companies will proceed in their own way and according to their own desires, without any governmental supervision of any kind, to make such pooling arrangements as they see fit.

It does seem to me that if we are to permit railroads to enter into pooling arrangements there should be some representative of the Government to supervise those arrangements, to know what they are, to protect the small railway company against the large railroad company, and to protect the public in so far as the public's rights may be affected.

Mr. NEWLANDS. May I suggest to the Senator from Missouri that this section does not permit carriers to enter into agreements looking to a proper and equitable division, such agreements to be absolutely operative according to their will. They enter into such agreements only as shall be permitted and authorized by the President of the United States.

Mr. REED. If that was the language of this amendment, if that were the purpose of this amendment, I would have no objection to it, but if that is the purpose of the amendment then it means exactly the same as the text did before the amendment was offered.

I know why this amendment is here. The Senator who offers it knows why it is here. The railroad presidents appeared before the committee asserting the right of the railroads to make their own agreements among themselves. If it means the same as the text does now, why do you offer it? Why do you insist upon it?

Mr. BRANDEGEE. Mr. President——

Mr. NEWLANDS. Does the Senator wish an answer to his question?

Mr. REED. Yes.

Mr. BRANDEGEE. The other day I called the attention of one of the members of the committee to what I consider an ambiguity in this language, because as it was printed it authorized the President to enter into agreements with the carriers looking to a proper division of earnings, and so forth, and I did not understand what was intended to be done. I think there is no doubt about the effect of the amendment offered by the Senator from Nevada, but in order to clarify my own views upon it, and to enable me to appreciate the point about to be made by the Senator from Missouri, I should like to have the amendment read by the Secretary.

Mr. REED. Or the Senator will have a copy sent to him. It is printed. I think when the Senator reads it he will catch its import.

Mr. BRANDEGEE. I did not know that it had been printed.

Mr. REED. I ask the Senator from Nevada, is it not his purpose to change the effect of the language in the original bill when he offers this amendment?

Mr. NEWLANDS. Of course it is.

Mr. REED. Is it not the effect of the change, then, that under the amendment the railway presidents once they have obtained permission to pool will make their own agreements without any interference by any officer of the Government?

Mr. NEWLANDS. I do not so understand it.

Mr. REED. Why not?

Mr. NEWLANDS. If the Senator is not through, I will wait until he concludes, for it will take some little time.

Mr. REED. I thought perhaps the Senator could explain it to me in a moment. I do not want to stand here and take any time on the bill.

Mr. NEWLANDS. If the Senator yields to me, I will explain it.

Mr. REED. I yield.

Mr. NEWLANDS. It is perfectly evident that the language contained in the original bill is faulty. What does it provide? It provides that the President shall enter into agreements with two or more carriers looking to a proper division of earnings for a time to be specified and upon the kinds of traffic to be prescribed. It is not a function of the President to enter into agreements with carriers regarding the public regulation of their transactions. The carriers are subject to public regulation and control. They are now forbidden by law to make any arrangements for pooling or for a division of earnings. Inasmuch as the bill provides for priorities and preferences which may act disastrously or injuriously as to one of the roads and beneficially as to others, and inasmuch as we have stricken out that section of the bill which authorizes those who are injured to apply to the Interstate Commerce Commission for compensation, that compensation to be paid out of the Treasury, we have provided that they can agree among themselves for a division of the earnings, and that agreement must be permitted and authorized by the President of the United States. It is entirely, it seems to me, lacking in dignity; it is a withdrawal from the dignity of the office of President of the United States to require him to enter into an agreement, but it is the duty of the Government to regulate and control. Now, we regulate and control.

Mr. REED. I am trying to ask the Senator a question, with all due courtesy.

Mr. NEWLANDS. Very well.

Mr. REED. The Senator states that the President must authorize the agreement.

Mr. NEWLANDS. Yes.

Mr. REED. Does the Senator mean that the agreement before it becomes effective must be submitted to the President and that agreement by him authorized, or does the Senator mean that all the President will do will be to say, "I hereby authorize an agreement to be made between the railway companies with reference to a division of their earnings," and thereupon, after that general permission has been given, the railway companies shall go on and make their agreement?

Mr. NEWLANDS. My understanding of the bill is that each agreement with reference to earnings must be approved.

Mr. REED. Very well. Will the Senator change his amendment now and add the language so that it will read:

The President is hereby authorized, whenever in his judgment it becomes necessary, in order to expedite and provide for needed transportation and to do justice between carriers, to permit and authorize carriers to enter into agreements looking to a proper and equitable division of earnings for such time as may be specified and upon kinds of traffic to be prescribed, such agreement in each instance to be approved by the President or his duly authorized representative.

Mr. NEWLANDS. I have no objection to that.

Mr. REED. I ask the Senator to accept that amendment.

Mr. NEWLANDS. I accept it.

The PRESIDING OFFICER (Mr. KING in the chair). The amendment to the amendment will be stated.

The SECRETARY. At the end of the proposed amendment insert:

Such agreement in each instance to be approved by the President or his duly authorized representative.

The PRESIDING OFFICER. The Chair understands the Senator from Nevada to accept the amendment.

Mr. NEWLANDS. I do.

The PRESIDING OFFICER. Without objection, the amendment will be so modified. The question is on agreeing to the amendment of the Senator from Nevada as modified.

The amendment as modified was agreed to.

Mr. REED. Has the chairman of the committee any other amendments that he desires to offer?

Mr. NEWLANDS. I have not.

Mr. REED. I offer the following amendment to be added as a new section. I send it to the desk to be read.

The PRESIDING OFFICER. It will be read.

The SECRETARY. Add as a new section at the end of the bill the following:

SEC. —. The Interstate Commerce Commission is hereby authorized and directed, after proper investigation and hearing, to require the various railway companies of the United States engaged in interstate commerce to provide with all possible dispatch sufficient cars and equipment to promptly move and transport all traffic tendered to them, and it is hereby made the duty of the said railway companies to comply with such orders when so made.

Mr. POMERENE. Does the Senator intend that they shall provide all the cars needed?

Mr. REED. They must get them.

Mr. POMERENE. In what way? By purchase?

Mr. REED. Yes.

Mr. POMERENE. The amendment does not provide any appropriation for the purpose. If I may give the Senator the benefit of a little information which I received yesterday, I think the Senate will perhaps conclude that there is not any occasion for the amendment, and if it were adopted that the Interstate Commerce Commission, even if they had the funds on hand, would not be able to procure the cars.

Mr. REED. The Senator did not hear the amendment correctly. There is no proposition that the Interstate Commerce Commission shall buy the cars.

Mr. POMERENE. As I understood it, it read that the Interstate Commerce Commission shall provide the cars.

Mr. REED. Oh, no; the Senator did not hear it correctly.

Mr. POMERENE. Then I misunderstood it.

Mr. REED. Let the Secretary again read the amendment.

The PRESIDING OFFICER. The Secretary will again read the amendment of the Senator from Missouri.

The SECRETARY. Add as a new section at the end of the bill the following:

SEC. —. The Interstate Commerce Commission is hereby authorized and directed, after proper investigation and hearing, to require the various railway companies of the United States engaged in interstate commerce to provide with all possible dispatch sufficient cars and equipment to promptly move and transport all traffic tendered to them, and it is hereby made the duty of the said railway companies to comply with such orders when so made.

Mr. POMERENE. I think I did perhaps misunderstand it, but I desire to state what was in my mind in any event as bearing upon this subject. A few days ago a communication taken from a newspaper was read to the Senate in effect that the Advisory Council had given an order for 100,000 freight cars. That matter was under consideration. Upon investigation it was found that the railroads themselves had given orders for about 100,000 cars and they had already financed their proposition. The car builders at that time were unable to provide those cars, because they could not get the necessary iron, steel, and other material. At once an effort was made to increase the output of iron and steel in the furnaces and steel mills. At that time the furnaces and steel mills were operating, according to the best information that could be obtained, to about 90 per cent of their capacity. The effort by the railroad men here was to enable the mill owners to use their capacity to the full limit. Because of that desire, an order was issued requiring the use of certain freight cars in the transportation of coal, coke, ore, iron, and steel; and they are using every effort now to get that extra iron and steel for the express purpose of building these additional cars.

Mr. REED. Mr. President, the Senator from Ohio, I trust, will not oppose this amendment because some cars have been ordered. If cars have been ordered and all due diligence is being employed to get them, and if they are sufficient in numbers, that will be a complete answer, when made, to any request of the Interstate Commerce Commission.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Missouri yield to the Senator from Ohio?

Mr. REED. Certainly.

Mr. POMERENE. I do not know that I shall oppose the amendment, but my belief is that it is not going to be effective, for the reasons I have stated.

In addition to that, permit me to call attention to the fact that the car-shortage bill, which was passed the other day, gives to the Interstate Commerce Commission plenary power when it comes to a question of the movement, distribution, exchange, interchange, and return of cars.

Mr. REED. But it does not require any additional equipment.

Mr. NEWLANDS. Mr. President, will the Senator from Missouri allow me to say a word?

The PRESIDING OFFICER. Does the Senator from Missouri yield to the Senator from Nevada?

Mr. REED. Yes.

Mr. NEWLANDS. I can say that, individually, I can see no objection to the amendment which the Senator from Missouri offers; but it has been the custom—and the well-reasoned custom—of the Interstate Commerce Committee to sanction no important change of this kind in the interstate commerce act without referring the proposed legislation to the Interstate Commerce Commission, in order that we may have the benefit of their information and suggestion, and also without having a hearing at which the shippers and the railroad companies may be heard.

If the Senator from Missouri will present this matter in a separate bill, I, as chairman of the committee, will expedite action upon it, because I believe it is a matter of great importance; but I should much prefer that it take the course I have indicated, instead of hastily having passed here a provision that has not been seriously considered either by the Committee on Interstate Commerce, the Interstate Commerce Commission, or the railroads. I ask the Senator from Missouri whether it will not satisfy him to introduce this proposition as a separate bill, with the assurance that it will be speedily presented to Congress in some form or other?

Mr. REED. Well, Mr. President, in normal times and under normal conditions I might be willing to do that, but I hope I shall not be asked to do it under existing circumstances. We all know that the business of Congress is crowded; we all know that there is going to be an attempt, at least, made to adjourn Congress as soon as what is termed war legislation is concluded. This amendment can not by any possibility work any wrong or outrage on any person or on any company, unless it be a wrong or outrage to require a common carrier to provide with all possible dispatch sufficient cars to transact its business.

I have no desire to see these companies placed under hardships; but this is a matter to which I challenge the attention of Senators: I believe that more than one-half of the difficulties that exist to-day with reference to exorbitant prices, especially for coal, arises from inadequate transportation facilities. If you go to a coal merchant in Washington and ask to buy your winter's coal, he will tell you that he can not get the coal into Washington; that he can not get cars to haul it. If you inquire why large quantities of provisions were allowed to go to waste in the western portion of our country a few months ago, you will find that the difficulty arose from lack of transportation.

These transportation companies exist; the public depends upon them to do the business of the country. If they do not do the business of the country, the gravest injury results. We are talking now about having, and many people believe we ought to have, food dictators—men authorized to take charge of the entire industrial organization of our land—the same men or man to be authorized to take charge of the transportation facilities of our land. The proposition that I make is so modest a demand by the Government that I feel very small and insignificant when I put it forward. It is merely that transportation companies shall perform the functions which they have undertaken to perform, and that they shall be required to do it as a matter of law, and not left to do it as a matter of choice. I hope there will be no opposition to the amendment.

Mr. POMERENE. May I ask the Senator from Missouri merely one question?

The PRESIDING OFFICER. Does the Senator from Missouri yield to the Senator from Ohio?

Mr. REED. I do.

Mr. POMERENE. I made a statement a moment ago, and I was satisfied my information was reliable, that the railroads have already contracted for a hundred thousand cars, which can not be built because there is not a sufficient iron and steel supply for that purpose. That being the situation, as a temporary measure, what good would the Senator expect to derive from his amendment if it were adopted?

Mr. REED. But, Mr. President, railroad companies may have ordered that many cars, and they may not be using all possible dispatch to secure them. Suppose, however, that they have ordered them and are using all possible dispatch, there is no harm to be done to them under the amendment, because they will appear before the Interstate Commerce Commission and say, "We have already ordered the cars; we are doing all we

can," and that will be the end of the matter; but if it should transpire that they are not doing all that they ought to do, it will do no harm for the Interstate Commerce Commission to have the authority to say to them, "You must do it." Besides I do not know, and nobody, I imagine, will undertake to say, that every railroad in the United States is doing its duty in this behalf.

Mr. POMERENE. Well, I think they are acting pretty well, as a whole. I can see this effect, as it seems to me, namely, that if the amendment is adopted it will certainly give the railroads another very cogent reason in support of their petition for an increase in freight rates at the present time.

Mr. REED. I can not be frightened by that, because their petition for increased freight rates would be as well bolstered up by the claim that they have ordered the cars, which the Senator from Ohio thinks they have ordered, as by a law which gives the Interstate Commerce Commission the authority to require them to get necessary cars. In any event, it must be plain to every candid man and to every man with an open mind that the country's demands and needs are more transportation; that the place we can get it from is the railroad companies; and that once we require them by law to use all reasonable means to secure it we are only making a reasonable requirement. I hope this amendment may be accepted and go on this bill.

Mr. FLETCHER. Mr. President, it may not be necessary to adopt this amendment, but I can not see any harm in it. It was reported, according to the best authority, that on May 1 there was a shortage of 150,000 cars. I think the Senator from Ohio [Mr. POMERENE] has said that the railroad companies have ordered 100,000 cars. That may be sufficient; and it may be that they are pursuing with energy the whole subject of providing these facilities as they are needed; but this amendment provides, first, that the Interstate Commerce Commission shall investigate the subject. That means they shall give hearings on it where needed; that they shall inquire into it; that they shall find what roads are acting in good faith, what cars are being built, what shops are available, and what the possibilities are for providing this equipment. Then it provides that the railroads shall be ordered, if it is found that they ought to be so ordered, by the Interstate Commerce Commission to provide the cars with as great dispatch as possible. There is nothing unreasonable about that.

If we provided by law that the Interstate Commerce Commission should ascertain how many cars were needed, and that the railroads should be required to provide them at once, it might be said we were doing an absurd thing, because it is possible that they could not be built and furnished at once; but here the language is broad in that respect; and it seems to me entirely reasonable that the railroad companies should be required to supply the needed equipment with as great dispatch as possible. So far as I am concerned, I can see no objection to the amendment.

Mr. SMITH of South Carolina. Mr. President, as a member of the Committee on Interstate Commerce I heartily indorse the amendment proposed by the Senator from Missouri. It does seem to me in this emergency, when so great complaint has been made on the ground of the inadequacy of facilities for shipment, while we are making provision for the mobilization of the resources of this country to meet the emergency upon us, that this amendment is peculiarly fitting now. In my opinion, we should put into the hands of the Government, through the Interstate Commerce Commission, the power to say to the railroads, after investigation, "We find that you have not sufficient equipment to do the business that is now entailed upon you, and in all reasonable time we expect you to furnish the equipment for which your roads were chartered and for which the privileges of common carriers were granted to you." I do earnestly hope that this amendment will be incorporated in the bill, because, according to my judgment, it is one of the most helpful provisions that possibly could be attached thereto.

Mr. HARDWICK. Mr. President, this amendment ought to be adopted, in my judgment, and it ought to be adopted for a great reason of public policy. When we passed the Hepburn law in 1906 we declared the established policy of this country to be the great democratic principle of "first come, first served"—equality of treatment to all of the business of all the industries of this Republic. If for the moment inadequate facilities force us to declare for preferences and for favoritism, according to the merits of each shipment, certainly we ought to take every step to return at the earliest possible moment to the true and safe ground on this question. We can not do that in any other way except by requiring the public carriers, who are public servants, to provide adequate facilities.

Of course it goes without saying, Mr. President, that the Interstate Commerce Commission when it requires this of the carriers, is bound to allow them whatever money is necessary, if any is necessary, in order to enable them to procure this equipment, and I suppose that that will be attended to. It is my opinion, Mr. President, in any event, that possibly, under some of the general provisions of the Hepburn law, the Interstate Commerce Commission already has this power; but I think this an appropriate place, when we are about to enact legislation, departing, temporarily at least from the correct principle, to make some expression of our desire to employ whatever methods are necessary to enable us to return to the true and correct principle and rule about this matter. For that reason I earnestly favor this amendment and hope it may be adopted by the Senate.

Mr. BRANDEGEE. Mr. President, while I was a member of the Interstate Commerce Committee I learned something about car shortage, the conditions of traffic, the degrees of its variation, the uncertainties of provision, and the difficulty of ascertaining what amount of traffic would be offered to each and all the railroads of the country at different seasons of the year and during different years. Of course I agree to the proposition—and I think everybody will—that a common carrier ought to be able to transact its business. If it sets up in the business of carrying traffic in the territory through which it runs, it ought to have sufficient equipment to do that business; but, Mr. President, it is not always the easiest thing for a railroad company to be in that position, in view of the fact that there may be hard times, when hundreds of thousands of its cars are sidetracked, and no freight offers for them at all for a year or two, and then there may come a boom time or a great excess of crops, when everybody rushes at the same time to a railroad and wants his product carried first and at once. I can well understand—and I think any man who will reflect upon the varying conditions that exist in different parts of the country as to its production can understand—that it is not physically possible for every railroad company, rich and poor, at all times to maintain the number of cars which would be adequate to accommodate the maximum rushes that occasionally do arise to congest interstate commerce.

I would have no objection at all to this amendment if the Senator had not included in it the word "direct." This matter comes before us very suddenly. It has not had the consideration of the committee. We are a legislative body——

Mr. REED. If the Senator please, if that is all the objection the Senator has, I am perfectly willing to leave it as an authorization.

Mr. BRANDEGEE. I would have no criticism at all then. That gives the specialists that we have constituted the commission the authority to do this if they think it is necessary.

Mr. REED. Yes.

Mr. BRANDEGEE. But I did not feel in a frame of mind to issue a direct order to our experts to do a thing when we knew nothing about it.

The PRESIDING OFFICER. The Senator from Missouri accepts the amendment.

Mr. POMERENE. Mr. President, that very materially changes the amendment; and I want to say just a word further on the subject of car shortage.

As a member of the subcommittee I went somewhat thoroughly into this question. The fact is that the railroads of the country own about 2,500,000 freight cars. There are some privately owned cars in addition to those. One of the difficulties has been the method of returning cars to the owning company. There have been several different plans adopted by the railroad companies, and until recently they had the plan that if a car was sent out from the owning company it should not be returned from its point of destination to the owning company unless it was loaded. The result was that there was a vast number of empty cars here in the East and at other terminal facilities. One witness suggested that if they had many, many more cars it would not materially change the present state of transportation, because they were lacking in terminal and elevator facilities; and I think there is a good deal of force in that proposition.

I was interested a few days ago to receive a circular which had been issued by this railway committee, in which they suggest to the various railroads methods of improvement of the present service, and in substance they make a statement like this: That if they would increase the speed of the freight trains, as they readily could do, and would load their cars more heavily, which they readily could do, and hurry up repairs on the cars that were out of repair, they could increase the present equipment to what would be the equivalent of 750,000 cars.

Mr. REED. Who made those suggestions?

Mr. POMERENE. This was a statement made by the committee of railway presidents, which was issued to the railroads of the country, urging them to increase the speed, to load their cars more heavily, and to hurry up the repairs on the cars that were out of repair.

Mr. REED. Did the railroad presidents inform the country why they had permitted their roads to be run in such an outrageous manner, as they must have been if all these reforms could be made?

Mr. POMERENE. I can not answer for the railroad companies. I am simply giving the Senate the benefit of a statement which is contained in a circular which was issued by this committee here.

The PRESIDING OFFICER. The question is upon the amendment offered by the Senator from Missouri.

Mr. HOLLIS. Mr. President, I understand that the amendment has been modified. I should like to hear it in its modified form.

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. It is proposed to add a new section, to be known as section 3, as follows:

SEC. 3. The Interstate Commerce Commission is hereby authorized, after proper investigation and hearing, to require the various railway companies of the United States engaged in interstate commerce to provide with all possible dispatch sufficient cars and equipment to promptly move and transport all traffic tendered to them, and it is hereby made the duty of the several railway companies to comply with such orders when so made.

Mr. NEWLANDS. Mr. President, so far as I am concerned, I wish to say that as to the merits of this amendment I can see no objection; but I think it is objectionable that any legislation so important as this should be passed without committee inquiry and without the usual course of procedure, which involves getting the views of the Interstate Commerce Commission, the railroads, and the shippers. I therefore can not accept this amendment, but I am perfectly willing that it shall go to a vote.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Missouri.

The amendment was agreed to.

Mr. SMITH of Georgia. Mr. President, I desire to state that I shall not offer any further amendments to this bill, with the amendment which has just been placed upon it, the amendment offered by the Senator from Minnesota, and the modification which the Senator from Nevada himself made in the bill. The amendment by the Senator from Minnesota limits the power of directing priorities in shipments to commodities essential to the prosecution of the war. While I have been willing to give the Interstate Commerce Commission the power to direct certain other priorities, I much prefer making it the duty of the commission to take such action as will cause the prompt shipment of all traffic. The amendment just adopted accomplishes even more than the amendment I had suggested. I will now vote for the bill as amended.

Mr. BRANDEGEE. Mr. President, I call the attention of the Senator from Nevada, in charge of the bill, to section 1 of the bill. I do not consider it a matter of great importance; but in line 4, if I have the right print——

The PRESIDING OFFICER. The Chair will state to the Senator that there is a reprint.

Mr. BRANDEGEE. I read from the reprint of June 12. In line 4, page 1, it states that whoever shall "during the war with Germany" do these various acts, and so forth, shall be punished. On page 2, when you come to section 2, the language of the bill is "that during the continuance of the war in which the United States is now engaged the President is authorized" to do certain things.

Is there any difference in the minds of the committee as to the period during which this bill is to operate? If not, unless there is some distinction between those two phrases, I should think it would be better to have a uniformity in describing the period during which the bill shall remain in effect. Of course it may be a purely technical matter; but we are at present at war with Germany, and we may possibly be at war with a dozen other powers before we get through; or some of them may drop out, and we may continue at war with the rest.

Mr. ROBINSON. Mr. President, I suggest to the chairman of the committee that there can be no objection to broadening the language so as to embrace any conflict in which the United States may become engaged before the termination of the present war.

Mr. BRANDEGEE. If you should say in each instance "during the continuance of the war in which the United States is now engaged," it seems to me it would be better than specifically referring to Germany.

Mr. ROBINSON. Yes; I think that would be the better language. I suggest to the chairman that he offer to make the language uniform, in line with the suggestion of the Senator from Connecticut.

Mr. HARDWICK. Mr. President, I do not think it ought to be exactly that way. We might be willing to confer on the President a lot of powers in connection with this matter, when we are at war with a great power, that we would not be willing to confer if we were engaged in war with a very small power.

Mr. ROBINSON. If the present conflict continues, in all probability the suggestion of the Senator from Georgia would not apply, because when Germany is whipped in all probability the war will be approaching an end.

Mr. SMITH of Georgia. When the war is over between the United States and Germany——

Mr. HARDWICK. We will not need any such power as this.

Mr. SMITH of Georgia (continuing). We can confidently expect that we will be at peace with all the balance of the world for a long time.

Mr. NEWLANDS. May I ask the Senator what amendment he suggests?

Mr. BRANDEGEE. I was going to suggest that, on line 4, page 1, we strike out the words "war with Germany" and insert in lieu thereof the same words that are used on page 2, lines 14 and 15.

Mr. NEWLANDS. There is no objection to that.

Mr. BRANDEGEE. Strike out the words "with Germany" and insert in lieu thereof the words "in which the United States is now engaged."

Mr. HARDWICK. Mr. President, let me ask the Senator a question. Does not that mean the war with Germany?

Mr. BRANDEGEE. Well, while we have not declared war on anybody but Germany, I think we are really engaged in a war against Germany and Turkey and Austria and the allies of the central Teutonic powers, and will be actually fighting them shortly.

Mr. HARDWICK. In my judgment, the words "the war in which the United States is now engaged" would be construed by anybody, in Congress or in the courts, to mean the war we have declared. I do not think there would be the slightest difference if we should use that phraseology.

Mr. BRANDEGEE. I think if our troops on the front continue in the war, we had better have the bill operate during the period of the war, until we make peace.

Mr. HARDWICK. My judgment is that it would operate in exactly the same way no matter whether you say "the war with Germany" or "the war in which the United States is now engaged," because the war in which we are now engaged by law is the war with Germany.

Mr. BRANDEGEE. I was not so anxious about which phrase we used as that we should not use two phrases, unless they meant the same thing.

Mr. HARDWICK. Yes; I agree with the Senator about that.

Mr. BRANDEGEE. And if they do mean the same thing, you had better drop one of them out.

Mr. SMITH of Georgia. We use one in one place and another in another place.

Mr. HARDWICK. Yes; I did not catch the Senator's criticism. I agree with him about that.

Mr. SMITH of Georgia. I desire, however, to express the hope that we will not be involved in war with Austria or in war with Turkey, and that the war will be limited to Germany, and that both of those other countries will realize the danger from submarining one of our vessels. Furthermore, I should be gratified to know at an early date that they have retired from the war.

Mr. BRANDEGEE. I will say to the Senator that if he will read the first account of the meeting of some Austrians or Turks with Gen. Pershing's division over in the trenches, he will agree that we are at war with them.

Mr. NEWLANDS. Mr. President, I have no objection to the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Connecticut, which will be stated.

The SECRETARY. On page 1, line 4, it is proposed to strike out the words "with Germany" and to insert in lieu thereof the words "in which the United States is now engaged."

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

THE LIBERTY LOAN.

Mr. LEWIS. Mr. President, prior to adjournment I desire to submit what I hope will not occupy a minute of the time of the Senate.

Mr. President, I assume that I am permitted by the Senate to express its gratification at the display of patriotic support of the liberty loan. The American Nation has delivered $3,000,000,000 in response to a call for two billion for the first installment for national defense against Prussian invasion of American rights. Let the once-doubting world note that the people of the United States, when suddenly precipitated from peace to war on a day's demand, rescued themselves from business obligations, commercial undertakings, banking and industrial pledges, and in 15 days paid to their Nation a sum of money the equal of which the warring nations of Britain took six months to deliver, France five months, Germany eight months, and Russia more than a year and two months.

If there be those in America who doubted if America's zeal in this war was aroused, or her interest awakened, or her people unanimously enlisted, let them heed this response to the call of the President and the appeal of the Secretary of the Treasury. Let the world behold that upon the first call to our Nation by her Commander her response was that of the prophet to the Lord, "Here am I." For victory quick and certain, America responded for the largest sum in a given time to a national defense recorded in all history.

To the people whose bankers have taken from their millions, whose business men have taken from their fortunes, whose citizens have given from their possessions, whose women have given from their savings, and whose toilers from their wages, all of our Government sends its praise and gratitude.

Mr. President, I thank the Senate for its indulgence.

Mr. NEWLANDS. I move that the Senate adjourn.

The motion was agreed to; and (at 1 o'clock and 55 minutes p. m., Saturday, June 16, 1917) the Senate adjourned until Monday, June 18, 1917, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

SATURDAY, *June 16, 1917.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Impress us, O God our Heavenly Father, as a people, from the least to the greatest, with the extreme gravity of the situation which confronts us in the world-wide struggle against autocracy and militarism for democracy which insures to the individual the right to think and act according to the dictates of his conscience in the things which are vital to life, liberty, and the pursuit of happiness. What we are called upon to do, let us do it with might, that a peace crowned with the glory of right and truth may prevail, to the honor of Thy holy name. Amen.

The Journal of the proceedings of yesterday was read and approved.

LAKES WINNIBIGOSHISH AND POKEGAMA—WATER POWER.

Mr. ADAMSON. Mr. Speaker, I ask unanimous consent to change the reference of the bill (H. R. 156), authorizing the Secretary of War to grant leases or licenses for the use of surplus water at the United States Government dams at Lake Winnibigoshish and at Lake Pokegama, in the State of Minnesota, from the Committee on Rivers and Harbors to the Committee on Interstate and Foreign Commerce. This is a water-power bill, and the Committee on Interstate and Foreign Commerce has always had jurisdiction of the subject.

Mr. SMALL. What is the nature of the bill?

Mr. ADAMSON. It is a bill to authorize the Secretary of War to utilize the surplus water at a couple of dams at the headwaters of the Mississippi River.

Mr. SMALL. Mr. Speaker, I ask unanimous consent to proceed for one minute.

The SPEAKER. The gentleman from North Carolina asks unanimous consent to proceed for one minute. Is there objection?

There was no objection.

Mr. SMALL. In the first place, I ask the gentleman if he will kindly wait until the gentleman from Minnesota [Mr. MILLER] comes into the Hall? The gentleman from Minnesota introduced the bill.

Mr. ADAMSON. I will do that, if I can be recognized then.

Mr. SMALL. At that time I will make the statement I intended to make now.

Mr. FERRIS. Will the gentleman yield to me for a question?

Mr. SMALL. Certainly; I yield to the gentleman from Oklahoma.

Mr. FERRIS. I notice that section 5 of the pending river and harbor bill contains the same proposition.

Mr. SMALL. Yes.

Mr. FERRIS. I have not compared it critically to see whether the words in section 5 of the river and harbor bill are identical with the words in the bill H. R. 156, introduced by the gentleman from Minnesota [Mr. MILLER], but I think they are.

Mr. SMALL. The gentleman from Minnesota [Mr. MILLER] told me they were.

Mr. FERRIS. I think they are. I hope we may have some sort of an agreement to take the water-power provision out of this river and harbor bill altogether.

Mr. SMALL. Mr. Speaker, the point can be made when we reach section 5 in the river and harbor bill. I think there is undue haste as well as undue insistence in this matter; but, at all events, the gentleman from Georgia has agreed to wait until the gentleman from Minnesota comes in.

Mr. ADAMSON. If I can be recognized to make the request, then I will do it.

The SPEAKER. The gentleman will be recognized if the Speaker is in the chair. The House may be in Committee of the Whole.

Mr. ADAMSON. I will state, by permission, that I do not wish to be considered in haste at all, but I do not want to be prejudiced in any rights that my committee may have.

The SPEAKER. The gentleman will not be prejudiced in any rights.

Mr. ADAMSON. I am perfectly willing to register the request, and if it is not granted, to enter a motion to make the change of reference and not press either one at this time.

The SPEAKER. The Chair understands the gentleman from Georgia is going home. How soon is he going?

Mr. ADAMSON. I am going home to-night. I am afraid I will not be here when section 5 of the river and harbor bill is reached.

The SPEAKER. The reason the Chair asked the gentleman the question is that the gentleman from North Carolina [Mr. SMALL] is going to move in a minute that the House go into the Committee of the Whole for the consideration of the river and harbor bill.

Mr. ADAMSON. I am not disposed to hinder the progress of the bill at all, but I do not want to be prejudiced in any right about it.

The SPEAKER. The gentleman will not be prejudiced.

Mr. ADAMSON. I want to give notice that we claim jurisdiction of both questions, and that we want to perfect a better section than that whenever the water-power bill is framed.

Mr. STAFFORD. Will the gentleman yield to me to make this suggestion——

Mr. ADAMSON. I yield to the gentleman.

Mr. STAFFORD. That the gentlemen enter into some understanding that when the gentleman from Minnesota [Mr. MILLER] makes his appearance the committee rise and take up this question for consideration.

Mr. SMALL. Oh, Mr. Speaker, that can be done when we reach the item in the bill or at some other time.

Mr. ADAMSON. I am not even insisting on that. I am afraid I will not be here when section 5 is reached.

The SPEAKER. The gentleman might deputize some other gentleman to represent him in the matter.

Mr. ADAMSON. I am perfectly willing to enter the request for the change of reference, giving notice that if the request is refused I will enter a motion to change the reference, and to let it stand until some future time.

The SPEAKER. All right.

CALL OF THE HOUSE.

Mr. SMALL. I move that the House resolve itself——

Mr. MADDEN. I make the point of order that there is no quorum present, Mr. Speaker.

The SPEAKER. The gentleman from Illinois makes the point of order that there is no quorum present. Evidently there is no quorum.

Mr. SMALL. I move a call of the House, Mr. Speaker.

The motion was agreed to.

The SPEAKER. The Sergeant at Arms will notify absentees, the Doorkeeper will lock the doors, and the Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

Almon	Bland	Browning	Cantrill
Anthony	Bowers	Bruckner	Capstick
Bacharach	Brand	Butler	Carew
Bell	Brodbeck	Campbell, Kans.	Carlin

Chandler, N. Y.	Goodwin, Ark.	Langley	Saunders, Va.
Clark, Fla.	Gould	Larsen	Schall
Connally, Tex.	Graham, Pa.	Littlepage	Scott, Pa.
Copley	Gray, N. J.	Longworth	Scully
Crago	Griest	Lunn	Shallenberger
Cramton	Griffin	McCormick	Sherley
Crisp	Hamill	McCulloch	Sinnott
Crosser	Hamilton, N. Y.	McKinley	Slayden
Currie, Mich.	Harrison, Va.	Maher	Slemp
Dale, N. Y.	Haskell	Mann	Sloan
Davis	Hayes	Martin, Ill.	Smith, C. B.
Dent	Heaton	Morin	Smith, T. F.
Denton	Helm	Mudd	Snyder
Dixon	Hill	Neely	Stephens, Nebr.
Dooling	Hollingsworth	Nelson	Sterling, Ill.
Doremus	Howard	Nichols, Mich.	Stevenson
Drukker	Hull, Iowa	Oliver, N. Y.	Stiness
Dyer	Hutchinson	Olney	Strong
Eagan	Igoe	Paige	Sullivan
Eagle	Ireland	Parker, N. J.	Swift
Edmonds	Johnson, Ky.	Peters	Tague
Estopinal	Jones, Va.	Porter	Talbott
Fairchild, B. L.	Kearns	Pou	Taylor, Colo.
Fields	Keating	Powers	Templeton
Fitzgerald	Kelley, Mich.	Price	Van Dyke
Flynn	Kelly, Pa.	Ramseyer	Vare
Fordney	Kennedy, Iowa	Reed	Walton
Foss	Kennedy, R. I.	Riordan	Ward
Francis	Key, Ohio	Robinson	Wason
Freeman	Kiess, Pa.	Rogers	Watson, Va.
Fuller, Mass.	Kitchin	Rose	White, Me.
Gallivan	Knutson	Rowland	Wilson, Tex.
Garland	Kraus	Rucker	Wingo
Garrett, Tenn.	Kreider	Russell	Winslow
Glass	LaGuardia	Sabath	Woodyard

The SPEAKER. On this call 274 Members, a quorum, have answered to their names.

Mr. SMALL. Mr. Speaker, I move to dispense with further proceedings under the call.

The motion was agreed to, and the doors were opened.

HOUR OF MEETING ON MONDAY.

Mr. LEVER. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock a. m. next Monday.

The SPEAKER. The Chair will inquire of the gentleman if he intends to call up the food-control bill on Monday.

Mr. LEVER. Yes.

The SPEAKER. The gentleman from South Carolina asks unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock a. m. next Monday. Is there objection?

Mr. YOUNG of Texas. I object.

EXTENSION OF REMARKS.

Mr. LINTHICUM. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by inserting an editorial from the New York World of May 18, 1917.

The SPEAKER. The gentleman from Maryland asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. TIMBERLAKE. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing a resolution by the members of the Centennial Chapter, No. 58, Order of the Eastern Star, of Colorado Springs, in favor of the Susan B. Anthony amendment.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

Mr. HICKS. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by publishing some further facts in regard to the flag.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. ALMON, for to-day, on account of illness.

To Mr. JOHNSON of Kentucky, indefinitely, on account of critical illness in his family.

THE RIVER AND HARBOR BILL.

Mr. SMALL. I move that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the river and harbor bill (H. R. 4285), and pending that I ask to make a statement and to submit a request for unanimous consent.

The SPEAKER. The gentleman from North Carolina asks unanimous consent for two minutes. Is there objection?

There was no objection.

Mr. SMALL. Mr. Speaker, during the consideration of the river and harbor bill to-day in the Committee of the Whole I respectfully suggest that Members remain in the Chamber during the day. Mr. Speaker, I ask unanimous consent that at 5.30 o'clock p. m. to-day the committee rise and report the bill to the House with all amendments and that the previous question be considered as ordered on the bill and all amendments thereto.

Mr. MADDEN. I object.

Mr. SMALL. Mr. Speaker, I modify the request by making it 8 o'clock.

Mr. MADDEN. Mr. Speaker, there was an understanding yesterday between the gentleman and Members of the House that the committee should rise this afternoon not later than half past 5. If the gentleman from North Carolina does not want to keep it, well and good.

Mr. SMALL. That is gratuitous. I was asking unanimous consent.

The SPEAKER. The time of the gentleman from North Carolina has expired, and the question is on the motion of the gentleman to go into Committee of the Whole House on the state of the Union on the river and harbor bill.

The motion was agreed to.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union, with Mr. HARRISON of Mississippi in the chair.

The Clerk read as follows:

Government iron pier in Delaware Bay, near Lewes, Del.: For maintenance and repair in accordance with the report submitted in House Document No. 1059, Sixty-fourth Congress, first session, $68,000.

Mr. TREADWAY. Mr. Chairman, I move to strike out the last word. I think the House is entitled to an explanation as to why this item is included in the present bill. If I remember rightly, it was not in the bill as it passed at the last session of Congress. The present bill under consideration is supposed to be based on that bill. Now, in some way the construction of an iron pier appears to be necessary for the national defense.

I hold in my hand the report of the Chief of Engineers, submitted to the first session of the Sixty-fourth Congress, House Document 1059, and I find that this pier was originally authorized by act of Congress in 1870, and that it has so far cost the Government $387,839.40. The district officer states, and I read from the report, "that the iron substructure is now heavily rust eaten and the entire timber superstructure is badly decayed," and he estimates that "an expenditure approximately of $78,000 will be required to place it in proper condition."

The pier has never been used to any extent for commercial purposes.

May I ask the people interested in having this item go into this bill for what purpose it has been used, if not for commercial purposes? Then, again, we read that the Board of Engineers is of the opinion that it is not advisable to repair the pier in the interest of general commerce and navigation, but that repairs are urgently needed if its use is to be continued in behalf of other interests. I take it that "the other interests" there referred to near Lewes, Del., are the interests of yachtmen and possibly some Government lighthouse boats, and that sort of thing, but we are passing here, or the majority of the committee is endeavoring to have passed here, a bill based upon national defense. One of the items in the bill is for repair to a rusted iron pier which was built in 1870 and maintained at an expense of $387,000. It is now so rusted that the understructure is nearly gone and the upper structure badly decayed. That is the kind of an item which to-day is an emergency proposition, so claimed, in behalf of national defense. My mentality does not carry me to the extent wherein that emergency appears at the present time. It was not a national emergency at the time we passed the river and harbor bill last session, but it becomes one now, and I think the House is entitled to an explanation, which I hope some gentleman will be able to give, as to the national emergency now confronting us requiring an appropriation of $70,000 for this rusted pier.

Mr. SMALL. Mr. Chairman, it should not be necessary to furnish to a member of the committee the information which I shall now with pleasure submit. This pier was originally constructed in 1870 and was intended primarily for commercial needs. It is true that the commerce there did not develop to the extent anticipated. The present emergency for the repair of this pier is based on these facts: That it is located near the Delaware Breakwater, that in that section during this period of war particularly there will be large numbers of naval craft, patrol boats, submarines, destroyers, and it is absolutely necessary that the pier be repaired to have a convenient landing place for these small naval craft. Col. Newcomer, representing the Chief of Engineers in the hearing before the committee, in explanation for the necessity for this appropriation, made the following statement:

This pier is important at this time on account of the fact that we have so many of these patrol boats, torpedo boats, and other small boats

which now have no good landing at Lewes. This, of course, is the Delaware Breakwater, where they are apt to collect in considerable number.

I hope this statement makes it clear that it is an emergency matter.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. SMALL. Yes.

Mr. MOORE of Pennsylvania. If my colleague cares to he might call the attention of the gentleman from Massachusetts to the report, which the gentleman from Massachusetts had in his hand, and from which he read only a part, and which report following the extract the gentleman read says:

The United States Lighthouse Establishment uses the pier at the place for the storage of boats, the United States Lifesaving Service has a boathouse at a point about midway of the pier, and the United States quarantine service uses it occasionally for landing passengers.

The pier is situated at one of the most vital points of the Delaware River and Bay approaches, and if the gentleman will permit me to say further, it seems absurd that because a pier has grown old and is no longer serviceable in certain of its parts Congress in war times should not put it in order for the use of the Government of the United States.

Mr. POLK. Mr. Chairman, it might be well for me to state to the House that there is located at the land end of this pier a marine hospital, and I have a letter from Gen. Black, which I send to the desk and ask to have read in my time.

The Clerk read as follows:

FEBRUARY 7, 1917.

Hon. WILLARD SAULSBURY,
United States Senate.

MY DEAR SENATOR: 1. Replying to your letter of yesterday, relative to my appearance before the Commerce Committee on the subject of needed repairs to the iron pier at Lewes, Del., I take pleasure in giving you a statement of a portion of my testimony given before the committee.

2. The pier is in need of immediate repairs. The ironwork is badly eaten by the rust, some of the braces are broken, and the decking is so badly decayed that life is risked in walking thereon. This pier was erected for the purpose of providing communication with the shore for vessels coming to the harbor, so that provisions and supplies could be obtained and also to give access to lines of travel and afford mail accommodations.

3. Whether much use is made of this structure for commercial reasons or not is of small importance, due to the fact that it is the only pier extending to deep water behind the breakwater, which forms a harbor of refuge during storms. Its greatest value, however, lies in its use as made by the Lighthouse Department, the Coast Guard Service, the Public Health Service, the War Department, and the use that can be made of it by the Navy. It is a fact that all departments of the Government are anxious to use this pier and the desire to retain it.

4. In view of the need and use of this pier by the various branches of the Federal Government, the factor of commerce should not be considered, and its repair was recommended. It is evident that the repairs and control of the pier can be accomplished most advantageously if this duty is made the charge of one department, and if it is desired that the Engineer Department retain control and make repairs the item has a proper place in the present river and harbor bill.

5. I trust that the foregoing will be sufficient, but if it is not, I will be glad to give any additional data which you may indicate.

Very truly, yours,

W. M. BLACK,
Brigadier General, Chief of Engineers.

The Clerk read as follows:

Waterway between Rehoboth Bay and Delaware Bay, Del.: Continuing improvement and for maintenance, $50,000.

Mr. FREAR. Mr. Chairman, I move to strike out the last word. This is an inland-waterway proposition, a canal, but I wish to address myself to another subject which is directly in point, and which is brought forth by the CONGRESSIONAL RECORD. In the Appendix of the RECORD there appears extension of remarks by the distinguished gentleman from North Carolina [Mr. SMALL], the chairman of our committee, for whom I have personally high respect. I desire to call attention to one statement which appears in that extension of remarks wherein he has included an address to the press by Secretary Redfield. Incidentally the chairman of the committee makes use of the following language:

It must seem strange to intelligent citizens that in the face of this crisis some Members of Congress are contending that we should suspend the maintenance and improvement of our waterways during the period of the war, and are indulging in facetious and unfounded criticism of our waterways. Such opposition can not find defense at the bar of public opinion and will be justly rebuked.

Mr. SMALL. Mr. Chairman, will the gentleman permit me to say right there that I still subscribe to that?

Mr. FREAR. Very well. Mr. Chairman, I do not care to undertake the defense of seven members of the committee who have opposed this bill; I do not care to defend the 120 Members of the House who opposed the consideration of the bill, and I do not care to defend a majority side of the Democratic House which directed that there should be no such bill as this river and harbor bill at this session of Congress. It must rest with the chairman of the committee to determine whether or not all of these gentlemen who have been in opposition to the bill are to be criticized because of their attitude upon this question. That is the chairman's right whether advisable or not.

But I wish to address myself—and this is the point for which I rose—more particularly to the timely remarks of Mr. Redfield, the Secretary of Commerce. Secretary Redfield makes a statement for the press of a commission that has been appointed by the public defense league—a commission or board to carry on inland-waterway expenditures. Secretary Redfield has taken a very active part in some matters, particularly in the city of Chicago, if I remember aright, on a waterway proposition that involved the wreck of the *Eastland*, but I wish to consider the personnel of the commission.

Mr. HARDY. Mr. Chairman, I make the point of order the gentleman is not discussing the amendment or the bill.

Mr. FREAR. I am discussing the statement of the chairman of the committee.

The CHAIRMAN. The point of order is sustained. The gentleman will discuss the amendment.

Mr. FREAR. The amendment is to strike out the last word on this proposition on inland waterways, and I wish to come to the question of the commission that is extended in the RECORD and mentioned by the chairman of the committee. Now, I am trying to find out whether I am in order or not.

The CHAIRMAN. The gentleman will proceed in order.

Mr. FREAR. Let me discuss that commission which is to have charge of this inland waterway work according to the chairman's remarks. First——

Mr. HARDY. Mr. Chairman, I raise the point of order that the commission is not involved in the motion to strike out the last word.

The CHAIRMAN. The gentleman has not proceeded far enough to ascertain whether or not the gentleman is in order.

Mr. FREAR. First, in this commission is Gen. Black——

The CHAIRMAN. The time of the gentleman has expired.

Mr. FREAR. Mr. Chairman, I ask unanimous consent for five minutes more.

Mr. HARDY. I object.

Mr. MADDEN. Mr. Chairman, I move to strike out the paragraph.

Mr. SMALL. If the gentleman will permit me, I ask unanimous consent that all debate on this paragraph and all amendments thereto close in five minutes.

Mr. MADDEN. I object.

Mr. SMALL. I move that all debate on this paragraph and all amendments thereto close in five minutes.

Mr. MADDEN. I have the floor, and I do not recognize the gentleman's right to take me off the floor.

Mr. SMALL. I understood the gentleman to yield for that purpose.

Mr. MADDEN. I did not yield for any such purpose.

The CHAIRMAN. Does the gentleman yield for the purpose?

Mr. MADDEN. No.

Mr. BORLAND. Mr. Chairman, I make the point of order that the gentleman has spoken five minutes to his amendment. Unless the gentleman is recognized for five minutes as opposed to it, he would not be in order.

The CHAIRMAN. The gentleman from Illinois [Mr. MADDEN] moves to strike out the paragraph. There has not been five minutes of discussion yet on that amendment.

Mr. MADDEN. Now, Mr. Chairman, I think this paragraph certainly ought to be stricken from the bill. It has no place in it. It does not amount to anything as a war emergency. We are endeavoring to appropriate $50,000 for a project that has no value as a war emergency. And I understand that we are considering this bill as a war emergency. And then the question I wish to ask the gentleman from North Carolina [Mr. SMALL], if he cares to answer, is, in what respect will this improvement be used as a war emergency if the appropriation is made? I pause for an answer. The gentleman does not reply.

Mr. MOORE of Pennsylvania. Will the gentleman take an answer from me?

Mr. MADDEN. Yes; I will take an answer from anybody.

Mr. MOORE of Pennsylvania. If you could get foodstuffs over a waterway that you could not get over a railroad in time of war, it is a war proposition. That is exactly what this is.

Mr. MADDEN. The State of Delaware is not so large but that you could haul foodstuffs anywhere with a mule team. I could get on a street car line and go through the State before the 5-cent fare is out. So I do not think the gentleman can come here with the idea that foodstuffs must be carried on a waterway across a State where if you enter a street car and pay a 5-cent far you would only have half the fare used up before you would cross the State.

Mr. MOORE of Pennsylvania. There are not any street cars.

Mr. MADDEN. If so, the people of Delaware are not progressive.

Mr. POLK. I would like to state to the gentleman from Illinois that while the State of Delaware may not be very large she has oversubscribed her quota to the war loan by three times.

Mr. MADDEN. I am very glad to hear that, and the State of Delaware ought to do that, because there is no State in the Union that has made so much out of war as its citizens have. They have made money out of war and preparations for war when everybody else in the United States was broke. They ought to subscribe. They ought to subscribe for half of the war loan, because they have made their money out of the war. It is no indication of patriotism because they have contributed a small part of that which they have taken out of the blood of the men of the country and of the world by making ammunition and creating sentiment in favor of war.

Mr. CALDWELL. Will the gentleman yield for a minute?

Mr. MADDEN. No; I do not yield now.

Mr. CALDWELL. I did not think you would.

Mr. MADDEN. I think now the time has come when we ought to insist, inasmuch as the chairman of the committee and members of the committee say this is a war-emergency measure, on knowing wherein it is a war-emergency measure. I assert, and I pause for reply again and for any member of the committee to say in denial, that this is not in any sense a war-emergency measure and it can not be justified as any part of this bill.

Mr. CALDWELL. Will the gentleman yield?

Mr. MADDEN. If the chairman of the committee makes the assertion it is, I will accept his word. I deny it, and I ask any member of the committee to assert that it is. Will they refuse to assert what they have already claimed, that this is an emergency-war measure; that this 7-foot channel on which we are proposing to expend $50,000 of the people's money in these days of stress, when everybody is taxed beyond limit, is a war-emergency measure to carry food supplies to the Army? Ah, it is absurd and ridiculous.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SMALL. Mr. Chairman, I desire to answer the gentleman in my own time. He asserts that this is not an emergency measure. He moves to strike out the paragraph. The committee has a chance to say whether or not it will strike it out.

These are the facts: In this, the lower part of Delaware, there are large agricultural interests. Vegetables and various kinds of fruits, including small berries, are largely grown. These farmers are absolutely without any railroad facilities of any kind, and this waterway furnishes the only outlet which these farmers engaged in agriculture have for sending their produce to market. It is the only opportunity they have of reaching the Delaware River.

The gentleman from Illinois speaks of "war measures." I do not know, when the gentleman from Illinois is discussing this bill, how to distinguish between facetiousness or humor and seriousness. If the gentleman is serious and intends to tell the House that transportation in this hour of stress and war, in consideration of the importance of increasing our agricultural production, is not a war measure, he either displays his humor or his prejudice. [Applause.]

I submit, Mr. Chairman, it is a war measure; and if in face of these facts the committee wishes to strike out this item, it will have an opportunity of doing so.

Mr. COOPER of Wisconsin. Mr. Chairman, will the gentleman yield for a question?

Mr. SMALL. Certainly.

Mr. COOPER of Wisconsin. The gentleman from Illinois indicated that there was a street car system or electric car system which could transport all the products, and so forth. Now, the gentleman from North Carolina says there are no railroads in that section of Delaware at all. Is that true?

Mr. SMALL. That is true. That is the information before the committee. I think there are no street car lines in that part of Delaware.

Mr. POLK. Mr. Chairman, if the gentleman will permit, there are no street car lines there, and the only outlet for this section of the country is the waterway connecting Rehoboth Bay with Delaware Bay.

Mr. SMALL. Mr. Chairman, I ask that the debate on this section close.

The CHAIRMAN. The gentleman from North Carolina asks unanimous consent that the debate on this section close. Is there objection?

There was no objection.

The CHAIRMAN. The question is on agreeing to the motion of the gentleman from Illinois [Mr. MADDEN].

The question was taken, and the Chairman announced that the noes seemed to have it.

Mr. MADDEN. Mr. Chairman, I ask for a division.

The CHAIRMAN. A division is asked for.

The committee divided; and there were—ayes 25, noes 62.

So the motion was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Improving inland waterway from Delaware River to Chesapeake Bay, Del. and Md., in accordance with the project recommended by the Chief of Engineers in paragraph 3 of his report, dated August 9, 1913, as published in House Document No. 196, Sixty-third Congress, first session: The Secretary of War is hereby authorized to enter into negotiations for the purchase of the existing Chesapeake and Delaware Canal, and all the property, rights of property, franchises, and appurtenances used or acquired for use in connection therewith or appertaining thereto; and he is further authorized, if in his judgment the price is reasonable and satisfactory, to make a contract for the purchase of the same, subject to future ratification and appropriation by Congress. In the event of the inability of the Secretary of War to make a satisfactory contract for the voluntary purchase of said canal and its appurtenances, he is hereby authorized and directed through the Attorney General to institute and to carry to completion proceedings for the condemnation of the said canal and its appurtenances, the acceptance of the award in said proceedings to be subject to future ratification and appropriation by Congress. Such condemnation proceedings shall be instituted and conducted in, and jurisdiction of said proceedings is hereby given to, the District Court of the United States for the District of Delaware substantially as provided in "An act to authorize condemnation of land for sites for public buildings, and for other purposes," approved August 1, 1888, and the sum of $5,000 is hereby appropriated to pay the necessary costs thereof and expenses in connection therewith.

Mr. MADDEN. Mr. Chairman, I reserve a point of order on that paragraph.

Mr. FOSTER. I make the point of order, Mr. Chairman.

Mr. SMALL. Mr. Chairman, will the gentleman withhold his point of order just a moment? There is a clerical error in the paragraph.

Mr. MADDEN. I reserve it, but my colleague [Mr. FOSTER] makes it. I do not think the gentleman from North Carolina can correct the paragraph until we have disposed of this point of order. It is not before the House yet for consideration.

Mr. SMALL. I hope the gentleman will withdraw his point of order.

Mr. FOSTER. I make the point of order, Mr. Chairman; if it is to be made at all, it might as well be made at one time as another. This is not authorized by law.

Mr. MOORE of Pennsylvania. I understand the gentleman from Illinois [Mr. FOSTER] makes the point of order against the paragraph?

The CHAIRMAN. Yes.

Mr. MOORE of Pennsylvania. I ask the gentleman from Illinois, in all fairness to this proposition, to reserve his point of order until its merits can be explained.

Mr. FOSTER. I will reserve it for five minutes, but not for a long discussion.

Mr. MOORE of Pennsylvania. I ask that the gentleman reserve it without limit. I shall not be unreasonable as to time.

Mr. FOSTER. Certainly.

The CHAIRMAN. The gentleman from Illinois [Mr. FOSTER] reserves his point of order.

Mr. MOORE of Pennsylvania. I desire to speak on the merits for a brief period.

Mr. MADDEN. Is the gentleman going to talk on the merits or on the point of order?

Mr. MOORE of Pennsylvania. On the merits. Does the gentleman object to that? Because if he does, we might as well understand it now, if that is the move to be made.

Mr. MADDEN. No.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. MOORE] asks unanimous consent to proceed in the discussion of this section on its merits. Is there objection?

Mr. MADDEN. Mr. Chairman, while the point of order is pending, I assume that the gentleman will have that right?

The CHAIRMAN. The Chair does not care to express himself as to that.

Mr. SMALL. How much time does the gentleman from Pennsylvania desire?

Mr. MOORE of Pennsylvania. This is one item in the bill that will probably be more contested than any other, and there ought to be at least 20 or 30 minutes for the explanation of the project. I should like to have 30 minutes.

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent to proceed for 30 minutes to discuss the merits of the proposition. Is there objection?

Mr. FOSTER. Reserving the right to object——

Mr. LENROOT. Reserving the right to object, Mr. Chairman, I shall not object, provided that an understanding can be

had that an equal amount of time shall be given to those opposed to the proposition on the merits. That is only fair.

Mr. SMALL. That will consume an hour.

Mr. MOORE of Pennsylvania. I have no objection to that, of course.

Mr. SMALL. The gentleman knows that the gentleman from Pennsylvania is quite familiar with and interested in this proposition.

Mr. LENROOT. May I make this suggestion to the chairman of the committee, that if this shall be held in order, the chairman of the committee will not move to close debate until the opposition has had an equal amount of time?

Mr. SMALL. I will agree to 30 minutes.

Mr. LENROOT. Very well.

Mr. MADDEN. Let us see if we understand that. If the gentleman from Pennsylvania is given unanimous consent to talk for 30 minutes, speaking on the merits in favor of this project, when the point of order is decided and the item is held to be in order those in opposition to it shall have 30 uninterrupted minutes to speak on the other side? Is that what the gentleman understands?

Mr. SMALL. That is a new descriptive word "uninterrupted." [Laughter.]

Mr. MADDEN. I mean they will have 30 minutes without question.

Mr. SMALL. Yes.

The CHAIRMAN. The gentleman from Pennsylvania asks leave to proceed for 30 minutes.

Mr. FOSTER. Reserving the right to object, Mr. Chairman, if it is going to take a long time to discuss the point of order after the merits of the proposition are discussed——

The CHAIRMAN. The Chair will state that he would like to hear argument on the point of order.

Mr. MADDEN. Does the Chair want to hear an argument on the point of order now?

The CHAIRMAN. The Chair does not desire to express a positive opinion on that.

Mr. MADDEN. I will discuss the point of order with the Chair after the gentleman from Pennsylvania has discussed the merits.

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent to proceed for 30 minutes to discuss the merits. Is there objection?

There was no objection?

Mr. MOORE of Pennsylvania. Mr. Chairman, this matter has been before the committee previously, and I shall regret it if the statement of the facts appears to be reiteration. It is an old story, but an intensely interesting one, to those who live along the Atlantic seaboard and who are interested in the development of commerce and in the welfare and defense of our country.

The gentlemen from the Mississippi Valley are naturally proud of their territory. They have a fertile soil, and they have it well irrigated by the Mississippi River and its tributaries, and they have labored in this House valiantly to obtain improvement of that river and those tributaries, and have succeeded wonderfully well.

While all this has been going on in the Middle West the Atlantic seaboard has not received the same attention from Congress in a commercial sense that the Mississippi Valley has received. Not that those of us living along the Atlantic seaboard are at all envious of the progress of our friends in the Middle West. but we feel that the time has come when recognition should be given to the worthy projects of the East.

It is a geographical fact that the Atlantic seaboard is dotted inland with lakes, ponds, sounds, bays, and rivers, which, if linked up into one united chain, would make a complete inland waterway, safe from the dangers and risks of outside sailing, all the way from New England to the Gulf.

Mr. Chairman, I feel constrained to ask for order, and that gentlemen who are opposed to this project refrain from loud conversation. It is a strange thing that those who oppose a proposition will persist in irritating those who are endeavoring to make a fair presentation of it; but that seems to be the rule in the consideration of this bill, and it is not fair play. [Applause.] Now, I am asking for fair play, and I have been here long enough to know how to get it, and I notify the gentlemen who are constantly keeping up a noise by conversation that I propose to get a square deal for the presentation of this proposition.

Mr. MADDEN. What does the gentleman want to get peeved for?

Mr. MOORE of Pennsylvania. I am not getting peeved. The gentleman could not get me peeved if he tried.

Mr. MADDEN. It does not help the gentleman's case any for him to make threats.

Mr. MOORE of Pennsylvania. I am not making any threats. I am appealing to those who are not obstinate and who are willing to listen.

Mr. FREAR. I am satisfied that there was no intention to create any interruption, and of course there are only two or three gentlemen talking, so I think the gentleman ought to withdraw his remarks which he made about those who are engaged in conversation in view of the fact that an extension of time has been given him without any question.

Mr. MOORE of Pennsylvania. At the special request of the gentleman from Wisconsin, who, I assume, is in favor of this bill, I withdraw what I said. [Laughter.]

Here is a geographical situation that deserves consideration at the hands of this Congress, particularly now in these times of war. Gentlemen in the interior may not understand this situation so thoroughly as we do who are more directly affected by it. But we have tremendous wealth along the Atlantic coast; we have great industries there. The gentleman from Illinois [Mr. MADDEN] a little while ago made merry over a proposition at Wilmington, Del., because men had made money out of munitions of war. Yet I recall no one who was more enthusiastic for war than the gentleman from Illinois, and I am amazed that he should stand here in the face of a proposition to make ammunition to carry on that war, and deride those who are doing their best to further the interests of the country in that regard. That is a dog in the manger policy that I object to, even if the gentleman insinuates that I get peeved in making the statement.

Here is the great coast line of the Atlantic [indicating]. Inland all the way from Boston—and we can carry it farther north—are a series of sounds and bays back from the shore line, back from the dangers of this great ocean out here, safe from the danger in ordinary times of storm and at present from the danger of the submarines of a hostile country. Here is the city of Boston. Vessels leaving Boston now proceed to the open sea. Here is a short canal cut through Cape Cod to save an outside sailing distance from Boston to New York of upwards of 70 miles and to save the outside risk of fog and shoal and storm. The Government did not build that canal, which is 8 miles in length. It was built by a private company and is now being used not only by vessels of commerce but by submarines and small war craft of the United States Navy and of the United States Army, which of itself has a fleet of more than 2,500 vessels. Now, this is a great saving to the Government. It cheerfully and willingly pays toll through that privately owned canal on Cape Cod to save time and get from Cape Cod Bay down through Buzzards Bay into Long Island Sound.

For strategic reasons, therefore, that canal may be used as an inland course for vessels of war, passing them practically safe from the sea into Long Island Sound, which was described here the other day, and with which every schoolboy should be familiar—one of the best sheets of water for harboring vessels in the United States. Here is the entrance from the north to Long Island Sound, and here is the entrance from the south. But, so far as war vessels are concerned, the difficulty is this: That while certain vessels now may pass from Boston inland for our own purposes or to circumvent an enemy who may be lurking out here somewhere, if we once get into Long Island Sound on this inland course with battleships we strike Hell Gate in the East River before we can get beyond the port of New York, and large vessels of the Navy do not pass Hell Gate. So that, as a matter of fact, if Hell Gate stands as it now is, and if our large vessels find it advisable to use Long Island Sound and to come into New York Harbor either to protect it or to drive out an enemy or to seek repairs at the Brooklyn Navy Yard, they are blocked here at Hell Gate.

The argument that the gentleman from New York made the other day was that we should make the necessary improvements that have been so long delayed at Hell Gate now, so that during this year, or should the war continue for three years, we may have the inside passage to New York and points south. And why should we not have two entrances to Long Island Sound? These little dots on the map indicate where a foreign fleet might be outside the port of New York waiting for our vessels to come out, just as the submarines outside the ports of England are waiting now for English vessels to come out or for our vessels to go in.

This of all times seems to be the best time for us to properly protect out coast line. We can not begin too soon to make these necessary defensive and strategic improvements.

Mr. FESS. Will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes.

Mr. FESS. How long would it take to clear the channel at Hell Gate?

Mr. MOORE of Pennsylvania. I will let the gentleman from New York answer that. The War Department has approved the project as necessary now. It may take two years, speaking offhand, but if it takes two years, would it not be well to begin now rather than to wait until the two years have expired?

Mr. FESS. I think it would.

Mr. MOORE of Pennsylvania. Is it not cheaper to buy property now than to buy it when the price has gone up? Is it not cheaper to prepare ourselves for war now than to wait until the enemy has sacked our shores?

Mr. LENROOT. Will the gentleman yield?

Mr. MOORE of Pennsylvania. Certainly.

Mr. LENROOT. The project, as the gentleman states has been approved, is a 12-foot channel.

Mr. MOORE of Pennsylvania. I have not reached the project that I want to talk about. The Cape Cod Canal is 25 feet and there is good water——

Mr. WALSH. Will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes.

Mr. WALSH. Does the project the gentleman is speaking of include the taking over of the Cape Cod Canal?

Mr. MOORE of Pennsylvania. It does not; the Cape Cod Canal is a private enterprise, and while it has been approved by waterways men, the project, which includes the Chesapeake & Delaware Canal, contemplates getting to Boston by a still more inland route, at a 12-foot depth, although the plans provide for a larger depth if need be.

Mr. SMITH of Michigan. Will the gentleman yield?

Mr. MOORE of Pennsylvania. I will.

Mr. SMITH of Michigan. How long will it take to complete that improvement?

Mr. MOORE of Pennsylvania. I regret I can not take time to go into the Massachusetts project until I get through with the discussion of the Chesapeake & Delaware paragraph.

Mr. TOWNER. Will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes; I will yield.

Mr. TOWNER. The gentleman states that the depth of the Cape Cod Canal is 25 feet?

Mr. MOORE of Pennsylvania. Twenty-five feet is the ruling depth.

Mr. TOWNER. That depth is insufficient to pass a large battleship.

Mr. MOORE of Pennsylvania. It is not sufficient to pass a battleship, but is sufficient for minor craft.

Mr. TOWNER. Is it proposed to deepen the canal by private owners or by an appropriation?

Mr. MOORE of Pennsylvania. That canal was built wholly from private funds by a private company.

Mr. TOWNER. I know it was, but is it proposed to deepen it?

Mr. MOORE of Pennsylvania. I have not heard that they have any such intention. I am using the Cape Cod Canal as a going canal as an argument and because the inner Massachusetts canal is not in existence. It is a short cut, as is the East River here at Hell Gate. There is a good depth at Hell Gate now. Vessels owned by the New York, New Haven & Hartford Railroad traverse the channel and get back and forth with safety, as gentlemen who travel to Boston know. But battleships——

Mr. SLAYDEN. Will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes.

Mr. SLAYDEN. How much do these vessels that go through there draw?

Mr. MOORE of Pennsylvania. I do not know, but probably 13 or 14 feet, and they may draw more.

Mr. FESS. Will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes.

Mr. FESS. May I ask the gentleman whether the item that we adopted yesterday takes care of the Hell Gate proposition?

Mr. MOORE of Pennsylvania. I understand that it does to the satisfaction of the engineers at the present time.

Now, here is the Delaware & Raritan Canal, a very old canal, opened in 1834, bisecting the State of New Jersey from Raritan Bay, which is south of New York Bay, across to the Delaware River at the point indicated on the map. It is about 33 miles long, but it is impossible as a modern proposition. It was a great carrier between New York and Philadelphia in the old days, but when the railroads became active this, in common with other canals in the South and West that did a great business, began to slump.

They had come before the era of railroads, and when the railroads came the canals began to go, and this one, although it competed with the railroad after it did come, was subsequently absorbed by one of the railroads, which owns it now. This old canal across New Jersey is in operation and is carrying considerable tonnage. Under war pressure it has been carrying special lines of barges suited to its dimensions back and forth from New York to Philadelphia. That is not Philadelphia and New York commerce exclusively, it is the commerce of the country that has squeezed itself through the canal because of the incompetence of the railroad to carry all the freight presented.

That canal is not under discussion now except that the State of New Jersey has passed an act providing $1,000,000 for a right of way which it will dedicate to the Government the moment the Government is ready to begin operations on a new canal. That project enters the Delaware River at a point near Trenton, and a 12-foot depth carries it down to the city of Philadelphia, where the 35-foot channel begins, and to the sea, in this direction. As is well known the Delaware River has grown in importance enormously during the last two years.

The Delaware always was a great commercial river. As a matter of State pride I have contended that it is the most important commercial river in the United States. There are 100 miles of the Delaware River from the sea to Philadelphia, inland, that does a tonnage business of more than 26,000,000 a year. That is an enormous tonnage for an inland river. There is nothing like it upon an inland river in the United States. Great establishments, factories, industries of one kind and another, oil refineries, and recently munition establishments, as well as shipbuilding plants have come along the Delaware River, until from a point at or near Wilmington up to Philadelphia it is a perfect beehive of industries upon both sides of the river in New Jersey and Pennsylvania. There is a splendid depth of water. We take the largest vessels afloat, certainly those that have a draft under 31 feet, all the way up to Philadelphia. It is a most unusual proposition for an inland river, and we do an enormous business upon it and are proud of it.

Now comes the point that I desire to discuss. Gentlemen seek to strike out the paragraph in the bill proposing to take over what is known as the Chesapeake & Delaware Canal, and gentlemen will probably use as an argument against that canal that the owners of it want to dispose of it, which is not the fact. If anyone would know that fact, I would know it. I have investigated this matter for 10 years, and the fact is that the old canal, the Chesapeake & Delaware Canal, has been in the possession of estates and heirs since long after its completion in 1829, and there is no power within the corporation, as I understand it, to dispose of it. It must be either condemned or seized by the Government of the United States.

Mr. LENROOT. Mr. Chairman, will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes.

Mr. LENROOT. Did they have a charter for that canal?

Mr. MOORE of Pennsylvania. Yes.

Mr. LENROOT. Will the gentleman tell us from whom they got the charter?

Mr. MOORE of Pennsylvania. The gentleman will find upon my desk the first report upon the canal, which the Pennsylvania State Historical Society sent to me the other day, and I shall be glad to give the gentleman the particulars as soon as I am able to examine it. As a matter of fact, this canal was regarded of great importance to the people of the United States when it was agitated prior to 1825, as much so as was the construction of the Union Pacific Railroad to the people of the West.

Mr. BATHRICK. Mr. Chairman, will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes.

Mr. BATHRICK. Is it not a fact that the Government of the United States owns stock in that canal?

Mr. MOORE of Pennsylvania. It owns stock in it now, and the State of Pennsylvania does, as do also Delaware and Maryland.

Mr. BATHRICK. And the final determination of whether it is constitutional to appropriate money for waterways or to engage in the construction of canals was determined in this case?

Mr. MOORE of Pennsylvania. That may be.

Mr. BATHRICK. It was decided then that it was constitutional for the Government to do so?

Mr. MOORE of Pennsylvania. Just as we began to finance the early stages of our Government by lotteries, so we induced the Government and the States to invest in canals before we ever dreamed of railways, and some of these antiquated conditions, though matters of great historical interest, are not understood by the modern generation.

Mr. ROWE. How long is that canal?

Mr. MOORE of Pennsylvania. Thirteen miles, and one of the difficulties about any one State or individual or corporation getting control of the property there is that it bisects two

States. It is an interstate canal. It runs from the Delaware River at a point near Delaware City across lowlands, until it enters what is known as the Elk River, on the Maryland side, and then goes out into Chesapeake Bay. The builders of the canal, according to this first report, had 850 men working upon it with horses and carts and picks and shovels, and it cost them upward of $2,100,000 when it was completed in 1829—a wonderful job, done in that way. Gentlemen say that when the Government appraises this property at $2,500,000 now it is appraising a defunct and worthless property, and yet when it was completed in 1829, when money was certainly more valuable than it is now, when it would go much further than it goes now, it cost upward of $2,100,000.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes.

Mr. MADDEN. Of course, the gentleman knows, as does everyone else, that when this canal was dug there was no machinery such as is now used in the construction of great public works, and whereas it would cost a dollar and a half a yard or two dollars a cubic yard for the materials taken out then, moved by horses and wagons, to-day it would cost fifteen cents by machinery.

Mr. MOORE of Pennsylvania. And labor was cheaper then than now.

Mr. MADDEN. Machinery is more advanced than it was then, so that what you could do at a dollar and a half a cubic yard then, even at low wages, you could do for fifteen cents to-day at high wages.

Mr. MOORE of Pennsylvania. If I understand the gentleman, he would not make any allowance whatever for the value of the property at the time of construction or the improvements made upon it, and since it is a going property, without any friends in particular, he would just take it and drive the people out of business who own it?

Mr. ROWE. And at that time Illinois farms were worth about a dollar an acre.

Mr. MOORE of Pennsylvania. That is a fact, and I have plenty of proof here to show that Illinois was working very strongly for canals subsequent to the construction of this one, which is of so great value to the coast. Let me explain the value of this canal if I can. I have records here which, of course, I can not quote in half an hour, but here is a great waterway lined with tremendous industrial improvements and activities, and here is one of the most vital sheets of water from a naval standpoint to the Government of the United States. If foreign vessels were to approach Delaware Bay, they could proceed, of course, if we were not to meet them at sea, as far up this bay as these three lines of fortifications marked upon the map, a little more than 40 miles below the city of Philadelphia. They would have substantially a free run of 60 miles up that bay before they were halted. If our fleet happened to be in Chesapeake Bay maneuvering somewhere around Hampton Roads or going into Norfolk Navy Yard for repairs, and should not care for strategic reasons to come outside to meet the enemy, but should prefer to go inside or send supplies inside up the Chesapeake Bay, it would be all over the minute they got up here to Chesapeake City, on the Maryland side of the Chesapeake & Delaware Canal. They would be blocked.

That old canal carries only 10 feet of water, which would permit the passage through it of vessels of a draft of certainly not more than 9 feet. Any vessel with a draft of more than 9 feet would be helpless or hopeless either on this Chesapeake side of that canal or on the Delaware side. Is it not possible that sometime in this war with Germany we may find it advisable, being very active along the coast here, at Boston, or active down here at Norfolk, or active at the Panama Canal, or active on the Pacific coast, or while helping our allies upon the other side of the water—is it not possible we might find it advisable to pass vessels inland from the New York Navy Yard to the Philadelphia Navy Yard, and from the Philadelphia Navy Yard through that canal down to the sheltered waters of the Chesapeake Bay and the Norfolk Navy Yard? Is not this possible?

Mr. LENROOT. Will the gentleman yield?

Mr. MOORE of Pennsylvania. I will.

Mr. LENROOT. I will ask the gentleman a question. What is the depth of the water proposed in the option of the project in this paragraph?

Mr. MOORE of Pennsylvania. Engineers have recommended two depths.

Mr. LENROOT. This project is for 12 feet?

Mr. MOORE of Pennsylvania. Yes.

Mr. LENROOT. Did not the engineers of the War Department testify in the hearings before this committee that a 12-foot depth would not be of the slightest value to the Navy and would not afford access for submarines, and that the Navy would consider nothing less than 16 feet?

Mr. MOORE of Pennsylvania. And I testify to that statement myself. I admit it on all fours. It is absurd to think that a 12-foot channel would carry war vessels. It could not be done. But I am asking the gentleman from Wisconsin in all fairness and reason to answer me this, whether when Congress is obstinate as it has been on the 12-foot proposition, and apparently still more obstinate on the proposition which the engineers have presented, to give a 25-foot depth through that 13 miles, whether we had not better take a 12-foot depth and put it in the hands of the Government to get the work started?

Mr. LENROOT. The gentleman asks me that question?

Mr. MOORE of Pennsylvania. Yes.

Mr. LENROOT. I say that if we are going to have only a 12-foot depth it is of no value from a military standpoint.

Mr. MOORE of Pennsylvania. There is a report, and I would be delighted if I had time to quote it, from officials of the Navy, from men who have investigated this for the last 50 years and who have reported to Congress from time to time, that there must be a start, and that if it is a question of money it is better to take 12 feet and get started and prove up the worth of the enterprise rather than to postpone until it is too late.

Mr. LENROOT. Then the gentleman admits that this would have nothing to do with the present war?

Mr. MOORE of Pennsylvania. I do not admit that. I certainly do not admit it. I have evidence here from the Secretary of the Navy, evidence from experts of the Army and the Navy, that even now this canal would be of tremendous value to the Government in the passage of supplies on such ships as are able to pass through. And I want to say to the gentleman what I have said to the House before, and it is not bombast but the solemn truth, that this old canal in its present condition was the saving clause when Abraham Lincoln was calling for troops to save the National Capital, because the Confederates were right across the river here, and the railroad bridges from the North were burned, just as they could easily be burned and destroyed now, and it was through this old canal, so much berated at times in this argument, that the northern troops were taken on barges down to Annapolis in order that they might move up to Washington and save the day at Lincoln's call. [Applause.]

Mr. HAMILTON of Michigan. Will the gentleman yield?

Mr. MOORE of Pennsylvania. I will.

Mr. HAMILTON of Michigan. How long is it estimated it would take to dig this canal to a depth of 16 feet?

Mr. MOORE of Pennsylvania. Why does the gentleman ask about 16 feet, because that is confusing?

Mr. HAMILTON of Michigan. Put another depth, then, for a more practical proposition, and say 32 feet.

Mr. MOORE of Pennsylvania. Thirty-two feet would destroy the project just now, because of the cost. It did before. It was the little joker.

Mr. HAMILTON of Michigan. I was speaking about the practical utility of this canal for the purpose the gentleman is arguing.

Mr. MOORE of Pennsylvania. My judgment is, if you want my judgment, that if you give the Army engineers authority to build this canal you will have it ready within a year or two, so that it will be available for the defense of the country. The point is to get started.

Mr. LENROOT. The gentleman speaks about the possible destruction of railroads by a foreign foe. In the event that should happen, would it not be just as easy, and in fact easier, to destroy the canal than the railroads?

Mr. MOORE of Pennsylvania. The situation there is fairly well fortified, I will say to the gentleman, and it would be as difficult to get to the canal as it would be to get to the railroads.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MEEKER. How much would you save in mileage in going through there than around the other way?

Mr. MOORE of Pennsylvania. The saving in mileage from Philadelphia—which is 90 miles from Baltimore, as the bird flies—the saving in distance would be 325 miles.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LENROOT. Mr. Chairman, the gentleman has generously yielded, and I ask that he have 10 minutes more.

The CHAIRMAN. Is there objection?

Mr. MOORE of Pennsylvania. I am very serious about this matter, and I would like to get it presented to the committee properly.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. GOOD. How wide is this canal?

Mr. MOORE of Pennsylvania. At present?
Mr. GOOD. Yes.
Mr. MOORE of Pennsylvania. It is 24 feet wide in the locks.
Mr. GOOD. How wide outside of the locks?
Mr. MOORE of Pennsylvania. They fix the limit. There are three locks in the canal. Let me explain to the gentleman. That is interesting and apropos.
Mr. GOOD. Just another question before the gentleman gets to the locks. In the event this was authorized it would take three years to cut deep enough for naval purposes during that time, and the canal would be entirely out of commission for commercial purposes and defensive purposes?
Mr. MOORE of Pennsylvania. I think not.
Mr. GOOD. And for defense purposes?
Mr. MOORE of Pennsylvania. I think it has been so stated by the engineers. I have seen it stated in some of the reports that they could manage to keep the canal going.
Mr. GOOD. So that if we went ahead and appropriated this money it would practically eliminate the use of this canal?
Mr. MOORE of Pennsylvania. No. The engineers have indicated that it would not. The use of the canal would go on. I am so advised by the engineers.
Mr. MADDEN. I think that is so.
Mr. MOORE of Pennsylvania. Here is an expert in engineering. I refer to the gentleman from Illinois [Mr. MADDEN]. [Laughter.] He coincides with me.
Mr. MEEKER. Mr. Chairman, will the gentleman yield?
Mr. MOORE of Pennsylvania. Yes.
Mr. MEEKER. Of course the gentleman understands that a railroad does not quit business when it builds a new bridge.
Mr. MOORE of Pennsylvania. That is true. They simply provide another means. But that question has been discussed by the engineers and has been answered in the negative. It would not stop the operation of the canal.
Mr. FESS. Mr. Chairman, will the gentleman yield?
Mr. MOORE of Pennsylvania. Yes; I yield to the gentleman from Ohio.
Mr. FESS. I was going to suggest that in view of the time being extended only 10 minutes, I am very anxious to hear the statement which the gentleman is about to make, and unless the time can be still further extended I suggest that the gentleman be permitted to go on uninterrupted. I want to hear him.
Mr. MOORE of Pennsylvania. I am obliged to the gentleman from Ohio.
Let us take the element of cost from the official report; and incidentally I must repeat, because it has often been said before here, that this project has several times been approved in official reports. The United States Army engineers have several times officially indicated that the Government ought to have this property; that the property ought to be improved and developed even to the extent of a ship canal, which I think would be the present war demand, if the Government was given authority by Congress to proceed.
The cost of this project has been the bone of contention, and I think it is due largely to the fact that Congress has authorized the purchase of other canals, some of them in the West, which have fallen down and have been failures and waste. I will not refer to any of them now, because I do not want to harass any particular Representative; but Congress has authorized the purchase of numerous canals in this country in the past at large expense, and those canals have not been workable.
Mr. MADDEN. Why not state them?
Mr. MOORE of Pennsylvania. Well, the Hennepin Canal, if the gentleman wants to go near home, is one of them.
Mr. MADDEN. The Government authorized the construction of it, not the purchase of it. It is a fake.
Mr. MOORE of Pennsylvania. The gentleman is very frank about it, and condemns a canal in his own State. I am commending mine, although it is not in my State.
Mr. SWITZER. Mr. Chairman, will the gentleman yield?
Mr. MOORE of Pennsylvania. Yes.
Mr. SWITZER. Does the gentleman know what the annual tonnage of traffic through the canal is?
Mr. MOORE of Pennsylvania. There is a business now of upward of a million tons a year, privately carried and paying tolls to the owners of the canal. That tends to answer the constant charge that this is a worthless property. The owners of the bonds of this property—the stock being valueless, it is said—the bonds, which are substantially equivalent to the appraised value of the canal, pay 4 per cent interest, and these old estates which own those bonds are thoroughly satisfied to draw that interest.
The canal is a paying property, even ancient and limited as it is in capacity.

Now, the appraisement of this canal by the engineers—and I trust I may not be asked to quote their report—is $2,500,000 with some odd figures. That appraised value includes locks, engines, towboats, barges, and such other equipment, buildings, land, right of way, and other property as the company possesses.
The engineers have reported that the cost of a 12-foot channel, making it a sea-level waterway, which would dispense with the locks and unite the waters of Chesapeake Bay with the waters of Delaware Bay, would be $7,900,000.
Now, that, plus $2,500,000, would be the cost of taking over the property and improving it and deepening the channel to a depth of 12 feet and making it a sea-level proposition; and 12 feet will carry some of the vessels of the Navy, some of the torpedo boats, and many supply boats, and it will carry a major portion of the fleet of vessels that are now attached to the Army of the United States.
Mr. MADDEN. Mr. Chairman, will the gentleman yield?
Mr. MOORE of Pennsylvania. Yes.
Mr. MADDEN. What is the tonnage of the vessels that now run through the canal?
Mr. MOORE of Pennsylvania. I will give that later in my speech. There is a line known as the Ericsson Line, a very old and respected company, that does business between Philadelphia and Baltimore, taking freight from the region roundabout Philadelphia and New York to New England and then carrying it to Baltimore, where it is distributed to points south and southwest and vice versa. It has three or four boats that are built to fit the dimensions of these locks. I think they are exactly 23 feet 4 inches wide, which gives them a leeway going through these locks of a few inches, and they are built so high that their proportions attract attention as they pass up and down the river or the bay. They are peculiarly constructed, and their capacity is limited. But, even limited as it is, they still seem to be engaged in a paying business through that canal, and they have been doing it for generations.
Mr. MADDEN. Are they of 50 tons?
Mr. MOORE of Pennsylvania. Oh, more than that.
Mr. MEEKER. Down on the Potomac they haul 115 tons on boats of this type.
Mr. REAVIS. Mr. Chairman, will the gentleman yield?
Mr. MOORE of Pennsylvania. Yes.
Mr. REAVIS. I am reluctant to take any of the gentleman's time, but have any Government experts expressed any opinion as to the utility of this canal if it were improved so as to accommodate the larger warcraft?
Mr. MOORE of Pennsylvania. Yes; they have very emphatically, and always favored taking it over. I say on my honor as a Representative that the reports of the Army engineers are in nearly all instances—for there are many reports—strongly in favor of taking this property over as a war proposition.
Mr. REAVIS. Are they in favor of taking it over with the ultimate purpose of deepening it for the larger craft?
Mr. MOORE of Pennsylvania. That is the idea. I make no concealment as to that. We would never be content with a 12-foot depth in that waterway. It will not be a canal if the Government takes it over. It will be a waterway. Every canal feature will be dispensed with. The canal to-day is a positive obstruction to navigation along the coast. It is a hindrance to business. It is a hindrance to the proper defense of the coast line in time of war, and we want to get rid of these old locks and these old appurtenances of a canal and make it a sea-level waterway, so that the water will flow from one bay to the other at a depth sufficient to carry our ships of war; and if we do that, then it will follow logically that, the canal being open and free, business will sweep through the canal and commerce will be stimulated.
Mr. JAMES. How much will it cost to deepen it to a depth of 25 feet?
Mr. MOORE of Pennsylvania. To deepen it to a depth of 25 feet will cost, according to the engineers, $12,424,500.
The CHAIRMAN. The gentleman's time has expired. Does the gentleman from Illinois desire to make the point of order?
Mr. MADDEN. I make the point of order. If the Chair wants to hear arguments upon it I shall be glad to present them.
The CHAIRMAN. Does anybody desire to say anything against the point of order?
Mr. MOORE of Pennsylvania. I certainly do.
Mr. SMALL. I desire to be heard, but would it not be better to have the proponents of the point of order heard first?
Mr. MADDEN. I shall be glad to hear the gentleman.
The CHAIRMAN. The Chair would like to hear from those who conceive that the point of order should be overruled.
Mr. SMALL. Mr. Chairman, I submit that the point of order against this paragraph providing for the Chesapeake and Delaware waterway can not be sustained. In the first place,

because this item appears in this bill, and for other reasons which I shall submit, this committee has prima facie jurisdiction of this item. This item is in this bill by reason of an authorization reported by the Committee on Rivers and Harbors for an examination and survey of an intracoastal waterway from Boston, Mass., to Beaufort Inlet, N. C. That was authorized in the river and harbor act of 1909, if I am not mistaken, and this item is based upon that and the supplemental report, being the final report of the Chief of Engineers. So that, for the reason that the item is in the bill, for the reason that it occurs here as the result of a favorable recommendation based upon an examination and survey authorized by Congress, as reported in the river and harbor bill, I say that the River and Harbor Committee prima facie has jurisdiction, and that the burden is upon those who make the point of order involving the jurisdiction of the committee to sustain the point of order. I think that is an elementary proposition of law, and I submit it is applicable to points of order involving the jurisdiction of the committee.

Mr. Chairman, the making of this point of order is not for the purpose of preserving the jurisdiction of the alleged Committee on Railways and Canals. Further, it is not for the purpose of attacking the jurisdiction of the River and Harbor Committee on similar projects. The sole purpose of it is to use this moribund Committee on Railways and Canals as a refuge for defeating the consideration of this item and its enactment into law.

What is the Committee on Railways and Canals, which gentlemen assert has jurisdiction of this proposition? Fortunately or unfortunately there is such a committee, and yet most Members of the House have to be reminded of its existence, or else its existence would not be recalled.

Mr. LENROOT. Will the gentleman yield for a question?

Mr. SMALL. Certainly.

Mr. LENROOT. Is the gentleman aware that the Committee on Railways and Canals has, in fact, exercised jurisdiction over this very canal, and upon two occasions reported upon it?

Mr. SMALL. I am coming to that in a moment upon another phase of this matter. I say that the purpose of this point of order, Mr. Chairman, is to defeat this item, and not in behalf of the preservtion of any jurisdiction upon the part of the Committee on Railways and Canals. That committee is called "Railways and Canals," and yet there are precedents for the proposition that it has lost its jurisdiction of railways by custom of the House, and by the activities of that most assiduous and industrious committee in asserting its own jurisdiction, the Committee on Interstate and Foreign Commerce. So that although it is called "Railways and Canals," and has jurisdiction of railways, nobody would rise in his place and make a point of order against a bill reported by the Committee on Interstate and Foreign Commerce or any other committee of the House upon the ground that the Committee on Railways and Canals had and should assert jurisdiction of it. I submit that in this case it ought also to be ruled that the Committee on Railways and Canals has lost jurisdiction of the waterways denominated canals. Now, I come to the suggestion of the gentleman from Wisconsin [Mr. LENROOT], who, I presume, will support the contention that the point of order ought to be sustained. I hold in my hand here a report by the Secretary of War based upon a resolution of the Senate asking him to furnish information containing summaries of reports of Government commissions, officers, and engineers on the commercial, naval, and military advantages of this canal. I refer to Senate Document No. 14, Sixty-fourth Congress, first session. In that report, on page 5, is a summary of all the reports which have been made upon this canal. And I presume the gentleman from Wisconsin, who is always industrious in whatever he presents to the House, has assimilated this valuable report. Among these reports which have been submitted to Congress——

Mr. HARDY. Before leaving that point will the gentleman permit an interruption?

Mr. SMALL. Certainly.

Mr. HARDY. It seems to me a very serious fact that the time to raise the question as to which committee has jurisdiction of a matter is upon the reference of the bill, and that when it comes before the House the point of order ought not to be sustained on the ground that the matter belongs to another committee. On the question of reference, the reference might be to the right or the wrong committee, but this House has jurisdiction of everything, and this Committee of the Whole has jurisdiction, whether it comes from the right or the wrong committee, if there is no other ground for objection.

Mr. STAFFORD. Mr. Chairman, will the gentleman yield in that connection?

Mr. SMALL. I yield to the gentleman.

Mr. STAFFORD. Is not my friend the gentleman from Texas [Mr. HARDY] aware that this bill has never been referred, but is an original bill presented by the chairman of the committee as a privileged matter, and that all points of order were reserved as soon as it was presented to the House?

Mr. HARDY. So it may be, but whether the right committee or the wrong committee presents the bill, the Committee of the Whole has jurisdiction over every matter involved in it.

Mr. STAFFORD. There are two points of order in this case: First, that the Committee on Rivers and Harbors has not jurisdiction over the subject matter, because it relates to a canal; and, second, because even if it had jurisdiction over the subject matter it is not privileged under the rules of the House.

Mr. HARDY. I submit that both committees have jurisdiction—the River and Harbor Committee and the Committee on Railways and Canals—for that matter.

Mr. REAVIS. Will the gentleman yield to me before he leaves the question of committee jurisdiction?

Mr. SMALL. I will yield.

Mr. REAVIS. If the gentleman from Pennsylvania is correct that the purpose of putting the item in the bill was to change its character from a canal into a waterway, that purpose would defeat the jurisdiction of the Committee on Railroads and Canals.

Mr. SMALL. Without commenting on the quotation of the gentleman from Pennsylvania, I shall endeavor to assert, before taking my seat, and to prove that this project does not involve a canal within the meaning of the rules of the House.

Mr. REAVIS. The point I had in mind is, if the gentleman will indulge me that supposing the Committee on Railways and Canals has jurisdiction of it as a canal, would that prevent another committee having jurisdiction for the purpose of changing its character from a canal into a waterway?

Mr. FOSTER. The gentleman from North Carolina does not contend that this is anything but a canal?

Mr. SMALL. If the gentleman thinks otherwise, I will beg him to examine some of the reports——

Mr. FOSTER. Because you intend to change it from a canal into a waterway does not prevent it being a canal.

Mr. SMALL. That is not any canal proposition. I will come to that later.

Mr. GALLAGHER. Will the gentleman yield?

Mr. SMALL. Yes.

Mr. GALLAGHER. Is it not a fact that a proposition was taken away from the committee the other day that was originally lodged in another committee in answer to the gentleman from Texas?

Mr. SMALL. That did not settle any question of jurisdiction. I do not desire now to be diverted to another question. Mr. Chairman, I said as to this proposition that the Committee on Railways and Canals had gone into innocuous desuetude, and in this report by the Secretary of War in respect to the Senate resolution there are a large number of reports, I think 18, which have been made on this waterway connecting the Chesapeake Bay and the Delaware River. The only reports based on legislation reported by the Committee on Railways and Canals was one in January, 1907, authorizing a commission to be appointed, which consisted of Gen. Felix Agnus, Maj. C. A. F. Flagler, and Mr. F. T. Chambers, civil engineer of the United States Navy, and a report based on the action of the Committee on Railways and Canals, February 5, 1886, and a report of April 24, 1904, by Representative DAVIDSON and Representative STRONG. All the other reports were recommended and were reported from the Committee on Rivers and Harbors.

The CHAIRMAN. The Chair would like to ask the gentleman if any part of this appropriation is to be used for anything else than for the improvement of rivers and harbors?

Mr. SMALL. To be perfectly frank with the Chair, a part of it is to be used for the purchase of a canal.

The CHAIRMAN. That is what the Chair wished to know.

Mr. DEMPSEY. Will the gentleman pardon me for a question?

Mr. SMALL. Yes.

Mr. DEMPSEY. Is it not a fact that on page 18 of the bill there is a project set out of which this committee has had jurisdiction for 10 or 12 years, which involves, and has involved during all that time, the improvement of connecting a canal with waterways, precisely the thing that is done in this case?

The CHAIRMAN. The Chair would like to have gentlemen argue this proposition, that if any part of this appropriation is used for the purchase of a canal, how does the Committee on Rivers and Harbors get jurisdiction under the rules of the House?

Mr. SMALL. That is a most pertinent inquiry, and I am coming to that.

Mr. SWITZER. Will the gentleman yield?

Mr. SMALL. Yes.

Mr. SWITZER. I would like to ask the gentleman if in making a waterway under the jurisdiction of rivers and harbors, some of the money to purchase a canal, or some other piece of property, would preclude the River and Harbor Committee from building it any more than if it was a roadway or a railroad we had to purchase?

Mr. HARDY. Will the gentleman allow me a suggestion?

Mr. SMALL. Yes.

Mr. HARDY. There is this statement on page 514 of the Manual, that when a bill embraces subjects belonging to the jurisdiction of several committees the main object of the bill may be taken as the test to show to which committee it should go to.

Mr. SMALL. I am glad that the gentleman cited that, and I call the Chair's attention to it without further citation on my part.

Mr. ALEXANDER. Will the gentleman yield?

Mr. SMALL. I will.

Mr. ALEXANDER. I understand the proposition contained in the river and harbor bill is not to improve the canal. That might be given to the Committee on Railways and Canals, but they take the territory of a right of way now occupied by the canal, propose to abandon it as a canal and make it a waterway and appropriate money for that purpose. Is not that true?

Mr. SMALL. That is entirely correct.

Mr. TREADWAY. Will the gentleman yield?

Mr. SMALL. I will.

Mr. TREADWAY. Is it not a fact that the present Chesapeake & Delaware Canal is an 8-foot canal?

Mr. SMALL. Nine feet.

Mr. TREADWAY. Is it not the purpose of the bill to make it 12 feet in depth?

Mr. SMALL. Yes.

Mr. TREADWAY. The proposition is to enlarge and deepen it, but it still remains a canal of 12 feet rather than one of 9 feet.

Mr. SMALL. Instead of a private waterway it becomes a public waterway.

Mr. TREADWAY. But still a canal.

Mr. SMALL. I do not think so.

Mr. DEMPSEY. Does not it become not a canal but, as the gentleman from Pennsylvania [Mr. MOORE] said, a sea-level waterway, a sea-level waterway at both ends, so that it is a continuous sea-level waterway?

Mr. FOSTER. I would like to ask the gentleman from North Carolina what he calls the work at Panama. Is that a canal?

Mr. SMALL. The so-called Panama Canal does not furnish an analogy to the case illustrated by the gentleman from New York [Mr. DEMPSEY].

Mr. Chairman, the gentleman from New York [Mr. DEMPSEY] made a suggestion to which I wish to respond. The gentleman said there were items in the bill which were as susceptible to points of order, perhaps, as this. There have been such items in every bill. This point of order is invoked only for the purpose of defeating some proposition which some Member or group of Members may wish to defeat, and is not universally made against projects in the river and harbor bill.

Mr. FESS. Mr. Chairman, before the gentleman leaves that question I desire to state that I am somewhat confused. This project is now a canal, and when it is completed, if I understand the gentleman correctly, it will then be a waterway. I would like to know the distinction technically.

Mr. SMALL. If the gentleman will listen, I shall try to make it as plain as I can, but I am not making refined distinctions here; I am discussing broad propositions involving the jurisdiction of a committee. I would like to advert to and discuss the proposition which was so clearly stated at length by the gentleman from Missouri [Mr. ALEXANDER]. This does not involve a canal in such a way as to defeat the jurisdiction of the committee. What is it? It is a waterway connecting Chesapeake Bay with the Delaware River. It is true that there exists now what may be denominated a canal, about 13 miles long, and originally constructed many years ago by private capital, and still owned and controlled by a private corporation. The project which is sought to be carried out in this item involves the improvement of natural waterways, leading to this alleged canal at both ends. It involves the improvement of the Delaware River leading up to it at a cost of $57,000.

It involves the improvement of several natural waterways at the southern end. First, the improvement of Back Creek for a distance of 4½ miles at a cost of $405,000. Back Creek empties into Elk River, and it involves the improvement of Elk River a distance of 8½ miles at a cost of $314,000, and it involves further improvement in the upper part of Chesapeake Bay for a distance of 10 miles, involving a cost of over $500,000.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. SMALL. In just a moment. So that this project recommended by the engineers involves and must carry necessarily appropriations and expenditure of money for the improvement of natural waterways constituting the approaches. I now yield to the gentleman.

Mr. MADDEN. The question I desired to ask the gentleman was, Whether he contends that the purchase of this canal can in any wise be connected with the proposition which he has just stated and thereby be made to appear what it really is not?

Mr. SMALL. I think so, if the gentleman desires to put it in that way. I say this project involves a waterway. What is proposed? In addition to the improvement of natural waterways, the approaches to either end of this so-called canal, it is proposed to purchase the canal, and instead of a lock canal as at present to convert it into a tide-level canal or, as some call it, a sea-level canal, so that the water will flow freely by natural processes from Chesapeake Bay at the southern end to the Delaware River at the northern end, and vice versa. So there we have a project involving the improvement of natural waterways and the acquisition of some property which is to-day, if you please, claimed by private owners, enlarging it from 9 feet deep to 12 feet in width, and widening it from its present inadequate width to 90 feet bottom width and about 150 feet top width, and in addition removing the three present locks in the canal and converting it into a tide-level canal, making it a public waterway, the property of the United States; so that when this project shall have been completed we will have, to all intents and purposes, a waterway or artificial river connecting the Chesapeake Bay and the Delaware River—by the way, two of the busiest interior waterways in the country excepting the Great Lakes—making what will be a river between the Chesapeake Bay and the Delaware River.

Mr. Chairman, there ought not to be any narrow construction placed upon this. How frequently is it known by gentlemen familiar with river and harbor legislation that we cut off bends in rivers by making a new channel across a bend to save sharp curves and distance in a tortuous river. Yet no complaint is made. How often have we needed land, for instance, for repairing the banks of streams by revetment work or otherwise? How often have we required contiguous land to deposit the material dredged from streams? How often do we have to go into various phases incidental to river and harbor improvement, and so, forsooth, because the purchase of an existing canal claimed by a private corporation is involved in carrying out this project it is said that the Committee on Rivers and Harbors has no jurisdiction, and that it ought to be buried with the Committee on Railways and Canals. To that proposition we protest, and we say that whatever jurisdiction upon a narrow construction may be claimed by the Committee on Railways and Canals arising out of the report on this project, it is incidental and is not the primary purpose of the improvement. The primary purpose of the improvement is a waterway, making it a free waterway, open to commerce of all the people, and that brings it within the jurisdiction of this committee. We contend that no strained construction ought to be taken by the Chair as to the jurisdiction of respective committees, so as to cut the matter up, having one committee having jurisdiction of a part of it and another committee having jurisdiction of another part of it.

Mr. Chairman, with just a citation I shall close.

On February 15, 1910, CONGRESSIONAL RECORD, volume 45, part 2, page 1945, the river and harbor bill was under consideration in the Committee of the Whole. The item of survey with a view to locating a channel from the Gulf of Mexico to the Apalachicola and St. George Sound by "an artificial cut across St. George Island" was under consideration.

Mr. Keifer, of Ohio, made the point of order against the paragraph because it provided a survey for an artificial waterway or canal. Mr. MANN, of Illinois, in discussing the point, stated that the survey was for a channel which could not be considered a canal in the ordinary sense. He said: "It is simply making an entrance from the Gulf of Mexico to this city, where there are now large bodies of water, much of which is shallow, and where it may be desirable in making the entrance to cut through St. George Island rather than run away around an island; to cut through that island, which is a small island, in order to make a direct channel." The Chair overruled the point of order.

On January 15, 1915, CONGRESSIONAL RECORD, volume 52, part 2, pages 1656-1658, in the consideration of the item involving a waterway from Rehoboth Bay to Delaware River, the point

of order was made against the paragraph because it involved a canal and also the construction of a bridge. The first point of order was overruled and the latter sustained.

The CHAIRMAN. Does that appear in Hinds' Precedents?

Mr. SMALL. My memorandum does not show. I desire now to call the attention of the Chair to Hinds' Precedents, section 4218, volume 4, where it is stated that the jurisdiction of the Committee on Railways and Canals as to railways has been absorbed by the Committee on Interstate and Foreign Commerce.

I only mention that in connection with the proposition I previously submitted, that jurisdiction of alleged canals has been more largely with the Committee on Rivers and Harbors—very much more with that committee—than with the Committee on Railways and Canals. And I make the further statement that certainly for the last 18 years the Committee on Railways and Canals has never reported, or, if it has reported, there has never passed the House, any constructive legislation involving the improvement or construction of any canal. And all that it has reported to the House which passed has been these two or three resolutions for the appointment of commissions, which died there, nothing more ever being done about it.

Mr. STAFFORD. Will the gentleman yield?

Mr. SMALL. Certainly.

Mr. STAFFORD. Does the gentleman recall about 12 years ago—maybe 10—the Committee on Railways and Canals, as I recall it, brought in a bill providing for the construction of the Lake Erie & Ohio River Canal? It was discussed here and passed the House after a very vigorous fight.

Mr. SMALL. Instead of for the construction, was it not for a commission and examination?

Mr. STAFFORD. It was for the construction of that canal.

Mr. SMALL. I remember there was such a proposition, but the exact nature of it I do not recall. But it did not become a law.

Mr. STAFFORD. It passed the House, though. I was citing that instance to show that the Committee on Railways and Canals was not moribund at that day.

Mr. REAVIS. Will the gentleman yield for a question?

Mr. SMALL. Certainly.

Mr. REAVIS. I understand the jurisdiction of the Committee on Railways and Canals, so far as it pertains to canals, is restricted to canals. The committee could not construct a waterway out of a canal.

Mr. SMALL. The gentleman is right.

Mr. REAVIS. And if it should be held that the Committee on Rivers and Harbors could not construct a canal, once a canal always a canal.

Mr. SMALL. Certainly.

Mr. REAVIS. There must be jurisdiction in this House somewhere to change the character of a canal. It is self-evident the Committee on Railways and Canals can not do it. What other committee can do it than the Committee on Rivers and Harbors?

Mr. SMALL. The query of the gentleman, Mr. Chairman, very strongly sustains the proposition that this point of order is based merely upon technicalities and not upon substance, and that the only purpose, if it should be sustained, will not only be to deny the Committee on Rivers and Harbors jurisdiction of this item but virtually—perhaps as some of its proponents hope—to defeat and kill a meritorious proposition.

Mr. FOSTER and Mr. MOORE of Pennsylvania rose.

The CHAIRMAN. Does the gentleman from Pennsylvania [Mr. MOORE] desire to be heard?

Mr. MOORE of Pennsylvania. I do. I would like to follow the gentleman from Illinois.

The CHAIRMAN. The Chair would like to hear a full discussion of this matter before ruling.

Mr. MOORE of Pennsylvania. Supplementing the statement of the gentleman from North Carolina [Mr. SMALL], I wish to make reference to the authorization for a survey for the intercoastal waterway. The act of March 3, 1909, carried this provision:

SEC. 13. * * * The Secretary of War is hereby authorized and directed to cause preliminary examinations and surveys to be made at the localities named in this section, as hereinafter set forth.

Survey for the construction of a continuous waterway, inland where practicable, from Boston, Mass., to Long Island Sound, including a waterway from the protected waters of Narragansett Bay through the ponds and lagoons lying along the southern coast of Rhode Island to Watch Hill and Fishers Island; thence to New York Bay; thence across the State of New Jersey to a suitable point on Delaware River or Bay; thence to Chesapeake Bay; thence from Norfolk, Va., to the sounds of North Carolina and Beaufort Inlet, N. C., for the purpose of ascertaining the cost of a channel with a maximum depth of 25 feet, or such lesser depths along any section or sections of the said waterway as may be found to be sufficient for commercial, naval, or military purposes. Such survey shall include an examination of all practicable routes, the preparation of plans and estimates of cost along the most available route, and a report upon the desirability of utilizing as a part of such waterway any existing public or private canal, or any part thereof, and the probable cost of acquiring the same.

Now, that was the authorization for what is known as the intercoastal waterway. Congress appropriated $100,000 to make that survey. The complete report included certain points of the intercoastal waterway that had been covered in preceding reports of the United States Army engineers, some of which had previously approved sections of the entire projects. The law contemplated that the waterway should be opened up inland along the entire course. After the survey was completed and reported upon to Congress, Congress made appropriations for certain sections of the intercoastal waterway consistent with the the plans laid down by the Army engineers in their report. For instance, the upper Delaware was improved to a depth of 12 feet from Philadelphia to the approach to the contemplated waterway across the State of New Jersey. That improvement was made so that the upper reaches of the Delaware would connect with the lower reaches of the Delaware, in consistency with the general plan. An appropriation was also made for the purchase of the so-called Norfolk-Beaufort Canal, extending from a point south of Norfolk into the sounds of North Carolina. That purchase was made, and Congress proceeded to improve that Norfolk-Beaufort link of the entire waterway by ample appropriations, which still continue, for maintenance and completion; so that the coastal plan has not only been written into the law but has been provided for in certain sections which are now being worked together under the plans of the United States engineers to secure a continuous chain.

What is known as the Beaufort Cut, south of the sounds of North Carolina, leading into the Atlantic Ocean, has been completed by an appropriation made by Congress, so that the act of 1909, authorizing a survey, which survey resulted in the report of a plan, has led to the adoption of that plan by Congress along certain links of the chain considered most important by Congress at the time the appropriations were made.

Now, as to the particular project before the committee, that of the so-called Chesapeake & Delaware Canal, connecting up the Delaware Bay and River with the Chesapeake Bay, that is a part of the plan for which appropriations have already been made by Congress in acts heretofore passed, and is simply in line and in harmony with the continuation of the general waterway thus contemplated. It is an essential link of the waterway. Without its inclusion in the plan the appropriations heretofore made for other parts of "the intercoastal waterway," which is the term used in the law, would be of little or no national avail.

The doctrine heretofore held with respect to continuing work in the matter of public buildings and appropriations for public works, I assume, would hold in this case. That is one point, Mr. Chairman.

Another point in respect to the Chesapeake & Delaware link in this coastal plan as approved by law is as to the jurisdiction, it being contended that the Committee on Rivers and Harbors has stepped in where the Committee on Railways and Canals should operate. The fact of the matter is that such decisions as the Miami Canal decision, which will be cited by gentlemen arguing the point of order, and other decisions that may be cited, contemplate the purchase and taking over of canals to be operated as canals. Now, even if the Committee on Railways and Canals had jurisdiction there—and I suppose it is a fair statement to make that it had jurisdiction, because it is proposed to take over and operate canals—that is not this proposition. This proposition is that this canal shall be taken over, not to be maintained and operated as a canal, but to be translated into a sea-level waterway.

Mr. COOPER of Wisconsin. Mr. Chairman, will the gentleman permit a question?

Mr. MOORE of Pennsylvania. Yes.

Mr. COOPER of Wisconsin. Suppose that this canal were bought by the United States Government and then made a sea-level waterway 25 feet in depth, with no locks, just open water 25 feet deep. Is there any question that the subsequent appropriations for dredging and maintenance of that open sea level affair would be under the jurisdiction of the Committee on Rivers and Harbors?

Mr. MOORE of Pennsylvania. There is no doubt in the world that that is where it would go.

Mr. COOPER of Wisconsin. It would not go to the Committee on Railways and Canals?

Mr. MOORE of Pennsylvania. It would not go to the Committee on Railways and Canals. It would no longer be a canal. I made that statement in a general way in stating the merits

of the proposition. The whole purpose of this project is to get rid of a canal and to establish a waterway.

Now, Mr. Chairman, the Government issues through the Department of Commerce an inside coast pilot, which shows existing routes of waterways from the northern tier of States to the Southern States, all the way to the lower extremity of Florida, so that it has been for a long time the policy of the Government, apart from these laws especially applicable to this intercoastal waterway, to encourage the development of a continuous waterway along the coast. Here is an inside coast pilot, issued by the Coast and Geodetic Survey for the use of mariners, for use up and down the inland waters of the Atlantic coast, substantially in line with the plan that is here adopted and approved by the United States Army engineers, and which in large part has already been appropriated for by Congress.

I contend that the question of jurisdiction is not sound in this instance, because the jurisdiction must necessarily go to the Committee on Rivers and Harbors, once this canal is taken over and turned into a waterway. It must be kept improved for the purposes of the Government. Surely the Committee on Railways and Canals would have no jurisdiction to report appropriations for the improvement of this waterway once it is established.

Now, I contend that this is an essential link in the waterway chain that has been approved by the Government and by Congress; that the Committee on Rivers and Harbors has jurisdiction over it, because it is not a canal proposition; it is a waterway proposition.

Moreover, Mr. Chairman, I make the point that the point of order in this instance comes too late, and I call to the attention of the Chair a decision by Mr. Speaker CLARK in connection with the jurisdiction of the Committee on Flood Control. I was aware that certain chairmen had had this question of jurisdiction before them, and personally raised it in the matter of the Committee on Flood Control.

When the first flood-control bill was called up by the gentleman from Mississippi [Mr. HUMPHREYS], the chairman of the Committee on Flood Control, I made the point of order that the committee had exceeded its power, that the work that it was reporting was properly the work of the Committee on Rivers and Harbors. Mr. Speaker CLARK ruled upon that question. At that time this colloquy took place:

Mr. MOORE of Pennsylvania. I desire to call the attention of the Speaker to the fact that on numerous occasions when canal bills have been introduced here, simply because the word "canal" appears, although they pertained exclusively to waterways and navigation, they have been taken away from the Committee on Rivers and Harbors and referred to another committee. Navigation comes under the jurisdiction of the Committee on Rivers and Harbors——

Then the Speaker said:

That was because they were put in a privileged bill. The history of this discussion and the rights of everybody are these: This bill was introduced—the Chair does not know who introduced it; but that does not matter. It is a public bill. It was referred to the Committee on Flood Control. If the gentleman or any other gentleman felt aggrieved or thought his rights had been trampled on or the jurisdiction of the Committee on Rivers and Harbors was being usurped, the proper remedy was for the gentleman to come in here and move that it be re-referred.

Mr. MANN. Mr. Speaker—the Speaker will pardon me—but no one can move, except one of the committees, unless by unanimous consent.

The SPEAKER. The gentleman is technically right, that it takes one committee or the other to ask it.

Mr. MANN. Or unanimous consent.

The SPEAKER. Or unanimous consent.

The Speaker, further ruling on the point of order that the Committee on Flood Control had usurped jurisdiction of rivers and harbors matters, said:

These gentlemen sinned away the day of grace, and the Flood Committee took charge of this bill and worked on it, and it was a matter of public notoriety that they were doing it. It was not done in a corner. They went to work and investigated the matter and made this report here. As to the proposition of the gentleman that it takes a piece out of the jurisdiction of the Committee on Rivers and Harbors, of course the whole scheme of the Flood Committee did that very thing. That was what it was intended to do, to relieve the Committee on Rivers and Harbors of a part of its work. It was overloaded.

You can not put water into a river and you can not take water out of a river and you can not do anything about controlling the waters of a river that it does not in some way affect the improvement of the river and the navigation thereof. So the point of order is overruled.

Now, Mr. Chairman, we were alive to the probability that a point of order would be raised, and have been alive to it for some time, and this question was raised before Mr. Speaker CLARK in order that a ruling might be had as to whether it was too late to come in when a bill is called up, after it had been under consideration for weeks, and after it was a matter of notoriety, as the Speaker said in his decision. Mr. Speaker CLARK ruled that the gentleman who made the point of order at that stage of the procedings was too late, and he ruled against the point of order.

Now, I make these points: The Committee on Rivers and Harbors has jurisdiction; this is not a canal proposition but a proposition to do away with a canal and to complete a waterway authorized in part by appropriations already made; that the operation and maintenance of a canal is not contemplated, as was the case of the Miami Canal; and that it is too late to make the point of order against the jurisdiction of the Committee on Rivers and Harbors at this time.

Mr. BRUMBAUGH. Mr. Chairman——

The CHAIRMAN. Does the gentleman from Ohio desire to be heard?

Mr. BRUMBAUGH. Mr. Chairman, I want only one moment, to say this: Something has been said during my temporary absence from the Chamber about the Committee on Railways and Canals. Just a few days ago I was elected by the House to the chairmanship of that committee. It has been stated that this committee has been a dead committee. I propose to make it a live committee, or else to ask that it be abolished altogether. [Applause.]

Mr. MOORE of Pennsylvania. No one receives that statement with more pleasure than myself; but I would like to ask the gentleman whether his predecessor, or whether he since he has become chairman has indicated in any way that he desired to have control over this proposition, as of the Railways and Canals Committee?

Mr. BRUMBAUGH. I have not, because, as I stated, I have been chairman only a week or such a matter.

Mr. MOORE of Pennsylvania. The gentleman does not know that his predecessor asked to have this matter referred to his committee?

Mr. BRUMBAUGH. I know he did not, because the former chairman resigned, and Congress did not act upon that resignation until recently; but as soon as Congress will give the committee a clerk I propose to call the committee together and make it a live committee. The fact that it has been a dead committee in the past does not indicate that I do not propose to make it a live committee in the future. I want to say this one word in a general way, that I am opposed to a few gentlemen on large committees taking every bill of every conceivable kind and character and having all these bills referred to them and monopolizing all the legislation that should properly go to other committees. And while I am not at this time going to make a fight to have any legislation or bills referred to this committee before I have had time to organize it or even to occupy the committee room, I do propose to insist that this committee be treated fairly, and I propose to make it a live committee, and any time that Members of the House desire to send any bills to this committee we will meet and give them proper hearing and take action upon them.

Mr. FOSTER. Mr. Chairman——

The CHAIRMAN. The Chair is ready to rule, and does not care to have the time of the committee occupied by further discussion.

Mr. MADDEN. Does not the Chair want to hear anything from our side?

The CHAIRMAN. The Chair has made up his mind on the proposition.

The Chair, without regard to what his personal desires are in the matter of these appropriations, must decide these questions according to the rules of the House. The Chair's own district is vitally interested in the inland-waterway proposition, but the Committee on Rivers and Harbors has jurisdiction to report on certain matters. In Rule XI, paragraph 8, we find that jurisdiction over questions relating to the improvement of rivers and harbors is given to the Committee on Rivers and Harbors.

In section 56 of Rule XI we find that certain committees of the House are given a privileged status, that is, that they can make reports at any time, and have questions over which they have jurisdiction immediately considered by the House, and under that rule this bill is now being considered. The rule says the following-named committees shall have leave to report at any time on matters herein stated, and then it names the committees. It says—

The Committee on Rivers and Harbors, of bills for the improvement of rivers and harbors.

It has jurisdiction to report at any time on bills for the improvement of rivers and harbors. Now, that removes it from the case cited by the gentleman from Pennsylvania [Mr. MOORE], because the flood-control bill is not a privileged bill. The Committee on Flood Control is not a committee that can report at any time, but you must introduce your bill and have it referred to that committee, and if there is a question of jurisdiction, some gentleman in the House must move to transfer the bill from that committee to the committee having jurisdiction, and any Member can take advantage of that opportunity. Now, the precedents hold that if Members wait until it is too late they can not take advantage of that rule. But when this

privileged bill was reported to the House by the Committee on Rivers and Harbors, delegated by its privileged character to report on improvements for rivers and harbors, the gentleman from Illinois [Mr. MANN], on May 9, reserved all points of order. He could not have made that reservation sooner, because the bill was then for the first time reported to the House, so he took prompt advantage of the situation.

Now, the question is presented to us whether or not this paragraph goes beyond the jurisdiction of the Committee on Rivers and Harbors. If no part of the appropriation was to be used other than for the improvement of rivers and harbors, clearly it would not be subject to a point of order; but the gentleman from Pennsylvania [Mr. MOORE] and the gentleman from North Carolina [Mr. SMALL] both concede that part of the appropriation is for the purchase of a canal, which clearly removes it from the privileged status given to the Rivers and Harbors Committee under section 56, Rule XI, to report bills for the improvement of rivers and harbors.

Every other appropriation that would go for the improvement of rivers and harbors would be clearly within the jurisdiction of that committee and would not be subject to a point of order; but under the precedents, if any part of the paragraph is subject to a point of order, then all of it is subject to a point of order. The Chair must follow the precedents in this matter, and every time a question similar to this has come up the point of order has been sustained. The Chair has made diligent investigation into this question, giving it the most careful considerartion, hoping that possibly the committee had not exceeded its authority and that the point of order could be overruled, but he has not been able to find any decision sustaining that point of view, and for that reason he has not desired to hear from gentleman on the other side of the question.

The gentleman from North Carolina [Mr. SMALL] has cited one case applying to the Apalachicola Bay and St. George Sound improvement, which was with a view to determining the best location for a deep-water harbor with entrance channel from the Gulf of Mexico by way of East Pass, West Pass, New Inlet, or by an artificial cut across St. George Island, consideration being given to the respective needs of the cities of Apalachicola and Carrabelle for increased harbor facilities.

Mr. SPARKMAN, who was chairman of the Committee on Rivers and Harbors, in speaking at that time on that proposition, said:

Mr. Chairman, this is in no sense a canal even if that should make any difference, nor would the improvement be in the nature of a canal.

The gentleman from Illinois [Mr. MANN], in speaking on the proposition, not speaking in favor of the point of order, but speaking on the other side, used this language:

Mr. Chairman, I did not make the point of order against this paragraph, because I am familiar with the situation there, having made a personal visit to this place with the distinguished Committee on Rivers and Harbors, and I remember very distinctly much of the situation there. This clearly is not a canal. It is no more a canal and no more the construction of a canal than it was when we made a new entrance to New York Harbor. It is simply, as I understand, making an entrance from the Gulf of Mexico to this city where there are now large bodies of water, much of which is shallow, and where it may be desirable in making the entrance, rather than run away around an island, to cut through that island, which is a small island, in order to make a direct channel.

So the facts in that case were, without question, that it was for the improvement of a harbor and did not either appropriate for or take over a canal.

Now, in Hinds' Precedents we find, in section 4219, that on February 19, 1885, a question arose over a paragraph in the river and harbor bill providing for the construction of the Hennepin Canal, and the chairman sustained the point of order on similar grounds to those the Chair has just stated.

On January 15, 1915, on an amendment to a paragraph in the river and harbor bill to improve an inland waterway between Raritan Bay and Delaware Bay there was a point of order made that it was to improve a canal. At that time the chairman, the gentleman from Illinois [Mr. RAINEY] held, in a very elaborate opinion, that it was clearly subject to a point of order and sustained the point of order.

Mr. MOORE of Pennsylvania. May I ask the Chair when that decision was rendered?

The CHAIRMAN. January 15, 1915.

Mr. MOORE of Pennsylvania. Was not that the case where the opinion was withheld?

The CHAIRMAN. No; the gentleman has in mind the following year or the year before, when Mr. DENT offered an amendment to improve an inland waterway near Mobile, Ala., and the point of order was made, but the opinion was reserved for argument, and subsequently the amendment was withdrawn and the Chair did not pass on that proposition.

The Chair is very clearly of the opinion that in the present case the Committee on Rivers and Harbors did not have jurisdiction to make the appropriation to improve the canal, and for that reason sustains the point of order to the paragraph.

Mr. MOORE of Pennsylvania. Mr. Chairman, I respectfully appeal from the decision of the Chair.

The CHAIRMAN. The gentleman from Pennsylvania appeals from the decision of the Chair, and the question is, Shall the decision of the Chair stand as the judgment of the committee?

Mr. LENROOT. Mr. Chairman, before the question on the appeal is put I desire to say just a word. Upon every decision where a similar question has come up the same ruling has been made that the present chairman of the committee has made. There is not one single exception. As a question of parliamentary law there can be no question but that the chairman is correct in his ruling. Now, upon this appeal I want to make this observation——

Mr. AUSTIN. A point of order, Mr. Chairman.

The CHAIRMAN (Mr. FOSTER). The gentleman will state it.

Mr. AUSTIN. Is this question debatable?

The CHAIRMAN. It is debatable. The present occupant of the chair some time ago made an erroneous statement, saying that it was not debatable, but afterwards corrected that statement by saying an appeal was debatable, subject to the will of the committee.

Mr. AUSTIN. I have been in the House eight years and I never heard it discussed.

The CHAIRMAN. It is debatable in Committee of the Whole. The committee can close it in the committee or rise and close debate in the House. In the House debate is avoided by moving to lay the appeal on the table, but no such rule applies in the committee, so the only way to close debate is by moving that it be done.

Mr. LENROOT. Mr. Chairman, I want to make this one observation: Criticisms have been made to certain items in the bill. Other criticisms will be made, no doubt, as to items when reached, but if the supporters of this bill are so desperate and the bill is of such a character that they shall refuse to sustain the decision of the Chair upon a question of parliamentary law upon which the Chair is undoubtedly correct—and the gentleman who made the decision is one of the best parliamentarians in the House and one of the fairest—if the supporters of this measure now desire to overrule the Chair upon this proposition, they will demonstrate to the country beyond peradventure that this bill is not being considered upon its merits, and that wherever there is a piece of pork in it they are willing to violate the rules of this House in order to keep that pork in it, so that the pork may be had for other items in the bill that they are afraid might be lost unless all the other items remain in.

Mr. MOORE of Pennsylvania and Mr. HARDY rose.

Mr. LENROOT. I will yield to the gentleman from Pennsylvania.

Mr. HARDY. I thought the gentleman had yielded the floor.

Mr. LENROOT. I am through.

Mr. MOORE of Pennsylvania was recognized.

Mr. STAFFORD. The gentleman from Pennsylvania has discussed the point of order.

Mr. MOORE of Pennsylvania. But I made the appeal and the gentleman from Wisconsin has attacked the appeal.

Mr. HARDY. I would like to be heard for five minutes.

Mr. MOORE of Pennsylvania. Mr. Chairman——

Mr. LENROOT. Will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes.

Mr. LENROOT. I did not mean to intimate that the gentleman from Pennsylvania had not made his appeal in good faith. I simply meant that the majority of the House ought to sustain the Chair.

Mr. MOORE of Pennsylvania. I understand the gentleman. Mr. Chairman, I do not regard a favorable vote upon this appeal as in any way reflecting on the gentleman from Mississippi, the chairman of the committee. He has rendered his decision in good faith according to the precedents as he understands them, but I submit that the House some time or other ought to have an opportunity to vote on this question to take over an important waterway absolutely necessary at this time for the preparedness of the defense of the country. For more than 10 years to my knowledge this project has been the victim of "battledore and shuttlecock," and always subject to points of order. How long is the country to submit, in a matter of this kind, to one precedent after another, based on technicality, and the decision of some one long since dead? I have such a regard for the gentleman from Mississippi that I would hesitate to vote against his decision; and I wish the gentleman had exercised his own judgment in the matter rather than have fallen back on precedents.

It seems to me that if the President of the United States were to be guided altogether by precedents from the Revolution to the present time, we would never be prepared to conduct a war with Germany. Sometimes we have to cut the red tape and get down to business. That is the reason I made the appeal. I respect the high parliamentary qualities of the gentleman from Mississippi [Mr. HARRISON], as does the gentleman from Wisconsin [Mr. LENROOT], but the question is whether we shall so hamstring ourselves to precedents and what has passed as never to meet absolute necessities of the present time. I hope the appeal from the decision of the Chair will be sustained in the interest of the common defense of the people of the United States. [Applause.]

Mr. HARDY. Mr. Chairman, I want to answer the lecture that the gentleman from Wisconsin [Mr. LENROOT] has been giving us about pork. The anxiety that certain gentlemen here have about pork is very amusing. I have such a contempt for this denunciation of pork-barrel legislation which comes from newspapers and from various sources that I can not make any other reply than that the man who is influenced by it signs a warrant of his own shame. As to the merits of the point of order that this canal item ought to belong to the Committee on Railways and Canals, I wish to say that I was a member of the Committee on Railways and Canals at one time, and I know it to have been a fact that the Speaker of the House never referred a single bill to that committee. That committee went into a state of innocuous desuetude, and to-day the House at this session has refused to grant it even a clerk. Are we to be confronted with a situation in which a nonexistent or moribund committee is allowed to intervene or be thrust in in order to prevent proper and needed legislation? It is pertinent to observe that the Committee on Railways and Canals did not inject itself into this matter, but that the opponents of the bill have injected it here. The truth of the business is simply this, that the functions of committees in this House overlap each other in many instances. There is not a phase of the jurisdiction of the Committee on Railways and Canals that has not been absorbed by either the Committee on Rivers and Harbors or the Committee on Interstate and Foreign Commerce. I soon found that out when I was on the committee in the days of Republican rule in the House. I concluded that it was useless and got off the committee.

Mr. LENROOT. Mr. Chairman, will the gentleman yield?

Mr. BRUMBAUGH. Will the gentleman yield?

Mr. HARDY. I yield to the gentleman from Ohio.

Mr. BRUMBAUGH. Is not the condition the gentleman is describing the result of the chairman not calling the committee together and organizing to receive business?

Mr. HARDY. In my innocent ignorance when I first came here, from the name of it, I thought that the Committee on Railways and Canals would be an important committee, but I found that it did not have anything to do and could not get anything to do. I think we did ourselves frame a bill that some reference has been made to, and tried to get some attention paid to it, but we could not. Let me say one thing further. It seems to me that this is a matter in which the jurisdictions of more than one committee overlap each other. Here is a project and that project is to make navigable the waterways from Philadelphia down to Baltimore. That waterway consists of one river, the Delaware River, about 50 miles of it, and a canal of 13 miles, and then of a land-locked bay, and then two harbors, and are you going to cut that project up into half a dozen different committee jurisdictions and have the bill cut up in three or four pieces? Will you give a part of one project to Rivers and Harbors, one part to Interstate Commerce, and one part to the Railways and Canals Committee? It seems to me that common sense demands that the House treat the matter as a whole, and, according to the argument made here, no one committee could pass the bill, because it would not have jurisdiction of all of it. If the Committee on Railways and Canals were here in charge of this bill, objectors would say that they had nothing to do with the Delaware River or the harbor at Philadelphia or Baltimore, and that every item, except the one, for this 13 miles of canal. Common sense says that it ought to be handled and presented in one bill, and this bill, which is, in the main, a rivers and harbors bill, is a most appropriate bill for it to stand in. I have the greatest regard for the gentleman from Mississippi [Mr. HARRISON]. He followed the precedents in this matter, but it is time that precedents should yield to common sense, and that we should cut the red tape and technical rules that prevent all possible action. Further, gentlemen, I cited a moment ago an authority which stated that a bill should be referred to that committee which had jurisdiction of the major part of the subject matter of the bill. You can not frame a bill that would treat this whole project unless you include that 13-mile canal, and also include any necessary improvements in the Delaware River or the harbors of Philadelphia and Baltimore. Let us have more common sense. Here is a whole project, and let the House break away from any precedents that have crippled it for years and have stood in the way of legitimate improvement. Now, to him who says there is pork in it I simply say, "Evil be to him who evil thinks." If any gentleman believes this item is pork or is worthless, he ought to vote against it, but he ought not to stigmatize every other man who does not think as he does, and if he has a decent and proper respect for himself, he will not do so.

For one, and for the sake of this discussion only, I am glad to say that my district has not one item in this bill, and I certainly have no interest in the item here in question, but I would be ashamed of my intellect if the facts presented did not convince me of the merit of the item, and ashamed of my manhood if I permitted the pork-barrel cry to drive me from its support.

Mr. AUSTIN. Mr. Chairman, I have as much respect for the gentleman from Mississippi [Mr. HARRISON], who rendered this decision, as any Member of this House. My attachment and affection for him is as deep and as sincere as any colleague who sits on the other side of the House. Why should we, when the interest of the country is involved, be tied and gagged by some precedents or rulings of the presiding officer of this House? Is that of more importance than the consideration of a great public measure involving the safety of the country in time of stress and war? There are revolutions necessary at times throughout the world, and this is a time when a legislative revolution against being tied down by precedents and rulings and opinions of presiding officers of this House is necessary. The individual ruling or judgment of one man out of 435 should not absolutely make us powerless to do something which a majority of us conscientiously believe is for the best interest of the country.

A word now in relation to the reflection of the gentleman from Wisconsin [Mr. LENROOT], who in closing his speech said that if we do not sustain the ruling of the Chair we will have committed an offense in the interest of pork-barrel legislation.

Mr. DUPRÉ. Mr. Chairman, will the gentleman yield?

Mr. AUSTIN. Not now. This is supposed to be the greatest lawmaking body in the world. I believe every Member of this House is honest, faithful, and conscientious, and while some may differ, as they do upon this bill, ill does it become any Member to reflect upon the honor of his colleagues in the discharge of what they believe to be their conscientious duty in supporting one of these bills. I give every man in this House—the gentleman from Wisconsin [Mr. LENROOT] and every other man—the same right to think and act which I claim for myself. I believe he is just as honest, just as conscientious, and just as patriotic as myself, but not one bit more so, and I repudiate the conduct or the utterance of any man in this House who will ascribe improper or unpatriotic motives to those who do not see as he sees or act as he acts. [Applause.] If this body has incurred public disfavor through the public press in criticizing this measure and other bills as pork-barrel legislation, as graft, let us think too much of our own character and the standard of this great lawmaking body to make ourselves voluntary witnesses for such a contemptible, scornful utterance or public opinion of ourselves and colleagues. How can you expect the American press, yellow or otherwise, to hesitate to denounce and criticize us when some of our own colleagues stand here and by their public utterance furnish proof that what they say is true? I believe every one of the 435 Members of this House is honest.

They are acting here under oath. I repudiate and condemn the language of the gentleman from Wisconsin. I believe it to be my duty to do it. I resent it on my own part and in behalf of every man in this House. [Applause.]

The CHAIRMAN. The gentleman from Wisconsin [Mr. STAFFORD] is recognized for five minutes.

Mr. STAFFORD. Mr. Chairman, after recognition, I believe there is no limit on time. At the end of that time I would like to be heard on the proposition, before the Chair rules.

The CHAIRMAN. The Chair will decide the question now.

Mr. STAFFORD. I would like to be heard, if the Chair will hear me, on that question.

The CHAIRMAN. The Chair will state that the mind of the Chair is fully made up.

Mr. STAFFORD. I would like to show the precedents that the five-minute rule does not apply in the Committee of the Whole on the argument of the question of appeal, and I have precedents here to that effect. If the Chair will permit, the five-minute rule in the Committee of the Whole, as the Chair will note, extends to amendments that are then pending. A gentleman may offer an amendment, and under that rule five minutes may be granted in favor of the amendment and five

minutes in opposition. The rule that I refer to is Rule XXIII, subclauses 5 and 6. Subsection 6 says:

The committee may, by the vote of a majority of the Members present, at any time after the five minutes' debate has begun upon proposed amendments to any section or paragraph of a bill, close all debate upon such section or paragraph or, at its election, upon the pending amendments only (which motion shall be decided without debate); but this shall not preclude further amendment, to be decided without debate.

Subsection 5 of that rule provides:

When general debate is closed by order of the House, any Member shall be allowed five minutes to explain any amendment he may offer, after which the Member who shall first obtain the floor shall be allowed to speak five minutes in opposition to it, and there shall be no further debate thereon, but the same privilege of debate shall be allowed in favor of and against any amendment that may be offered to an amendment; and neither an amendment nor an amendment to an amendment shall be withdrawn by the mover thereof unless by the unanimous consent of the committee.

Mr. Chairman, under those clauses that I have just read, which have been frequently put into practice, the chairman of the committee having the bill in charge can move to limit debate whenever debate has occurred on an amendment. I wish to direct the Chair's attention to the history of proceedings in the Committee of the Whole, and it is only by the Chair understanding the history and the early procedure and practice of the House when the Committee of the Whole was first established in the early times of this Government that he will appreciate there is no limit and that the hour rule applies on questions of this kind. If the Chair will examine the precedent closely, he will see that when the Committee of the Whole was first organized, and when business came up after the morning hour and the House resolved itself into the Committee of the Whole House on the state of the Union to consider legislation that was on the calendar, to consider matters relating to the state of the Union, or just merely private matters, that the Member gaining recognition was entitled to one hour's time. That is the basis for the rule at present when we go into Committee of the Whole on general debate. It recognizes the old-established rule that the Member who gets recognition when the House resolves itself into the Committee of the Whole House on the state of the Union, without any limitation by the House, is entitled to an hour's time, which he can parcel out as he sees fit.

Mr. Chairman, the Chair has ruled here that there is no limit of debate and that debate can only be limited by the committee rising to go into the House.

Now, I wish to call the Chair's attention to that rule——

The CHAIRMAN. Let the Chair state to the gentleman right here that debate can be closed any time by the gentleman having the floor moving to close debate. It can be done either way.

Mr. STAFFORD. Does the Chair agree that we are not limited to five minutes?

Mr. MADDEN. You can move to close debate.

Mr. STAFFORD. I call the attention of the Chair——

The CHAIRMAN. Let the Chair state that under the precedents, and there are not very many of them, he is led to believe that the question of appeal does not come under the one-hour rule but under the five-minute rule, the same as discussions upon amendments. So the Chair would be inclined to hold that it is under the five-minute rule.

Mr. STAFFORD. I hope the Chair will bear in mind because we are establishing precedents here and I do not wish to argue unnecessarily——

Mr. HARDY. A point of order, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. HARDY. I make the point of order that the gentleman should address himself to the appeal from the decision of the Chair upon this amendment.

The CHAIRMAN. The Chair begs to state that when the gentleman from Wisconsin [Mr. STAFFORD] took the floor the Chair stated that he was recognized for five minutes, and the gentleman from Wisconsin took exception to that, and is now trying to convince the Chair that the Chair is wrong and that the gentleman is entitled to an hour.

Mr. HARDY. Can he superimpose that question?

The CHAIRMAN. The Chair thinks he has a right to do it.

Mr. STAFFORD. I am addressing myself to that point, if the gentleman from Texas [Mr. HARDY] will give attention.

Mr. HARDY. I withdraw my point of order.

Mr. STAFFORD. I am very thankful to the gentleman that he saw the difference. Now, Mr. Chairman, I ask the Chair's especial attention to this rule, which is directly applicable, and that is clause 2 of Rule XIV, which forecloses the Chair from holding that the five-minute rule applies. I grant that the chairman of the committee has the right to move to close debate in committee——

Mr. SMALL. Mr. Chairman, a parliamentary inquiry.

Mr. STAFFORD. The gentleman can not take me off the floor with a parliamentary inquiry.

Mr. SMALL. Will the gentleman yield?

Mr. STAFFORD. I yield for a question.

Mr. SMALL. I wanted to ask the Chair a question.

Mr. STAFFORD. It may interfere with my argument, and I will be willing to yield in a very few minutes.

What does that clause 2 say? It says:

And no Member shall occupy more than one hour in debate on any question in the House or in committee, except as further provided in this rule.

Remember it says, "In the House or in committee." I again direct the attention of the Chair to the original practice in the Committee of the Whole House on the state of the Union, or merely in the Committee of the Whole, before the establishment of the five-minute rule, and that was, that any Member gaining recognition on any amendment, or on the bill itself, was entitled to one hour's recognition. The only limitation that you find anywhere in these rules cutting down the hour recognition to discuss any question is that which I have cited before, which is the five-minute rule in the Committee of the Whole, so far as amendments are concerned. You can not find any other rule anywhere else that limits the discussion of any question to five minutes except on amendments.

Here we have a direct mandate on the Chair, not only on the Speaker but on the chairman of the Committee of the Whole, that no Member shall occupy more than one hour in debate on any question in the House or in the committee, except as further provided for in this rule.

Mr. Chairman, there can be no escape from it. I do not intend to take much more than 10 or 15 minutes at the outside.

The CHAIRMAN. The Chair would kindly suggest to the gentleman, in order to avoid any further delay, that he proceed if he desires to do so.

Mr. STAFFORD. I do not intend to abuse the patience of the House, and when I conclude the gentleman from North Carolina [Mr. SMALL] can move to close debate.

The CHAIRMAN. The Chair would want some additional time to look this matter up. Even if the gentleman is right, the Chair suggests that the gentleman proceed for the present without deciding the point of order just now.

Mr. STAFFORD. I will not take more than 10 minutes, or perhaps 15 at the outside.

Mr. SMALL. I am not assuming that the gentleman is purposely consuming time. May I ask a question of the Chair at this time?

Mr. STAFFORD. I yield to the gentleman to ask a question of the Chair.

Mr. SMALL. I did not understand the Chair to decide that the chairman of the committee in charge of the bill did not have the right to move to close debate or to move that the committee rise and go into the House during a discussion under the five-minute rule. Is the Chair in doubt about that?

The CHAIRMAN. The Chair believes from the rules and precedents that he has examined—and the precedents are not quite clear on many of them—that they apply to discussion under the five-minute rule; but the gentleman from Wisconsin has contended that the Chair is wrong, and if so the Chair would be glad to be corrected. There is no question in the mind of the Chair, so far as the right to control debate is concerned. That has been decided as shown by paragraph 6949 of volume 5 of Hinds' Precedents.

Mr. STAFFORD. I admit that contention of the Chair.

Mr. SMALL. I did not intend to take the gentleman off the floor.

The CHAIRMAN. It is within the province of the committee to close debate when it sees fit, or the chairman of the committee in charge of the bill has the right to move that the committee rise and go into the House and so close debate.

Mr. SMALL. Mr. Chairman, while the Chair is considering that matter, the gentleman is proceeding in that indefinite situation?

The CHAIRMAN. The Chair would suggest at the same time that the Chair will examine further into the matter; for the Chair's benefit the gentleman from Wisconsin has kindly consented to proceed for the present.

Mr. LENROOT. Mr. Chairman, will the gentleman yield there for a question?

Mr. STAFFORD. Just for a brief question.

Mr. SMALL. I hope the gentleman will yield.

Mr. LENROOT. This is a very important matter, and it ought not to be decided—because it is so important—without the fullest care, and I suggest that the gentleman proceed for a reasonable time on the merits of the appeal, and then it will be in order to close debate when he gets through.

Mr. HARDY. Why should the five-minute rule be made to apply to everybody except the gentleman from Wisconsin?

Mr. STAFFORD. Because "the gentleman from Wisconsin" knew what his rights were, and the Chair is most fair.

The CHAIRMAN. While the Chairman has not yet been convinced that his opinion is not right, he is endeavoring to be fair and right in the matter to all members of the committee, and he would want time to look it up more fully. The Chair made the suggestion which he did make for the purpose of saving time, and the gentleman from Wisconsin [Mr. STAFFORD] is proceeding with the understanding that his rights will be preserved.

Mr. STAFFORD. On the question of appeal, no more serious question can confront this committee or any committee than to take an appeal from the decision of the Chair on a parliamentary question which it is acknowledged that the Chair was right in his rulings and is supported by all the precedents. These rules have been established and the precedents have been placed here in permanent form so that we can proceed in regular order. If at any time when, perchance, a majority of the committee might be in favor of some proposition that was not in order a Member should rise and appeal from a decision of the Chair and overrule the Chair, there would be chaos rather than order in the control of the discussions of this House.

There was not a quorum and far less than a quorum present when this matter was under discussion. There is not a quorum present now, and yet you are attempting to make in order something that Members of the House have reason to believe is out of order, something on which every precedent that has ever been passed upon this question has been one way, as the Chairman of the committee ruled, and attempt to overset it, so that it might be considered in order.

This is not the only proposition that is out of order in this bill. In the back part of this measure there are provisions after provisions that the Chairmen in times past have ruled were not in order, provisions relating to water powers in this country, as to which there is no question but that the Committee on Rivers and Harbors has no jurisdiction.

Think for one moment, gentlemen, of what would happen if the Members who would be interested in that special provision in section 5, relating to singling one single water-power proposition in Minnesota against many other water-power companies seeking a like privilege from Congress, and not receiving the privilege because we have not passed any general dam law, could come in here and overrule the decision of the Chair declaring that provision out of order. What consistency or regularity would there be in the proceedings of this committee or of this House?

I can not recall at the present time any decision of the Chair in committee where the precedents have all been one way and where the decision has been overruled in Committee of the Whole House. Certainly on this provision you should not be swayed by the merits of it. I am frank to say to you, gentlemen, that a year ago when this item was under consideration I did not make a point of order against it because it was in a different form from what it is to-day. Then it provided merely for a lump-sum amount to be paid to the owners of this canal. The provision in this bill now authorizes condemnation proceedings in the courts whereby the owners, because of its peculiar value, could go into court and obtain all manner of return upon the showing that they might make, which this House might not be willing to favor under such conditions.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. STAFFORD. Let me make my argument, because I do not want to take up unnecessary time. [Laughter.]

Mr. BATHRICK. Mr. Chairman, will the gentleman yield?

Mr. STAFFORD. If it is a brief question, I will yield.

Mr. BATHRICK. I want to ask the gentleman this: Suppose it was generally conceded that this enterprise was very important, where could it go so that no point of order could be made against it?

Mr. STAFFORD. That involves the consideration of a very close parliamentary question, which I will proceed upon with the indulgence of the committee just for two or three minutes.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. STAFFORD. No; I want to answer the question of the gentleman from Ohio [Mr. BATHRICK]. Even granting that the Committee on Rivers and Harbors has jurisdiction of this subject matter, nevertheless under the rules of the House and the precedents based upon those rules, it has not the right to incorporate legislation into a river and harbor appropriation bill, which is privileged, unless the legislation relates to the improvement of rivers and harbors. I will not prejudge that question and say that the Committee on Rivers and Harbors has not the right to introduce a special bill relating to this individual project, and have it dropped in the basket and take its regular course on the calendar; but the Committee on Rivers and Harbors occupies a unique position, and that is that while this river and harbor bill is not considered a general appropriation bill, it is a regular appropriation bill, and all legislation which is in order under that paragraph of the rule which provides that the Committee on Rivers and Harbors shall have the right to report at any time, is privileged, but it has not the right to incorporate in that bill, which is limited to the improvement of rivers and harbors, other matters of legislation over which it has jurisdiction. The Committee on Rivers and Harbors may have jurisdiction of this subject, but it has no right to bring it here in this privileged bill, because the rule limits the privilege to matters relating to the improvement of rivers and harbors. This distinction has been recognized time and again in the rulings of the Chair, so I think I have sufficiently answered the question by saying that the Committee on Rivers and Harbors may have jurisdiction to report this very provision, but not to incorporate it into a river and harbor appropriation bill.

Mr. MOORE of Pennsylvania. Does the gentleman think we ought not to have a connecting waterway between the Chesapeake and Delaware Bays for war purposes?

Mr. STAFFORD. Oh, I would support it much more freely on commercial grounds than for war purposes. I think for war purposes it is an iridescent and chimerical dream—a proposition involving a depth of 25 feet——

SEVERAL MEMBERS. Vote! Vote!

Mr. FREAR. Mr. Chairman, I ask for order.

Mr. STAFFORD. I will say in all fairness to the committee I stated that I did not intend to speak more than 15 minutes without interruption.

Mr. LINTHICUM. The gentleman has spoken 25 minutes.

Mr. STAFFORD. The gentleman from Maryland is very shortsighted. I have not spoken over 10 minutes.

Mr. LINTHICUM. I think I was very shortsighted when I said 25 minutes. I ought to have said 40 minutes.

Mr. STAFFORD. Oh, well, the gentleman is always verbose on these matters and always wrong.

Mr. LINTHICUM. I desire to say that the gentleman from Milwaukee is not always wrong.

Mr. STAFFORD. Mr. Chairman, we are not going to gain any time——

Mr. SMALL. How much more time does the gentleman desire?

Mr. STAFFORD. I will conclude certainly in five minutes if not interrupted. I was about to conclude when interrupted by the gentleman from Ohio [Mr. BATHRICK] and the gentleman from Maryland [Mr. LINTHICUM].

Mr. GALLAGHER. How long will it take to finish the condemnation proceedings?

Mr. STAFFORD. This item differs from the item contained in last year's appropriation bill, because it authorizes condemnation proceedings, and there is no limit of cost, whereas the proposition of last year was limited to a certain definite amount, a little over $1,000,000, as I recall; and now the owners of these bonds may go into court and claim that by reason of war conditions this canal has been made much more valuable than it was a year ago. As I said before, I did not seek to interpose a point of order against this provision a year ago, when the cost was limited. I was willing to give the benefit of the doubt in favor of the proponents of that measure. I am not opposed to the improvement of the waterway, but I have the right, and the Members of this House have the right, to adhere to the rules of the House when an attempt is made here to bring in matters that may go contra to the best policy of the country. If you are going to overrule the decision of the Chair on this proposition, then you must concede that those who desire to single out a dam proposition should also have the right, when a point of order is sustained against them, to appeal from the decision of the Chair. I do hope that those who are in favor of river and harbor improvement will not go to the extreme of establishing a revolutionary precedent, that they will overrule the decision of one of the best-known parliamentarians in the House in order to try to bring before it something that is not in order under the rules of the House. You certainly do not want it to go out to the country that in the Committee of the Whole, where no roll call can be had, you are willing to take up for consideration a proposition that has never, under the rules of the House, been regarded as in order in the consideration of a river and harbor bill. You should be very loath to take that step, because if you do it will result in disorder and confusion, and will be against orderly parliamentary procedure.

Mr. SMALL. Mr. Chairman, I ask unanimous consent that all debate close in six minutes, that the gentleman from Ohio [Mr. BRUMBAUGH] be recognized for one minute, and that I may be recognized for the remainder of the time.

The CHAIRMAN (Mr. FOSTER). The gentleman from North Carolina asks unanimous consent that all debate be limited to six minutes, one minute to go to the gentleman from Ohio [Mr. BRUMBAUGH] and the other five minutes to himself. Is there objection?

There was no objection.

Mr. BRUMBAUGH. Mr. Chairman, I want the membership of the House to understand me thoroughly. In behalf of myself as chairman of the Committee on Railways and Canals and my colleagues on that committee, we are not bidding for the reference of this proposition. In fact, I think it should not at this date be referred to our committee.

Mr. MOORE of Pennsylvania. Should your committee report an appropriation bill anyhow?

Mr. BRUMBAUGH. Now, Mr. Chairman, I want to say that I do not see the propriety or good taste in regard to the eternal fitness of things for the chairmen of other committees making adverse remarks about committees outside of their own. I did not inject myself into this; others have done it. I want to say that this House should treat this committee fairly and on the level, as it does other committees. We shall organize for business, and in the future I do not propose to consent that other large committees take these bills that properly should be referred to this committee. I want to repeat that because this committee has not been alive in the past is no indication that we do not intend to make a live one of it in the future. Having been elected chairman of this committee only a few days ago, I do not ask a clerk at this short session, but when the regular session opens we will expect a clerk and get down to business as a live committee ready to receive and consider any bills which may be referred to it.

Mr. MADDEN. As I understand, the gentleman does not consider his committee moribund?

Mr. BRUMBAUGH. I certainly do not; and all these remarks that have been made are gratuitous and unjust, so far as the present is concerned, and so far as our intention for the future is concerned.

Mr. SMALL. Mr. Chairman, I desire to submit a few remarks on the appeal from the decision of the Chair holding this paragraph with reference to the Chesapeake & Delaware Canal out of order. While I do not desire to retravel the same ground, I am as strongly of the opinion now as I was when I endeavored to present the question that the Rivers and Harbors Committee has jurisdiction of the proposition as it appears in the bill, and that the ruling of the Chairman is wrong. We have appealed from the decision of the Chair. Does that involve any discredit to the Chairman? What is involved in his ruling? Only an expression of an opinion upon a question of parliamentary law—a disputed question, a doubtful question, on which there are two sides. Lawyers who are familiar with trials in nisi prius courts know that where the judge holds a certain way upon a question of law that an appeal is taken to the supreme court of appeals, which may consist of three judges or five judges or nine, as the case may be, and which is the court of last resort. The rules of this House provide that there may be an appeal from the decision of the Chair, and it involves no more discourtesy to the Chairman of the committee than does an appeal from a nisi prius judge involve a discourtesy to that judge.

Gentlemen like my good friend from Wisconsin [Mr. STAFFORD] and his colleague [Mr. LENROOT] seem to regard with dismay this appeal from the decision of the Chair. I think there is not a gentleman in this House, upon either side, who in his past record as a Member has exhibited the ingenuity and skill in parliamentary law by presenting appeals from the decision of the Chair more frequently than my distinguished friend the gentleman from Wisconsin [Mr. STAFFORD].

Mr. STAFFORD. Mr. Chairman, the gentleman does not wish to misrepresent me.

Mr. SMALL. I do not.

Mr. STAFFORD. I do not recall—I may be short of memory—but I do not recollect that I ever appealed from the decision of any Chairman or from the decision of any Speaker.

Mr. SMALL. Or argued in favor of an appeal? Did not the gentleman argue at some length to sustain an appeal from the decision of the Speaker in the cotton-tax proposition?

Mr. STAFFORD. The gentleman is confusing me with some other Member.

Mr. AUSTIN. Let the gentleman ask him if he did not vote to overrule the decision of the Speaker [Mr. CLARK].

Mr. SMALL. My colleague instances one occasion when the gentleman from Wisconsin [Mr. STAFFORD] was in favor of an appeal. The gentleman has corrected me in my assertion as to the cotton tax, and I yield to his recollection. But the gentleman himself, I have no doubt, would not deny that he has voted to overrule the Chair, either the Chairman of the Committee of the Whole or the Speaker, in various rulings that have been made, sustaining the contention that I am making that there is no discourtesy intended by this appeal from the ruling by the distinguished gentleman from Mississippi, the chairman of the committee.

The rules provide that the Members of the House sitting in in Committee of the Whole shall be a court of last resort and a finality. The Committee of the Whole ought to vote on this appeal in the light of law and reason and in furtherance of wise legislation. The Committee on Rivers and Harbors reported the legislation authorizing the examination and survey of this project. The report of the Chief of Engineers when submitted to the House was referred to the Committee on Rivers and Harbors. The same Committee on Rivers and Harbors now reports the legislation embraced in this paragraph adopting the project for the Chesapeake and Delaware waterway. Now, for the first time the jurisdiction of the Committee on Rivers and Harbors is assailed. It comes too late. The point of order is a subterfuge and a snare and is actuated primarily by the desire to defeat the project. Let us assert ourselves and maintain the rightful jurisdiction of the Committee on Rivers and Harbors.

Mr. DUPRÉ. Mr. Chairman, I ask unanimous consent for just one minute.

The CHAIRMAN. The gentleman from Louisiana asks unanimous consent for one minute. Is there objection?

There was no objection.

Mr. DUPRÉ. Mr. Chairman, some very handsome sentiments have been uttered regarding the gentleman from Mississippi [Mr. HARRISON], in which I heartily concur; but I do not see how a vote to overrule the decision of the Chair involves any disloyalty to him or disrespect of his high parliamentary qualifications. In fact, I gravely suspect that no gentleman in the House would be more pleased than the gentleman from Mississippi if his own decision were repudiated by the House. [Laughter and applause.]

The CHAIRMAN (Mr. FOSTER). The question is, Shall the decision of the Chair stand as the judgment of the committee?

The question was taken; and there were 42 ayes and 55 noes.

Mr. GILLETT. Mr. Chairman, I ask for tellers.

Tellers were ordered; and the Chair appointed Mr. BOOHER and Mr. MOORE of Pennsylvania.

The committee again divided; and the tellers reported that there were 40 ayes and 64 noes.

So the decision of the Chair was not sustained as the judgment of the committee.

Mr. LENROOT. Mr. Chairman, I move to strike out the paragraph.

Mr. SMALL. Will the gentleman yield to let me perfect the paragraph?

Mr. LENROOT. I will.

Mr. SMALL. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Committee amendment: Page 7, after the word "in," at the end of line 6, insert the words "House Document No. 391, Sixty-second Congress, second session, in."

Mr. SMALL. This merely inserts the document, which was omitted by a clerical error.

The amendment was agreed to.

Mr. MADDEN. Mr. Chairman, it is understood now that the opponents to this paragraph of the bill shall have 30 minutes.

Mr. SMALL. That was the agreement.

Mr. LENROOT. Mr. Chairman, what has just transpired in this committee in overruling the decision of the Chair would not have happened on any bill other than a river and harbor bill. It could not and would not have happened had it not been that members of this committee determined to overrule the Chair not upon the merits of the proposition, many of them—some of them did—but it is no secret that many members of this committee voted to overrule the decision of the Chair to sustain the river and harbor committee upon all of the items in this bill, fearing, some of them, that their own items might suffer if they did not do so. I listened to the reply of my friend from Tennessee [Mr. AUSTIN], in which he undertook to criticize me for suggesting that there was anything in the action of any Member of this House in the consideration of this bill before the House but the most patriotic motives.

He asserted that in the consideration of every item in this bill every member was actuated only by the best interests of his country. My friend from Tennessee may make such a statement as that, but it seems to me it rather ill becomes a Member of this House to make such a statement when his boast is that in this House he never votes against an appropriation or for a tax; and yesterday when I asked him whether he would be willing to vote for a tax to raise the expenditures provided for in this bill he declined to answer, and I yield now and ask him that question and ask for a reply.

Mr. AUSTIN. Mr. Chairman, I shall answer the gentleman in my own time.

Mr. LENROOT. I thought that would be the reply that the gentleman would make, but I yield now for a reply.

Mr. AUSTIN. I want to talk a little longer than that when I get after the gentleman.

Mr. LENROOT. Does this House realize that if the doctrine of the gentleman from Tennessee should prevail, voting for all appropriations and against all taxes, it would leave the United States helpless in this crisis, in this war time, with Germany winning the war, leaving the United States nothing with which to carry it on? Mr. Chairman, there does not seem to be a realization on the part of some Members of the House that we are in war. When you talk about carrying on all of these projects involving millions and millions of dollars, do you stop to realize that in the liberty-bond sale, which was concluded yesterday, we had gone to the humblest laboring man in the country and asked him to buy a $50 liberty bond, because we said to him that we needed the money to carry on this war? What do you suppose would have been thought by the thousands of laboring men in this country who have made sacrifices to buy liberty bonds if we told them that we wanted this money to spend a million dollars on the Missouri River, to spend $1,200,000 on the Mississippi River, such as is proposed in the bill? Do you spppose they would have come to the front?

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. LENROOT. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MEEKER. Mr. Chairman, will the gentleman yield?

Mr. LENROOT. In a moment. In this revenue bill that has passed the House and is now pending in the Senate, we have taxed the necessaries of life, we have taxed sugar, we have taxed heat and light and various other things. Did we impose that taxation for the purpose of carrying on the improvements that are proposed in this bill? Can any Member of this House justify taking money next winter from possibly starving women and babies for the purpose of expending millions of dollars shown by the hearings themselves to be unnecessary either in the maintenance of existing projects for commercial purposes or for the carrying on of the war? I yield now to the gentleman.

Mr. MEEKER. I just wanted to inform the gentleman that not long ago I filed a petition of 3,500 workingmen of the city of St. Louis in favor of these improvements.

Mr. LENROOT. That is always so. I have no doubt there are 3,500 workingmen in St. Louis who, because they think they have a peculiar and special benefit in this proposition, might be willing to take the bread from the mouths of millions of other people of the country.

As to this proposition which is now pending, which I have made the motion to strike out, the only member of the Office of Engineers who appeared before the Committee on Rivers and Harbors in discussing the proposition made no pretense that it was a military necessity, so far as the Navy is concerned. Of the canal he said that "it is not, of course, important for the movement of vessels of defense"; that is, naval vessels; that the Navy Department desired nothing less than 16 feet as of any special value for their purpose, for the movement of submarines or naval boats and things of that kind; and yet this is being urged as a war measure—a 12-foot canal, when the Navy says they can make no use of it whatever for naval purposes.

Mr. Chairman, in this crisis, whatever we may believe in times of peace when we are going along in a normal way with reference to these appropriations, in this time of war when all of the resources of the country are necessary for the carrying on of the war, every one of us ought to be willing to forget our own projects, to forget the few votes that might come to us from our districts by favoring this bill, if there be such, and remember only that never since the foundation of the Government has there been a time when Members should forget themselves and their districts more than in this hour, when we should consider this question only from the standpoint of the country. If that is done, this bill without any injury to anyone, can be cut down several millions of dollars. [Applause.]

Mr. GOOD. Mr. Chairman, I was interested and somewhat amused the other day when the gentleman from Illinois [Mr. MADDEN] characterized this item as being rotten, and the criticism was taken as a personal affront by the gentleman from Pennsylvania [Mr. MOORE], who at once defended it; and he became so bitter in his criticism I thought we ought to look into the history of this item a little and see whether or not it was above reproach, whether or not there was anything rotten in this item, whether all of the transactions connected with the canal it is proposed to purchase were straight and legitimate. So I got a copy of this letter of the Secretary of War, and what do you suppose I found? I find here that the men in charge of this canal, of a concern where 38 per cent of the stock was paid for out of the Treasury of the United States, and is now owned by the Government, had stolen or permitted to be stolen $609,000 of the bonds of this canal, and the company owning the canal, and the Government owns 38 per cent of the stock in this company, is now paying interest upon that amount of bonds that were spirited away, and now we are about to appropriate money, we do not know how much, ten or twelve million dollars, and the fellows who got those bonds will get $609,000 out of the Treasury of the United States for the bonds for which not a dollar, according to this report, was ever paid to the canal company.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. GOOD. Yes.

Mr. MOORE of Pennsylvania. Does not the gentleman know that that whole matter was thoroughly investigated by a Senate committee?

Mr. GOOD. I know that whole matter was thoroughly investigated by a commission appointed by Congress to investigate it, and the secretary of the company in his letter says that the total bonds of the company amount to $2,609,000, and that there was included a fraudulent overissue of $609,000.

And yet the gentleman from Pennsylvania complains because the gentleman from Illinois used the mild term of "rotten" when referring to the very rotten canal transaction, a transaction which the secretary of the company itself characterizes as fraudulent.

Mr. MOORE of Pennsylvania. Will the gentleman yield now? The gentleman tries to be fair at times. Because a bank clerk has peculated from a bank, has been arrested and put in jail, should the bank be forever condemned as rotten because it brings the crooks to terms?

Mr. GOOD. I am not condemning the bank. I am criticizing the rotten canal transaction. The canal company was responsible for these bonds. It permitted $609,000 of its bonds to be stolen, and now this concern wants to get into the Treasury of the United States.

Mr. MOORE of Pennsylvania. The gentleman is harping on something that occurred years ago, of course.

Mr. GOOD. I am complaining that this canal company, owned in part by the Government, permitted $609,000 of its bonds to be stolen.

Mr. MOORE of Pennsylvania. And the mote has grown to such proportions that it obliterates his sight. Will the gentleman yield?

Mr. GOOD. I decline to yield for a speech. If the gentleman has information and wants to give it, I shall be very glad to yield, but he seems to be ignorant of the early history and fraudulent action of the officers of this canal company. But I want to make this observation, that a company like this, owned in part by the Government, that will permit others to rob it will, if given a chance, itself rob the Government. Remember that we are starting on a project now that was conceived in fraud. The men who had charge of the building and financing of this canal, of which 38 per cent of the stock was subscribed by the Government, stole or permitted to be stolen from the company $609,000. How much will they be able to get away with of the $10,000,000 that you are about to appropriate for the purchase and repair of this canal?

Mr. MOORE of Pennsylvania. Here is a report dated 1829. Those men are dead long since. The gentleman is thrashing over their graves.

Mr. GOOD. You see when you put your finger on these tender spots, not only spots that are tender but spots that are rotten, spots that are corrupt and fraudulent, and admittedly so, the gentleman rises immediately and tries to interrupt one who is trying to give the House a little information that the committee has tried to keep in the dark. Not a word in the report of the

chairman of this committee that reported the bill of the $609,000 of fraudulent overissue. Why?

The CHAIRMAN. The time of the gentleman has expired.

Mr. MADDEN. Mr. Chairman——

The CHAIRMAN. The gentleman from Illinois is recognized for five minutes.

Mr. MADDEN. Mr. Chairman, this scheme we are about to vote upon very soon now was conceived in iniquity and sin, and it is still iniquitous, and still rotten, and still undeserving, and now we are to purify it by the expenditure of millions of dollars out of the Treasury of the United States. [Applause.]

Mr. SMALL. Will the gentleman allow me to ask him a question?

Mr. MADDEN. Yes, sir.

Mr. SMALL. Can not the gentleman possibly be serious while indulging in those violent adjectives? [Laughter.]

Mr. MADDEN. I will say to the gentleman from North Carolina I never was more serious in my life, and never more serious in my purpose to expose the iniquity involved in this nefarious enterprise, never more serious in my purpose to prevent the consummation of an iniquity, than I am in my purpose to defeat this rotten measure. Does the gentleman think that is serious enough? [Laughter.] If he thinks I am not sufficiently serious I will say a few more things that are still more serious. Is the gentleman serious in his endeavor to foist this rotten incubus onto the Treasury of the United States? Does he believe that this wart, known as an inland waterway, sought to be purchased on the recommendation of the gentleman from North Carolina [Mr. SMALL], chairman of the Committee on Rivers and Harbors, is justified as an emergency war measure?

Mr. MOORE of Pennsylvania. Mr. Chairman, I ask that the gentleman's words be taken down.

Mr. MADDEN. Does the gentleman want to come to the defense?

Mr. MOORE of Pennsylvania. He says it was being foisted on the Government at the recommendation of the gentleman from North Carolina.

The CHAIRMAN. Does the gentleman ask that the words be taken down?

Mr. MOORE of Pennsylvania. If the gentleman will modify his language I will not ask that they be taken down.

Mr. MADDEN. I demand the gentleman prove his statement that I am stating an untruth. I challenge the statement of the gentleman.

The CHAIRMAN. Does the gentleman from Pennsylvania [Mr. MOORE] desire the words to be taken down?

Mr. MOORE of Pennsylvania. If the gentleman yields to me to prove to him the inaccuracy of his statement——

Mr. MADDEN. I do not yield the floor. The gentleman seems to think he has a right to the floor no matter who occupies it.

Mr. MOORE of Pennsylvania. I will defend those who are in their graves.

The CHAIRMAN. Does the gentleman from Pennsylvania desire the words be taken down?

Mr. MOORE of Pennsylvania. If the gentleman withdraws what he said about the personal interest of the gentleman from North Carolina about this rotten scheme I will.

Mr. MADDEN. Mr. Chairman, I deny I made any such statement.

The CHAIRMAN. The gentleman from Illinois [Mr. MADDEN] is recognized.

Mr. MOORE of Pennsylvania. Then the gentleman will proceed in order, and I will call him again.

Mr. SMALL. I do not desire that he withdraw it.

Mr. MADDEN. I made the statement and continue to reiterate the statement that this measure is being considered upon the recommendation of the gentleman from North Carolina [Mr. SMALL] as chairman of the Committee on Rivers and Harbors. That is what I said. That is what I still say. Does anyone deny it? Does the gentleman from Pennsylvania deny it? Does the gentleman from North Carolina deny it?

Mr. MOORE of Pennsylvania. I do not deny it.

Mr. MADDEN. Then why do you want to inject interruptions into what I say?

Mr. MOORE of Pennsylvania. The gentleman said it was a rotten scheme.

Mr. MADDEN. I say so now. It is still rotten.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MOORE of Pennsylvania. The gentleman from North Carolina holds a different opinion.

The CHAIRMAN. The gentleman's time has expired.

Mr. FREAR. Mr. Chairman, the time is to be occupied equally by those who were in favor of this and those who were opposed to it.

The CHAIRMAN. The present occupant of the chair was not in the chair at the time.

All time has expired. The question is on agreeing to the amendment offered by the gentleman from Wisconsin.

Mr. GILLETT rose.

The CHAIRMAN. The gentleman from Massachusetts is recognized for five minutes.

Mr. GILLETT. I rose simply to call the attention of the Chair to the fact that the time has not elapsed.

Mr. GREEN of Iowa rose.

The CHAIRMAN. The time has elapsed. The Chair will recognize the gentleman from Iowa [Mr. GREEN].

Mr. GREEN of Iowa. Mr. Chairman, I do not intend at any length to discuss the merits of this proposition, nor the merits of any other proposition in the bill, beyond saying that it seems to be quite clear that this can not be considered as a military necessity at this time, for the reason that it is utterly impossible for the canal to be completed in time to be used or to be of any use before this war is over and we either win the war or are beaten.

Such being the case, I can not approve appropriations of this kind at this time. As a member of the Committee on Ways and Means, I sat with the other members of that committee for many weeks hunting and searching in every direction possible to find something upon which we could lay a tax without inflicting any hardship upon the American people. After all our searching and hunting we were unable to find anything that did not surpass either in degree or in form taxes which were proper in times of peace, and we were obliged in some measure to levy taxes which necessarily inflict hardship on those who will have to pay them. Unfortunately, too, we felt compelled, in order to raise the great amount of money necessary, to put taxes to some extent on the necessaries of life, although our bill only carried taxes on necessities to a small extent. Now, another body has been searching and hunting to find some other means of revenue and other objects of taxation, and after all their searching, as I understand it, they have found simply a tax on candy—some method of taking pennies from the children—and a tax on checks.

In addition to this enormous sum that we have called upon the people of the United States to raise, and which we will eventually go out and tell them as patriotic citizens they ought to pay—in addition to this enormous sum of $1,500,000,000 or $1,800,000,000 that we have thought proper to raise, we have been conducting a canvass from house to house all over this country, asking the citizens to do their patriotic duty and subscribe for liberty bonds. To do what? To build these canals, to dredge some of these creeks, to widen some of these channels? No; to carry on this war and save the country and win the war. And that is what the people subscribed for, and nothing else.

Mr. Chairman, I think this proposition ought to be voted down. [Applause.]

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Wisconsin [Mr. LENROOT].

The question was taken, and the Chairman announced that the noes appeared to have it.

Mr. LENROOT. Mr. Chairman, a division.

The CHAIRMAN. A division is demanded.

The committee divided; and there were—ayes 24, noes 52.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk began to read.

Mr. MADDEN. Mr. Chairman, I make the point of no quorum.

Mr. MOORE of Pennsylvania. I make the point, Mr. Chairman, that that is too late. The Clerk had begun to read.

Mr. SMALL. I hope the gentleman will withdraw that.

Mr. MADDEN. Mr. Chairman, it has been suggested to me by a number of gentlemen that I should let that go, and I will withdraw it.

The CHAIRMAN. The gentleman from Illinois withdraws the point of no quorum. The Clerk will read.

The Clerk read as follows:

Baltimore Harbor and Channels, Maryland: For maintenance of Patapsco River and Channel to Baltimore, including channel of approach at York Spit, Chesapeake Bay, $104,000; for improvement in accordance with the report submitted in House Document No. 799, Sixty-fourth Congress, first session, and subject to the conditions set forth in said document, $250,000; and the Secretary of War is hereby authorized to prosecute maintenance work in the inner harbor in accordance with the recommendation submitted in said document; in all, $354,000.

Mr. AUSTIN. Mr. Chairman, in reply to the gentleman from Wisconsin [Mr. LENROOT] I wish to read from his speech which called forth my criticism. He said:

If the supporters of this measure now desire to overrule the Chair upon this proposition, they will demonstrate to the country beyond

peradventure that this bill is not being considered upon its merits, and that wherever there is a piece of pork in it they are willing to violate the rules of this House in order to keep that pork in it, so that the pork may be had for other items in the bill that they are afraid might be lost unless all the other items remain in.

Mr. Chairman, the Secretary of War, who is charged under his oath with the responsibility of caring for river and harbor improvements, has O. K'd and approved every item in the pending bill, and that Cabinet officer is at the head of the Army which is to wage a successful war against Germany. Now, can the gentleman from Wisconsin [Mr. LENROOT] be more deeply concerned in the successful prosecution of this war than a high Cabinet officer who is directly charged with the management of the Army?

Mr. GOOD. Will the gentleman yield for a question?

Mr. AUSTIN. No; I have only five minutes.

Mr. GOOD. I had only five minutes, and I yielded to several questions.

Mr. AUSTIN. I have only five minutes. Each and every item in this bill has been approved by the Secretary of War.

What else? Why, the gentleman from Wisconsin [Mr. LENROOT], who aspires to the leadership of this side of the House, is unkind and unjust enough to say that his Republican colleagues and his Democratic colleagues are not voting for or considering this bill upon its merits. Is not that a challenge to the honor of every man on this floor? If those of us who favor it—and a majority of us favor it—are not considering it upon its merits, but alone upon the lines of "pork," is it not a challenge to our honor; and if that challenge holds good, is it not a reflection upon the integrity and the conscience of every man here who favors this bill, and has he not, according to the statement of the gentleman from Wisconsin [Mr. LENROOT], violated his oath of office? If the gentleman from Wisconsin is proud of his utterance, I do not envy him. I think he owes it to himself and to his colleagues who have honored, respected, and trusted him to apologize to them before the close of this day's session.

Now, the gentleman says something about voting for revenue bills. I voted for the last Republican tariff bill which passed this House, and the gentleman from Wisconsin [Mr. LENROOT] voted against it. I voted with more than nine-tenths of the Republican Party, and he voted with all the Democrats. I put my record for voting for the last Republican tariff bill against the record of the gentleman [Mr. LENROOT] and of Senator LA FOLLETTE, who also voted against it. I repudiate the reflection sought to be cast upon the gentleman's colleagues by him. I stand here for the integrity and the honor of the membership of this House. If we do not respect ourselves and stand up here for our own honor, who will stand up for us? I prefer to believe in the honor and integrity of my colleagues, rather than to stand up with the yellow journalism of this country in reflecting upon their honor and questioning their motives in supporting this and other measures. [Applause.]

Mr. LENROOT. I have only this to say in reply to my good friend from Tennessee—and we are personal friends—that whenever I find the gentleman from Tennessee voting against any appropriation that is proposed in this House I shall be prepared to apologize to him for the remark that I have made, but not until then.

Mr. GOOD. Mr. Chairman, will the gentleman yield?

Mr. LENROOT. I yield to the gentleman.

Mr. GOOD. A short time ago the gentleman from Wisconsin [Mr. LENROOT] propounded an inquiry to the gentleman from Tennessee as to whether or not he would vote for a tax to pay this appropriation, and the gentleman was going to answer it, but I listened patiently, and the gentleman from Tennessee did not state whether he would vote for such a tax, and I hope the gentleman will yield his time so that the gentleman from Tennessee can answer that question.

Mr. AUSTIN. I have said that I voted for the last Republican tariff bill, and the gentleman from Wisconsin [Mr. LENROOT] voted against it. I voted for these appropriation bills because I believed them to be meritorious; and the Members of this House who compose those committees, acting under their oaths, reported out those bills that were meritorious and deserved my support.

Mr. LENROOT. Now, I have some time left, and I ask the gentleman will he not answer the question I have several times propounded to him, whether he is willing to vote at this session for taxes to pay these appropriations?

Mr. AUSTIN. I voted against the late revenue bill, which the gentleman from Wisconsin supported and the country repudiated, and which the United States Senate is going to repudiate. [Laughter.]

Mr. LENROOT. That does not answer my question.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

Rockhall, Queenstown, Claiborne, Tilghman Island, Cambridge, and Crisfield Harbors, Elk and Little Elk, Chester, Corsica, Choptank, Tuckahoe, Warwick, La Trappe, Tred Avon, Wicomico, Manokin, and Pocomoke Rivers, Slaughter, Tyaskin, and Broad Creeks, Twitch Cove and Big Thoroughfare River, and Lower Thoroughfare, Deal Island, Md.; Nanticoke River (including Northwest Fork), Del. and Md.; and Broad Creek River, Del: For maintenance, $15,800.

Mr. FREAR. Mr. Chairman, I invite the attention of the committee——

Mr. SMALL. Is there any motion pending?

Mr. FREAR. I move to strike out the last word. I invite the attention of the committee to this paragraph of the bill which has just been read by the Clerk. Heretofore the statement has been made to the House that it will not be difficult to move to strike out certain items from this grouping system wherever they occur, whenever it is the disposition of the House to do so. I point out here that about 30 items are placed in this group, which never before have been grouped together, with a $50,000 balance remaining to their credit substantially. According to the bottom of page 8 of the bill, substantially 30 items, possibly 29, are grouped, while heretofore some of these items have been criticized in the House. I do not propose to enter into any discussion with regard to the individual items now, but I call the attention of the House to the fact that no one hereafter will ever be able to challenge one of these items when it appears in this bill, nor in any other grouping system can you challenge a single item. When it is placed in the bill it stays there. It is no matter whether it may be worthless, no matter whether there is no commerce on the stream, the money may be poured in there, as we have seen in so many cases, without any return whatever to the public, and we continue to pay that money without an opportunity to know where the money is going or how to get rid of the objectionable items.

Here are 30 items strung all along the coast in this neighborhood and grouped, and some of them have been already criticized. This is only one evidence, possibly one of the worst of the system, in which you have covered up for all time any effort hereafter to get after these specific items or to show up the character of them, because the appropriation goes to the total and the engineers can give it to any item they choose.

As I stated early in the discussion, in the case of the Toms River and in the case of Cold Springs Inlet and two or three other items that were in that group, the most of which will not stand the light of day, the Army engineers can turn the money over in the same way. It is said, "Oh, yes; you can pick them out; you can move to strike out," but you can not move to strike out unless you have before the committee the amount of money that is to be expended on the item. So I say that the Army engineers have succeeded in preparing a bill which I have no doubt will be followed in the future, and which will prevent the striking out of any items by the House.

Mr. MADDEN. Mr. Chairman, I move to strike out in this group the word "Queenstown."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 8, line 20, strike out the word "Queenstown."

Mr. MADDEN. Mr. Chairman, I move to strike out this word because no one would know from the reading of this bill whether any money is appropriated for the Queenstown improvement or not. No one will know if that paragraph is passed whether Queenstown will ever have any part of the $15,800 appropriated for the total aggregate expended at the improvement.

Mr. JAMES. Will the gentleman yield?

Mr. MADDEN. Yes.

Mr. JAMES. On page 103 of the report of the committee, it states that the value of the commerce in 1913 was $1,307,000. In 1914 it was $1,067,000 and in 1915 $323,000.

Mr. MADDEN. So it appears from the record of the War Department that the commerce has fallen off two-thirds since 1913, and the presumption is that if we keep that up another year or two there will be no commerce at all.

Mr. JAMES. And the next item in reference to Claiborne Harbor, the value of the commerce in 1913 was $9,075,000, and in 1915 it was $1,502,000.

Mr. MADDEN. So it seems that even Claiborne, once a great mart of trade, having a commerce valued at $9,000,000 has now fallen into a state of innocuous desuetude. And then, it seems to me, Mr. Chairman, that with a paragraph like this, with 30 or 40 items in it, with no indication given as a matter of information as to the value of the commerce in either case, it is no evidence as to what amount of money is to be expended for

any item in the paragraph, with an appropriation of $15,800 for them all, it is utterly lacking in information. Who knows but that the whole $15,800 will not be expended on the least meritorious item in the paragraph? Who knows that it will not be spent on one item in the paragraph that has no merit whatever? Does not the chairman of the Committee on Rivers and Harbors believe that the time has come when evidence or information, or whatever you may call it, should be furnished to Members of the House charged with the responsibility of legislating on these great propositions in the name of war emergency? Does not the gentleman know and ought he not to accede to the request of the Members of the House to furnish information to the effect that at any rate each one of the items in this paragraph has something to do with the war emergency?

Mr. GREEN of Iowa. Will the gentleman yield?

Mr. MADDEN. Yes.

Mr. GREEN of Iowa. Is there any way of finding out whether the creeks or duck ponds mentioned here are located on any map?

Mr. MADDEN. The gentleman from North Carolina and the gentleman from Pennsylvania, his successful ally, have not condescended to furnish to the ordinary Members of the House any information as to the location of these places where the money of the Treasury is to be expended and for which the people, already overburdened with taxation, are to be taxed again in order that they may be able in the name of an unknown war emergency to take large sums of money out of the Federal Treasury.

Mr. MOORE of Pennsylvania. Does the gentleman want the information?

Mr. MADDEN. Certainly; but I do not believe that the gentleman from Pennsylvania can give it, and therefore I decline to yield. [Laughter.]

Mr. MOORE of Pennsylvania. I thought the gentleman would, although he asked for it.

The CHAIRMAN. The time of the gentleman from Illinois has expired. All time has expired, and the question is on the amendment offered by the gentleman from Illinois.

The question was taken, and the amendment was rejected.

Mr. MADDEN. Mr. Chairman, I move to strike out the words "Elk" and "Little Elk" on page 21.

The Clerk read as follows:

Page 8, line 21, strike out the words "Elk" and "Little Elk."

Mr. MADDEN. Mr. Chairman, I want to elicit some information with reference to these animal names.

Mr. MOORE of Pennsylvania. Does the gentleman want the information?

Mr. MADDEN. I decline to yield. I do not know whether this is to be a hunting ground of some member of the committee that reports the bill or one of those places where you meet in social gayety in some backwoods town or whether it is a place where we have commerce that has something to do with the war. Elk and Little Elk would seem to indicate some condition that would enable a man to exercise his disposition and privilege of hunting. But it might mean that it belongs to some feature of the Elk Order where men can enjoy social converse with their fellows when they find themselves in a town where they are unknown except to brother Elks.

It certainly can not mean that it has anything to do with the conduct of the war, and yet the chairman of the Committee on Rivers and Harbors tells the House that the Secretary of War was persuaded by him to certify to the fact that this is an emergency war measure, and he also tells the House that the President of the United States certified to the fact that this bill is an emergency war measure. I wonder if the President of the United States and the Secretary of War were taken into the confidence of the gentleman from North Carolina with respect to what Elk and Little Elk mean, and where they are—whether they are animals to be shot at or things to eat or places of social converse; whether they have anything to do with moving the food supply to the starving soldiers abroad or the people in Belgium who have been put into a position of starvation by the conduct of the Germans; whether we are going to be able to float ships to carry the seasickness out of the sea through one of the channels known as Elk and Little Elk, or whether this is just a pleasantry that has been put into the bill for the delectation of the Members of the House; and if so, or in any case, however the thing happens, about how much money is to be spent upon it, and what is the amount of commerce carried upon it, if it is water, and, if it is beer, why we will not call attention to the commerce in connection with it. But in any case, it seems to me that the chairman of this committee, otherwise industrious, intelligent, patriotic, insistent upon bringing this bill to the light of day, ought to tell the Members of the House what these Elks consist of, whether they are simply the skins of elks or the horns of elks, or whether they have four feet and are able to run, or whether it is simply a channel that carries water between two banks, or one of these streams that sleeps in its own bed, or whether it is a sluggish stream that has no current; whether it contains water hyacinths that have to be removed as the result of the appropriation out of the Public Treasury, and whether water hyacinths are really good food for elks, and, if they are not good food for elks, if they are good food for the soldiers that are to fight the battles to preserve the honor of the Nation—whether, in short, as a matter of fact, Elk and Little Elk have any place in this bill or any other bill.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. SMALL. Mr. Chairman, in listening to the gentleman from Illinois [Mr. MADDEN] we have difficulty in determining whether he is humorous or merely serious, but on this occasion there is no doubt whatever. He varies in his opposition to items. Sometimes he exhausts his vocabulary in applying derogatory adjectives, in which he is unjustified, and sometimes he indulges in facetiousness and satire. It is for him to judge how successful he is in either rôle; but I do call the attention of the committee and, if possible, the country to the kind of opposition to the river and harbor appropriation bill, of which this is a fit sample. Mr. Chairman, if the gentleman had consulted the reports of the Chief of Engineers, which are available to him and to every other Member of the House, consisting of three volumes, on page 425 of the first volume he would have found a full discussion of the Elk and Little Elk Rivers, in Maryland, which constitute one project, and in that he would have learned that there was no estimate or recommendation for any appropriation in the bill, and none is carried, the reason being that the available balance on hand is sufficient to take care of this project during the ensuing fiscal year ending June 30, 1918. And I commend to the gentleman these reports, with which he does not seem to be familiar, before indulging with such satisfaction in humor and facetiousness in discussing river and harbor items.

I desire further to submit this observation: We had an attack here a moment ago upon the Chesapeake & Delaware Canal. I say, upon my reputation as a man for intelligence and official integrity, that it is a proposition of great merit, both for commerce and for national defense.

I have here before me these reports, all recent ones, first, Senate Document No. 215, Fifty-ninth Congress, second session, which is a report made by the commission of which Gen. Felix Agnus, the distinguished editor of the Baltimore American, was chairman, which is filled with arguments and recommendations in favor of the project. Gen. Agnus is an eminent economist and a distinguished Republican. I have before me another report, House Document No. 391, Sixty-second Congress, second session, a general report of a special board of engineers, followed by a report of the Board of Engineers for Rivers and Harbors, and then followed by the report of the Chief of Engineers, all favorable to this project. One feature of the project was left for final conclusion, and a final report was embodied in House Document No. 196, Sixty-third Congress, first session. Then I cite another document, Senate Document No. 14, Sixty-fourth Congress, first session, being the report of the Secretary of War upon a Senate resolution asking him to report as to the military value of this waterway. I commend those reports to gentlemen. I think it is fair to say that no gentleman who rose in his seat this afternoon and criticized this project has read any of those reports. I further say this, that I would be willing to hand these reports to the distinguished gentleman from Massachusetts [Mr. GILLETT], a man of trained mind, and in whose intellectual integrity I have confidence, give him several days to digest them, and I say that I will abandon the advocacy of this project if that gentleman will then come in and say that the characterization of the project by these other gentlemen is well founded. [Applause.]

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois.

The amendment was rejected.

Mr. MADDEN. Mr. Chairman, I move to strike out, on page 8, line 24, the word "Slaughter."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. MADDEN: Page 8, line 24, strike out the word "Slaughter."

Mr. MADDEN. Mr. Chairman, I do not know what this item in the bill entitled "Slaughter" refers to, whether it is a slaughter pen for mosquitoes or bedbugs or flies or gnats or muskrats, or what, whether it is something over which they carry commerce; but in all events it has no place in the report of the committee, and this is not the only item in this paragraph that

is not printed in the report of the committee. For example, we have Tilghman Island, Cambridge, neither of which is reported, Crisfield Harbor not reported, Elk and Little Elk not reported. Choptank not reported, Tuckahoe not reported, and Warwick not reported, Tred Avon not reported, Wicomico, Manokin, Pocomoke Rivers, Slaughter, Broad Creeks, Twitch Cove, and so forth, not reported.

Now, it may be that the word "Slaughter" should have been annexed to the words "Elk" and "Little Elk." And then we would have understood by the words that "Elk" and "Little Elk" had appeared on a former line. Then we would have realized that the hunting ground of the men who shoot elk could be found in the neighborhood of these titles. But as it is we find the words "Elk" and "Little Elk" in one place and "Slaughter" in another place, way down on the page.

Mr. COX. It may be that the word "Slaughter" there may mean slaughter of the Treasury of the United States.

Mr. MADDEN. I had forgotten that. I know the Committee on Rivers and Harbors never thought of that side of the case, for they have no consideration for the Treasury of the United States. That is the last thing they think about.

The question with them is, Are there any streams anywhere in the United States upon which the money of the Treasury can be used? Not the question of how much traffic there is on the stream, not the question of how much we can economize, not the question of how much the burden of taxation may be upon the already overburdened tax-laden people of the United States, not the question of what is an emergency war measure, not the question of how we can transport troops, not the question of how we can transport the food to the troops, but how can we slaughter the Treasury. That is the question. That is the question that is foremost in the minds of those who advocate these improvements for rivers and harbors.

True there are items in the bill that are worthy, and I am proud to certify to that, and I am for the items in the bill that are worthy, and I would like to see a river and harbor bill framed every item of which is worthy, so that we could have unanimous support for it and let it go to the people of the country as the work of the unanimous membership of the Congress of the United States.

Mr. GREEN of Iowa. Will the gentleman yield?

Mr. HUMPHREYS. Mr. Chairman——

Mr. MADDEN. Does the gentleman from Mississippi wish to ask me a question?

Mr. HUMPHREYS. No.

Mr. MADDEN. I thought the gentleman was curious.

I yield to the gentleman from Iowa [Mr. GREEN].

Mr. GREEN of Iowa. The gentleman from Illinois [Mr. MADDEN], as I understand, does not see the value of these creeks in a military and naval way, and the thought has just occurred to me that possibly if we get the mouths of these creeks open the Germans might sail up there and get stuck in the mud.

Mr. MADDEN. The trouble is that these creeks are getting the mouth of the Treasury open. That is where the trouble lies. They eat up every dollar we have in the Treasury that ought to go to other and more valuable purposes.

Mr. SMALL. Mr. Chairman, I ask unanimous consent that debate on this paragraph and all amendments thereto close in five minutes.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. HUMPHREYS. Mr. Chairman, the gentleman from Illinois [Mr. MADDEN] said that I looked curious, and I am. It is enough to excite the curiosity of any man to listen to the address just delivered by the gentleman from Illinois on the Slaughter Creek proposition, and it is in keeping with a great many criticisms that are made of the river and harbor bill. Up to date all the appropriations the Government has ever made for Slaughter Creek are less than $5,000, all put together. Yet the commerce floated on Slaughter Creek last year was valued at more than $1,000,000. [Applause.] A great many gentlemen object to appropriations because they are carried for creeks, or, as they frequently say, "Carried for 'cricks.'" The fact of the business is, that is due entirely to the ignorance of the critics concerning the geography of this country, and not due to any lack of merit in the creeks. [Applause.]

Now, let us take the Suez Canal as a standard by which to measure values. It floats around 20,000,000 tons a year. The creeks in this country for which we provide appropriations carry annually more than 7,000,000 tons, all of it American commerce and tonnage, valued at, last year, $185,000,000. [Applause.] We have spent in all the tide of time combined less than $3,000,000 for all the creeks in the United States since we began to make appropriations. And yet those creeks float annually approximately $200,000,000 of American commerce. And because gentlemen are not informed, because they have not taken the time to ascertain where the creeks are located, and what the creeks are named, they assume that they are some worthless, trivial, unimportant waterways, and, as one gentleman expressed it yesterday, that a terrapin would grow thirsty in.

Now, there is carried in this bill $35,000 of appropriations for all these creeks put together. There never has been and never will be a railroad constructed in the United States that can carry the commerce borne on the creeks provided for in this bill for $35,000 annual maintenance. There may be just criticism of items in the bill. It may be there are things here that ought not to be here, but certainly the creeks are not those items. And gentlemen who pick out that particular feature of the bill to level their criticisms against are simply giving evidence, if evidence were needed, that they were striking blindly, as a gentleman suggested yesterday.

Now, although there is nothing specifically mentioned in this bill for Slaughter Creek, last year it carried $1,000,000. There are $15,000 carried for all the small streams mentioned in that particular paragraph. If Slaughter Creek should be allotted out of this appropriation as much as has been allotted to it in all the years put together heretofore, it would be $4,000, and I submit to the gentlemen of this House that a stream that carries $1,000,000 worth, or more, of commerce every year is worthy to be allotted $4,000.

Mr. MADDEN. That is the information I have been searching for and which I would not have received if I had not made the statement that I did make.

The CHAIRMAN. The question is on the amendment of the gentleman from Illinois [Mr. MADDEN].

The question was taken, and the amendment was rejected.

The Clerk read as follows:

Potomac River, at Washington, D. C., at Alexandria, Va., and at Lower Cedar Point, Md., Anacostia River, D. C., Occoquan, Aquia, Upper Machodoc, and Nomini Creeks, Va.: For maintenance, $30,000.

Mr. GILLETT. Mr. Chairman, I move to strike out the last word.

The gentleman from North Carolina [Mr. SMALL] a few moments ago criticized the tactics of those who are opposing this bill, and I wish to say just a word about the tactics of the majority who favor this bill. There happened a few moments ago a very unusual incident. The Chairman of the Committee of the Whole on appeal had one of his decisions overruled. Now, the Chairman of the Committee of the Whole is always from the majority party, and it is a very rare thing that his decision is reversed, because appeals from the decisions of the Chair are generally taken by the minority on the ground that they think the Chair has been partisan and has ruled against their interests. That is the usual cause of an appeal, and being supported by the minority it is very rare that it succeeds. But when it does it is generally by the votes of the minority supported by a very few from the majority. In this case the facts are quite different. The gentleman from Louisiana [Mr. DUPRÉ] suggested that the Chair would probably be delighted to have its decision overruled, indicating that the Chair's sympathies were with the resolution, but that performing his duty as a presiding officer he looked not to the merits of the proposition but at the legal problem before him.

Mr. DUPRÉ. Mr. Chairman, will the gentleman yield?

Mr. GILLETT. Certainly.

Mr. DUPRÉ. The gentleman from Louisiana does not presume to speak with any authority.

Mr. GILLETT. I did not suppose so.

Mr. DUPRÉ. My remarks were largely jocular.

Mr. GILLETT. They were very effective, I think.

Mr. DUPRÉ. Somebody said I talked as well as the gentleman. [Laughter.]

Mr. GILLETT. The fact that he ruled against his sympathies did credit to the Chair, of course. The Chair, under the responsibility of his position, did as the Chairman of the Committee of the Whole and as the Speaker of the House generally do, looked not at the merits of the question involved but at the legal question brought before him, and so the Chair sustained the point of order. He subordinated his wishes to the law. And, as I say, it did him credit. But we, when we come to vote on the appeal, ought not to be influenced by our feelings toward the merits any more than the chairman is. We, when we are voting on an appeal, are just as much subject to the duty of following parliamentary law as the chairman is. His responsibility is no greater than ours. He decides what he thinks is parliamentary law. When an appeal is taken from his decision and we vote upon that appeal we are acting as judges, and we ought to vote not according to our wishes but according to parliamentary law.

Mr. LONGWORTH. Mr. Chairman, will the gentleman yield?

Mr. GILLETT. Certainly.

Mr. LONGWORTH. I think the gentleman is correct in saying that the overruling of the decision of the Chair on a river and harbor bill is unusual, but it is not altogether unprecedented. I recall an instance, and probably the gentleman will recall it, when an amendment offered not to the river and harbor bill, but to the sundry civil bill containing items for public buildings, requiring that the public building at Cleveland should be constructed of granite rather than sandstone, was ruled out of order by the Chair, and the House overruled that decision of the Chair.

Mr. GILLETT. I remember that proposition well, and as the gentleman also will recall, the incidents that led up to it. There were some alleviating circumstances. But although I sympathized with the gentleman who took the appeal yet, because I thought the Chair was right in his ruling, I voted to sustain the Chair.

Mr. LONGWORTH. I merely desired to call it to the attention of the House that this was not absolutely unprecedented.

Mr. GILLETT. No; it is not absolutely unprecedented, but it is very unusual, and that very vote was on what is known as pork legislation, on an item for a public building, that shows the viciousness and meaning of this vote. The river and harbor bill, more than all others, is considered by the outside world as a question where men's own interests are involved as against the public good, and therefore it is a question where we should scrupulously observe parliamentary law and not vote down the decision of the Chair, because we do not like the effect of that decision. But to secure a certain appropriation the Chair was overruled, and the votes were cast mainly by members of his own party, while we on this side were the ones who supported him.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. SMALL. Mr. Chairman, I ask unanimous consent that the debate on this paragraph and all amendments thereto now close.

The CHAIRMAN. The gentleman from North Carolina asks unanimous consent that debate on this paragraph and all amendments thereto close. Is there objection?

Mr. FESS. Reserving the right to object, Mr. Chairman, I would like to ask the chairman of the committee one question. It will not take more than a minute.

Mr. SMALL. I withdraw the request temporarily, then.

Mr. FESS. I wanted to ask whether there is carried in this bill anywhere an item with reference to the narrowing of the channel in the Potomac out beyond Potomac Park?

Mr. SMALL. Of course, there are so many items which are under improvement by the Government that it is difficult sometimes to be correct by memory, but I do not think there is any recommendation for any narrowing of the channel, and I am confirmed in that opinion by the Clerk.

Mr. FESS. I wanted to make some inquiry as to the policy of the Government in narrowing the channel, and I wondered whether this was the place to make the inquiry.

Mr. SMALL. It would be perfectly appropriate. It would not be narrowed except as the result of an investigation. I renew my request, Mr. Chairman.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Norfolk Harbor and Channels, Va.: For improvement, including channel to Newport News, in accordance with the report submitted in House Document No. 605, Sixty-third Congress, second session, and in accordance with the report submitted in Senate Document No. 3, Sixty-fifth Congress, first session, item "B," page 5, $900,000. The unexpended balance of appropriations heretofore made for improvement of channel to Norfolk, Va., is hereby made available for continuing improvement of said channel in accordance with the report submitted in said document.

Mr. SMALL. Mr. Chairman, I offer a committee amendment.

The CHAIRMAN. The gentleman from North Carolina offers a committee amendment, which the Clerk will report.

The Clerk read as follows:

Committee amendment, page 9: Strike out the words "Senate Document No. 3," in lines 13 and 14, and insert in lieu thereof the words "House Document No. 140."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. MADDEN. Mr. Chairman, I move to strike out the last word in order to ask the gentleman from North Carolina a few questions about this.

The CHAIRMAN. The gentleman from Illinois moves to strike out the last word.

Mr. MADDEN. We have been spending a good deal of money down at Norfolk. Is this an extension of the project that we entered upon some years ago and upon which we have spent a large amount of money? Exactly what does it do that we have not been doing?

Mr. SMALL. I can explain that very briefly. There has been an existing project for several years for 35 feet up to the navy yard. That depth prevails there now. This new project which is adopted here provides for widening the channel up to the navy yard, which is on the southern branch of the Elizabeth River, and also for widening the anchorage grounds at Lamberts Point, and also on the western branch at Pinners Point, and also widening the channel up to Newport News. That is the House document referred to—the first document that is referred to. The second document—House Document No. 140, Sixty-fifth Congress, first session—according to the amendment that I have just sent to the Clerk's desk, is based upon the recommendation of the Secretary of War and the Secretary of the Navy in response to a provision in the last naval appropriation bill asking for recommendations as to harbors and channels for the better operation of the fleet, and so forth, and that report recommended an increased depth of 40 feet up the southern branch of the Elizabeth River to the navy yard and a little further widening of the channel up to the navy yard.

Mr. MADDEN. That will cost $900,000 more than the project we have under way. Is that right?

Mr. SMALL. That does not include the entire cost. The entire cost of the larger project adopted here is $4,039,000, but the engineers said that this was all we could profitably expend during the next fiscal year. The greatest expense there is in acquiring the additional width of 750 feet.

This appropriation is to be used first in giving the increased channel of 40 feet in order to accommodate these large capital ships that are in process of construction or authorized.

Mr. MADDEN. Has this project any connection whatever with the appropriation of $1,600,000 that we made a day or two ago in the war deficiency bill for the deepening of the channel at Jamestown?

Mr. SMALL. None whatever. Has the gentleman ever been in Norfolk?

Mr. MADDEN. No.

Mr. SMALL. The southern branch of the Elizabeth River begins between the cities of Norfolk and Portsmouth. There the river divides into the Southern and Eastern Branches, whereas this Jamestown site is 12 miles farther down and fronts on Hampton Roads, so that it is an entirely different location. This does not include any improvement of the channel anywhere near the naval site.

Mr. MADDEN. So that we are adding to the expense of the project already adopted $4,250,000 in this project?

Mr. SMALL. No; I would not say that. The $4,039,000 project supersedes the former project as to the southern branch of the Elizabeth River, and but for the fact that the former document recommended also enlarging the anchorage ground off Lamberts Point and the widening of the channel up to Newport News and the anchorage ground up to Pinners Point, there would be no necessity at all for citing the former report, being House Document No. 605, Sixty-third Congress, second session.

Mr. MADDEN. I am very much obliged to the gentleman for the information. I think it is one of the meritorious projects in the bill, and of course I am anxious to promote meritorious projects wherever I can discover them. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

The Clerk read as follows:

James, Nansemond, Pagan, and Appomattox Rivers, Va.: For maintenance, $26,000; continuing improvement of James River, $46,000; in all, $72,000.

Mr. FREAR. Mr. Chairman, I move to strike out the last word. I desire first to offer, as a part of my remarks, a proposed substitute for section 16 of the bill when we reach the commission proposition. I just want to have it printed at this time.

The CHAIRMAN. The gentleman asks unanimous consent to extend his remarks in the RECORD by inserting his proposed substitute for section 16. Is there objection?

There was no objection.

The proposed substitute is as follows:

Mr. FREAR'S substitute for section 16:

"That a commission is hereby created and established, to be known as the National Waterway Commission, hereafter referred to as the commission, which shall be composed of five commissioners who shall be appointed by the President, by and with the advice and consent of the Senate. Not more than three of the commissioners shall be members of the same political party. The first commissioners appointed

shall continue in office for terms of three, four, five, six, and seven years, respectively, from the date of the taking effect of this act, the term of each to be designated by the President, but their successors shall be appointed for terms of seven years, except that any person chosen to fill a vacancy shall be appointed only for the unexpired term of the commissioner whom he shall succeed. The commission shall choose a chairman from its own membership. No commissioner shall engage in any other business, vocation, or employment. Any commissioner may be removed by the President for inefficiency, neglect of duty, or malfeasance in office. A vacancy in the commission shall not impair the right of the remaining commissioners to exercise all the powers of the commission.

"SEC. 2. That each commissioner shall receive an annual salary of $10,000, payable in the same manner as the judges of the courts of the United States. The commission shall appoint a secretary, who shall receive an annual salary of $5,000, payable in like manner. The commission shall have the authority to employ and fix the compensation of civil engineers, clerks, and other employees as it may from time to time find necessary for the proper performance of its duties and as may be from time to time appropriated by Congress, and in making appointments for continuous service the commission, so far as practicable, shall select its employees from the classified service.

"All property of the United States in the hands or under the control of Army engineers or other officials or of private individuals or public contractors, including dredges, steamboats, barges, yards, and other property used in the improvement of public waterways, shall be placed under the jurisdiction and authority of the commission.

"SEC. 3. That the Secretary of War may, if practicable, detail such Army engineers as are requested by the commission to assist in organizing and establishing a comprehensive system of waterway improvement, providing that such details of engineers shall not be made to the detriment of their military duties.

"SEC. 4. That the commission shall have the authority and it shall be its duty to make an investigation of all waterway projects now constructed in whole or in part by Federal aid. The commission shall prepare a complete and succinct statement, by years, of the amount heretofore appropriated for each project, the estimated amount required to complete such project, a report of the commerce now served and to be served, the character of such commerce given by separate items so far as can be furnished, the source of information, the interests to be served, the kind of water craft used, and such other information as may be useful in determining the public use and value of the project. The commission shall also furnish Congress, at the earliest practicable date, information concerning all harbors and waterways now improved or being improved in whole or in part by Government aid, showing the amount of commerce, character of terminals or landings, ownership thereof, and, so far as practicable, ownership of regular lines of craft used thereon; and the commission shall also report its recommendations for the finishing of the projects now being constructed or modifications of existing plans or abandonment of work on any project, together with findings upon which such recommendations are based.

"The commission shall further ascertain and report what projects are now being improved for purposes other than navigation, and if for power development, a full statement of interests concerned, officers and stockholders, public use to be served, if any, private or public contributions toward expense of construction, and the commission's recommendations thereon. Said commission shall further ascertain and report what projects are now being carried on in whole or in part for land reclamation purposes, the character of such project, amount of lands to be recovered, estimated value of such lands, ownership thereof, and contributions now being made by beneficiaries toward such expenditures, together with the commission's recommendations.

"The commission shall make a full investigation into all work now being performed by the Mississippi River Commission, the amount of money heretofore expended on such river, character and permanency of work performed, and reclamation interests now being served, if there be any, a full statement of contributions by public or private interests toward said work, together with a comprehensive and intelligible report of the probable cost of the present plans of levee construction or other river improvement now being undertaken, the percentage of project completed, and this commission's recommendation thereon. Such Mississippi River report shall be separate and distinct from reports on other projects now under improvement by the Federal Government.

"All of such data and all other available information of a pertinent character affecting particular projects or entire waterway improvements now being conducted by the Federal Government shall be collected in convenient form and presented to Congress in installments at the earliest practicable date.

"When the commission shall have reason to believe at any time that the proposed project is not for general use of the public or will not warrant further expenditures, or if contributions shall be required to be furnished before further appropriations are made or further expenditures authorized, such commission shall immediately report to Congress, with a preliminary recommendation thereon, and shall furnish a copy thereof to the United States Treasurer. That thereupon, when so recommended, the Treasurer shall withhold all funds theretofore appropriated not specifically obligated under existing contracts and shall refuse further payments until subsequent and specific action shall be had thereon by Congress.

"SEC. 5. That prior to the presentation of any new waterway project appropriations the commission shall cause a careful survey of the proposed improvement, and if it shall appear such project is to serve a public use and is feasible, the commission shall thereupon collate data showing the estimated cost thereof, commerce to be served, water craft to be used, public terminals furnished, and contributions recommended to be made by public or private interests, together with such additional data as has heretofore been specifically required to be furnished on existing projects The commission shall thereupon transmit to the Committee on Appropriations of the House of Representatives a full report concerning such new project or projects, its recommendations thereon, and, if requested so to do, all other and further information that may be required by the Committee on Appropriations.

"Whenever the commission shall determine that any waterway project is primarily for power or land-reclamation purposes or to serve special interests, the commission may recommend Government aid for such project, notwithstanding the special interests to be served, and shall prepare data showing the proportionate amount of Federal aid recommended, together with suitable restrictions as to audit and payment of funds from the Public Treasury. Such recommendation shall be presented as a proposed separate bill to the Committee on Appropriations of the House and shall not be embodied in any general waterway appropriation bill by such committee.

"Whenever any new survey shall be proposed for any waterway project, the commission, prior to such survey, may require data to be furnished showing the public use and prospective commerce to be served and such other information as may be desired, and a brief synopsis of such information shall be furnished to Congress by the commission to accompany any recommendations made for new surveys.

"All existing waterways, new projects, and new surveys shall be classified, so far as practicable, prior to each regular session of Congress, together with estimates of appropriations required for maintenance and improvement for the ensuing two-year period, and a brief report as to each project considered shall be separately prepared and, with the commission's recommendation thereon, shall be placed in the hands of the Committee on Appropriations of the House at the beginning of each session.

"Whenever the Appropriations Committee so requires, the commission shall furnish additional data concerning any project, and shall further aid the Committee on Appropriations when requested so to do in the preparation of the regular river and harbor bill, which shall be prepared and presented by the Committee on Appropriations of the House.

"The commission shall further compile and cause to be published at the earliest practicable date for the use of Congress an intelligent, concise statement of past waterway expenditures by the Government and of amounts needed to complete all continuing projects, and shall further give estimates of future obligations to be incurred by new projects recommended for construction. The commission shall give preference in its recommendations to Congress of appropriations needed to complete the more important projects, and, so far as practicable, shall enter upon a program looking toward the early completion of such projects.

"The commission shall make a thorough investigation of reasons for loss of river traffic and shall make recommendations for the reestablishment of such traffic. It shall ascertain and determine the most available craft for river use, and, as soon as practicable, shall prepare plans and build experimental craft for such purpose.

"Whenever reason therefor shall appear the commission may fix reasonable freight rates on all interstate water-borne traffic by common carrier and upon all such traffic on navigable waters wholly within the State, subject, however, to the jurisdiction now conferred by law on the Interstate Commerce Commission to fix maximum joint rates between and over rail and water lines.

"The commission shall determine the reasonableness of wharfage or water-terminal charges, whether such terminals are owned by private persons or municipalities, and all river and harbor improvements, including terminal facilities, shall be under the supervision and control of the commission.

"Whenever the commission shall determine that unprofitable railway freight tariffs are maintained in any given case in order to prevent waterway competition, it shall be the duty of the commission to make a report thereon in duplicate to the Interstate Commerce Commission and to Congress, with recommendations that Congress give power, if need be, to the Interstate Commerce Commission for fixing minimum railway rates.

"The commission shall at the earliest practicable date adopt an intelligent system of natural waterway improvement and shall perform such other and further duties as may present themselves from time to time.

"Whenever it shall be desirable to secure sworn testimony from any witness or witnesses relating to any project or to navigation generally, or whenever the commission shall have reason to believe that private interests are secretly or improperly seeking to influence the commission or to force the passage of any private or public waterway measure through Congress, the commission may cause a hearing or summary investigation to be held, and for that purpose may issue summons, subpœnas, or other writs in the same manner and under the same procedure as is more specifically set forth in the act to regulate commerce approved February 4, 1887, and the amendments thereto, which portions of such act relating to procedure, so far as applicable, are made a part of this act, and may bring before such commission all parties believed to be informed concerning the facts or interested in the passage of such measure. A complete record shall be preserved of the testimony taken at such hearing and a certified transcript thereof shall be transmitted immediately to the Committee on Appropriations.

"SEC. 6. That all unexpended balances to the credit of any project not specifically obligated under existing contracts shall, from the date of the passage of this act, be transferred by the Treasurer to the general fund, and all vouchers thereafter paid by the Treasurer shall be upon order of the National Waterway Commission.

"SEC. 7. That the sum of $500,000, or so much thereof as may be necessary, be, and the same hereby is, appropriated, out of any money in the Treasury, to carry out the provisions of this act."

Mr. FREAR. I desire further to speak briefly of this particular paragraph, Mr. Chairman, because the James River has been a subject of frequent discussion before the House. Finally the Army engineers, as will be remembered, changed the original project and modified it so that the present work is being undertaken. This item carries $46,000 for the continuing improvement of the James River. The suggestion has been made occasionally that if this bill fails to pass these projects will be without any moneys with which to carry on the improvements. We have before us the balances and have frequently referred to the balance sheets which were furnished by the Army Engineers. The James River, for instance, has to its credit, or did have to its credit on the 1st day of March last, uncontracted, $185,900. To that is to be added this $46,000. I speak of that because this proposition is a very expensive one. We are paying over $11 a cubic yard to take out the rock for this improvement, which work has been carried on for many years. It would seem that at this particular time it is a wasteful and an unnecessary expense. I will not use a harsher term, because it is advised by Army engineers, but it is a project that seems to be an unnecessary burden at this time. However, I have not moved to strike out any of the items, and I wish to leave the subject with the simple statement that with $185,900 on the 1st of

March uncontracted for on the James River, an additional $46,000 was recommended by the Army engineer, and appears in the bill.

Mr. SMALL. Mr. Chairman, I deem it only necessary to make this observation, that if any criticism is to be made of this item it is that an insufficient amount has been appropriated.

The CHAIRMAN. Without objection, the pro forma amendment will be considered as withdrawn, and the Clerk will read.

The Clerk read as follows:

Waterway from Norfolk, Va., to Beaufort Inlet, N. C.: Continuing improvement, $100,000: *Provided*, That the route of the waterway may, in the discretion of the Secretary of War, be modified in accordance with the report submitted in House Document No. 1478, Sixty-third Congress, third session: *And provided further*, That not more than $75,000 shall be expended in acquiring the necessary rights of way between Albemarle Sound and Pungo River.

Mr. FREAR. Mr. Chairman, I move to strike out the last word. This is a proposition that I have discussed many times on the floor, and I do not intend to discuss it now, so far as the merits of the waterway itself are concerned, excepting to call attention to the fact that $75,000 of the $100,000 contained in the bill appropriated for this waterway is to be expended for purchasing necessary rights of way between Albemarle Sound and the Pungo River. This is to be a change or a modification or correction of plans for this waterway from the old project, for the Army engineers, as I understand, deem that advisable; that is, it is a waterway which extends down from Norfolk, and this is a branch of it, down below Albemarle Sound. I believe originally $150,000 was provided for the purchase of this right of way by the Government, but afterwards the amount was reduced. When the Army engineer was before our committee last session, although the hearings are not printed, I think I quote him correctly—if not I ask to be corrected—when I say he testified that about 800 acres of land were to be used for this right of way, the land being, as he stated, largely marsh land of little value, and yet $75,000 is now set apart for the purchase of a right of way which ordinarily is required by engineers to be given to the Government by the various localities as a consideration or a prerequisite to the making of the improvement. That amount is nearly $100 an acre for land much of which is practically of no value. The testimony of the engineer was further to the effect that much of the adjoining land would be improved by the dredging and filling in, so that it would be made more valuable. However, we find here an item of $75,000 for 800 acres of land in addition to the land which may be used at the sides for dumping purposes, which would be benefited instead of damaged. It would seem that under ordinary circumstances that land ought to have been donated to the Government. Under such circumstances land is donated in many cases, and in any event so large an amount for such a small proportion of land ought not to have been allowed. But I will not offer any further statement.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn and the Clerk will read.

The Clerk read as follows:

Winyah Bay, Waccamaw, Little Peedee, and Great Peedee Rivers, S. C.: For maintenance, $70,000.

Santee, Wateree, and Congaree Rivers, S. C.: For maintenance, including the Estherville-Minim Creek Canal and the Congaree River as far up as the Gervais Street Bridge, Columbia, and for improvement of the Congaree River in accordance with the report submitted in House Document No. 702, Sixty-third Congress, second session, $30,000.

Mr. FREAR. Mr. Chairman, I move to strike out the last word, and I do it with better satisfaction because I know that the gentleman who is interested in the new project on the Congaree River is present.

Lines 13 and 14 of the bill contain items which have been criticized heretofore, and I shall not refer to them, excepting to say that on the Little Peedee River there was spent for office expenses last year $739, and nothing was spent for actual improvement, according to the report of the Army engineers.

The Congaree River has had spent upon it thus far something like $668,298, and $1,268,000 for the Congaree, Santee, and Wateree combined. After all that expenditure of money we have secured 4,000 tons of commerce each year on an average. On page 3 of the document the engineer says:

I therefore report that the further improvement by the United States of the Congaree River, S. C., is deemed advisable to the extent of maintaining a 4-foot navigable channel by dredging, assisted by properly designed bank protection, and recommend that this protection be provided first at Congaree and Gill Creek, and that $100,000 be provided in one appropriation for that purpose, together with $10,000 annually for the operation of the dredge now owned by the work, and for other necessary maintenance.

In the hearings that were held upon this proposition—and I have them before me—the engineer, Col. Newcomer, stated it was not deemed advisable to go on with this improvement at this time; but subsequent to that time, it seems, gentlemen interested in the project went before the committee and it was inserted. It is inserted in this war measure. Let us see what we have before us in that proposition.

It is stated on page 8 of the document that at present "nothing which could be described as terminal facilities in the usual meaning of those terms are on the river." There is only an ordinary river landing with a small tent to protect freight; and that is true at Columbia.

Now we have spent over $600,000 on this stream, and here we are called upon to spend $100,000 more for the purpose, apparently, of revetment work along the banks.

That is the report of the board, and the improved facilities for navigation consist of one stern-wheeler, according to the engineers' report, which made last year 36 trips, and in the last three years has averaged about 4,000 tons of commerce annually. After an appropriation of $600,000 for this river during past years we are asked to spend $100,000 more, in addition to $30,000 through this war-measure waterway bill.

Mr. LEVER. Mr. Chairman, in answer to the criticism of the gentleman from Wisconsin [Mr. FREAR] on this item, I think the committee should have the facts. There was a special board of Army engineers appointed a few years ago to examine the Congaree River with a view to further improvement. That board in its report, paragraph 26, suggests the following:

Referring to the list of shoals in paragraph 6, Congaree and Gill Creeks are the only places at which revetment and contraction work is at the present time urgently necessary and where it would produce the most immediate beneficial results. The estimated cost of revetment and contraction work at those points is about $100,000, with $10,000 annually for maintenance. The board recommends that this sum, $100,000, be made available in one appropriation, and that it should be in addition to the cost of maintenance of the river by dredging and snagging. After the works have been completed and their effects on the river have been studied, a definite final project for bank protection and contraction works can be adopted.

That is the first proposition. That recommendation was concurred in by Col. Dan C. Kingman, who was Chief of Engineers of the Army, and his recommendation is as follows:

5. After due consideration of the above-mentioned reports, I am compelled to disagree with the views of the Board of Engineers for Rivers and Harbors and am disposed to accept those of the special board on the Congaree River. I have no doubt that a very large dredge, or a sufficient number of them, would maintain an adequate channel in the Congaree River throughout the period of low water, but, after careful, special study of the river, I am of the opinion that it is best to attempt to reduce the amount of material to be excavated by protecting the badly caving banks and thus reducing the supply of bar-making material. I believe, also, that public terminals at Columbia would be very desirable, and think that the municipality should take advantage of the privilege that it now has to compel a junction to be made between the canal and the river whereby the former can be used as a landing place for boats. But, as the local interests have shown a willingness in the past to provide terminals, I do not think that it would be quite fair to render the moderate appropriation which it is proposed to recommend conditional upon the accomplishment of this rather expensive piece of canal work. I therefore report that the further improvement by the United States of the Congaree River, S. C., is deemed advisable to the extent of maintaining a 4-foot navigable channel by dredging, assisted by properly designed bank protection, and recommend that this protection be provided first at Congaree and Gill Creeks and that $100,000 be provided in one appropriation for that purpose, together with $10,000 annually for the operation of the dredge now owned by the work and for other necessary maintenance.

Gen. Black, now Chief of Engineers, in his report says:

Unless the channel below the lock is made more stable and permanent and a low-water depth of about 4 feet secured, the expenditures already made will be of little benefit. It seems advisable, therefore, to undertake some additional work with a view to securing a more permanent channel of about 4 feet in depth at low stages under proper conditions of cooperation.

It will be recalled that the last river and harbor bill that passed the House carried an authorization and an appropriation of $50,000 for making good that authorization.

That $50,000 was to be expended for the purpose of revetment work at Congaree and Gill Creeks where the banks are composed of shifting sands and at high rainfall the banks cave in and clog the channel for navigation purposes with the result that the boats are unable to make their connections at Georgetown with the Clyde Line or to make their schedules coming from Georgetown into Columbia, with the further result that necessarily the patronage of the boat line has gradually fallen off.

The Congaree River, according to my information, has had only one year a real 4-foot channel, and that was in the year 1909, and in that year they handled over 12,000 tons of freight. When this item in the last river and harbor bill was passed carrying an appropriation of $50,000, not now provided in this bill, I telegraphed the chamber of commerce in the city of Columbia, and in response I received this letter:

A committee from the chamber of commerce appeared before the city council yesterday morning, and they agreed to include in the proposed bond issue for city improvements an item of $50,000 for the construction of municipal wharves, warehouses, railroad track facilities, thereby providing suitable terminal facilities for river navigation.

In addition to that in a letter addressed to me from the secretary of the chamber of commerce, in further response to my telegram he says:

At a meeting of the merchants just held [dated May 28, 1917] I was instructed to proceed in the preparation of papers to organize a $100,000 company to operate on the river between here and Georgetown.

I happen to know personally that one of the largest capitalists in South Carolina, a man of large public spirit and interest, is back of that proposition, and rather than criticize this item, it seems to me that if there is any criticism it falls upon the Congress of the United States in not heretofore providing for a 4-foot channel which that stream is capable of furnishing 12 months in the year.

It is said that this is not a war measure. I do not know whether it is or not, but I know this: Recently one of the cantonments for the Army was located at Columbia, S. C. I know that freight congestion is increasing each day at the city of Columbia. I know also that the largest cotton manufacturing establishment in the world is at the city of Columbia. The freight which I refer to is nonperishable; it is now being handled by the railroads, and it should be handled by water transportation. Rather than have this item go out, I am going to offer an amendment here to test out the sincerity of this committee, increasing the appropriation $50,000, to take care of 5 miles of nonnavigable stream in a stream that is navigable for 200 miles, and I move to amend by striking out "$30,000" and inserting "$80,000," in line 21, on page 11.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. LEVER: Page 11, line 21, strike out "$30,000" and insert "$80,000."

Mr. LEVER. Mr. Chairman, let me be heard for a moment upon that. I never have been more earnest on any proposition than I am upon this. Let me show you what the proposition is and see if it is not a good business proposition. From Columbia to Georgetown by the Congaree and Santee Rivers is a distance of 208 miles, and except for 5 miles there is a 4-foot channel in all that distance. Seven or eight miles below the city of Columbia there is a stretch of caving banks of 5 or 6 miles, where two creeks run into the river. Heavy rains cause these banks to cave in. The boats come up and find the channel clogged with sand. They have got to send to the city of Columbia—7 or 8 miles above—to get the dredge. The dredge comes down and pumps the sand out, opens the channel, and two or three days are lost, and the patrons of the boats in the city of Columbia are waiting for their goods. On the other hand, it would leave Columbia for Georgetown, laden with cotton and other freight, to connect with the Clyde Lines at Winyah Bay or Georgetown for Baltimore, New York, Philadelphia, and northern ports. It runs into a heavy rain, runs into these caving banks, and finds itself tied up for 24 hours probably, or 12 hours—sufficiently long at least to lose its connection at Georgetown.

Does anyone blame the patrons of the boat line of Columbia for complaining? Does anyone blame the Clyde Line for finally refusing to make the connection with this boat line? There is only one cause for it, and that is that Congress has not appropriated a sum sufficient, though recommended by the War Department, to revet the 4 or 5 or 6 miles of caving banks on this river, which revetment work would give you an open 4-foot channel for 12 months in the year.

Mr. FESS. Mr. Chairman, will the gentleman yield?

Mr. LEVER. Yes.

Mr. FESS. I wondered whether the congestion of freight, due to the cantonment that is to be placed there, could be much relieved by this proposed improvement?

Mr. LEVER. My judgment is that the cantonment so far has not congested freight, because the work has not been begun. The congestion is due to the rapid growth of the city of Columbia. We have to take into consideration that Columbia is one of the large interior cotton markets of the State, that it is a market not only for raw cotton, but it is one of the largest markets of the South for the manufactured product. It is not good business, in my judgment, to load your freight cars, which ought to be handling the more perishable stuff, with these nonperishable products, when with the expenditure of a small sum of money within a few months we could have this stretch of water 200 miles long to carry this heavy and nonperishable freight.

Mr. ROBBINS. Mr. Chairman, will the gentleman yield?

Mr. LEVER. Yes.

Mr. ROBBINS. What would these two embankments you speak of cost?

Mr. LEVER. The War Department recommended originally $100,000, but I think the representative of the War Department who appeared before the Committee on Rivers and Harbors last year recommended the sum of $50,000. It does seem to me that there could not be any better investment than this small sum of money. The gentleman from Wisconsin [Mr. FREAR] is right. We have expended $600,000 on this river. We have been working on it for many years—25 years or more—and yet it is not thoroughly navigable now, and in that connection I desire to say that it does seem to me there should come a time when the War Department should finish some of these projects. I trust that I may have the support of the committee on this small amendment.

Mr. MADDEN. Mr. Chairman, I would like to talk about two minutes before the chairman of the committee makes his reply.

Mr. SMALL. Mr. Chairman, I ask unanimous consent that debate may close in seven minutes, two minutes to be occupied by the gentleman from Wisconsin [Mr. FREAR].

The CHAIRMAN. Is there objection?

There was no objection.

Mr. FREAR. Mr. Chairman, I do not care to add to what I have stated, because I simply read from the report. I do desire to read what Col. Newcomer stated to the committee, which may be of interest in regard to this item. When $30,000 was mentioned as a maintenance item, Mr. TREADWAY said to the colonel, "May I ask the immediate need for this appropriation?" and the colonel replied:

Col. NEWCOMER. This is mainly for use on the Congaree River. You know that from Columbia out they are maintaining a barge line, and the Columbia merchants claim, of course, that it is a matter of great importance for them to have that barge line in operation, and this is mainly for maintenance work on the Congaree River. In the last bill there was an additional improvement authorized, but we left that out because we thought it was not sufficiently urgent.

That is the statement of the engineer before the committee. I do not question the interest and the anxiety of the gentleman from South Carolina [Mr. LEVER], and I presume it is entirely proper, but I am making this statement for the benefit of this committee to show the lack of necessity for this project at this time. That is the testimony placed before the Committee on Rivers and Harbors which you are now asked to set aside.

Mr. SMALL. Mr. Chairman, I have no disposition to and could not combat the contention of the gentleman from South Carolina [Mr. LEVER] as to the merit of the project involved in this recommendation. The section of the Congaree under improvement extends, as the gentleman says, up to Columbia, S. C., and it is an important project and has rendered and is rendering valuable commercial service to the city of Columbia. I have pleasure in saying that because the minority of the committee in their report use this language:

The adoption of a $100,000 new project on the Congaree is only cited by way of illustration of the emegency items included.

Mr. HUMPHREYS. Will the gentleman yield for a question?

Mr. SMALL. Certainly.

Mr. HUMPHREYS. As to the extract you just read from the minority report, did the minority favor this, or is it cited as an illustration of an unwise expenditure?

Mr. SMALL. I should say they criticized it as an unwise expenditure. They put it among those projects which are criticized. The committee discussed this matter at length and had the benefit of the opinion of Col. Newcomer.

Mr. MEEKER. That is on all fours with the position we have heard all the afternoon, is it not, on these other items?

Mr. SMALL. The question of the gentleman answers itself.

While the committee, following the recommendation of the War Department, were willing to appropriate $30,000 for maintenance, they could not see their way to appropriate a larger sum in connection with the improvement under this new project. The reason the new project was adopted without any additional appropriation over and above the $30,000 was in order that the maintenance might conform to the character of the improvement suggested in the new project. With the expenditure of this $30,000 maintenance can be carried on and maintenance of a kind to conform with the procedure and plans in the new project. That is the reason for adopting the project without increasing the appropriation. The committee could not without discrimination consent to the increased appropriation. And for that reason, in order that no injustice might be done to various sections of the country, which under similar circumstances have asked for increased appropriations, I hope the committee will vote down the amendment.

Mr. SWITZER. The Chief of Engineers refused to make that recommendation that is asked for here?

Mr. SMALL. Yes. He declined to recommend an increased appropriation.

The CHAIRMAN. The question is on the amendment offered by the gentleman from North Carolina [Mr. SMALL].

The question was taken, and the Chair announced that the noes appeared to have it.

Mr. LEVER. Division, Mr. Chairman.

The committee divided; and there were—ayes 20, noes 20.

Mr. LEVER. I ask for tellers, Mr. Chairman.

Tellers were ordered; and Mr. BOOHER and Mr. LEVER took their places as tellers.

The committee again divided; and the tellers reported—ayes 22, noes 17.

So the amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Waterway between Beaufort, S. C., and St. Johns River, Fla.: For maintenance, $43,000.

Mr. LENROOT. Mr. Chairman, I move to strike out the last word.

Mr. SMALL. Will the gentleman allow me to present a committee amendment here?

Mr. LENROOT. I will.

The CHAIRMAN. The gentleman from North Carolina offers a committee amendment, which the Clerk will report.

The Clerk read as follows:

Committee amendment: Page 11, strike out the word "for," in line 23, and insert in lieu thereof the words "continuing improvement and for."

The CHAIRMAN. Without objection, the amendment will be agreed to.

The amendment was agreed to.

Mr. LENROOT. Mr. Chairman, I want to say just a word in reference to the amendment last adopted. I am sure the country is now in so much better position to prosecute the war than it was a few moments ago——

Mr. DUPRÉ. Did the gentleman vote for the proposition?

Mr. LENROOT. He voted against it. But it is an illustration of really how this bill is being considered upon its merits. No one will find that a single item is ever stricken out of this bill, and, of course, it is not extremely difficult to get additional items added to it. And this is another illustration of the patriotism of the membership of this House, and how they are regarding all of these items, strictly upon their merits and solely for the purpose of successfully prosecuting this war.

Mr. HARDY. Will the gentleman yield right there?

Mr. LENROOT. Yes.

Mr. HARDY. Does not the gentleman think he would do more credit to himself now in criticizing that measure if he would attempt to answer the argument presented by the gentleman from South Carolina [Mr. LEVER]? I did not vote for it, but I do think the gentleman would do himself credit to answer that argument.

Mr. LENROOT. As I listened to the gentleman from South Carolina [Mr. LEVER], for whom I have the greatest respect, he did not advocate this as a matter of military necessity, did he?

Mr. HARDY. The gentleman knows that this bill is presented as a commercial measure intended and calculated to aid the country in time of war, as well as a military matter strictly.

Mr. LENROOT. Now, the gentleman from Texas is frank enough to get away from what the proponents of this bill have been arguing throughout, from the report of the Secretary of War himself, who advocated that no new projects be considered in this bill except those that were matters of military necessity, and the chairman of the committee has repeatedly said that there were no new projects in this bill except those that were of military necessity.

Mr. HARDY. Now, will the gentleman yield?

Mr. LENROOT. Yes.

Mr. HARDY. The gentleman misunderstands my understanding, for I think every measure that helps to marshal the transportation resources of this country, if they are needed for that purpose, are military measures.

Mr. LENROOT. The gentleman is too intelligent a man to believe for a single moment that in the prosecution of this war this increase of $50,000, that may possibly mean an increase of 2,000 tons a year in commerce, can be in the remotest degree a matter of military necessity.

Mr. HARDY. Will the gentleman yield again?

Mr. LENROOT. Yes.

Mr. HARDY. I think the gentleman is too intelligent a man not to know that every means that helps the transportation facilities of this country during this war is a war measure.

Mr. LENROOT. According to the gentleman's position, then, for the purpose of carrying some commodities of this country on water we ought to pay ten times what the commodities are worth for the purpose of doing it.

Mr. HARDY. Oh, no. The gentleman does not contend that.

Mr. LENROOT. That is the gentleman's position.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. COOPER of Wisconsin. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Wisconsin moves to strike out the last word.

Mr. COOPER of Wisconsin. Mr. Chairman, in view of what my colleague [Mr. LENROOT] has just said, I invite the attention of the committee to the letter of Mr. Secretary Redfield. I think it is apropos, following the remarks just made by the gentleman from Wisconsin. You will find it in the Appendix of the RECORD. He says:

No one who knows the facts will question that the railways of the country are overwhelmed by the threatened traffic.

Then he says they are going to have some new engines and cars, but that even with these the facilities of the railroads will be insufficient for the task laid upon them. On the next page he continues:

If, as is quite possible, the war shall last more than a year, our Nation may find itself a year hence with its industries of all kinds driven to the full and with special energy devoted to more extensive as well as more intensive cultivation. At the same time our troops will have to be moved and the regular flow of supplies maintained for the armies abroad. It will be difficult, if not impossible, to expand the railroad system in time to meet the additional demands upon it which these circumstances may bring. Many of the great waterways of the land, however, are almost unused, and a great opportunity for national service is open by means of them to those who have the energy and foresight to take the matter up and develop water transportation into a practical fact. Every river, lake, and canal should be used. Every enterprise, large or small, looking toward their practical use should have encouragement. The president of one of our greatest railway systems has recently said, "So long as the war lasts the railroads of the United States will cooperate to the fullest possible extent with the waterways of the country in order that the needs of the country may be served."

It must be evident to reflecting men that nothing which advances the interests of the country as a whole can be permanently hurtful to the great transportation systems of the land. There is no reasonable basis for antagonism between the railway and the waterway. Each is the servant of the other, and the success of each is in the long run helpful to the other. It is not to the final and the largest interest of the railway that the waterway should be neglected. Each has its own place in the national economy, and the highest success of each depends in no small measure upon the success of the other.

Listen to this, please:

It is at this time a matter of national duty to develop the interior waterway and to give it that part in the Nation's economic life to which its extent and variety entitles it, and this should be done as promptly and as thoroughly as possible by temporary means if need be in order to get the traffic moving, and then by permanent means in order to make the movement a solid part of our national life.

[Applause.]

Mr. WALSH. Mr. Chairman, will the gentleman yield?

Mr. COOPER of Wisconsin. I can not. I read further:

This process can only be helpful in the long run to everyone concerned and to the country as a whole.

That is a very strong presentation of the facts, showing, he declares, the necessity for the improvement by temporary means—the immediate improvement—of the interior waterways, and then their permanent improvement to the benefit of the industries of the country and the people of the country as a whole.

Mr. LENROOT. Does the gentleman think there should be any limit to the expenditures made by our Government upon waterways?

Mr. COOPER of Wisconsin. The gentleman's question is not germane to anything pending before the House.

Mr. LENROOT. Then I will make it germane.

Mr. COOPER of Wisconsin. I will answer the gentleman's question by saying this: There is a limit. France has expended about $600,000,000 on her rivers and harbors, and she is less than one-half the size of Texas. We have expended about $800,000,000 on all the magnificent rivers and harbors of this country. [Applause.]

The CHAIRMAN. The time of the gentleman from Wisconsin has expired. Without objection, the pro forma amendment will be withdrawn. The Clerk will read.

The Clerk read as follows:

Savannah Harbor, and Savannah River, below, at, and above Augusta, Ga.: For maintenance, $380,000; for improvement of Savannah Harbor in accordance with the report submitted in House Document No. 1471, Sixty-fourth Congress, second session, and subject to the conditions set forth in said document, $500,000: *Provided*, That no expense shall be incurred by the United States for acquiring any lands required for the purpose of this improvement; in all, $880,000.

Mr. FREAR. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Wisconsin moves to strike out the last word.

Mr. FREAR. I do this in order to command the attention of the gentleman from Texas [Mr. HARDY] for just a moment. I desire to call the gentleman's attention to the fact that while I desired to discuss the proposition contained in Mr. Redfield's

statement just read, but from the other standpoint earlier in the day, the gentleman from Texas raised a point of order against it because it was not directed to the item in the bill. I recognized that; but the gentleman sat here and heard the discussion of Mr. Redfield's statement on the other side of the question and did not make a point of order. I never wish to transgress the rules of the House if I can help it, but call attention to the manifest unfairness.

That is all I desire to say.

Mr. MADDEN. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Illinois moves to strike out the last word.

Mr. MADDEN. I do so in order to ask the chairman of the Committee on Rivers and Harbors if he will kindly explain the importance of Savannah Harbor and Savannah River below Augusta, Ga., and the necessity of spending this large amount of money upon it, and what is the amount of commerce upon it?

Mr. SMALL. The distance from Augusta to Savannah is a little more than 200 miles. The existing project is to provide a depth of 5 feet. The amount carried in the bill is $30,000, all of which goes to maintenance.

Mr. MADDEN. Three hundred and eighty thousand dollars, is it not?

Mr. SMALL. Thirty thousand dollars of that only is for this section of the river. The remainder of it is for Savannah Harbor.

Mr. MADDEN. What is the nature of the improvement there?

Mr. SMALL. That, the gentleman will realize, is for maintenance. If he reads further in the paragraph he will find that a new project is adopted there, for which $500,000 is appropriated.

Mr. MADDEN. The whole thing is $880,000?

Mr. SMALL. One item is for $500,000, and that, plus $380,000, makes $880,000.

Mr. MADDEN. What is the purpose of it?

Mr. SMALL. I can give the gentleman that.

Mr. MADDEN. What is the project under which it is being expended?

Mr. SMALL. I can best give it from the last annual report showing how this money is expended. This is below Augusta. It is between Augusta and Savannah. The Chief of Engineers says:

It is proposed to use the available balance, $3,421.60, in the care of the plant in use on this river at an average rate of $500 per month, until such time in the fall as the river will require additional work, probably September 1, 1916, and to expend the balance remaining in the operation of one snag boat for approximately six weeks, making proper reservation for office expenses, surveys and contingencies, and care of plant

The funds provided in the river and harbor act approved July 27, 1916, will be expended as follows, after reserving $4,000 for the engineer depot at Savannah, Ga., and proper amount for office expenses, surveys, and contingencies:

For operation, repair, and care of 1 pipe-line dredge 4 months, at $1,500 per month, in removing bars	$6,000
For operation, repair, and care of 1 snag boat 6 months, at $1,500 per month, in removing snags, etc., and in miscellaneous work	9,000
For repair under contract or by day labor of 2,000 linear feet of bank protection and training walls, at $5	10,000

The following estimate is submitted of funds needed for proposed operations from July 1, 1917, to June 30, 1918, for maintenance work, including proper reservation for office expenses, surveys, and contingencies:

For operation, repair, and care of 1 pipe-line dredge 6 months, at $1,500 per month, in removing bars	$9,000
For operation, repair, and care of 1 snag boat 6 months, at $1,500 per month	9,000
For repair under contract or by day labor of 2,400 linear feet of bank protection and training walls, at $5	12,000
Total	30,000

That is from the report of the Chief of Engineers, an excerpt of which appears on page 165 of the report accompanying this bill.

Mr. MADDEN. This is $380,000.

Mr. SMALL. The $350,000 goes for the maintenance of the Sapannah River, at Savannah, known as Savannah Harbor.

Mr. MADDEN. How much commerce is there all the way down the river?

Mr. SMALL. The commerce between Augusta and Savannah on that part of the upper river is 52,874 tons, at a valuation of approximately $4,000,000.

Mr. MADDEN. So that we are spending $6 a ton for every ton of traffic on the river to maintain the river?

Mr. SMALL. Oh, no; only $30,000 goes to that river.

Mr. MADDEN. Anyway, there are only 50,000 tons of traffic, and we are spending $380,000.

Mr. SMALL. No; $350,000 is to be expended at Savannah Harbor, not on this part of the river at all.

Mr. MADDEN. It is all in the project.

The CHAIRMAN. The gentleman's time has expired.

Mr. HULBERT. I ask unanimous consent that the time of the gentleman from Illinois be extended two minutes in order that he may procure enlightenment on this question.

The CHAIRMAN. The gentleman from New York asks unanimous consent that the time of the gentleman from Illinois be extended two minutes. Is there objection?

There was no objection.

Mr. MADDEN. It seems to me that we are spending $380,000, and while part of it is for the harbor and part of it for the river, it is $380,000 all told, and then the new project, $500,000, making $880,000, and only 52,000 tons of traffic; and if we divide 52,000 into $880,000 it will be seen that we are paying about $16 for every ton of traffic.

Mr. SMALL. I am sure the gentleman wishes to be correct.

Mr. MADDEN. Oh, yes; certainly.

Mr. OVERSTREET. Will the gentleman yield?

Mr. SMALL. I wish to answer the remark of the gentleman from Illinois first. Surely the gentleman from Illinois did not understand me when I stated that the $30,000 was to be expended for maintenance of that part of the river between Savannah and Augusta, a distance of about 200 miles, and with a commerce of a valuation of about $4,000,000.

Mr. MADDEN. It is not a question of valuation. It is a question of the transportation of tonnage.

Mr. SMALL. And the $350,000 is to be expended for maintenance at Savannah Harbor, which has a commerce of more than 3,000,000 tons.

The CHAIRMAN. Did the gentleman from Georgia [Mr. OVERSTREET] desire to be recognized?

Mr. OVERSTREET. I only wanted to be recognized in order to correct the gentleman from Illinois [Mr. MADDEN], and that has now been done by the gentleman from North Carolina [Mr. SMALL]. That is all I care to say.

Mr. MADDEN. I was not making a statement at all. I was simply asking questions. I did not make any statement, and therefore did not need to be corrected.

The Clerk read as follows:

Sapelo and Darien Harbors, Cowhead and Satilla Rivers, Club, Plantation, and Fancy Bluff Creeks, Ga., and St. Marys River, Ga. and Fla.: For maintenance, $12,500.

Mr. WALSH. I move to strike out the last word in order to ask a question of the chairman of the Committee on Rivers and Harbors. I notice that on some of these streams that are appropriated for in this item it is stated that naval stores are transported. I would like to know what sort of naval stores are transported on these various streams.

Mr. SMALL. The term "naval stores" means the products of the long-leaf pine tree. Turpentine is gotten by cutting the base of the tree. Tar is gotten from the resinous part of the pine, and also resin; and spirits of turpentine are distilled from the resin and the raw turpentine. All these go under the general designation of naval stores.

Mr. WALSH. Is that a local term?

Mr. SMALL. No; it is a very old term.

Mr. WALSH. I noticed that that term runs through the report, and I was wondering what it meant.

Mr. SMALL. The production of naval stores has gradually moved south. Formerly naval stores were produced in North Carolina. Then, later the production moved down to South Carolina, and now the production of naval stores is practically confined to Georgia, Florida, and some in Louisiana.

Mr. SLADYEN. And Texas.

The Clerk read as follows:

Santee, Wateree, and Congaree Rivers, S. C.: For maintenance, including the Estherville-Minim Creek Canal and the Congaree River as far up as the Gervais Street Bridge, Columbia, and for improvement of the Congaree River in accordance with the report submitted in House Document No. 702, Sixty-third Congress, second session, $30,000.

Mr. MADDEN. I move to strike out the last word. I should like to ask the chairman of the committee if he will be kind enough to inform the committee about how much commerce there is in connection with these two appropriations here.

Mr. SMALL. Does the gentleman really wish information about that?

Mr. MADDEN. Certainly. I never was more serious about anything.

Mr. MEEKER. Mr. Chairman, if the chairman has any information, will he kindly give it, for nobody in God's world needs it more than the gentleman from Illinois does. [Laughter.]

Mr. MADDEN. I admit it.

Mr. SMALL. With that prodding, I will be more than delighted to furnish the information. [Laughter.]

Mr. MADDEN. I hope the information will make the gentleman from Missouri [Mr. MEEKER] a little more intelligent in his conception of what we are considering. [Laughter.]

Mr. SMALL. Mr. Chairman, the Oconee and Ocmulgee together form the Altamaha. The Oconee is 300 miles long and the Ocmulgee 350 miles long. The commerce on the Oconee River is 41,425 tons, on the Ocmulgee 33,645 tons, and on the Altamaha 76,763 tons, at a valuation of about $1,000,000.

Mr. MADDEN. What is the depth of the channel there?

Mr. SMALL. It varies. On the Altamaha, which is formed by the junction of the two former rivers, the project is to maintain a depth of 3 feet, gradually increasing to 4 feet, but with a minimum depth of 3 feet.

Mr. MADDEN. What do they run there, Indian canoes?

Mr. SMALL. No; they have quite a commerce there, as the gentleman can see. There are lines of boats on these rivers, both barges and self-propelled.

Mr. MADDEN. I think I heard some Member of the House——

Mr. SMALL. I can tell the gentleman in all seriousness that this is a valuable system of rivers for a section of Georgia a good part of which is lacking in any other method of transportation.

Mr. MADDEN. Does the gentleman think a 3-foot channel is capable of carrying any commerce of any consequence?

Mr. SMALL. Oh, yes. They have a type of boat which can navigate and carry quite a cargo on a depth of 3 feet.

Mr. MADDEN. What commerce is carried on the rivers?

Mr. SMALL. Mostly agricultural and forest products.

Mr. GILLETT. Was it not on one of these rivers where they developed a steamboat that had to stop every time they blew the whistle? [Laughter.]

Mr. SMALL. My friend from Georgia might answer that; I have no information. The gentleman from Georgia suggests that it might have been on a Massachusetts stream.

Mr. MEEKER. Perhaps it was a Massachusetts statesman and not a steamer. [Laughter.]

Mr. HUMPHREYS. Mr. Chairman, let me say, with the permission of the gentleman from North Carolina, that on this question of a 3-foot depth, referred to by the gentleman from Illinois, a great deal of commerce can be floated on a stream 3 feet in depth. For instance, I do not know what it was last year, but I remember a few years ago the Alabama River carried a tonnage value of $13,000,000 with a depth in that river of only 3 feet. On a great many rivers where they have small boats they push barges in front, putting the cargo on the barges, and they do not require any greater depth than 3 feet, and certainly not beyond 4.

Mr. MADDEN. Are these side-wheel steamers?

Mr. HUMPHREYS. No; stern wheel.

Mr. MADDEN. The gentleman from Mississippi always contributes a great deal of information on any question before the House, and I am obliged to him.

The CHAIRMAN. The time of the gentleman has expired.

The Clerk read as follows:

Indian River, St. Lucie Inlet, Miami Harbor (Biscayne Bay), and Harbor at Key West, Fla.: For maintenance, $6,000; completing improvement of Miami Harbor, $160,000: *Provided*, That the work proposed under the project adopted by the river and harbor act approved July 25, 1912, may be done by contract if reasonable prices can be obtained; in all, $166,000.

Mr. SEARS. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 12, line 21, after the word "obtained" insert "for improvement, Key West Harbor, by removal of middle ground and other improvements, $50,000"; and strike out "$166,000" and insert "$216,000."

Mr. SEARS. Mr. Chairman, before proceeding under the five minutes allotted to me, I ask unanimous consent that this amendment be passed over until some time next week, at which time I will have the report of Gen. Black. If the House will take my statement for it, I can give the information this afternoon.

The CHAIRMAN. The gentleman from Florida asks unanimous consent to postpone the consideration of this amendment until next week, or until such time as the bill is taken up again. Is there objection?

There was no objection.

The Clerk read as follows:

Tampa and Hillsboro Bays. St. Petersburg Harbor, Hillsboro, and Manatee Rivers, Fla.: For maintenance, $66,500; for improvement of Hillsboro Bay in accordance with the report submitted in House Document No. 1345, Sixty-fourth Congress, first session, and subject to the conditions set forth in said document, $300,000; in all, $366,500: *Provided*, That nothing in this act, nor in the act approved June 25, 1910, entitled "An act making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes," shall be so construed as to prevent the use of any part of the Ybor Estuary zone for industrial or other legitimate purposes when the same is not needed for commercial uses, nor to exclude the building and operation of a railroad or railroads by private parties or railroad companies under such rules and regulations as the Secretary of War may prescribe, subject to the right of the city of Tampa to construct and operate a municipal railroad on said estuary zone as set forth in said report. The Secretary of War is hereby authorized to prosecute the work of improvement on the existing project for St. Petersburg Harbor, in accordance with the modified conditions recommended by the Chief of Engineers and the Board of Engineers for Rivers and Harbors in the report printed in Rivers and Harbors Committee Document No. 6, Sixty-fourth Congress, second session.

Mr. MADDEN. Mr. Chairman, I reserve a point of order on this item in the bill. I would like to have the gentleman from North Carolina give us some explanation. I reserve the point for the purpose of giving the gentleman an opportunity to explain to the House what facilities the Government of the United States furnishes by the expenditure of this money to the railroad companies who are to be authorized to build railroads in connection with the improvement.

Mr. SMALL. Mr. Chairman, the river and harbor act of 1910, in imposing local cooperation connected with the improvement of Ybor Estuary and Tampa Bay, provided that no expenditure be made on that part of the harbor until the Secretary of War is assured that the local municipality will construct wharves and slips which shall be open to the use if the general public under reasonable regulations and charges.

In the line of local cooperation the report of the Chief Engineer adopting this project further provides:

That no work shall be done by the United States under such project until the city of Tampa shall have given assurances, satisfactory to the Secretary of War, that the city of Tampa will within a reasonable time, and when in his opinion the facilities are needed, acquire full ownership and possession of sufficient land for the establishment of terminals fronting on the Ybor Estuary; will complete the construction thereon of piers and slips in accordance with the plans for the development of the Ybor Estuary zone, heretofore approved by the Secretary of War, or such modified plans as he may approve; will build adequate warehouses and storage sheds on these piers and equip them with suitable rail connections and freight-handling appliances; will construct and put in operation a municipal railroad having physical connection with all railroads entering the city of Tampa, and serving the channel frontage on both sides of the estuary, in accordance with the plan of development of the estuary zone approved by the Secretary of War; will open, pave, and make available for use a sufficient number of streets and highways to give proper access to all parts of the estuary channel frontage; and will open these terminals for business under a schedule of reasonable wharfage charges and a set of regulations to be approved by the Secretary of War for the control and operation of the property fronting on the estuary channel, designed to insure its use primarily in the interests of general commerce, on equal terms to all; and provided, further, that no work shall be done in the channels constituting the Harbor of Tampa proper until local interests shall agree to provide, without cost to the United States or to any contractor for the work, a suitable place for deposit of material dredged from these channels.

I think that will constitute an answer to the gentleman's inquiry as to the construction of a railroad contiguous to this improvement.

Mr. MADDEN. Mr. Chairman, the question arises whether the local community contributes anything toward the expense of the improvement, and whether when they build what I assume will be a belt-line railroad connecting all the railroads, the traffic that goes over the main line will be held to pay tribute to the belt-line railroad; and whether that will add to the cost of the commodities which are moved by rail out of Tampa, and whether the city of Tampa is to absorb the charges of moving the supplies and freight over the belt-line railroad to connect with the main line. All these things are important in this question, and I think that as a matter of justice to the membership of the House who are asked to vote on this item, the information should be supplied. I do not know whether the gentleman has the information or not.

Mr. SMALL. I have not the information as to the charges that will be imposed by the belt-line railroad upon the railroads that serve that community in sending their cars over the belt line road. That is a matter for municipal regulation, and I assume the trackage charges are satisfactory to the railroads.

Mr. MADDEN. That is not the question involved here. The question I am concerned about is, How it is going to affect the shipper, the man that pays the bill, the final consumer? It is not how it affects Tampa or the citizens of Tampa or the municipality of Tampa or the railroads that connect with the belt railroad, but how does it affect you and me. That is what concerns me.

Mr. SMALL. I think an answer is carried in this suggestion, that it is to the interest of the municipality owning the belt-line road to attract traffic to its municipal water terminal, and that in obedience to its own interests it will impose only reasonable charges for the use of the belt line, and in subserving its own interests any complaint will be avoided. The committee has no knowledge of any complaint.

Mr. SWITZER. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. Yes.

Mr. SWITZER. I will say this to the gentleman: Has not the gentleman always contended here that all persons who have been interested in river and harbor improvements—that the cities and municipalities should own the terminals?

Mr. MADDEN. Yes.

Mr. SWITZER. Is not that this case; and now you are going to assume that they are going to abuse the privilege which you have always contended they should have?

Mr. MADDEN. Mr. Chairman, I think the gentleman misunderstands me. I am only asking for information. I am not criticizing. I think it is only fair that we who are here as the conservators of public good and public interest ought at least to be permitted to ask questions that would give us an intelligent conception of what we are doing without being criticized for having done so. I am rather surprised at the gentleman from Ohio, a member of the Committee on Rivers and Harbors, questioning the good faith of my questions, when I am trying to elicit information that ought to be in the possession of every person who wants to serve the public good.

Mr. SMALL. May I say that I overlooked the further provision requiring that charges and regulations be submitted to the War Department for approval?

Mr. MADDEN. The main thing that I am concerned about is this: In giving authority to construct a belt-line railway to connect with the main lines running into Tampa, there should be a provision—and maybe there will be, I do not know—which will prohibit the city of Tampa or its citizens from making such charges as will permit the payment of dividends either to the city of Tampa or to any person who might be interested in the road. The charges should be made to cover not more than the cost of the operation and the maintenance of the tracks, and in a case of that sort I believe this terminal would serve a good purpose. I have no intention or desire to in any way embarrass the establishment of institutions of this kind, but, on the other hand, I have every desire to promote them, and at the same time, while wishing to promote them to also protect the man who is not in control, so that he may not be charged an undue price for the thing that he is to receive at the hands of those to whom we grant privileges.

Mr. ROBBINS. Would not that be regulated by the Interstate Commerce Commission?

Mr. MADDEN. No; that is a local terminal.

The CHAIRMAN. Does the gentleman withdraw his point of order?

Mr. MADDEN. I withdraw the point of order.

Mr. FESS. Mr. Chairman, this question brings up a thought that has been in my mind, and which I want the chairman to clear up at once. What is the policy of river and harbor legislation on local cooperation where the Government appropriates for the improvement of harbors? Is there any local cooperation in the way of expenditure of money?

Mr. SMALL. There may be said to be a settled policy to this extent, that local cooperation is required in excavating the channel leading from the main channel furnished by the Government into the slips and up to the wharves to be used by vessels. There ought to be another principle of cooperation which is not so uniform. Individually I believe that no river or harbor ought to be substantially improved without imposing as a condition the construction of adequate water terminals, constructed, managed, and regulated by the municipality in the interest of the public, and also such water terminals should be physically connected with all the railroads serving the community by a belt-line railroad also owned and controlled by the municipality, and in so far as our committee can do so we intend hereafter to insist upon compliance with such a degree of local cooperation.

Mr. FESS. If we expended $26,900,000 in this bill, that will not represent all of the expenditure for the improvements where this money is applied. There will be some appropriation locally?

Mr. SMALL. Yes; in the aggregate a very large sum.

Mr. FESS. And the gentleman has no estimate of how much?

Mr. SMALL. I am not sure whether that is available or not. The gentleman heard the gentleman from Wisconsin [Mr. STAFFORD] speak yesterday of the city of Milwaukee making a large contribution for excavation in the channel there.

Mr. FESS. And in the case of Boston and New York it is also true?

Mr. SMALL. The city of Boston has been for several years expending millions of dollars in the construction of terminals and of a large dry dock, probably one of the largest in the country, and in the most creditable way cooperating and providing water terminals, and the city of Philadelphia is also engaged in the same activity.

Mr. SLAYDEN. And the cities of Houston and Corpus Christi, in Texas, are other examples where there have been local contributions of importance.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

The Clerk read as follows:

St. Johns River, Fla., Jacksonville to the ocean, opposite the city of Jacksonville, Jacksonville to Palatka, and Palatka to Lake Harney, Lake Crescent and Dunns Creek, and Oklawaha River, Fla.: For maintenance, $335,000.

Mr. SEARS. Mr. Chairman, I move to strike out the last word for the purpose of asking the chairman of the committee a question. Last year when this appropriation was up, I asked Mr. Sparkman, who was chairman of the committee at that time, if this appropriation included the perfecting of the jetties, and he replied that the appropriation was intended to cover that project. I will state to the present chairman that I understand the jetties are in bad shape and need some repair, and I would like to know if the present chairman believes that this appropriation will cover that work? It was so reported by the Board of Engineers, as I understand it, Mr. Chairman, but I would like to have it definitely understood.

Mr. SMALL. In answer to the gentleman, I think I can state it unequivocally that the maintenance of this jetty is included in the improvements. That was the question?

Mr. SEARS. Yes.

Mr. SMALL. Mr. Chairman, I ask that all debate on this paragraph and amendments thereto close in seven minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. FREAR. Mr. Chairman, I do not know that I care to ask for five minutes, but I wish to ask the chairman this: We have adopted the grouping system, which has been discussed in several cases, but I can not understand the purpose of the group on the bottom of page 13. On the St. Johns River, Fla., there are several different portions of the river included, and the lower portion of the river has a balance of $239,276 uncontracted for, and $15,000 is for the next item and $16,000 for another item. The Oklawaha River is joined with this group. What is the reason for joining the Oklawaha River in a grouping system of that kind, if the chairman has the information? I know the engineers have assumed charge of this, but what possible reason could they have for that method of grouping and for giving for maintenance $335,000, all of which, of course, might possibly be expended on the Oklawaha River? Of course that would not be likely, but that is a possibility.

Mr. SMALL. I will state that the Oklawaha River empties into the St. Johns River, and that gives it a direct connection with it, and makes the grouping consistent, and of the appropriation $330,000 is for the St. Johns River from Jacksonville to the sea and $5,000 for the maintenance of the Oklawaha.

Mr. FREAR. It would be possible under this grouping system for the Army engineers to use any portion or all of that $335,000, if they desire, on any of these projects, including the Oklawaha River?

Mr. SMALL. No; the gentleman is incorrect. They could divert the money to other projects only if conditions unanticipated should cause any deterioration of the channel, which conditions do not now exist. But unless conditions change from the time when the annual report was submitted on June 30, 1916, and in fact after this bill was formulated—because it was formulated upon information existing at that time—unless some conditions should occur to make additional funds necessary for maintenance none of this $335,000 will be used upon these other sections of the St. Johns River, but all of it will be expended on that part of the St. Johns River from Jacksonville to the sea.

Mr. FREAR. I presume that is true, but I am calling attention to this to show the powers we have lodged in the hands of the Army engineers by this grouping system, when over $300,000 can be given for maintenance of any project, two or three of which are on the St. Johns River.

Mr. HULBERT. Mr. Chairman, I ask that I may be recognized for the remaining two minutes.

During my membership in this House and prior thereto I have been much interested in the subject of aeronautics. I rise at this time to call attention to the fact that there will presently be brought into this House a bill to appropriate $650,000,000 for our aeronautical system. That will represent a greater appropriation than the combined appropriations for the Army and Navy in time of peace. I introduced and put in the basket this afternoon a resolution for the creation of a committee on aeronautics, and I think such a committee should be created at this time, because when bills are brought in here which seek to coordinate the activities of the Government with relation to the aeronautical service in the Army and Navy there will always be arising questions with regard to the committee to which they should be referred. Therefore, I hope

Members of the House will give their earnest and serious consideration to the importance of this matter.

Mr. FESS. Does the bill include also the creation of an extra Cabinet member?

Mr. HULBERT. I will say to the gentleman that I also introduced on the opening day of this session a bill, H. R. 3, and Senator SHEPPARD introduced a counterpart of the bill in the Senate, S. 80, and hearings are now going on before a subcommittee of the Committee on Military Affairs, of which the Senator from Texas [Mr. SHEPPARD] is the chairman, upon that measure. Admiral Peary, Lieut. Col. Rees, of the Royal Flying Corps, and Howard E. Coffin have already appeared and been heard; and Mr. Walker, the editor of the Scientific American, Gen. Goethals, and other noted men connected with aeronautics will appear before that subcommittee on Monday and Wednesday of next week.

The CHAIRMAN. The gentleman's time has expired. The Clerk will read.

Mr. POLK. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD on the pending bill.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. FREAR. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. SEARS. Mr. Chairman, two minutes ago, the committee, by unanimous consent, passed the Key West item. I would like for the members of the committee to read page 669 and the following pages, in volume No. 1, and also page 2307, of the report of the engineers on this proposition in order that they may familiarize themselves with it.

Mr. SMALL. Mr. Chairman, I move that the committee do now rise, and pending that to make this statement: I understand the food bill is in order for next Monday, but after the conclusion of the food bill the river and harbor bill will resume its status and will follow for consideration. I think that is the legislative status of the rivers and harbors bill.

The CHAIRMAN. The question is on the motion of the gentleman from North Carolina [Mr. SMALL] that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. HARRISON of Mississippi, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 4285) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, and had come to no resolution thereon.

THE ITALIAN MISSION (H. DOC. NO. 189).

The SPEAKER laid before the House the following communication:

CHAMBER OF COMMERCE OF THE UNITED STATES OF AMERICA,
Washington, D. C., June 13, 1917.

The honorable the SPEAKER OF THE HOUSE OF REPRESENTATIVES,
Washington, D. C.

Mr. SPEAKER: The American Chamber of Commerce for Italy, which has its offices in Milan, has sent us a cable in which it requests that we express to the House of Representatives, through you, its appreciation for the splendid reception given to the Italian mission and for the opportunity to improve Italo-American relations.

Very truly, yours,

ELLIOT H. GOODWIN,
General Secretary.

The SPEAKER. The communication is ordered printed and referred to the Committee on Foreign Affairs.

EXTENSION OF REMARKS.

Mr. HULBERT. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing the text of the resolution which I introduced here for the creation of a separate committee on aeronautics, and a statement by Gen. Squiers and Howard Coffin, and an editorial on the subject.

Mr. WALSH. Reserving the right to object, Mr. Speaker, I wish to inquire if this has not already been printed as a separate document?

Mr. HULBERT. It has not yet been printed in the RECORD. I want to put them in the RECORD for information.

The SPEAKER. Is there objection?

Mr. WALSH. I object.

Mr. HULBERT. I ask unanimous consent, Mr. Chairman, to extend my remarks in the RECORD on the subject of aeronautics.

The SPEAKER. The gentleman from New York asks unanimous consent to extend his remarks in the RECORD as indicated. Is there objection?

Mr. FARR. Reserving the right to object, Mr. Speaker, I want to ask if the gentleman is going to give some information as to what the Government itself is doing?

Mr. HULBERT. That is what I am trying to put in if they do not object to it. If they want enlightenment, I am trying to give it to them.

Mr. WALSH. Reserving the right to object, Mr. Speaker, is it the gentleman's intention to insert the same documents that he asked permission to insert?

Mr. HULBERT. Certainly not. I am not going to transgress the objection that the gentleman made against the printing of documents that are already printed.

The SPEAKER. Is there objection?

There was no objection.

Mr. SMALL. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection to the gentleman's request?

There was no objection.

LEAVE OF ABSENCE.

Mr. ADAMSON. Mr. Speaker, for providential reasons I ask unanimous consent that I may have leave of absence next week.

The SPEAKER. The gentleman from Georgia asks unanimous consent for leave of absence during next week. Is there objection?

There was no objection.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Waldorf, its enrolling clerk, announced that the Senate had passed bills of the following titles, in which the concurrence of the House of Representatives was requested:

S. 2203. An act for the establishment of Northgate, in the State of North Dakota, as a port of entry and delivery for immediate transportation without appraisement of dutiable merchandise; and

S. 2453. An act to authorize condemnation proceedings of lands for military purposes.

The message also announced that the President had, on June 12, 1917, approved and signed bill of the following title:

S. 2133. An act to amend an act entitled "An act to authorize the establishment of a Bureau of War-Risk Insurance in the Treasury Department," approved September 2, 1914, and for other purposes.

SENATE BILL REFERRED.

Under clause 2, Rule XXIV, Senate bill of the following title was taken from the Speaker's table and referred to its appropriate committee, as indicated below:

S. 2203. An act for the establishment of Northgate, in the State of North Dakota, as a port of entry and delivery for immediate transportation without appraisement of dutiable merchandise; to the Committee on Ways and Means.

ADJOURNMENT.

Mr. SMALL. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 34 minutes p. m.) the House adjourned until Monday, June 18, 1917, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV a letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on reexamination of Grosse Pointe Channel in Lake St. Clair, Mich. (H. Doc. No. 188), was taken from the Speaker's table, referred to the Committee on Rivers and Harbors, and ordered to be printed.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. JACOWAY: A bill (H. R. 5072) to authorize condemnation proceedings of lands for military purposes; to the Committee on Military Affairs.

By Mr. KELLY of Pennsylvania: A bill (H. R. 5073) to establish direct contact between the people and the National Government by the creation of the war information commission; to the Committee on Education.

By Mr. CARTER of Oklahoma: Resolution (H. Res. 104) making exercises appropriate to acceptance of statue of Sequoyah the special order of business on June 23; to the Committee on Rules.

By Mr. HULBERT: Resolution (H. Res. 105) as to creation of committee on aeronautics; to the Committee on Rules.

By Mr. JAMES: Resolution (H. Res. 106) instructing the Committee on Immigration and Naturalization to interview the Secretary of State with a view to opening negotiations with the Italian mission relative to naturalization; to the Commitee on Foreign Affairs.

By Mr. CARTER of Oklahoma: Concurrent resolution (H. Con. Res. 14) auhorizing the printing and binding of the proceedings in Congress, together with the proceedings at the unveiling in Statuary Hall, upon the acceptance of the statue of Sequoyah, presented by the State of Oklahoma; to the Committee on Printing.

By Mr. RAKER: Joint resolution (H. J. Res. 103) extending provisions of section 2296 of the Revised Statutes to all homestead entries; to the Committee on the Public Lands.

By Mr. BORLAND: Joint resolution (H. J. Res. 104) designating the army raised under the act of May 18, 1917, as the "National Army of the United States"; to the Committee on Military Affairs.

By the SPEAKER: Memorial of the Legislature of the Territory of Hawaii, favoring the ratification of the arrangements of certain named persons made with the commissioner of public lands of the Territory of Hawaii, and the issue of land patents to those eligible under the terms of the agreement; to the Committee on the Territories.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. DICKINSON: A bill (H. R. 5074) granting an increase of pension to Levi Covey; to the Committee on Invalid Pensions.

By Mr. DILL: A bill (H. R. 5075) for the relief of Vince P. Brown; to the Committee on the Public Lands.

By Mr. KAHN: A bill (H. R. 5076) authorizing the President to nominate and, by and with the advice and consent of the Senate, appoint Henry S. Kiersted, late a captain in the Medical Corps of the United States Army, a major in the Medical Corps on the retired list, and increasing the retired list by one for the purpose of this act; to the Committee on Military Affairs.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Memorial of the International Farm Congress in support of the war; to the Committee on Military Affairs.

Also (by request), petitions of sundry citizens of Clarendon, Pa., and congregations of Disciples of Christ in the State of Missouri, favoring prohibition as a war measure; to the Committee on the Judiciary.

Also (by request), memorial of Northwest Suburban Citizens' Association relative to erection of a memorial hall in the District of Columbia; to the Committee on the District of Columbia.

By Mr. ANTHONY: Petition of Mullinix Cash Store and other merchants of Horton, Kans., in favor of House bill 4737, to regulate postage; to the Committee on the Post Office and Post Roads.

By Mr. AUSTIN: Petition of Centenary Methodist Episcopal Church South, of Knoxville, Tenn., favoring the prohibition of the liquor business as a war measure; to the Committee on the Judiciary.

By Mr. CARY: Petition of the Milwaukee County Council of Defense relative to passage of food-control bills; to the Committee on Agriculture.

Also, petition of I. M. Candlin and 30 others of Wisconsin, favoring the daylight-saving bill; to the Committee on Interstate and Foreign Commerce.

By Mr. DALE of New York: Memorial of the New England Newspaper Alliance against tax on newspaper advertising; to the Committee on Ways and Means.

By Mr. DOWELL: Memorial of letter carriers of Des Moines, Iowa, relative to pay of National Guard while on Mexican border; to the Committee on Military Affairs.

By Mr. GEORGE W. FAIRCHILD: Petition of Oneonta (N. Y.) Trades and Labor Council, against prohibition measure; to the Committee on the Judiciary.

By Mr. FULLER of Illinois: Petition of A. S. Johnson, of Streator, Ill., protesting against Federal tax on gross receipts of agricultural fairs and associations; to the Committee on Ways and Means.

Also, petition of Rev. Almer Pinniwell and 120 others, of Morris, Ill., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. GANDY: Petition of 51 citizens of Rapid City, Mich., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. GRAHAM of Illinois: Petition of Rev. William H. Dickman, pastor of the Bethel Baptist Church, Port Byron, Ill., and 89 other citizens and residents of Coe and Zuma townships in Rock Island County, Ill., for the immediate enactment of prohibition of the manufacture of alcoholic liquors as a measure of food conservation, and for the immediate prohibition of the sale of liquors for beverage purposes in order to conserve the health, wealth, labor, transport facilities, and military efficiency of the people during the period of the present war; to the Committee on the Judiciary.

Also, memorial of members of the Moline Woman's Christian Temperance Union, Moline, Ill., urging conservation of foodstuffs used in making alcoholic beverages and passage of all war prhibition measures, and urging that no added tax be placed on liquor; to the Committee on the Judiciary.

Also, petition of the members and adherents of the United Presbyterian Church of Sunbeam, Ill., asking the prohibition of the use of all grain in the manufacture of beer or whisky; to the Committee on the Judiciary.

Also, petition of Rev. H. T. Jackson, pastor, and the official board of the Methodist Episcopal Church, of Good Hope, Ill., for the passage of a bill to prohibit the manufacture of intoxicating drinks during the period of the war; to the Committee on the Judiciary.

Also, petition of students of Carthage College, Carthage, Ill., for legislation prohibiting the consumption of food products in the manufacture of intoxicating liquors; to the Committee on the Judiciary.

By Mr. HADLEY: Petition of sundry citizens of Hamilton, La Conner, and Home Guard of Anacortes, Wash., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. HAMILTON of New York: Petition of sundry citizens of Jamestown, N. Y., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. KELLY of Pennsylvania: Petition of Woman's Home and Woman's Foreign Missionary Societies of the First Methodist Episcopal Church, of Braddock, Pa., favoring the prohibition of alcoholic liquors; to the Committee on the Judiciary.

Also, petition of the Michael Dwyer Club, of Pittsburgh, Pa., favoring the independence of Ireland; to the Committee on Foreign Affairs.

By Mr. KENNEDY of Rhode Island: Resolution of Roger Williams Association of Baptist Church of State of Rhode Island, and Mount Pleasant Baptist Church of Providence, in the State of Rhode Island, favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. LONERGAN: Petition of Connecticut Chamber of Commerce, favoring passage of House bill 4630, the food-control bill; to the Committee on Agriculture.

Also, petition of Glastonbury (Conn.) Grange, favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. LUNN: Petition of William A. Campbell, representing all of the Methodist Episcopal Churches of the counties of Montgomery and Fulton, also a part of the county of Schenectady, State of New York, praying for enactment of prohibition of the use of such grain as is now being lost in the manufacture of intoxicating liquors, and also to limit the liquors now on hand to nonbeverage uses; to the Committee on the Judiciary.

By Mr. MAGEE: Petition of Union of Churches and Men's Club of Trinity Church, of Fayetteville, N. Y., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. NOLAN: Petition of Division No. 12, Ancient Order of Hibernians, San Francisco, Cal., praying for the passage of House joint resolution 88; to the Committee on Foreign Affairs.

Also, petition of the San Francisco Theological Seminary, praying for the amendment of the existing Federal estate tax law which provides no exemption for educational, philanthropic, and religious bequests, legacies, and gifts; to the Committee on Ways and Means.

By Mr. O'SHAUNESSY: Petition of the Rhode Island State Federation of Woman's Clubs, urging the creation of effective zones around all military camps; to the Committee on Military Affairs.

By Mr. PLATT: Petition of members of the Home Culture Club of Cold Springs and citizens of Orange, Monroe, and Newburgh, N. Y., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. RAKER: Petition of Drs. Walker and Finney, Baltimore, Md., relative to patents on salvarsan; to the Committee on Patents.

Also, petition of A. J. Harder, president Northern California Editorial Association, Sacramento, and Mrs. Paul R. Sprague.

Woman's Home Missionary Society, Quincy, both in the State of California, favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. RANDALL: Petition of 40 citizens of Montebello, Cal., favoring national prohibition; to the Committee on the Judiciary.

By Mr. ROWLAND: Petition of Tenth District Sunday School Association of Clearfield County, Pa., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. SANDERS of New York: Petition of Rev. W. Swales, pastor, and the congregation of the Methodist Episcopal Church of Hamlin, N. Y., favoring national prohibition for the conservation of food and as a war measure; to the Committee on Agriculture.

By Mr. SMITH of Idaho: Petitions of citizens of Payette and Gooding and First Methodist Episcopal Church of Payette, Idaho, favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. TAGUE: Petition of American Association of Masters, Mates, and Pilots, indorsing the Wadsworth-Dale bill, providing for the retirement of civil-service employees; to the Committee on Reform in the Civil Service.

By Mr. TILSON: Petition of the Connecticut State Medical Association, urging Congress to enact legislation to prohibit the sale of liquor during the war; to the Committee on the Judiciary.

Also, petition of Connecticut State Association of Letter Carriers, against contributory pension law; to the Committee on the Post Office and Post Roads.

By Mr. TIMBERLAKE: Memorial of Contemporary Alumnæ Association of Colorado Springs, Colo., relative to protection for morals of those in training camps; to the Committee on Military Affairs.

Also, petition of the Colorado Metal Mining Association, relative to exemption from military service of employees of metal industries; to the Committee on Military Affairs.

Also, memorial of council of the city and county of Denver, Colo., relative to high cost of living; to the Committee on Agriculture.

SENATE.

MONDAY, *June 18, 1917.*

The Chaplain, Rev. Forrest J. Prettyman, D. D., offered the following prayer:

O God, we feel that we gather this morning to consider questions pertaining to the welfare of our Nation upon the very crest of a wave of petition that has gone up to Thee out of millions of hearts seeking Thy divine guidance and blessing in this day of our national trial. O God, answer the prayer of Thy people. Look with infinite compassion upon us as we strive to walk in the light to do that which will be justified before the bar of Almighty God. Give to us wisdom and counsel. Give us a spirit of might and of understanding that we may so direct the affairs of this Nation that Thy approval shall be upon it and that great victory shall rest at last upon our efforts. For Christ's sake. Amen.

The Journal of the proceedings of the legislative day of Friday, June 15, 1917, was read and approved.

PLANT DISEASES AND PRICE FIXING.

Mr. SMITH of Michigan. Mr. President, I have a letter from the plant pathologist of the Michigan Agricultural College bearing upon the question of food conservation and plant disease survey. I should like to have the letter read.

I have also a letter from Hon. James N. McBride, the Michigan director of markets of the Michigan Agricultural College, bearing upon the question of a minimum price for agricultural products. It contains much valuable information in view of the present food situation and our proposed legislation. I will not ask to have the second communication read, but I will ask that it may be printed in the RECORD and the first communication read.

The VICE PRESIDENT. Without objection, the Secretary will read the first communication.

The Secretary read as follows:

MICHIGAN AGRICULTURAL COLLEGE,
East Lansing, Mich., June 4, 1917.

Senator WILLIAM ALDEN SMITH,
Washington, D. C.

DEAR SIR: There is at present before the Senate, the bill having passed the House, the matter of augmenting the food supply by scientific survey work and extension work. I am particularly interested in the matter of plant-disease survey, which is one of the minor items of this larger matter.

Plant-disease survey has for its object the determination by a corps of experts the exact conditions in the various great producing centers with reference to losses by plant disease. The data collected permits of immediately turning of the extension forces of the Department of Agriculture of the various colleges to the amelioration of conditions. It also assembles a body of facts which enable conclusions to be drawn which will permit relief measures to be planned.

As an example of this latter form of return, I might illustrate from my own experience here in Michigan. In 1912 and in 1915 the State was swept by an epidemic of late blight. This disease came in August and September and took, in 1912, 25 per cent of the crop, and in 1915, 50 per cent of the crop. In my work with the plant-disease survey I took up data as to the distribution of the disease, its extent, etc. In making comparisons with the weather maps for the various months of August and September when the blight occurred, I was surprised that other than the evidence that there was a moderate amount of rainfall there seemed no connection between the weather of those two months and the severity of the disease. On the other hand, the weather map for July presented almost the same picture as a disease map of the State in which the percentage of the disease was indicated. A study of the epidemics of the past years shows that in the vast majority of cases late blight epidemics in Michigan have been associated with cold wet Julys followed by months of heavy or even moderate rainfall. The inference drawn from this plant-disease survey study is going to be of great value to us this year, since it will enable us to predict whether late blight is going to attack our potato crop, and it will enable us, in case the disease is imminent, to get spraying started in Michigan.

This is only one instance of the sort of work that we may expect from the plant-disease survey. The work is to be done in the field by trained mycologists and plant pathologists. In this State we are able to secure a few men who have had training along this line who are available in the summer. In the House discussions I noticed that there was some fear expressed that there would be waste in the carrying out of such a large program of agricultural extension and investigation. This particular fear does not seem at all well grounded considering the long record of usefulness behind the Department of Agriculture. I think I can assure you that the plans of the plant-disease survey are carefully made, experts are available, and that the matter promises great returns in conserving our food supplies.

It is very likely that in the near future we shall not increase our yields by discovery of varieties that give phenomenal crops so much as by conserving from plant diseases and insect pests the crops which we already raise. I wish to ask your aid in furthering this particular branch of the Agricultural bill.

Very truly, yours,

G. H. COONS,
Plant Pathologist.

The VICE PRESIDENT. Without objection, the second communication will be printed in the RECORD.

MICHIGAN AGRICULTURAL COLLEGE,
East Lansing, Mich., May 16, 1917.

Hon. WILLIAM ALDEN SMITH,
United States Senate Chamber, Washington, D. C.

MY DEAR SENATOR: The question of minimum prices for agricultural products in Michigan is one that farmers are greatly interested in—in fact, not only farmers but business men of all lines. This office sent out a large number of inquiries, and I am inclosing to you a portion of some of the answers. Not 2 per cent of the answers received were in opposition to minimum prices.

I feel certain you would like to know public sentiment in Michigan.

Very truly, yours, JAS. N. MCBRIDE,
Michigan Director of Markets.

PUBLIC SENTIMENT IN MICHIGAN ON MINIMUM PRICES FOR FARM CROPS.

Colon C. Lillie, Coopersville: "My opinion is that fixing a minimum price would have a tendency to make food cheaper to the consumer and yet release the farmers from any possible loss. I would favor fixing a minimum price."

A. G. Hathaway, Hastings: "The proposition of minimum prices for farm crops was presented to 20 representative farmers Saturday and unanimously indorsed; $6 beans, $1 corn, and $1 potatoes are fair and compensatory."

At a county meeting of bankers and farmers held at Adrian May 3 R. C. Rothfus, banker, said that in case of overproduction, fixing a minimum price would cause all the people to bear the burden that otherwise would be borne by the farmer alone. In case of a short crop, curtailment of consumption would prevent

excessive prices. In either case the loss would be distributed among all the people, for the farmer is also a consumer.

Edward Frensdorf, banker, Hudson: "Minimum prices would greatly increase the borrowing power of the farmer by removing the factor of uncertainty of prices."

L. C. Robertson offered the following resolution which was unanimously adopted:

"We, the bankers of Lenawee County, in meeting assembled, do recommend the fixing of compensatory minimum prices for farm crops."

Dean Clark, Buchanan: "A minimum price for farm products would be a benefit in increased production and lessen some of the methods of extravagant distribution. Farmers are having difficulty in getting seed beans and potatoes."

R. G. Brumm, Nashville, reports one man as saying: "One dollar potatoes as a minimum price plants 20 acres, but with the uncertainties now none will be planted."

Chester Smith, Nashville: "When a farmer is urged to double his production, he is entitled to be safeguarded against a glutted market and speculating in his product."

County Line Grange, Pinconning, unanimously indorsed and urged minimum prices—beans, $6; corn, $1; and potatoes, $1 per bushel.

Emory Eddy, Linwood: "If the sugar companies can grant minimum prices on sugar beets, why can not the Federal Government do as much for us on other staple products? It would give the farmer a basic price to figure without danger of a slump in prices."

Fred Curtiss, Crystal Lake: "Compensatory minimum prices will cause maximum production. One man told me $1 potatoes this fall would make 'me plant the 15 bushels I have in my cellar and go without potatoes to eat until they grew again.'"

At a meeting of the Lenawee County Pomona Grange the executive committee unanimously declared for minimum prices.

Lowell Sours (representative), Grand Traverse County: "A fair minimum price for crops by the United States Government would be a boon to the farmer."

Michael Harris (representative): "Minimum prices would be a great help to the farmer of limited means in this year of high seed prices. The arguments against a liberal minimum price are very poor, for we certainly need a large food supply."

Frank A. Smith (representative), Wexford County: "The way to increase the production of foodstuffs is to guarantee the price; then the farmer can put forth every effort to raise a large crop and feel assured that a large crop will pay. Heretofore, oftentimes the small crop brought the most money."

L. W. Oviatt, Bay City: "Minimum prices for farm crops would give a great impetus to crop production."

Maj. Arthur P. Loomis, Ionia: "A minimum price would speed up production."

J. J. Henderson, Paris: "Minimum prices by the United States Government would be the greatest move that could be made to solve the problem of food shortness."

J. R. Tanner, Allegan: "A fair minimum price on beans, corn, and potatoes would do more to increase the total production than anything else."

Samuel W. Spicer, Ypsilanti: "Our grange unanimously indorsed minimum prices by the United States Government."

Frank Clark, Vernon: "Farmers would work harder, hire more help, and increase their acreage if they would not lose money by it. A minimum price would underwrite them against loss."

Duncan Campbell, Lincoln: "A minimum price would remove the gamble of planting $3 potatoes and $10 beans. Farmers should, with a minimum price, market as needed."

John P. Espie, Eagle: "The farmers are patriotic and will stand by the flag to a man. Public sentiment here is for minimum prices and in opposition to the food speculator having the advantage of the producer or consumer. The present price of milk and cream allows no profit to the farmer. Cows do not pay."

Peter Koelsch, Standish: "I am in a position to know the sentiment of farmers and can say that they would feel safer and work harder and grow more staple crops if the United States would establish a fair minimum price. It will take 15 bushels of potatoes at $4 per bushel to plant an acre, and not one farmer in fifty will take the chance without a guaranty."

Jason Woodman, Paw Paw: "If the Government really wants a very large amount of food, this is the only practical way to get it. Every farmer knows that the larger the crop the lower the price. * * * It must not be forgotten that when the farmer pays his help, his expenses, and his taxes, all of which will be extraordinarily high, he can not pay those bills with patriotism; his creditors ask cash."

I. W. Byers, Iron River: "I am most heartily in favor of compensatory minimum prices for farm crops. At a meeting of the Patriotic League it was determined that locally we should guarantee a price of at least 75 cents per bushel to farmers for potatoes next fall."

R. D. Bailey, Gaylord: "A minimum price will put the grease where the squeak is. If there is no risk, why not the Government take that risk. In Antrim and Otsego Counties farmers, worthy and substantial men, are asking for a minimum price."

Albert G. Griggs (representative), Oakland County: "I would say that a price of 75 cents per bushel for potatoes would increase the acreage 25 per cent and with a normal season give us three times the crop of last year. If you want more potatoes, raise the price to $1 per bushel and you will get them. No experienced farmer of good judgment will plant an increased acreage with a prospect of 30 to 50 cents per bushel price."

J. C. Merriam (representative), Sanilac County: "I was formerly opposed to minimum prices, but now have come to the conclusion that it should be done. Most farmers will not hire help at the price asked and take the risk of failure and low prices. I would favor a minimum price of grain only."

John Schmidt (representative), Osceola County: "I strongly favor minimum prices for farm products."

J. J. Jakway, Benton Harbor: "No force or forces directed toward increase of foodstuffs would be so effectual as guaranteed prices. Give us a mark to aim at and food will certainly be produced."

At a meeting of the bankers of Washtenaw County the following resolutions were passed:

"That a minimum price should be fixed by the Federal Government for spring crops, and this minimum should be $1 for potatoes, $1 for corn, and $5 for beans."

W. E. Underdown, Ann Arbor: "With the present high prices for seed, farmers seem reluctant to take the chance of increasing their acreage without some assurance of a fair price in the fall. I fully believe that the greatest stimulant to the increase of crop production would be for a minimum price fixed by the United States Government."

George Winnegar, Morrice: "The seed and fertilizer will cost me about $60 per acre to plant potatoes this year. Is this a good proposition? If I were assured of $1 per bushel I would not hesitate to get the help and grow an increased acreage. The man who farms from a city office says that this year there can be no overproduction and that speculators can not manipulate prices this fall. If this is true, the Government takes no chances on a minimum price. We all know that if the United States said $1, the price would not go lower."

T. F. Marston, Bay City: "Absolutely in favor of minimum price. Such action will stimulate production."

Edwin D. Greenhoe, Sheridan: "The Montcalm County Agricultural Committee discussed minimum prices and indorsed $6 beans, $1 potatoes, and $1 corn. Our best farmers say that the United States should fix prices."

Claire Blackman, Plainwell: "On motion, the Gun Plains Grange, No. 1281, indorsed the movement for the Government to fix a minimum price for beans, potatoes, corn, and wheat for the ensuing year, as follows: $6 for beans, $1 for corn, $1 for potatoes, and $1.50 for wheat, per bushel."

C. J. Chambers, Ithaca: "In reply to your inquiry as to the advisability of minimum price fixing as a stimulus to greater production, will say that there are in this county those that advocate the fixing of a minimum price. However, when it is explained to them that action along this line by Congress might lead to the fixing of a maximum price, there seems to be some uncertainty in the minds of the farmers as to whether it would be a good thing or not. Of course, if the minimum and maximum were high enough there would be no objection and might result in a slightly increased acreage in Gratiot County."

E. G. Amos, Manistique: "Farmers would increase the potato acreage 1,000 acres if they could be assured of compensatory minimum prices."

R. E. Morrow, Bellaire: "In reply to your circular letter dated May 1, 1917, would say that I don't believe 'minimum prices' will make much difference in production here. I believe nearly every tiller of the soil is working himself and the farm to the maximum anyhow in our county. It seems as though it might be profitable for the Government to devote considerable time and thought to organizing 'consumers' leagues' and, of course, more producers' selling associations just now, in order that the cost of distribution may be reduced to a minimum."

M. A. Rathburn, Sherwood: "In reply to your letter of May 1, I would say that we don't want a price set on our produce unless there is one on the manufacturers' goods, for it would be one-sided, like a jug handle."

Resolutions by the Farmers' Clubs of Alpena, May 4, 1917:

"Whereas the condition of our country is critical; and

"Whereas our farmers are asked to increase production beyond any previous year; and

"Whereas the high prices of seed and labor will double the cost of production: Therefore be it

"*Resolved*, That the farmer be guaranteed a compensatory price for his produce by the Federal Government setting minimum prices to the producer for staple crops."

Hon. John C. Ketcham, master Hastings Grange, Hastings: "You may count me in strongly for the minimum-price idea. More than any other thing it will increase our food supply.

"Contracts are made for all sorts of war supplies at fixed figures, and in no case are these prices based upon anything lower than cost plus a reasonable profit. The farmer has enough contingencies to face in the labor, weather, and pest factors without having to run the risk of noncompensatory prices, frequently made so by speculation or manipulation."

M. E. Duckles, Traverse City: "Farmers who have been interviewed in this section maintain that to insure them against the calamity of overproduction would only be justice, inasmuch as the Government is asking them to put forth every effort to increase their acreage. If the Government secures the munition plants and other war factories by contract, the farmers think they should be secured also.

"Commission men and consumers here demand a maximum limit if a minimum price is fixed.

"From all I can learn such a law to insure the farmer against great loss in case of overproduction would probably increase the acreage in this locality 10 to 20 per cent if it were passed at once."

S. S. Fall, State agricultural agent, Mount Pleasant: "In answer to your letter of May 1 in regard to the public sentiment in Isabella County as to minimum price fixing by the United States in order to increase food production, I will say that the people are very much in favor of such action, as it will greatly encourage the planting of a large acreage."

PETITIONS AND MEMORIALS.

Mr. NELSON presented petitions of the Farmers' Club, of Midway; of S. R. Lewis, of Duluth; of L. Marvin, of West Duluth; of the Woman's Christian Temperance Union of Etna; of the Baraca Class of the First Methodist Episcopal Church of Duluth; and of John Helmer, of Duluth, all in the State of Minnesota, praying for national prohibition as a war measure, which were ordered to lie on the table.

He also presented a memorial of sundry citizens of Minneapolis, Minn., remonstrating against the use of food products in the manufacture of intoxicating liquors, which was referred to the Committee on Agriculture and Forestry.

Mr. ROBINSON. I present a telegram in the nature of a petition from V. G. Craig and other members of the Methodist Church of Conway, Ark., which I ask may be printed in the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

CONWAY, ARK., *June 17, 1917.*

Hon. JOE T. ROBINSON,
Washington, D. C.:

We, the members of the Business Men's Bible Sunday School Class of the Methodist Church, Conway, Ark., hereby express to our United States Senators our earnest hope that they will stand for national prohibition as a war measure.

V. G. Craig, W. A. Bragg, A. L. Jones, W. O. Wilson, T. R. Douglass, W. N. Jones, J. N. Legg, Dr. G. D. Huddleston, Dr. G. A. Bennafield, J. T. Murphy, G. G. Hancock, J. J. Smith, W. F. Smith, T. C. Harned, W. R. Hairston, J. M. Jackson, Claude Martin, N. C. Martin, D. H. Colquette, J. J. Livingston, N. B. Nelson, J. V. Major, E. H. Major, T. A. Graham, A. R. Richardson, O. F. Bolls, J. M. Bolls, J. Z. Bailey, C. J. Greene, J. A. Pence, J. R. Pierce, Y. T. P. Landers, J. E. Little, A. M. Ledbetter, W. B. Hubble, J. H. Reynolds, W. D. Bryant, W. J. Redd, J. D. Voss, W. D. Cole, jr., E. L. Hinton, S. N. Bolton, W. E. Jumper, W. S. Cazort, S. G. Smith, R. C. Reid, C. C. Jones, S. E. Anderson, E. H. Allison, H. M. Anderson, J. W. Bassett, C. R. Berry, E. V. Leverett, J. H. Durham, C. E. Durham, J. E. Opie-Hart, J. W. James, G. L. Bahner, L. E. A. Munn, Dick Johnson, Dr. H. E. Cureton, H. C. Mode, J. D. Collier, E. F. Edwards, Guy R. Farris, W. J. Gardner, E. L. King, R. B McCulloch, J. H. Bailey, J. C. Clark, W. H. Smith, A. P. Dollahite, J. D. Brady, J. J. Nixon, S. T. Simpson, W. B. Stark, G. F. Miles, J. P. Womack, D. L. Young, B. T. Deal, C. H. Newbern, F. E. Bolls.

Mr. ROBINSON. I present a petition of the Woman's Missionary Society of the Methodist Church, of Little Rock, Ark., which I ask may be printed in the RECORD.

There being no objection, the petition was ordered to be printed in the RECORD, as follows:

LITTLE ROCK, ARK., *June 12, 1917.*

Hon. JOSEPH T. ROBINSON.
United States Senate, Washington, D. C.:

Undersigned petition your honorable body not to tax but prohibit the liquor business as a war measure.

Above petition was indorsed by vote at meeting held under auspices of Woman's Missionary Society, Methodist Episcopal Church South, in city of Little Rock, State of Arkansas, by the Little Rock District Conference in annual session, representing 5,000 women.

Attest:

Mrs. JOE GOETZ, *Presiding.*

Mr. ROBINSON. I present a large number of letters and telegrams from bankers in my State relative to the stamp tax on bank checks, which I ask may be received and referred to the Committee on Finance.

The VICE PRESIDENT. Without objection, that action will be taken.

Mr. McLEAN presented a petition from the Connecticut Branch of the National Woman's Party, praying for the adoption of an amendment to the Constitution granting the right of suffrage to women, which was ordered to lie on the table.

He also presented a petition of Union Grange, No. 25, Patrons of Husbandry, of Southington, Conn., and a petition of Glastonbury Grange, No. 36, Patrons of Husbandry, of Glastonbury, Conn., praying for national prohibition, which were ordered to lie on the table.

He also presented a memorial of the Allied Printing Trades Council of Hartford, Conn., remonstrating against the proposed increase in the rate on second-class postage, which was referred to the Committee on Finance.

He also presented a petition of sundry citizens of New Britain, Conn., praying for the passage of the so-called daylight-saving bill, which was ordered to lie on the table.

He also presented a petition of the Chamber of Commerce of Connecticut, praying for Federal control of food products, which was ordered to lie on the table.

Mr. POMERENE. I present a telegram in the nature of a petition from the Chamber of Commerce of Columbus, Ohio, urging the support of the bill to provide further for the national security and defense by encouraging agriculture and regulating the marketing and distribution of food, and also a similar telegram from the Central Labor Union of Canton, Ohio, which I ask may be printed in the RECORD.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

COLUMBUS, OHIO, *June 16, 1917.*

Hon. ATLEE POMERENE,
Washington, D. C.:

The Columbus Chamber of Commerce, after consultation with the best authorities of this community and ascertainment of business and professional opinion, by action of its board of directors earnestly urges your support of House bill 4630, being the bill to provide further for the national security and defense by encouraging agriculture and regulating the marketing and distribution of food. We believe passage of this bill vesting control of food supplies in the President is vitally necessary in view of the present emergency and hope nothing will prevent your favoring enactment of the law. We regard it desirable, if possible, to have the law amended so as to include in the system of control producers as well as manufacturers and distributors.

COLUMBUS CHAMBER OF COMMERCE,
M. J. CAPLES, *President.*

CANTON, OHIO, *June 16, 1917.*

Hon. ATLEE POMERENE,
United States Senate, Washington, D. C.:

Canton Central Labor Union insists Congress immediately pass legislation to protect our citizens against results of speculation in foodstuffs. Organized labor is doing its part in the world crisis, and workingmen and their families must not be exploited for the benefit of food gamblers. We look to you to help us.

CANTON CENTRAL LABOR UNION.

OFFICERS OF HEALTH SERVICE.

Mr. RANSDELL. From the Committee on Public Health and National Quarantine I report back favorably without amendment the joint resolution (S. J. Res. 67) to fix the status and rights of the officers of the Public Health Service when serving with the Coast Guard, the Army, or the Navy, and I submit a report (No. 66) thereon. I ask for the immediate consideration of the joint resolution. It is a war measure and very important.

The VICE PRESIDENT. The joint resolution will be read.

The Secretary read the joint resolution, as follows:

Resolved, etc., That when officers and other persons of the United States Public Health Service are serving aboard Coast Guard vessels in time of war, or are detailed for duty with the Army or Navy in accordance with law, they shall be entitled to all the rights, privileges, benefits, and allowances, including rights to pensions for themselves and widows and children, if any as are now provided for officers of corresponding grade and length of service of the Coast Guard.

The VICE PRESIDENT. Is there objection to the present consideration of the joint resolution?

There being no objection, the joint resolution was considered as in Committee of the Whole.

The joint resolution was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

PUBLIC HEALTH SERVICE RESERVE.

Mr. RANSDELL. Also from the Committee on Public Health and National Quarantine I report back favorably with amendments the joint resolution (S. J. Res. 63) to establish a reserve of the Public Health Service, and I submit a report (No. 65) thereon. This is also an emergency measure of an important character and is unanimously reported by the committee. I ask for its present consideration.

The VICE PRESIDENT. Is there objection?

Mr. GRONNA. May we have the joint resolution read?

The VICE PRESIDENT. The Secretary will read the joint resolution.

The Secretary read the joint resolution, as follows:

Resolved, etc., That for the purpose of securing a reserve for duty in the Public Health Service in time of national emergency there shall be organized, under the direction of the Secretary of the Treasury, under such rules and regulations as the President shall prescribe, a reserve of the Public Health Service. The President alone shall be authorized to appoint and commission as officers in the said reserve such citizens as, upon examination prescribed by the President, shall be found physically, mentally, and morally qualified to hold such commissions, and said commissions shall be in force for a period of five years, unless sooner terminated in the discretion of the President, but commission in said reserve shall not exempt the holder from military or naval service. Said officers shall consist of sanitarians, senior assistant sanitarians, and assistant sanitarians, and when ordered to active duty in the service of the United States shall receive the pay, allowances, and leaves of absence of surgeons, passed assistant surgeons, and assistant surgeons, respectively: *Provided*, That the Secretary of the Treasury may appoint for duty with said reserve employees in such number as the public interest may require and the funds appropriated may permit.

SEC. 2. That for the purpose of carrying out the provisions of this act the sum of $300,000 be appropriated out of any money in the United States Treasury not otherwise appropriated.

The VICE PRESIDENT. Is there objection to the present consideration of the joint resolution?

There being no objection, the joint resolution was considered as in Committee of the Whole.

The first amendment was, on page 2, line 4, before the word "pay," to insert the word "rank" and a comma.

The amendment was agreed to.

The next amendment was, on page 2, line 6, after the word "respectively," to strike out the proviso in the following words:

Provided, That the Secretary of the Treasury may appoint for duty with said reserve employees in such number as the public interest may require and the funds appropriated may permit.

The amendment was agreed to.

The joint resolution was reported to the Senate as amended, and the amendments were concurred in.

The joint resolution was ordered to be engrossed for a third reading, read the third time, and passed.

BILLS AND JOINT RESOLUTION INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. HARDING:

A bill (S. 2469) to authorize the change of name of the steamship *Caldera* to *A. T. Kinney* (with accompanying papers); to the Committee on Commerce.

By Mr. CHAMBERLAIN:

A bill (S. 2470) to provide for the planning, improvement, relocation, construction, and maintenance of a system of improved national highways and State highways designed to facilitate the movement of troops, equipment, munitions, and supplies, in time of peace and in time of war, and to promote the general welfare of the people of the United States; to the Commitee on Military Affairs.

A bill (S. 2471) granting a pension to Marguerite Daugherty (with accompanying paper); to the Committee on Pensions.

By Mr. BORAH:

A bill (S. 2472) granting an increase in pension to Martha R. Sutton (with accompanying papers); to the Committee on Pensions.

By Mr. OWEN:

A bill (S. 2473) extending the franking privilege for the purpose of transmitting to the Department of Labor papers relating to naturalization cases (with accompanying papers); to the Committee on Post Offices and Post Roads.

A bill (S. 2474) for the relief of the widow of Rudolph H. von Ezdorf, deceased; to the Committee on Claims.

A bill (S. 2475) granting an increase of pension to Malinda K. McGowen; to the Committee on Pensions.

By Mr. PENROSE:

A bill (S. 2476) granting a pension to Laura L. Junkin; to the Committee on Pensions.

By Mr. SWANSON:

A bill (S. 2477) to authorize the construction of a building for the use of the Treasury Department; to the Committee on Public Buildings and Grounds.

By Mr. WILLIAMS:

A bill (S. 2478) to repeal the restriction on appointments and promotions in the Pension Bureau; referred to the Committee on Appropriations.

By Mr. OWEN:

A joint resolution (S. J. Res. 80) to provide further for the national security and defense by insuring the supply and equitable distribution of print paper; to the Committee on Manufactures.

CONSERVATION OF FOOD.

Mr. GRONNA. I have a copy of a bulletin prepared by Dr. Wilbur F. Crafts on conservation of food and other resources by war prohibition. I ask that it may be printed in the RECORD without reading.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

CONSERVATION OF FOOD AND OTHER RESOURCES BY WAR PROHIBITION.

[Facts and figures prepared by the International Reform Bureau.]

This is not an argument, but certified facts classified to answer questions bearing on food conservation and war prohibition.

1. What are the facts as to national and world shortage of food as a war problem?

Hon. David F. Houston, Secretary of Agriculture, on April 23, 1917, said to the Senate Committee on Agriculture and Forestry, speaking of the relation of world agriculture to the war:

"I need scarcely dwell at length at this time on the tremendous importance and necessity of greatly increasing production this year, of conserving foods, of eliminating waste, of improving distribution, and of preventing manipulation of foodstuffs and uneconomic speculation in them. This struggle is one of endurance—of resources. Its outcome is dependent in no small measure on the abundance of supplies of all kinds, especially of food, just now. There was a world shortage of a number of important staple crops. The weather conditions the world over last year were unfavorable. There was a shortage especially of wheat and potatoes. In Europe, of course, agriculture, like everything else, is in a highly abnormal and disturbed state. It is handicapped by lack of labor, by disruption of organization and of transportation, and by lack of fertilizers, of seed, and of animals. The reserves are very low. We must not only produce more for our own people, but also a large surplus to dispose of to Europe."

David Lubin, American representative to the International Institute of Agriculture at Rome, sent a warning to the American people April 5: "For the first time in many years there exists a deficit in the supply of corn, wheat, rye, barley, and oats, estimated at a total of 130,000,000 bushels less than normal requirements for countries open to trade. We can avoid high prices by the elimination of waste." Manifestly the greatest waste is in making drink.

Instead of producing more than usual for this emergency, all our cereal crops were less in 1916 than in 1915, as Senator SHAFROTH showed in May 12 debate, from World Almanac for 1917, page 283, our total cereal shortage being 1,114,337,000 bushels, equivalent to 62,402,872,000 pounds. The greatest cereal shortage last year was in the chief cereal, "the staff of life," wheat, and there is no assurance of any surplus this year. Secretary Houston, at hearing already spoken of, said: "Of wheat the Nation needs for its liberal domestic use for human food and for seeding 640,000,000 bushels." In the Senate debate of May 12 Senator GRONNA (CONGRESSIONAL RECORD, p. 2180) quoted the Department of Agriculture to the effect that "production of winter wheat this year will be less than 400,000,000 bushels." He adds: "Never in the history of this country have we produced so much as 250,000,000 bushels of spring wheat. That makes a total of less than 650,000,000." It will be noted that this highest total of wheat that can be hoped for is almost exactly what Secretary Houston names as what is needed for our normal domestic uses. From a department report sent out in May, 1917, headed "Food crop must be increased," we quote two statements as to wheat prospects for this year: "The condition of this crop [winter wheat] as shown by the department in its report of April 1 is more than 25 per cent below the average condition April 1 for the past 10 years. This condition forecasts a production this year nearly 52,000,000 bushels less than that of 1916 and 243,000,000 bushels less than the crop of 1915. * * * The spring-wheat acreage of 1916 (17,956,000 acres) was more than 5 per cent less than that of 1915 (19,161,000 acres), and more than 4 per cent less than the preceding five-year average (18,799,000 acres)."

That our shortage is serious apart from the war is suggested also by the perilous rise of food prices, which speculators could hardly send so high if the supply was abundant. Such a shortage is also proclaimed loudly in the call of thousands of college students in the early spring from their lessons to the farms. Was this only to produce enough extra foodstuffs to supply the brewers?

2. How much do our allies ask us to export to them this year?

In Washington Post of May 15, 1917, it was stated that "the allies had called on the United States to furnish 600,000,000 bushels of grain this year." In contrast with this figure we note that Secretary Houston intimated to Senate committee that we could expect only "a small surplus." It has been said that the issue of the war may be determined by the last million bushels of grain. We must keep in mind that to get 600,000,000 bushels of grain to Europe we must send enough extra to pay generous toll to the submarines. Mr. Herbert C. Hoover is quoted in the Continent of June 7, 1917, page 33, as saying that the minimum need of the allies and neutrals for grain the coming year will be 971,000,000 bushels, of which he names six to eight hundred millions as our share. He talks more hopefully of getting it since he was appointed to public office and has met with criticism and opposition because he urged before the Senate committee the conservation of the grain wasted in the making of intoxicants. But we shall not forget his former more unbiased testimony in the Senate hearing, pages 374–376, where he said that "The allies, in order to provide the minimum bread rations which they are now giving to their people," which he calls a "drastic ration," will need "from a fifth to a quarter" more than can be sent them if they get "everything we could hope for from every quarter of the globe." As to conservation of the grain used to

manufacture liquors, Mr. Hoover said (p. 417): "Entirely aside from ethical questions, my impression is that we could save somewhere from 50,000,000 to 60,000,000 bushels of grain on the brewing side after having allowed for the fodder proposition, and that grain is of the utmost value to the allies. On the distilling side we will probably also want the whole capacity of the distillers for industrial purposes in connection with munitions. And without the intervention of some food control they would probably normally make that alcohol out of grain, but by the establishment of food control and the insistent installation of substitutes for grain in distillation we could probably save anywhere from 25,000,000 to 50,000,000 bushels of grain in the manufacture of industrial alcohol, because there are other things that may be used equally well for that purpose. There are two savings to be made there, one on the suppression of brewing and the other on the substitution of material other than grains for the manufacture of industrial alcohol."

Senator KENDRICK. If 100,000,000 bushels might be saved in that way, Mr. Hoover, it would supply about one-half of the shortage you spoke of yesterday that would be required by the allies?

Mr. HOOVER. It will be of very great importance, indeed.

(Prof. A. E. Taylor, Assistant to the Secretary of Agriculture, said to the writer that two-thirds of the capacity of American distilleries was occupied in producing munition alcohol before the United States entered the war, and their full capacity will be needed now. He also said that barley has only half the nutritive value for human food when it is fed to cattle, whether before or after the brewers have used it, and becomes meat, as when it is fed to human beings in bread.

No question is raised here as to any depreciation of the barley through alleged "food value" transferred to beer, or whether brewery refuse grain, as ordinarily handled, may not affect the healthfulness of the meat or milk of brewery-fed cattle.)

It is appropriate to quote here from a liquor paper (American Brewers' Review, June, 1917, pp. 182, 183) the statements of the British food dictator, Mr. Kennedy Jones, who opines it would not be wise or advisable to discontinue the making of beer in England or in Germany because "the workingman has been accustomed to his beer so long that he would not work well if he were suddenly deprived of it" (reductions are made), but he "thinks conditions are different in this country, and that it might be well, on the whole, for the United States to forbid the brewing of beer." In support of this distinction it should be recalled that in the United States alone has it been the custom of more than half the employers of labor for a quarter of a century (United States Labor Bureau Report on "Economic Aspects of the Liquor Question") to require abstinence for safety and efficiency or at least to give preference to abstainers. It is on this account partly that such great cities as Atlanta, Seattle, and Denver go from license to prohibition with no excitement and no exodus except of criminals and loafers.

NO SAVING IF USE OF GRAIN FOR WHISKY ONLY IS FORBIDDEN.

4. How much reduction of the use of foodstuffs in the manufacture of liquors would be assured by a really prohibitive tax on materials used for making distilled liquors, as proposed by the Senate Finance Committee, or by direct prohibition of the making of such liquors?

None whatever, as it might result only in the transfer of foodstuffs from distillery to brewery. Nor would such action conserve man power by suspending the drinking of distilled liquors, as the stock of spirits on hand June 30, 1916, was 231,452,740.4 gallons, according to internal-revenue report for 1916, page 113. The Distillers' Securities Corporation, in a statement dated May 2, 1917, page 4, say that the annual consumption for beverage purposes is 113,000,000 gallons. The alcohol that could be derived from this stock of distilled liquors would provide a supply for our munition plants for several months, and we might, therefore, postpone for so long the use of any foodstuffs for making explosives by commandeering these liquors for war purposes.

5. To what extent would the suspension of beer making conserve food?

Nearly twice as much grain is used annually for making beer as for making whisky—68,439,849 as against 39,341,566 (internal-revenue report, 1916). The brewers, in a statement to the Senate Committee on Agriculture and Forestry (see published hearings), seeking to minimize their drain upon food supply, first of all estimate a decrease of beer production on account of prohibition of more than one-seventh (from 58,663,624 to 50,000,000 bushels), and then ask us to credit 35 per cent for the value as cattle feed of the refuse grain they have used to make beer, and so reach a residue which they say is but three-quarters of 1 per cent of total grain product of the Nation.

Off against this claim should be considered the former claims of the Brewers' Yearbook, for example, the volume for 1914, page 156, claims that the brewers use grain equal to the entire grain crop of Maine, Connecticut, Delaware, Nevada, New Mexico, and Wyoming. Perhaps the Senators from those States may question whether such an amount of grain is negligible at a time of food shortage. In the remarks of Mr. RANDALL in the Appendix of the CONGRESSIONAL RECORD it is also shown that they claim to consume the product of 300,000 farmers.

The injury wrought by beer in the impairment of health and efficiency is very fully shown in the remarks of Mr. SMITH of Idaho in the Appendix of the CONGRESSIONAL RECORD and in "Scientific testimony on beer," quoted on the floor of the Senate by Senator GALLINGER on January 9, 1901. (See supplementary statement on brewers' fallacies.)

SHIPPING GRAIN TO MAKE BEER ABROAD.

The brewers (American Brewers' Review, June, 1917, p. 182) and their political friends (Courier-Journal, May 6, 1917) are citing the fact that if we conserve the American grain used to make liquors in order to ship more abroad, it will be made into beer in Great Britain, as much of our grain has been so used every year of the war while its price was rising to our own people. Our legislators and reformers have been seeking to avoid action on this question of exporting grain to our allies for making beer and whisky, but when liquor dealers introduce this fact for their defense it can no longer be avoided. If the Cummins amendment had not been reconsidered and defeated, a supplementary amendment would have been offered forbidding the export of foodstuffs during the war except on official guaranty that it should not be used to make liquors. Manifestly we must also see that it is not merely substituted for other grain that would have been used for bread so that the foreign grain may be turned to beer or whisky. M. Wintringer (Sunday School Times, Oct. 28, 1916) said that by cooperation of British and American Governments 12,000 tons of barley per month was sent to the Belgian Brewers' Federation at the very time that country was living on the world's charity. We are struggling to confine this document to questions and certified answers, and we will therefore interpose here only the question, Should that action be considered one of the "Belgian atrocities"? If the food shortage is as serious as Secretary Houston and Mr. Hoover described it to the Senate committee, is it not the duty of all the allies to take the heroic step of war prohibition together? This step the leaders of Britain and France advocated at the war's beginning, as thousands of their men of "light and leading" do to-day in the strength of Britain's movement (see book Defeat or Victory), and perhaps they might win in spite of the liquor power in politics if we should bravely lead the way, for their sake as well as ours.

In contrast to a general decrease in brewing elsewhere in Europe, the Brewers' Journal of June 1, 1917, intimates that during the first quarter of 1917 the French breweries increased their business and have almost "attained the normal level of antewar times."

6. What facts should be considered in deciding whether wine should be included in any legislation to conserve food and other resources?

It is said that our people do not use much intoxicating wine, and therefore that conservation of fruits so used would not help largely in meeting the food shortage. But, on the other hand, if few use wine would there not be so much less opposition to meet? And if the making of beer and whisky is forbidden, would not the making of wine be increased, and men and land now used for raising grain be diverted to raising fruits for wine? Tables of wines show that the weakest wines have higher alcoholic content than strongest beers—ranging from 8 per cent to 25.41 per cent. (Appleton's American Cyclopedia, article on wines, p. 667.) Cyclopedia of Temperance and Prohibition, article on vinous liquors, page 647, quotes from United States Agricultural Department, showing alcoholic content of American wines as from 9.66 per cent to 17.85 per cent. Distilled liquors are also in some cases made from fruits—brandies, for example. France and Germany, just beginning to experiment on liquor legislation, treat wine and beer as 'temperance drinks." The United States passed that experiment stage many years ago. All liquor laws of the United States, whether license laws or prohibitory laws, treat wine, beer, and whisky alike as "intoxicating liquors." All destroy grain, health, efficiency, character, public tranquillity. Wine is an "old offender," with a bad record back to the days of Noah and Lot and Solomon. Can it be reasonably expected the American people will tolerate any conservation or prohibition that leaves wine out? This year's crop might perhaps claim exemption on the ground that we usually grant a year to inaugurate prohibition, and while we can not wait so long in the case of grain in this crisis, we might wait till winter in case of fruits.

CONSERVATION OF THE NATION'S MONEY ALSO NECESSARY IN WAR TIME.

Attention has been too exclusively directed to the need of conserving food for victory. Wars have been determined by financial resources oftener than by food supply.

7. What is the direct retail cost of drink to our people?

Ex-President Charles W. Eliot, of Harvard University, in a table quoted in the Union Signal, March 23, 1916, estimates the "annual liquor bill" of the United States at $2,200,000,000. This is a conservative estimate.

8. What is the indirect cost of drink as a producer of disease, death, crime, accidents, dependency, and inefficiency?

This can not be answered exactly, but is estimated in the following table prepared by W. G. Calderwood, executive secretary of war prohibition committee of 60, and used in a speech by Representative CHARLES H. RANDALL, which explains the estimates in detail (CONGRESSIONAL RECORD, Appendix).

Loss on foodstuffs	$146,000,000
Loss of commercial value of 120,000 lives (destroyed yearly)	966,720,000
Loss time of 589,000 farmers and wage earners	539,000,000
Loss through crime, insanity, and poverty	93,377,500
Loss in production of wealth (by lowered efficiency)	2,000,000,000
Total indirect cost of drink	3,745,097,500
All direct retail cost of liquors to people (President Eliot's estimate)	2,200,000,000
Total cost of liquors to the Nation	5,945,097,500

THE LIQUOR REVENUE AN UNLUCKY 13 TO 1.

This is about twelve times the half million total liquor revenues to Nation, State, and city, including new war-revenue taxes not yet enacted. (National Herald, liquor paper, Mar. 6, 1915, gave $325,000,000 as the estimated total then.)

This estimate of 1 to 12 in above figures for the whole Nation strikingly corresponds with result of a prize contest in Baltimore conducted by the Antisaloon League, which showed the local saloons cost the people thirteen times as much as the total revenue they paid.

The Liberal Advocate, a liquor paper, in June, 1917, pictured "the goose that laid the golden eggs" labeled "internal revenue," with three eggs, one of which was marked to represent that one-third of Federal revenue is paid by the liquor business. But when it is shown that liquor revenue is only an unlucky thirteenth paid back to the people's Government out of what the liquor traffic costs the people, directly and indirectly, in money, besides other greater costs, who is the "goose" anyhow?

There has been some dispute as to whether liquor dealers asked the extra tax put upon them in the pending revenue bill, regarding it as an intrenchment. So far as distillers are concerned, the proof that they did is in a letter sent to Senators and Representatives by the Distillers' Securities Corporation, dated May 2, 1917, in which the president of that corporation said: "We are in favor of increasing (during the period that the present war continues) the tax from $1.10 to $2.20 per proof gallon."

Prof. Irving Fisher, chairman of war prohibition committee of 60, has this to say of liquor revenue: "If saloons were closed, two billions would be set free for something else, some useful articles of consumption. Whatever these articles might be, they could, if desired, bear the tax now borne by the liquor, which they would replace. In short, prohibition would not reduce the volume of taxable goods, but it would simply substitute other goods than liquor—such, for instance, as soft drinks, candy, foods, and clothing, which otherwise would never have been produced at all. Furthermore, prohibition, by keeping sober one or two hundred thousand men now incapacitated each day by drunkenness, and by increasing the productive power of those who, while not drunk, are 'slowed down' by alcohol, would speed up production probably at least 10 per cent (a manufacturer estimates it from actual records as over 20 per cent in his factory), which 10 per cent, if applied to the more than half of our national dividend now produced in 'wet' territory, would add over two billions to our national dividend. It follows that the more than two billions now spent on alcohol and the more than two billions of national income which prohibition would bring could all be paid in taxes without making the people one cent poorer."

CONSERVATION OF MAN POWER.

9. What are the significant statistics as to conserving and increasing man power by war prohibition?

The committee of 60 state that the wage and salary list of the liquor traffic is about 289,000. (CONGRESSIONAL RECORD, Appendix.) The Antiprohibition Manual states that the portion of farm produce that liquor makers use requires the full service of 300,000 men. Adding the two groups we have 589,000 men, more than enough to take the places in industry vacated by our first conscription of half a million men. With so many men about to be withdrawn from business pursuits and immigration at ebb tide, it is not at all a problem to use in other trades those now in the liquor business.

The Liquor Dealers' Manual for 1917 says: "Production and distribution of alcoholic beverages altogether give employment to 1,200,000 people." On this William J. Johnson remarks in the Continent, June 14, 1917, page 762: "If men are drafted for the farm, and women are drafted to do men's work, why should 1,200,000 persons be allowed to continue in a food-destroying, efficiency-destroying business?"

The acreage used to produce the material for drink, as stated in an article from the Continent, quoted above, which is based on statistics in Liquor Dealers' Manual for 1917 is as follows: Rice, 225,000 acres; hops, 45,000 acres; molasses, 700,000 acres; grain, 6,500,000 acres; total, 7,500,000 acres—more than one-third as much as the cultivated land of Illinois. The number of persons this wasted grain would support, as stated elsewhere, namely 7,000,000, is more than the population of Illinois, and the number that are employed in producing and distributing the liquor, dealers stated elsewhere, as 1,200,000, is double the population of that State.

The money spent for drink is four times the normal value of the cotton crop, three times the value of our normal wheat crop, 50 per cent more than the value of the corn crop. It is approximately equal to the wheat and corn crops combined.

TRANSPORTATION CLOGGED BY BEER BARRELS GOING BOTH WAYS.

One of the important aspects of conservation in war time is transportation. Trains and ships must not be clogged with goods that are not really needed. It is a serious matter that liquors require a double haul—the barrels, cases occupying as much space when returned empty as when sent out full. From the Continent article, previously quoted, we add a full statement of this.

"The Liquor Dealers' Hand Book says: 'According to United States statistical abstract for 1913, the total movement of manufactures of wine, whisky, and beer industries in 1912 amounted to over 7,000,000 tons, or 2½ per cent of the total traffic of all manufacturing industries.'

"To this must be added the grain, fruit, molasses, coal, bottles, empty kegs, and barrels going to the breweries and distilleries. It amounts to about 500,000 carloads a year. All such space in freight and express cars should be released for other materials needed in the prosecution of war and the distribution of the Nation's food, fuel, and clothing.

"The transportation board of the National Council of Defense suggests that all work that entails the use of railroad equipment that can be dropped until after the war, be postponed so the equipment can be used elsewhere here, and such of it as can be spared be transported abroad to be used there.

"Let us make the car shortage less serious by demanding the prohibition of the transportation of alcoholic liquors and all that pertains to it.

"Mr. Arthur Mee, in a letter to Lloyd George, published in the British Weekly March 29, 1917, says: 'This trade (liquor traffic) has used up shipping equal to a fleet of 60 ships of 5,000 tons working all the time; * * * the weight of food and other stuffs carried about for it in ships and trains has been equal to the solid material carried by the navy to all our fighting fronts.'

"Alcoholic liquors in large quantities are being shipped from America to Africa, China, and other countries.

"The amount of liquor passing Madeira, a port of registry for the coast of Africa, in one week, is reported as follows: Twenty-eight thousand cases of whisky, 30,000 cases of brandy, 30,000 cases of Old Tom, 36,000 barrels of rum, 800,000 demijohns of rum, 24,000 bottles of rum, 15,000 barrels of absinthe, 900,000 cases of gin. Since the war began, 55 per cent of all the liquor shipped to Africa goes from the port of Boston!

"With the Nation exerting every energy and spending millions upon millions of dollars in building ships, which are imperative, why should any part of our shipping be diverted to the use of the liquor traffic?

"Shall Germany's strongest ally be allowed to continue the staggering waste in itself, and to spread waste in all directions? Shall Uncle Sam keep on fiddling while the Nation is burning with alcohol?"

10. What are the reliable statistics as to weakening of man power in military service through drink and attendant vices?

(a) How much does it hinder mobilization?

Russia found it delayed mobilization to so serious an extent at the beginning of the war with Japan that war prohibition preceded mobilization in the present war. The first blow was at the drink enemy in the rear.

(b) How much does it hinder marching?

The Washington Star, before the war, published the story of marching tests in the British Army: Three regiments were selected from each of several brigades for tests at different times, partly during maneuvers. In one, every man was forbidden to drink a drop while the test lasted; in the second, malt liquor only could be purchased; in the third, a sailor's ration of whisky was given to each man. The experiment was repeated in several instances where forced marches and other work was required. The whisky drinkers showed more dash at first, but generally in about four days showed signs of lassitude and abnormal fatigue. Those given malt liquors displayed less dash at first, but their endurance lasted somewhat longer. The abstainers, however, are said to have increased daily in alertness and staying powers. As a result of this experiment, the British war department decided that in the Soudan campaign not a single drop of stimulant should be allowed in camp, save for hospital use. The officers, including even the generals, could no longer enjoy their accustomed spirits, wines, and malt liquors at their mess tables. Liquid refreshment was to be limited to tea, oatmeal water, or lime juice, and Nile water. It is a great feather in the headgear of the advocates of military total abstinence that Lord Kitchener's Egyptian victory was won for him by an army of teetotalers, who made phenomenal forced marches through the desert, under the burning sun, and in a climate famed for its power to kill or prematurely age the unacclimated. Indeed, 'tis said that never has there been a British campaign occasioning so little sickness and profiting by so much endurance.

Gen. P. H. Ray, of the United States Army, says: "Several times within the last 10 years I have noticed, when extra and continued exertion has been required in marching, that in every instance the first men to drop out of the ranks and fall by the wayside have been the beer drinkers." British generals said the same in the Boer War.

(c) How much does drink impair marksmanship?

"Tests in the Swedish Army under Staff Surg. Mernetsch, showed that 1½ ounces of brandy, equivalent to less than one glass of beer, with each meal, reduced the accuracy of marksmen 30 per cent. (CONGRESSIONAL RECORD, Appendix.)

Experiments in the Swiss Army have shown that even a little wine lowers the record of marksmanship on a target. (World Book of Temperance, p. 50.) Admiral Jellicoe is quoted as saying that drink causes 30 per cent inefficiency in shooting (American Issue, Apr. 13, 1917).

(d) How much does drink and the vices to which it leads impair the soldier's health and general effectiveness and reliability? In a petition against the restoration of the Army beer saloon in 1912, signed by a score of the leading physicians of the United States, including Drs. Benedist, Boos, Cabot, Hastings, Hall, Kelly, Loeb, Lichty, Litchfield, Lipman, Montgomery, McFarland, Mann, Woolley, Wilson, and Fannagan, the following statements are made:

"It is not only in the state of drunkenness that men step into danger of incurring venereal diseases, but in the state of exhilaration and weakened self-control, which follows the use of comparatively small amounts of alcoholic liquors. Modern scientific investigation has shown clearly that one of the earliest effects of the use of alcoholic liquors is impaired self-control. This impairment of self-control not only follows the use of the stronger alcoholic liquors, but may also follow the use of beer.

"Army tests conducted by generals and Army medical officers, have repeatedly shown the disadvantage not only of the spirits drinker, but of even the beer drinker, in health, endurance, morale, and marksmanship—the qualities which are especially necessary for the efficiency of the soldier."

The present law forbidding the "sale" of liquors to American soldiers in uniform is good as far as it goes, but it does not forbid treating the soldier, nor does it forbid dealers in foreign lands to sell to him. Manifestly the soldier is very imperfectly protected until we all share his prohibition.

The British Army officers, before the war, to encourage soldiers to join the British Army Total Abstinence Association that they might so become more effective, published statistics yearly showing that the abstaining groups not only ranked higher in athletic tests, but also had a much lower record in the three black lists of disease, desertion, and disorder. (Many reasons why there should be a strong Army and Navy abstinence society in the United States, promoted by War and Navy Departments, are given in World Book of Temperance, pp. 289, 314, 315, 316, 330, 331, 347.)

It is often said that "the Germans fight pretty well even though they still get their beer and wine." But it is also said that the wine cellars of Belgium kept them from capturing Paris, besides disgracing their nation through drunken outrages; and it was the German Emperor himself who said in 1911, "The nation that drinks the least alcohol will win the next war," referring to the fact that nerve will win, and "alcohol kills nerve"—prophecies never more worthy of the consideration of war leaders in all armies than in the present "tug of war." Dr. J. H. Kellogg, of Battle Creek, long before the war, in a stereopticon lecture, picturing the leading nations as trees dying at the top, tested by the "Century run," the number of persons in each living 100 years or more, placed Bulgaria at the head, with one in a thousand living to a hundred years, and Germany at the foot with only one in seven hundred thousand. Germany then drank eight times as much beer per capita as Bulgaria, says Hayler's "Prohibition Advance in All Lands."

Many physicians testify that beer is more brutalizing than any other drink. Does that have a bearing on the unprecedented brutality that spares neither babes nor cathedrals?

(e) Does drink impair the military commander's efficiency?

Gen. O. O. Howard gives the following among other instances of defeat through drink in the American War for the Union: "In one of our great battles we suffered defeat, and many of us have believed that the mistake which caused the defeat was due to an excess of whisky drunk by the officer in command. I had the testimony from an officer who was with him that pitchers of liquor were brought to his table, and that he and those around him drank as freely from them as if they contained only water. The orders the commander gave were the direct opposite of what he would have given had he not been suddenly confused by drink. A heavy loss of men and material and a dreadful defeat for our cause was the result."

Even Homer, 10 centuries before Christ, knew that wine was harmful to the general's body and brain, as witness the following dialogue in the Iliad (vi, 258) between Hector's mother and her hero son:

"'Stay till I bring the cup with Bacchus crowned,
Then with a plenteous draught refresh thy soul
And draw new spirits from the generous bowl.'
'Far hence be Bacchus gifts!' Hector rejoined.
'Inflaming wine, pernicious to mankind,
Unnerves the limbs and dulls the noble mind:
Let chiefs abstain, and spare the sacred juice
To sprinkle to the gods—'tis fitter use.'"

(See also the story of the defeat of drunken chiefs by sober princes in I Kings xx, 13-21; cf. Proverbs xxxi, 4, 5.)

HOW DRINK WEAKENS MAN-POWER BEHIND THE LINES.

11. How much does drink reduce efficiency in munition work?

"British lads at the front were dying for lack of munitions, and yet during the month of March, 1915, the munition workers of Great Britain lost one-fourth of their entire time. With the fate of their country in their hands, they lost 670,000 hours, or 217 years of labor, and 82 per cent of this loss was due to drink." (Margaret Wintringer, after tour of investigation in Europe in Sunday School Times of Nov. 11, 1916, p. 666.)

CONSERVING PUBLIC ORDER.

14. We close saloons in riots—why not in war? Especially in a land in which there are not only many scattered immigrants but large colonies from all the races at war, a land in which we have already had bread riots and race riots and peace riots and draft riots, and are likely to have more, which will be less frequent and less dangerous if saloons are closed. When we entered the war Pittsburgh's mayor asked for a hundred more policemen to deal with expected riots.

Manifestly the best check on riots for the whole Nation is war prohibition.

H. A SQUARE DEAL FOR THE LIQUOR SELLER.

Usually when prohibition is enacted, a year is allowed for liquor dealers to get out of the business. As not more than three months could be allowed in such an emergency measure as war prohibition to save grain, the advocates of war prohibition have put into Webb-Thompson bill (H. R. 4540; S. 2327), which is the bill that war prohibition advocates all prefer, permission for redistillation of liquors on hand for munitions and other nonbeverage uses, with waiver of tax in such cases. Prof. Irving Fisher, chairman of war prohibition committee of sixty, shows that with such permission there would be no serious hardship put on distillers if they should be closed as a war necessity. He says:

"A recent circular issued by the Distillery Securities Corporation (40 Exchange Place, New York City, May 2, 1917) indicates that the demand for explosives for the war and the commercial uses for alcohol will tax the capacity of all the distilleries. In fact, we now need for our military preparations to put the full resources of distilleries to use in the manufacture of industrial alcohol. Each pound of smokeless powder requires two pounds of alcohol in its manufacture. Some big guns need for each shot as much alcohol as is contained in a couple of barrels of whisky and a score of barrels of beer. The stocks of spirits in bond should all be denatured and used for powder making, fuel, or other military purposes. The breweries can probably also find a way to be useful, e. g., in producing foods and other necessities and providing cold storage."

III. CONSTITUTIONAL SCOPE OF "WAR POWER."

Senator P. C. KNOX, ex-Attorney General, speaking on war bills in general (CONGRESSIONAL RECORD, May 14, 1917, p. 2265), said:

"The Constitution must always be construed in such a manner as to give effect to all of its powers. The war power in the Constitution stands upon the same authority as the other powers in the Constitution, and it is a sound and well-recognized rule of construction of any instrument that, if possible, it must be construed so as to give meaning to all of its parts. When the fathers said in the Constitution that Congress should have the right to declare war, and that it alone should have that power, they did not undertake to define what war is. They dealt with a status that was well known, and when the Constitution conferred upon Congress the right to declare war, it by necessary implication conferred upon Congress the right to do anything that in its judgment was necessary to carry that war to a successful conclusion.

"The war powers of the Constitution, in my opinion, are dormant until a status of war is declared by Congress, and then they may be exercised without limitation or qualification to the extent that the safety of the Nation demands. Of this Congress is the judge, except as the Commander in Chief of the Army and the Navy in the actual conduct of the war and in a case of great emergency or dire necessity may be compelled to act. By this construction of the Constitution the Constitution itself is preserved in its entirety. Indeed, the exercise of the war power is the only way in which the Constitution can be preserved. Madison said, and I quote from paper 41 in Lodge's edition of the Federalist: 'If a Federal Constitution could chain the ambition or set bounds to the exertions of all other nations, then indeed might it prudently chain the discretion of its own Government and set bounds to the exertions for its own safety.' But, as Madison said, 'It is in vain to oppose constitutional barriers to the impulse of self-preservation. It is worse than in vain, because it plants in the Constitution itself necessary usurpations of power, every precedent of which is a germ of unnecessary and multiplied repetitions.'

"Or, stated in simpler language, if you undertake to impose in the Constitution limitations on the power of self-preservation, the very fact that those limitations exist causes them to be set aside and creates a precedent for violation of the Constitution.

"Those are the views that I entertain, and they constitute the lamp by which my feet shall be guided in all war legislation."

Senator J. K. SHIELDS, CONGRESSIONAL RECORD, May 12, pages 2185–2186:

"I have come to the conclusion that the Congress has the power to legislate upon this subject. In other words, when this Nation is at war I believe that Congress has the power to provide for the conservation of the supply of foodstuffs under the control of the Nation and to use them for the benefit of the country in supporting and maintaining not only its armies but its inhabitants and its allies.

"Under Article I, section 8, paragraph 11, of the Constitution, we find that Congress is authorized to declare war. Paragraph 12 provides that Congress has power to raise and support armies. Paragraph 13 vests in Congress the power to provide and maintain a navy, and paragraph 15 the power to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions. Paragraph 18 of the same section authorizes Congress 'to make all laws which shall be necessary and proper for carrying into execution the foregoing powers.' Whatever is necessary, or some of our cases say 'convenient,' to carry into effect and execute any power vested in the Congress by the Constitution may be resorted to by Congress for that purpose."

(See p. 2193, CONGRESSIONAL RECORD, Senator T. J. WALSH'S quotations from Willoughby on the Constitution; also in hearings in Senate Committee on Agriculture and Forestry, part 5, brief of Wayne B. Wheeler.)

IV. WHO ASK FOR WAR PROHIBITION AND WHY.

First, we note, it is asked for by many influential leaders never before identified with the prohibition movement, who seek war prohibition primarily for the necessary conservation of our scanty foods and feeds, but also for efficiency in both the fighting Army and the industrial army that supplies munitions and rations.

On April 23, 1917, in a memorial to Congress, a thousand leaders of the Nation's thought and activity asked for prohibition of the manufacture, sale, import, export, and transport of alcoholic liquors, 800 of them urging immediate enactment of prohibition as a war measure.

No more representative list of names has ever been affixed to a petition to Congress. The signatures were collected under the direction of the war prohibition committee of 60, whose leading spirits are Gov. Foss, of Massachusetts, and Prof. Irving Fisher. Eminent professors of Harvard and Yale and other universities, scientists, railroad presidents, capitalists, socialists, men of letters, men learned in the law and in medicine are among the signers.

The list includes Dr. W. J. Mayo, of Rochester, Minn., eminent surgeon; Warren S. Stone, chief of the Brotherhood of Locomotive Engineers; Luther Burbank, horticulturist; Orville Wright, inventor of the aeroplane; and Gen. Nelson A. Miles. Capital is represented by such men as John D. Rockefeller, jr., and ex-Judge Elbert H. Gary, head of the Steel Corporation.

Among the other signers are Dr. James Brown Scott, secretary of the Carnegie Endowment for International Peace; John Burroughs, naturalist and author; Raymond Robins, social worker; Darwin P. Kingsley, president of New York Life Insurance Co.; Mark Sullivan, editor Collier's Weekly; F. A. Vanderlip, president National City Bank, New York; John Spargo, author and socialist; Dr. Richard M. Pearce, professor of research medicine, University of Pennsylvania; Simon Lake, president of the Lake Submarine Co.; Dr. Roswell C. McCrea, professor of economics and dean of the Wharton School of Finance and Commerce; Frederick Frelinghuysen, president of the Mutual Benefit Life Insurance Co.; Winston Churchill, novelist; Dr. F. W. Taussig, member of the Federal Tariff Commission.

President Frank J. Goodnow, of Johns Hopkins University, is also among those that have asked for war prohibition.

President George E. Vincent, then of the Minnesota State University, ex-Gov. Van Sant, ex-Gov. John Lind, and many other noted men of that State sent telegrams to President Wilson urging war prohibition. Dr. H. E. Robertson, professor of pathology at the State university, who was in Germany for 18 months after the beginning of the war, sent this telegram:

"That intoxication lowers vitality, resistance to disease, power to work, ability to recover from exhaustion, and general usefulness is beyond doubt. In my opinion no other measure could accomplish the moral and economic conservation of resources that would result from national prohibition at this time."

Ex-President Roosevelt said in Chicago April 28: "The world is facing a shortage of food. Therefore let us use all the grain we have for food and not for 'ntoxicants. Now that the war is on, let us forbid any grain or corn being used in the manufacture of intoxicating liquors."

William J. Bryan said: "I am in hearty sympathy with the effort to conserve the food supply by not allowing the bread supply to be shortened in order to lengthen the supply of alcohol. It is not wise to starve the people in order to make them drunk."

Many governors, several of them representatives of "wet" States, including Brumbaugh, of Pennsylvania, Boyle, of Nevada, Burnquist, of Minnesota, are among the eminent petitioners for this war measure. The following leaders of the Progressive Party, HIRAM W. JOHNSON, Raymond Robins, Harold L. Ickes, William Draper Lewis, Gifford Pinchot, MILES POINDEXTER, Ogden Reid, E. A. Vankenburgh, Chester Rowell, and William Allen White in a "Progressive Statement on the War" name as the ninth article in their war creed: "The conservation of grain, so far as possible, for food purposes."

Surgs. Gen. Gorgas, Braisted, and Blue, and other medical members of the Council of National Defense; the Philadelphia County Medical Society, and other influential medical bodies; the Kansas City Board of Trade, and many other commercial organizations; many agricultural granges; the Daughters of the American Revolution; the General Federation of Women's Clubs; and welfare societies of many names in many places have earnestly petitioned for war prohibition on economic, humanitarian, and patriotic grounds.

Second, the Federal Council of Churches, speaking for 18,000,000 members, mostly adults and more than one-third of them voters, sent to Congress an eminent deputation headed by Gov. Carl E. Milliken, of Maine, asking for war prohibition, with permission for redistilling liquors on hand for military and other nonbeverage uses. The same constituency was represented by the petition of the "legislative conference," composed of about all religious and reform organizations that favor national prohibition in war or peace, or both. This conference is not only for complete war prohibition but against increasing the liquor tax for war revenue.

PROTESTS AGAINST LIQUOR TAX AND EVASIONS AND COMPROMISES.

Christian citizens generally protest against any increase of the liquor tax. By making the Government more dependent on the liquor traffic for financial support it makes it more difficult to get those who are beneficiaries or manipulators of the taxes to kill the evil traffic. Some Senators and Congressmen fear that if they vote against any proposal to increase liquor taxes it will be construed as befriending the saloon. They need have no such fears, for all temperance bodies regard liquor revenue as an "entrenchment tax."

Many of the church people protest also against Congress evading its plain duty by adding the arduous responsibility of deciding whether the liquor traffic shall be suspended for the war to the heavy burdens already laid on the President.

Christian citizens also protest against the various compromises proposed. They would regard it as no adequate settlement—

To merely forbid the manufacture of grain into intoxicants, because such a law would allow fruits to be made into wine and brandy, and permit the consumption of the two years' stock of whisky on hand.

Or to forbid making any new liquors and leave stocks of liquors on hand to be used as beverages.

Or to suppress whisky and spare beer and wine—a century-old fallacy.

Or to reduce the percentage of alcohol in certain drinks, and the number of breweries and distilleries and saloons.

Or to conserve food only, and neglect to conserve man power and public order.

None of these acts would necessarily restrict either the consumption of intoxicants or the consequences. Such half measures usually satisfy no one and accomplish nothing worth while, and are justifiable only when a half measure is all that can be secured and further legislation is contemplated. It is far better to press one measure that covers the whole case in a defensible way.

What is asked by the great host of petitions might be accomplished by amending second Lever food bill in the House (or failing there, in the Senate) by substituting for the paragraph referring this strenuous legislative problem to the President a complete prohibition by Congress of the use of our American foodstuffs here or elsewhere in the manufacture of liquors, and limiting the "alcoholic content" of liquors on hand to an infinitestimal fraction. This double amendment would be "in order" even under the strict rules of the House, because the original bill authorizes the President to prohibit use of foodstuffs in making liquors, or restrict "alcoholic content." If anything essential to effectiveness was ruled out on Lever bill in the House, it could be added in the Senate, where an earlier opportunity to enact complete prohibition will be afforded when the war-revenue bill comes up, as the Finance Committee have adopted Gore amendments putting prohibitive tax on food materials used to manufacture whisky, with regulations of import and export, that open the way to enact complete war prohibition in one substitute amendment to the amendment that would make

the prohibitive tax apply to the material used in making all kinds of liquors, and commandeer all intoxicating beverages on hand at some near date to be redistilled for munitions and other war purposes.

The Senate Committee on Agriculture and Forestry reported favorably to the Senate on Flag Day a bill providing full war prohibition, which may be enacted separately if its purpose is not accomplished by amending food or revenue bill.

FALLACIES OF BREWERS' ADS AND STATEMENT TO CONGRESS.

First fallacy: "Beer contains only 3 to 4 per cent alcohol."

Answer: The Cyclopedia of Temperance and Prohibition, article on beer, gives the range of American lager beer as from 3 to 6 per cent. This is well known to all familiar with the subject; also that there are some beers still stronger, and if whisky was cut out and beer spared there is little doubt the strongest beers would flourish.

Second fallacy: "The claim that beer used in brewing is subtracted from the food supply is false."

Answer: Herbert C. Hoover, pages 380 and 417 in hearing before Senate Committee on Agriculture, said: "Barley mixed in the bread makes a bread which has as fine a texture as wheat * * * and would enable us to release just exactly that quantity of wheat. * * * There is a certain deduction from the barley—the total barley used in brewing—to account for the malt which is given back to the feed, but even then there is a large margin of saving if the brewing could be cut out. * * * The difference between the feeding value and the fodder and the intake of the brewery in grain means just that much more foodstuffs to our allies. * * * We could save from 50,000,000 to 60,000,000 bushels of grain on the brewing side after having allowed for the fodder proposition, and that grain is of utmost value to our allies." Prof. A. E. Taylor, professor of physiological chemistry, University of Pennsylvania, and crop expert, Department of Agriculture, says (Senate hearings, p. 438): "In my opinion, on the basis of crop prospects, the need of grain, and especially barley, which has proved itself valuable as a flour, is such as to make it imperative upon us after the present maltings in operation and under contract have been concluded, in about three months, to cease the manufacture of malt for internal or export trade for brewing."

Third fallacy: "The amount of grain used in beer and the land area upon which it is grown is too small to be considered in the food-conservation plan of this country."

Answer: The Brewers' Yearbook for 1914, page 156, says that the farm products used in the manufacture of liquors annually is equal to the total value of the crops in Maine, Connecticut, Delaware, Nevada, New Mexico, and Wyoming. The major part of this is used by brewers. The National Wholesale Liquor Dealers' Association in its anti-prohibition manual for 1916 says that the liquor traffic uses the product of 300,000 farmers. When Mr. Hoover says that all the crops that can be hoped for in all the world will not be enough to maintain more than three-fourths or four-fifths of the present "drastic ration" of our allies next year, we can hardly agree that the farm products of 300,000 farmers, or of six States, is to be neglected (Senate hearings, p. 376), or even the brewers' major part of it.

Fourth fallacy: "None of the European countries has stopped the brewing of beer."

Answer: An official statement of the exact action taken by Russia, which Mr. J. M. Hogge, M. P., of England, received from the British ambassador at Petrograd, was published in Scottish Woman's News for March, 1915, in which it is stated that "beer saloons" as well as wine shops and the Government vodka shops were closed at the very beginning of the war for the period of mobilization, except that wine and beer were allowed with meals in first-class restaurants and hotels. The beer allowed in the exceptional cases was to contain not over 3.7 per cent alcohol. "This order," said the British ambassador, "has been renewed from time to time and remains in force at the present moment." It may be interesting to note that the liquor revenue promptly sacrificed by Russia, $445,000,000, was even more than that in our pending war-revenue bill. The Pirogroff Society is the leading medical society of Russia. In the twenty-ninth number of the Russian Physician (1915) may be found the report which this society passed concerning alcohol and prohibition. In that report the following item about beer is to be found: "To the question, Shall we eliminate vodka but allow the return of beers? the answer is that the use of wine and beer can not be a remedy for alcoholism, because they lead to alcoholism. Beer and wine are dangerous because, being weaker and pleasanter to the taste, they attract women and children."

The Brewers' Journal of June 1, 1917, page 325, incidentally remarks: "In Russia the late Czar's prohibition decree has already been repealed in regard to beer and light wines," which implies that beer was under prohibition.

The London letter in the same issue of the Brewers' Journal says: "In most of the countries on the Continent the output of the breweries has been reduced to hardly more than is doled out with a measly hand to the armies in the field." As to Great Britain, this Brewers' Journal records a decrease in home consumption for year 1916–17 of 9,433,000 barrels of beer and 8,598,000 gallons of spirits. The letter forecasts "the probability of not being allowed to brew or sell any beer at all after November next."

About 3,000 of the most eminent Britons enrolled in the Strength of Britain Movement are campaigning persistently for complete war prohibition, as is shown in the famous book "Defeat or Victory?" War prohibition here might bring it there also and in France, where the American market for French wines is the chief obstacle to a victory (Senate hearing, p. 439) over what leaders there and in Britain have proclaimed "a greater foe than Germany." We should fight for all the allies against King Alcohol as well as the Kaiser.

Hear what Lloyd-George said: "We are fighting Germany, Austria, and drink; and, so far as I can see, the greatest of these three deadly foes is drink. I have the greatest convictions, based on accumulating evidence, that nothing but root-and-branch methods would be of the slightest avail in dealing with the evil. I believe it is the general feeling that if we are to settle with German militarism we must first of all settle with liquor."

Fifth fallacy: "The food value of barley used in brewing is absorbed by the consumer of beer."

Answer: "The statement so often attributed to the famous German chemist, Baron Von Liebig, 'Beer is liquid bread,' can not be located in any of Von Liebig's scientific works, and in Letter VI of his 'Letters on Chemistry,' to be found on page 22 of his 'Complete Works on Chemistry,' he says: 'Beer, wine, and spirits furnish no elements capable of entering into the composition of the blood, muscular fiber, or any part that is a vital principle.'" And still again, "If a man drinks daily 8 or 10 quarts of the best Bavarian beer, in the course of 12 months he will have taken into his stomach the nutritive constituents of a 5-pound loaf of bread."

WILBUR F. CRAFTS.

WASHINGTON, D. C., *June 15, 1917.*

AGRICULTURAL PRODUCTION.

Mr. KENYON. Mr. President, in view of the statement made by the Senator from Michigan, or rather the letter placed in the RECORD by him, I wish to ask the Senator from Oklahoma, the chairman of the Committee on Agriculture and Forestry, a question, if I can have his attention. The Senator from Michigan placed in the RECORD this morning a letter in the nature of a petition with reference to the work in plant diseases. I wish to ask the Senator from Oklahoma what has become of the bill passed by the Senate over two weeks ago known as the first food-control bill? At that time the Senate appointed conferees and asked for a conference with the House upon its amendments. I ask the Senator, who is the chairman of the Committee on Agriculture and Forestry, if any conferees have been appointed by the House, or if anything has been done to hurry that bill?

Mr. GORE. I may say that the Senator and the Senate will remember that June 1 the Senate took final action on the bill referred to by the Senator from Iowa, known as the food-production act. On June 1 the Senate passed the bill, and the request was made for a conference with the House of Representatives. On that day the Senate appointed five conferees.

I may say that no response has yet been made on the part of the House to that request on the part of the Senate. I understand that the bill is still with the Committee on Agriculture of the House of Representatives. I had a talk with the chairman of that committee this morning. He advised me it was his purpose to defer the appointment of conferees concerning that measure until the unfinished business in the House is completed, which is the so-called Lever bill, or the food-control bill.

I understand that the consideration of that measure will begin in the House of Representatives this morning. How long its consideration will require I do not know. The chairman of the House Committee on Agriculture told me that he would defer the appointment of the conferees until the pending measure in the House has been passed in that body. I took the liberty to suggest that he during this interval give some attention to the bill previously passed by the Senate, in order that it could be brought out of conference and speeded to final enactment. It was my impression, and I so advised the chairman, that there are Senators who will insist upon final action upon that measure before the Senate proceeds to final action upon the Lever bill, or the so-called food-control bill. That is the present status.

Mr. KENYON. I raised the question because I read in the papers every day of a delay in the Senate on this and other bills. I think the statement of the Senator from Oklahoma, the chairman of the committee, shows that the responsibility for the delay of that bill is not on the Senate.

Mr. SMITH of Georgia. I desire the attention of the Senator from Oklahoma.

Mr. GORE. The Senator always has my attention.

Mr. SMITH of Georgia. I would also be glad to suggest, if agreeable to the Senator from Oklahoma, that he call attention to the fact that the bill which we passed not only provided the funds to enable the Secretary of Agriculture to make the food census, to employ demonstrators, and to stimulate food production, but it also added an amendment carrying the provision of the bill of the Senator from Washington [Mr. POINDEXTER], perfected by the Judiciary Committee, a most complete plan of suppression of food manipulation between the time foodstuffs leave the farm and reach the consumer. I desire to call attention to the amendment suppressing speculation in foodstuffs, and I hope the Senate's action upon this subject will be still further brought to the attention of the public.

Mr. GORE. Mr. President, I merely wish to say in response to what the Senator from Georgia has said that the Senate was appealed to when that measure was the unfinished business not to delay final action upon it. In fact, I was somewhat impatient with the delay that was incident to the position of the Senate. The Senate, however, yielded to the importunities of myself and other supporters of the measure, and it was passed without any considerable delay. The reason for that insistence was the argument made by the department and others that unless the bill was double-quicked to passage the entire season of 1917 would be lost. The bill was primarily designed to stimulate production. Of course that stimulation must be afforded while the planting season is on hand. On that ground the

urgency of the measure was impressed on the Senate, and the Senate yielded to that urgency. For my own part I must disclaim any responsibility for the delay. Of course, the Senate must be acquitted of any responsibility for the delay that has been occasioned.

Mr. SMITH of Michigan. I should like to ask the Senator from Oklahoma if that bill did not contain a liberal appropriation for the investigation of plant diseases.

Mr. GORE. Yes, sir.

Mr. SMITH of Michigan. Does the Senator recall the amount? It was substantially $400,000, was it not?

Mr. GORE. I think it was considerably more than that. Altogether it carried something like $15,000,000, but distributed and devoted to different purposes, among them the purpose designated by the Senator from Michigan.

Mr. SMITH of Michigan. Is there any controversy between the two Houses on that question?

Mr. GORE. I will say to the Senator, I am unable to answer his question. No conferees have been appointed on the part of the House. Consequently we have not been able to canvass the differences on the amendments.

Mr. SMITH of Michigan. No conferees have been appointed by the House?

Mr. GORE. No, sir.

Mr. REED. Mr. President——

The VICE PRESIDENT. Does the Senator from Oklahoma yield to the Senator from Missouri?

Mr. GORE. I yield to the Senator from Missouri.

Mr. REED. I have the legislative record of this body, and I should like to put it into the RECORD now in concrete form for the edification of the Senate.

Mr. GORE. The Senator refers to the bill which has already passed the House and the Senate.

Mr. REED. Yes; House bill 4188, commonly known as the food-production bill. It was introduced in the House of Representatives on May 4, 1917, was reported from the House committee on May 7, 1917, and was passed by the House May 28, 1917. It was reported to the Senate on May 29, 1917—the very next day after it reached the Senate. It was passed by the Senate on June 1, 1917, with certain amendments.

Mr. GORE. That was the second legislative day.

Mr. REED. That was the second legislative day after the bill reached here.

The bill was immediately sent to the House of Representatives. When it reached there the following proceedings appear in the RECORD—I am simply going to read the salient parts—I quote from page 3521 of the RECORD of June 12.

Mr. LEVER. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H. R. 4188) to provide further for the national security and defense by stimulating agriculture and facilitating the distribution of agricultural products, disagree to all of the Senate amendments, and agree to the conference asked for by the Senate.

Then follows a colloquy, which I shall not read. Then Mr. CANNON said:

Mr. Speaker, I can not find the Senate amendments. I am informed they have not been printed, and in view of the fact that it is alleged that the present stock of corn and wheat, and so forth, is substantially exhausted and will be fully before the incoming crop comes, it seems to me now, as it did when the bill was being considered, that this census, so called, is a useless work, and for the present, until I can see the Senate amendments in print, I am not willing to give unanimous consent that the House disagree to the Senate amendments and ask for a conference.

The SPEAKER. The gentleman from Illinois objects.

I find nothing in the RECORD to indicate that this bill has been touched since that time, which was on June 12. How the bill came to lie there in the House of Representatives from the 2d of June to the 12th of June without any action I do not know. It was actually ordered printed, I think, by the House on the 5th of June. Of course, the bill is subject to be taken up in the other House at any time for the purpose of disagreeing to the Senate amendments, and whatever delay there is here is plainly the fault of the House.

I call the attention of the Senate to another fact. It is complained that our people are being despoiled by virtue of the prices which are being exacted for foodstuffs. The cry is made that we must turn over to some one man the right to fix the price on all the farmer produces; the right to practically take charge of all of the wheat and other food products of the country, and that the only relief we can have from these alleged terrible conditions is to create this food dictator, and to do it at once; and yet, Mr. President, in the hands of the chairman of the committee in the House of Representatives, who is the author of what is known as the Lever bill, rests this bill, which has been passed by the House, and which contains an amendment which completely answers the difficulty with reference to food speculators.

Then it is claimed that the principal evil consists in a lot of men getting hold of foods and speculating in them. Many of us thought that that could be reached under the present provisions of the antitrust laws—speaking of them all broadly—but lest that might not be true, or whether or not it were true, the Senator from Montana [Mr. WALSH] introduced an amendment to this bill, which had been introduced in the Senate some time before in the form of a separate bill by the Senator from Washington [Mr. POINDEXTER]. That provision I desire to read as a part of my remarks. It is as follows:

SEC. 10. That any person carrying on or employed in commerce among the several States or with foreign nations or with or in the Territories or other possessions of the United States in any article suitable for human food, fuel, or other necessaries of life, who, either in his individual capacity or as an officer, agent, or employee of a corporation, or member of a partnership, carrying on or employed in such trade, shall store, acquire, or hold, or who shall destroy or make away with any such article for the purpose of limiting the supply thereof to the public or affecting the market price thereof in such commerce, whether temporarily or otherwise, shall be deemed guilty of a felony, and be punished by imprisonment in the penitentiary for not less than six months nor more than three years: *Provided*, That any storing or holding by any farmer, gardener, or other person, of the products of any farm, garden, or other land cultivated by him, shall not be deemed to be a storing or holding within the meaning of this act: *Provided further*, That farmers and fruit growers, cooperative and other exchanges, or societies of a similar character, shall not be included within the provisions of this section: *And provided further*, That the foregoing shall not be construed to prohibit the acquiring, storing, or holding of such article for future sale for such advanced price as might prevail in the ordinary course of business, and in a free and unrestricted market.

Mr. President, there is a proposed statute, which has been passed by the Senate nearly, aye, more than two weeks ago, which would enable the Government to lay its hands upon every wretch who seeks to corner food products for the purpose of speculation or otherwise; who, instead of trading in them in good faith, enters upon any scheme, conspiracy, plan, or device looking to the extortion of unjust prices from the people of this country. It is in the hands, I repeat, of the author of the Lever bill; it has been in his hands, with nothing done, for two weeks; and the country has the right to know why it is that this important legislation is held up.

PRIVILEGE OF THE FLOOR.

Mr. OWEN. Mr. President, I desire to call up the conference report on House bill 3673, making amendments to the Federal reserve act.

Mr. McLEAN. Let me inquire if morning business has closed? If not, I ask for the regular order.

The VICE PRESIDENT. Morning business has not been concluded. The introduction of bills and joint resolutions is in order.

Mr. McLEAN. Mr. President, I have in my hand what is in substance a copy of a bill reported to the Senate in 1881 by a select committee composed of Senators George H. Pendleton, W. B. Allison, D. W. Voorhees, J. G. Blaine, M. C. Butler, J. J. Ingalls, O. H. Platt, and J. T. Farley. It embraces a subject which, it seems to me, might well be brought to the attention of Congress at this time. If we are to give absolute control over the production, distribution, and consumption of all the necessaries of life to a single executive department or to a single individual, I think we ought, if possible, to harmonize the thoughts and actions of those who make the law with those who interpret and administer it. I should not have dared to have brought the attention of Congress to this matter at this time if I had not discovered that in 1881 it received the hearty support of many of the prominent Democratic Members of this body. I introduce a bill and ask the Secretary to read it.

The bill (S. 2468) granting privilege of the floor and right to participate in debate to heads of Executive Departments and other officers, was read the first time by its title, and the second time at length, as follows:

Be it enacted, etc., That the Secretary of State, the Secretary of the Treasury, the Secretary of War, the Secretary of the Navy, the Secretary of Agriculture, the Secretary of the Interior, the Secretary of Commerce, the Secretary of Labor, the Attorney General, the Postmaster General, the governor of the Federal Reserve Board, the chairman of the United States Tariff Commission, the chairman of the Federal Trade Commission, the chairman of the United States Shipping Board, the chairman of the United States Bureau of Efficiency, and the chairman of the Civil Service Commission shall be entitled to occupy seats on the floor of the Senate and House of Representatives, with the right to participate in debate on matters relating to the business of their respective departments, under such rules as may be prescribed by the Senate and House respectively.

That the said secretaries and officers, the Attorney General, and the Postmaster General shall attend the sessions of the Senate on the opening of the sittings on Tuesday and Friday of each week, and the sessions of the House of Representatives on the openings of the sittings on Monday and Thursday of each week, to give information asked by resolution or in reply to questions which may be propounded to them under the rules of the Senate and House; and the Senate and House may by standing order dispense with the attendance of one or more of said officers on either of said days.

Mr. McLEAN. I ask that the bill be referred to the Committee on the Judiciary.

The VICE PRESIDENT. The bill will be referred to the Committee on the Judiciary.

Mr. OVERMAN. Mr. President, the bill should go to the Committee on Rules, as it proposes to change the rules of the Senate.

Mr. McLEAN. I will say to the Senator from North Carolina that in 1881 a similar bill was referred to a special select committee. It does not seem that that is now necessary, but I think the Committee on the Judiciary is a much larger committee than the Committee on Rules, and evidently is the appropriate committee to consider the subject.

Mr. BORAH. Mr. President, I think that the bill ought to go to the Committee on Privileges and Elections, because I do not presume that the American people will ever favor such a proposition unless these officials are elected to office. I presume, in these times of democratic propaganda, we ought to keep in touch with those who hold the franchise.

Mr. SMITH of Michigan. Why should it not go to the Committee on Civil Service and Retrenchment?

Mr. OVERMAN. It proposes to change the rules of the Senate, and it belongs to the Committee on Rules.

Mr. GALLINGER. Mr. President, ultimately the bill will go to the Committee on the Disposition of Useless Papers in the Executive Departments.

Mr. McLEAN. I will say, Mr. President, that I have no doubt that the same influences that defeated this bill in 1881 will defeat it now; but that does not convince me that it is not a matter that Congress should consider, and consider seriously. I think that in 1864 a similar bill was reported favorably to the House of Representatives. I am not at all particular as to what committee the bill is referred. I am perfectly willing that it shall go to the Committee on Rules, and as——

The VICE PRESIDENT. There have been so many suggestions made to the Chair as to where the bill should go that the Chair is somewhat in doubt.

Mr. McLEAN. I prefer to have it go to the Committee on the Judiciary, and so move.

The VICE PRESIDENT. It is moved that the bill be referred to the Committee on the Judiciary. The question is on that motion.

The motion was agreed to.

Mr. McLEAN. I ask to have printed in the RECORD, without reading, extracts from constitutional provisions of various countries on this subject, and also an extract from Story on the Constitution.

The VICE PRESIDENT. Without objection, it is so ordered.

The matter referred to is as follows:

CONSTITUTIONAL PROVISIONS OF VARIOUS COUNTRIES ON THIS SUBJECT.

AUSTRIA.

Fundamental law of December 21, 1867.—ART. 28. The members of the ministry are authorized to take part in all the deliberations of the delegates in the Reichsrath and to submit their propositions personally or through the medium of a delegate. They have the right to be heard whenever they demand it. The delegates have the right to address questions to the ministry or to any one of its members, to call for answers and explanations, and to nominate committees of inquiry, to which the ministers must furnish the necessary information.

BELGIUM.

Constitution of 1831.—SEC. II, ART. 88. The ministers have no deliberative voice in either chamber of the legislature, except where they are members thereof. They have the right to be present in each of the chambers and to be heard whenever they demand it. The chambers may require the presence of the ministers.

BRAZIL.

Constitution of 1824.—CHAP. IV, ART. 53. The executive power exercised through one of the ministers of state, the right to propose laws; and it is only after an examination made by a committee of the Chamber of Deputies in which the law is to originate that such proposition can be converted into a bill.

ART. 54. The ministers may discuss and defend the proposition after the report of the committee, but they can not vote unless they are senators or deputies.

DENMARK.

Fundamental law of 1865.—V, 59. The ministers in virtue of their duties have admission to the Rigsdag and have the right during discussions to participate in the debate as often as they please, while observing the established rules. They have no vote, except when they are members of the Rigsdag.

FRANCE.

Constitutional law of July 18, 1875.—6. The ministers have the right of being present in the two chambers and may be heard whenever they demand. They may cause themselves to be assisted by commissioners designated by decree of the President of the Republic for the discussion of any bill proposed.

GERMANY (EMPIRE OF).

Constitution of 1871.—The Bundesrath is presided over by the chancellor of the empire, who has also the right to be present at the deliberations of the Reichstag, or house of representatives, which is an elective body.

GREAT BRITAIN.

While the executive government is vested nominally in the Crown, it is practically in a committee of ministers known as the cabinet. All the acts of the ministry are liable to be questioned in Parliament; and, as they may require prompt explanation, it is essential that the members of the cabinet should have seats either in the upper or lower house, where they may constantly answer for the policy and action of the Government.

GREECE.

Constitution of 1864.—VII, 78. The ministers are admitted to the sessions of the chamber, and may be heard whenever they demand it. The ministers have no deliberate voice in the chamber except when they are members of the same. The chamber may require the presence of the ministers.

ITALY.

Constitution of 1848 (extended over the annexed Provinces of the Kingdom of Italy).—66. The ministers have no deliberate voice in either chamber except when they are members thereof; but they have constantly the right of being present, and may be heard as often as they demand.

NETHERLANDS.

Fundamental law of 1815 as amended in 1848.—SEC. IV, 89. Heads of the ministerial departments have the right of admission to the two chambers. They have only a deliberative share in legislation unless they are members of either house. They communicate to the chambers, either verbally or in writing, the information demanded whenever its communication is not judged contrary to the interest and safety of the Kingdom or of its possessions and colonies in the other parts of the world. They may to that end be invited by each of the two chambers to be present at their sessions.

NORWAY.

Fundamental law of 1814.—SEC. 76. Every law must be first proposed to the Odelsting (house of representatives), either by its own members or the Government, and in the latter case through the medium of a counselor of state.

PORTUGAL.

Constitutional charter of 1826 as amended in 1852.—IV, 46. The executive power exercised by one of the ministers of state, the right of proposing bills, which belongs to it in the preparation of laws, and it is only after an examination in that chamber which must originate it that such a proposition can take the form of a bill.

47. The ministers may discuss and defend a proposition after the report of a committee, but they can not vote unless they are peers or deputies.

PRUSSIA.

Constitution of 1850.—IV, 60. The ministers, as well as the state functionaries who represent them, have admission to both chambers, and may be heard whenever they demand it. Each chamber may require the presence of the ministers.

SPAIN.

Constitution of 1845, readopted in 1856.—IX, 64. The ministers may be senators or deputies, and may take part in discussions of the legislative assemblies; but they have no right to vote except in that chamber to which they belong.

SWEDEN.

Constitutional law of 1809 as amended up to 1866.—II, SEC. 53. The members of the council of state may assist at the sittings of each chamber, with the right of taking part in its deliberations, but not of voting unless they are members of the chamber.

SWEDEN AND NORWAY.

Act of union of 1815.—V. The minister of state of Norway and the two counselors of state who accompany the King shall have a seat and a deliberative voice in the Swedish council of state whenever affairs relative to the two Kingdoms are in question. If affairs relative to the two Kingdoms are brought before the King in the Norwegian council of state, at whatever time or place it may be assembled, three members of the Swedish council of state shall also have seats and right of deliberation thereon.

SWITZERLAND.

Constitution of 1874.—ART. 101. The members of the federal council have a consulting voice in the two sections of the Federal Assembly, as well as the right to introduce propositions upon subjects under deliberation.

CHILE.

In the deliberations of the National Congress it listens to the orators of the Senate and of the Government, who must be one minister, one counselor of state, and one secretary of state.

COLOMBIA.

It is the duty of the ministers to communicate to both chambers, with the approbation of the executive power, all the information which may be demanded of them, orally or in writing, on the affairs of their respective departments, except in cases where publicity would be improper.

COSTA RICA.

The secretaries of state may be present at the discussions in Congress or at either of the two houses, and they may take part in the same discussions, but they shall retire before the votes are cast.

GUATEMALA.

In Guatemala they fill both positions, and, in fact, they always go together; so that the secretaries of government fully share in the discussion and have both voice and vote.

NICARAGUA.

In Nicaragua there is absolute incompatibility, and practically the secretaries leave the cabinet in order to go to Congress at the time of meeting, returning, often, to the secretaryship as soon as the Congress finally adjourns.

HONDURAS.

In Honduras the secretaries can not be members of Congress, but they may take part in discussions of all measures pending before them.

SALVADOR.

The practice and the law are the same as in Honduras.

HAITI.

The secretary of state and the grand judge are the orators charged with representing the executive power, by oral communication, on the floor of the Senate and the Chamber of Communes.

Story on the Constitution, section 869 et seq.:

"The heads of the departments are, in fact, thus precluded from proposing or vindicating their own measures in the face of the nation in the course of debate, and are compelled to submit them to other men who are either imperfectly acquainted with the measures or are indifferent to their success or failure. Thus that open and public responsibility for measures which properly belongs to the executive in all governments, and especially in a republican government, as its greatest security and strength, is completely done away. The Executive is compelled to resort to secret and unseen influences, to private interviews, and private arrangements to accomplish its own appropriate purposes, instead of proposing and sustaining its own duties and measures by a bold and manly appeal to the Nation in the face of its representatives. One consequence of this state of things is that there never can be traced home to the Executive any responsibility for the measures which are planned and carried at its suggestion. Another consequence will be (if it has not yet been) that measures will be adopted or defeated by private intrigues, political combinations, irresponsible recommendations, and all the blandishments of office, and all the deadening weight of silent patronage. The Executive will never be compelled to avow or support any opinions. His ministers may conceal or evade any expression of their opinions. He will seem to follow when, in fact, he directs the opinions of Congress. He will assume the air of a dependent when, in fact, his spirit and his wishes pervade the whole system of legislation. If corruption ever eats its way silently into the vitals of this Republic it will be because the people are unable to bring responsibility home to the Executive through his chosen ministers. They will be betrayed when their suspicions are most lulled by the Executive under the disguise of an obedience to the will of Congress. If it would not have been safe to trust the heads of departments, as representatives, to the choice of the people as their constituents, it would have been at least some gain to have allowed them seats, like Territorial Delegates, in the House of Representatives, where they might freely debate without a title to vote.

"In such an event their influence, whatever it would be, would be seen and felt and understood, and on that account would have involved little danger and more searching jealousy and opposition, whereas it is now secret and silent, and from that very cause may become overwhelming. One other reason in favor of such a right is that it would compel the Executive to make appointments for the high departments of Government, not from personal or party favorites, but from statesmen of high public character, talent, experience, and elevated services; from statesmen who had earned public favor and could command public confidence. At present gross incapacity may be concealed under official forms, and ignorance silently escape by shifting the labors upon more intelligent subordinates in office. The Nation would be, on the other plan, better served and the Executive sustained by more masculine eloquence as well as more liberal learning. * * * There can be no danger that a free people will not be sufficiently wakeful over their rulers and their acts and opinions when they are known and avowed, or that they will not find Representatives in Congress ready to oppose improper measures or sound the alarm upon arbitrary encroachments. The real danger is when the influence of the rulers is at work in secret and assumes no definite shape; when it guides with silent and irresistible sway, and yet covers itself under the forms of popular opinion or independent legislation; when it does nothing, yet accomplishes everything."

AMENDMENT OF FEDERAL RESERVE ACT—CONFERENCE REPORT.

Mr. OWEN. Mr. President I ask the Chair to lay before the Senate the conference report on House bill 3673, to amend the Federal reserve act as amended.

The VICE PRESIDENT. Is there objection? The Chair hears none.

The Senate proceeded to consider the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 3673) to amend the act approved December 23, 1913, known as the Federal reserve act as amended by the acts of August 4, 1914, August 15, 1914, March 3, 1915, and September 7, 1916.

The VICE PRESIDENT. This report has been printed and is on the table of every Senator. Is it desired that the Secretary read the entire report?

Mr. HARDWICK. Mr. President, there is one part of the report about which there will be some controversy, and which I should like to have read.

The VICE PRESIDENT. The Chair did not want to stop the reading except to save time.

Mr. HARDWICK. I think perhaps the part of the report on page 4, being section 4, should be read.

Mr. OWEN. If there is no objection, I move that the reading of the report in full be dispensed with. I think everyone understands it.

The VICE PRESIDENT. The Senator from Georgia wants a part of it read.

Mr. HARDWICK. I should like to have section 4 read. I do not care as to the rest of the report.

The VICE PRESIDENT. The Secretary will read section 4.

The Secretary read section 4.

The report of the committee of conference in full is as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 3673) to amend the act approved December 23, 1913, known as the Federal reserve act, as amended by the acts of August 4, 1914; August 15, 1914; March 3, 1915; and September 7, 1916, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate, and agree to the same with an amendment as follows: In lieu of the amendment proposed by the Senate insert the following:

"That section 3 of the act known as the Federal reserve act be amended and reenacted so as to read as follows:

"'SEC. 3. The Federal Reserve Board may permit or require any Federal reserve bank to establish branch banks within the Federal reserve district in which it is located or within the district of any Federal reserve bank which may have been suspended. Such branches, subject to such rules and regulations as the Federal Reserve Board may prescribe, shall be operated under the supervision of a board of directors to consist of not more than seven nor less than three directors, of whom a majority of one shall be appointed by the Federal reserve bank of the district, and the remaining directors by the Federal Reserve Board. Directors of branch banks shall hold office during the pleasure of the Federal Reserve Board.'

"SEC. 2. That section 4 in the paragraph relating to the appointment of Class C directors and prescribing their duties be amended and reenacted so as to read as follows:

"'Class C directors shall be appointed by the Federal Reserve Board. They shall have been for at least two years residents of the district for which they are appointed, one of whom shall be designated by said board as chairman of the board of directors of the Federal reserve bank and as "Federal reserve agent." He shall be a person of tested banking experience, and in addition to his duties as chairman of the board of directors of the Federal reserve bank he shall be required to maintain, under regulations to be established by the Federal Reserve Board, a local office of said board on the premises of the Federal reserve bank. He shall make regular reports to the Federal Reserve Board and shall act as its official representative for the performance of the functions conferred upon it by this act. He shall receive an annual compensation to be fixed by the Federal Reserve Board and paid monthly by the Federal reserve bank to which he is designated. One of the directors of class C shall be appointed by the Federal Reserve Board as deputy chairman to exercise the powers of the chairman of the board when necessary. In case of the absence of the chairman and deputy chairman, the third-class C director shall preside at meetings of the board.

"'Subject to the approval of the Federal Reserve Board, the Federal reserve agent shall appoint one or more assistants. Such assistants, who shall be persons of tested banking experience, shall assist the Federal reserve agent in the performance of his duties and shall also have power to act in his name and stead during his absence or disability. The Federal Reserve Board shall require such bonds of the assistant Federal reserve agents as it may deem necessary for the protection of the United States. Assistants to the Federal reserve agent shall receive an annual compensation, to be fixed and paid in the same manner as that of the Federal reserve agent.'

"SEC. 3. That section 9 be amended and reenacted so as to read as follows:

"'SEC. 9. Any bank incorporated by special law of any State, or organized under the general laws of any State or of the United States, desiring to become a member of the Federal Reserve System, may make application to the Federal Reserve Board, under such rules and regulations as it may prescribe, for the right to subscribe to the stock of the Federal reserve bank organized within the district in which the applying bank is located. Such application shall be for the same amount of stock that the applying bank would be required to subscribe to as a national bank. The Federal Reserve Board, subject to such conditions as it may prescribe, may permit the applying bank to become a stockholder of such Federal reserve bank.

"'In acting upon such applications the Federal Reserve Board shall consider the financial condition of the applying bank, the general character of its management, and whether or not the corporate powers exercised are consistent with the purposes of this act.

"'Whenever the Federal Reserve Board shall permit the applying bank to become a stockholder in the Federal reserve bank of the district its stock subscription shall be payable on call of the Federal Reserve Board, and stock issued to it shall be held subject to the provisions of this act.

"'All banks admitted to membership under authority of this section shall be required to comply with the reserve and capital requirements of this act and to conform to those provisions of law imposed on national banks which prohibit such banks from

lending on or purchasing their own stock, which relate to the withdrawal or impairment of their capital stock, and which relate to the payment of unearned dividends. Such banks and the officers, agents, and employees thereof shall also be subject to the provisions of and to the penalties prescribed by section 5209 of the Revised Statutes, and shall be required to make reports of condition and of the payment of dividends to the Federal reserve bank of which they become a member. Not less than three of such reports shall be made annually on call of the Federal reserve bank on dates to be fixed by the Federal Reserve Board. Failure to make such reports within 10 days after the date they are called for shall subject the offending bank to a penalty of $100 a day for each day that it fails to transmit such report; such penalty to be collected by the Federal reserve bank by suit or otherwise.

"'As a condition of membership such banks shall likewise be subject to examinations made by direction of the Federal Reserve Board or of the Federal reserve bank by examiners selected or approved by the Federal Reserve Board.

"'Whenever the directors of the Federal reserve bank shall approve the examinations made by the State authorities, such examinations and the reports thereof may be accepted in lieu of examinations made by examiners selected or approved by the Federal Reserve Board: *Provided, however*, That when it deems it necessary the board may order special examinations by examiners of its own selection and shall in all cases approve the form of the report. The expenses of all examinations, other than those made by State authorities, shall be assessed against and paid by the banks examined.

"'If at any time it shall appear to the Federal Reserve Board that a member bank has failed to comply with the provisions of this section or the regulations of the Federal Reserve Board made pursuant thereto, it shall be within the power of the board after hearing to require such bank to surrender its stock in the Federal reserve bank and to forfeit all rights and privileges of membership. The Federal Reserve Board may restore membership upon due proof of compliance with the conditions imposed by this section.

"'Any State bank or trust company desiring to withdraw from membership in a Federal reserve bank may do so, after six months' written notice shall have been filed with the Federal Reserve Board, upon the surrender and cancellation of all of its holdings of capital stock in the Federal reserve bank: *Provided, however*, That no Federal reserve bank shall, except under express authority of the Federal Reserve Board, cancel within the same calendar year more than 25 per cent of its capital stock for the purpose of effecting voluntary withdrawals during that year. All such applications shall be dealt with in the order in which they are filed with the board. Whenever a member bank shall surrender its stock holdings in a Federal reserve bank, or shall be ordered to do so by the Federal Reserve Board, under authority of law, all of its rights and privileges as a member bank shall thereupon cease and determine, and after due provision has been made for any indebtedness due or to become due to the Federal reserve bank it shall be entitled to a refund of its cash-paid subscription with interest at the rate of one-half of 1 per cent per month from date of last dividend, if earned, the amount refunded in no event to exceed the book value of the stock at that time, and shall likewise be entitled to repayment of deposits and of any other balance due from the Federal reserve bank.

"'No applying bank shall be admitted to membership in a Federal reserve bank unless it possesses a paid-up, unimpaired capital sufficient to entitle it to become a national banking association in the place where it is situated under the provisions of the national-bank act.

"'Banks becoming members of the Federal Reserve System under authority of this section shall be subject to the provisions of this section and to those of this act which relate specifically to member banks, but shall not be subject to examination under the provisions of the first two paragraphs of section 5240 of the Revised Statutes as amended by section 21 of this act. Subject to the provisions of this act and to the regulations of the board made pursuant thereto, any bank becoming a member of the Federal Reserve System shall retain its full charter and statutory rights as a State bank or trust company, and may continue to exercise all corporate powers granted it by the State in which it was created, and shall be entitled to all privileges of member banks: *Provided, however*, That no Federal reserve bank shall be permitted to discount for any State bank or trust company notes, drafts, or bills of exchange of any one borrower who is liable for borrowed money to such State bank or trust company in an amount greater than 10 per cent of the capital and surplus of such State bank or trust company, but the discount of bills of exchange drawn against actually existing value and the discount of commercial or business paper actually owned by the person negotiating the same shall not be considered as borrowed money within the meaning of this section. The Federal reserve bank, as a condition of the discount of notes, drafts, and bills of exchange for such State bank or trust company, shall require a certificate of guaranty to the effect that the borrower is not liable to such bank in excess of the amount provided by this section, and will not be permitted to become liable in excess of this amount while such notes, drafts, or bills of exchange are under discount with the Federal reserve bank.

"'It shall be unlawful for any officer, clerk, or agent of any bank admitted to membership under authority of this section to certify any check drawn upon such bank unless the person or company drawing the check has on deposit therewith at the time such check is certified an amount of money equal to the amount specified in such check. Any check so certified by duly authorized officers shall be a good and valid obligation against such bank, but the act of any such officer, clerk, or agent in violation of this section may subject such bank to a forfeiture of its membership in the Federal Reserve System upon hearing by the Federal Reserve Board.'

"SEC. 4. That the first paragraph of section 13 be further amended and reenacted so as to read as follows:

"'Any Federal reserve bank may receive from any of its member banks, and from the United States, deposits of current funds in lawful money, national-bank notes, Federal reserve notes, or checks and drafts, payable upon presentation, and also, for collection, maturing notes and bills; or, solely for purposes of exchange or of collection, may receive from other Federal reserve banks deposits of current funds in lawful money, national-bank notes, or checks upon other Federal reserve banks, and checks and drafts, payable upon presentation within its district, and maturing notes and bills payable within its district; or, solely for the purposes of exchange or of collection, may receive from any nonmember bank or trust company deposits of current funds in lawful money, national-bank notes, Federal reserve notes, checks and drafts payable upon presentation, or maturing notes and bills: *Provided*, Such nonmember bank or trust-company maintains with the Federal reserve bank of its district a balance sufficient to offset the items in transit held for its account by the Federal reserve bank: *Provided further*, That nothing in this or any other section of this act shall be construed as prohibiting a member or nonmember bank from making reasonable charges, to be determined and regulated by the Federal Reserve Board, but in no case to exceed 10 cents per $100 or fraction thereof, based on the total of checks and drafts presented at any one time, for collection or payment of checks and drafts and remission therefor by exchange or otherwise; but no such charges shall be made against the Federal reserve banks.'

"SEC. 5. That the fifth paragraph of section 13 be further amended and reenacted so as to read as follows:

"'Any member bank may accept drafts or bills of exchange drawn upon it having not more than six months sight to run, exclusive of days of grace, which grow out of transactions involving the importation or exportation of goods; or which grow out of transactions involving the domestic shipment of goods provided shipping documents conveying or securing title are attached at the time of acceptance; or which are secured at the time of acceptance by a warehouse receipt or other such document conveying or securing title covering readily marketable staples. No member bank shall accept, whether in a foreign or domestic transaction, for any one person, company, firm, or corporation to an amount equal at any time in the aggregate to more than 10 per cent of its paid-up and unimpaired capital stock and surplus, unless the bank is secured either by attached documents or by some other actual security growing out of the same transaction as the acceptance; and no bank shall accept such bills to an amount equal at any time in the aggregate to more than one-half of its paid-up and unimpaired capital stock and surplus: *Provided, however*, That the Federal Reserve Board, under such general regulations as it may prescribe, which shall apply to all banks alike regardless of the amount of capital stock and surplus, may authorize any member bank to accept such bills to an amount not exceeding at any time in the aggregate 100 per cent of its paid-up and unimpaired capital stock and surplus: *Provided, further*, That the aggregate of acceptances growing out of domestic transactions shall in no event exceed 50 per cent of such capital stock and surplus.'

"SEC. 6. That section 14, subsection (e), be amended and reenacted so as to read as follows:

"'(e) To establish accounts with other Federal reserve banks for exchange purposes and, with the consent or upon the order and direction of the Federal Reserve Board and under regulations to be prescribed by said board, to open and maintain ac-

counts in foreign countries, appoint correspondents, and establish agencies in such countries wheresoever it may be deemed best for the purpose of purchasing, selling, and collecting bills of exchange, and to buy and sell, with or without its indorsement, through such correspondents or agencies, bills of exchange (or acceptances) arising out of actual commercial transactions which have not more than 90 days to run, exclusive of days of grace, and which bear the signature of two or more responsible parties, and, with the consent of the Federal Reserve Board, to open and maintain banking accounts for such foreign correspondents or agencies. Whenever any such account has been opened or agency or correspondent has been appointed by a Federal reserve bank, with the consent of or under the order and direction of the Federal Reserve Board, any other Federal reserve bank may, with the consent and approval of the Federal Reserve Board, be permitted to carry on or conduct, through the Federal reserve bank opening such account or appointing such agency or correspondent, any transaction authorized by this section under rules and regulations to be prescribed by the board.'

"SEC. 7. That section 16, paragraphs 2, 3, 4, 5, 6, and 7 be further amended and reenacted so as to read as follows:

"'Any Federal reserve bank may make application to the local Federal reserve agent for such amount of the Federal reserve notes hereinbefore provided for as it may require. Such application shall be accompanied with a tender to the local Federal reserve agent of collateral in amount equal to the sum of the Federal reserve notes thus applied for and issued pursuant to such application. The collateral security thus offered shall be notes, drafts, bills of exchange, or acceptances acquired under the provisions of section 13 of this act, or bills of exchange indorsed by a member bank of any Federal reserve district and purchased under the provisions of section 14 of this act, or bankers' acceptances purchased under the provisions of said section 14, or gold or gold certificates; but in no event shall such collateral security, whether gold, gold certificates, or eligible paper, be less than the amount of Federal reserve notes applied for. The Federal reserve agent shall each day notify the Federal Reserve Board of all issues and withdrawals of Federal reserve notes to and by the Federal reserve bank to which he is accredited. The said Federal Reserve Board may at any time call upon a Federal reserve bank for additional security to protect the Federal reserve notes issued to it.

"'Every Federal reserve bank shall maintain reserves in gold or lawful money of not less than 35 per cent against its deposits and reserves in gold of not less than 40 per cent against its Federal reserve notes in actual circulation: *Provided, however*, That when the Federal reserve agent holds gold or gold certificates as collateral for Federal reserve notes issued to the bank such gold or gold certificates shall be counted as part of the gold reserve which such bank is required to maintain against its Federal reserve notes in actual circulation. Notes so paid out shall bear upon their faces a distinctive letter and serial number which shall be assigned by the Federal Reserve Board to each Federal reserve bank. Whenever Federal reserve notes issued through one Federal reserve bank shall be received by another Federal reserve bank, they shall be promptly returned for credit or redemption to the Federal reserve bank through which they were originally issued or, upon direction of such Federal reserve bank, they shall be forwarded direct to the Treasury of the United States to be retired. No Federal reserve bank shall pay out notes issued through another under penalty of a tax of 10 per cent upon the face value of notes so paid out. Notes presented for redemption at the Treasury of the United States shall be paid out of the redemption fund and returned to the Federal reserve banks through which they were originally issued, and thereupon such Federal reserve bank shall, upon demand of the Secretary of the Treasury, reimburse such redemption fund in lawful money or, if such Federal reserve notes have been redeemed by the Treasurer in gold or gold certificates, then such funds shall be reimbursed to the extent deemed necessary by the Secretary of the Treasury in gold or gold certificates, and such Federal reserve bank shall, so long as any of its Federal reserve notes remain outstanding, maintain with the Treasurer in gold an amount sufficient in the judgment of the Secretary to provide for all redemptions to be made by the Treasurer. Federal reserve notes received by the Treasurer otherwise than for redemption may be exchanged for gold out of the redemption fund hereinafter provided and returned to the reserve bank through which they were originally issued, or they may be returned to such bank for the credit of the United States. Federal reserve notes unfit for circulation shall be returned by the Federal reserve agents to the Comptroller of the Currency for cancellation and destruction.

"'The Federal Reserve Board shall require each Federal reserve bank to maintain on deposit in the Treasury of the United States a sum in gold sufficient in the judgment of the Secretary of the Treasury for the redemption of the Federal reserve notes issued to such bank, but in no event less than 5 per cent of the total amount of notes issued less the amount of gold or gold certificates held by the Federal reserve agent as collateral security; but such deposit of gold shall be counted and included as part of the 40 per cent reserve hereinbefore required. The board shall have the right, acting through the Federal reserve agent, to grant, in whole or in part, or to reject entirely the application of any Federal reserve bank for Federal reserve notes; but to the extent that such application may be granted the Federal Reserve Board shall, through its local Federal reserve agent, supply Federal reserve notes to the banks so applying, and such bank shall be charged with the amount of notes issued to it and shall pay such rate of interest as may be established by the Federal Reserve Board on only that amount of such notes which equals the total amount of its outstanding Federal reserve notes less the amount of gold or gold certificates held by the Federal reserve agent as collateral security. Federal reserve notes issued to any such bank shall, upon delivery, together with such notes of such Federal reserve bank as may be issued under section 18 of this act upon security of United States 2 per cent Government bonds, become a first and paramount lien on all the assets of such bank.

"'Any Federal reserve bank may at any time reduce its liability for outstanding Federal reserve notes by depositing with the Federal reserve agent its Federal reserve notes, gold, gold certificates, or lawful money of the United States. Federal reserve notes so deposited shall not be reissued, except upon compliance with the conditions of an original issue.

"'The Federal reserve agent shall hold such gold, gold certificates, or lawful money available exclusively for exchange for the outstanding Federal reserve notes when offered by the reserve bank of which he is a director. Upon the request of the Secretary of the Treasury the Federal Reserve Board shall require the Federal reserve agent to transmit to the Treasurer of the United States so much of the gold held by him as collateral security for Federal reserve notes as may be required for the exclusive purpose of the redemption of such Federal reserve notes, but such gold when deposited with the Treasurer shall be counted and considered as if collateral security on deposit with the Federal reserve agent.

"'Any Federal reserve bank may at its discretion withdraw collateral deposited with the local Federal reserve agent for the protection of its Federal reserve notes issued to it and shall at the same time substitute therefor other collateral of equal amount with the approval of the Federal reserve agent under regulations to be prescribed by the Federal Reserve Board. Any Federal reserve bank may retire any of its Federal reserve notes by depositing them with the Federal reserve agent or with the Treasurer of the United States, and such Federal reserve bank shall thereupon be entitled to receive back the collateral deposited with the Federal reserve agent for the security of such notes. Federal reserve banks shall not be required to maintain the reserve or the redemption fund heretofore provided for against Federal reserve notes which have been retired. Federal reserve notes so deposited shall not be reissued except upon compliance with the conditions of an original issue.

"'All Federal reserve notes and all gold, gold certificates, and lawful money issued to or deposited with any Federal reserve agent under the provisions of the Federal reserve act shall hereafter be held for such agent, under such rules and regulations as the Federal Reserve Board may prescribe, in the joint custody of himself and the Federal reserve bank to which he is accredited. Such agent and such Federal reserve bank shall be jointly liable for the safe-keeping of such Federal reserve notes, gold, gold certificates, and lawful money. Nothing herein contained, however, shall be construed to prohibit a Federal reserve agent from depositing gold or gold certificates with the Federal Reserve Board, to be held by such board subject to his order, or with the Treasurer of the United States for the purposes authorized by law.'

"Sec. 8. That section 16 be further amended by adding at the end of the section the following:

"'That the Secretary of the Treasury is hereby authorized and directed to receive deposits of gold coin or of gold certificates with the Treasurer or any assistant treasurer of the United States when tendered by any Federal reserve bank or Federal reserve agent for credit to its or his account with the Federal Reserve Board. The Secretary shall prescribe by regulation the form of receipt to be issued by the Treasurer or Assistant Treasurer to the Federal reserve bank or Federal re-

serve agent making the deposit, and a duplicate of such receipt shall be delivered to the Federal Reserve Board by the Treasurer at Washington upon proper advices from any assistant treasurer that such deposit has been made. Deposits so made shall be held subject to the orders of the Federal Reserve Board and shall be payable in gold coin or gold certificates on the order of the Federal Reserve Board to any Federal reserve bank or Federal reserve agent at the Treasury or at the Subtreasury of the United States nearest the place of business of such Federal reserve bank or such Federal reserve agent: *Provided, however*, That any expense incurred in shipping gold to or from the Treasury or substreasuries in order to make such payments, or as a result of making such payments, shall be paid by the Federal Reserve Board and assessed against the Federal reserve banks. The order used by the Federal Reserve Board in making such payments shall be signed by the governor or vice governor, or such other officers or members as the board may by regulation prescribe. The form of such order shall be approved by the Secretary of the Treasury.

"'The expenses necessarily incurred in carrying out these provisions, including the cost of the certificates or receipts issued for deposits received, and all expenses incident to the handling of such deposits shall be paid by the Federal Reserve Board and included in its assessments against the several Federal reserve banks.

"'Gold deposits standing to the credit of any Federal reserve bank with the Federal Reserve Board shall, at the option of said bank, be counted as part of the lawful reserve which it is required to maintain against outstanding Federal reserve notes, or as a part of the reserve it is required to maintain against deposits.

"'Nothing in this section shall be construed as amending section 6 of the act of March 14, 1900, as amended by the acts of March 4, 1907, March 2, 1911, and June 12, 1916, nor shall the provisions of this section be construed to apply to the deposits made or to the receipts or certificates issued under those acts.'

"SEC. 9. That section 17 be amended and reenacted so as to read as follows:

"'SEC. 17. So much of the provisions of section 5159 of the Revised Statutes of the United States, and section 4 of the act of June 20, 1874, and section 8 of the act of July 12, 1882, and of any other provisions of existing statutes as require that before any national banking association shall be authorized to commence banking business it shall transfer and deliver to the Treasurer of the United States a stated amount of United States registered bonds, and so much of those provisions or of any other provisions of existing statutes as require any national banking association now or hereafter organized to maintain a minimum deposit of such bonds with the Treasurer is hereby repealed.'

"SEC. 10. That section 19 be further amended and reenacted so as to read as follows:

"'SEC. 19. Demand deposits within the meaning of this act shall comprise all deposits payable within 30 days, and time deposits shall comprise all deposits payable after 30 days, all savings accounts and certificates of deposit which are subject to not less than 30 days' notice before payment, and all postal savings deposits.

"'Every bank, banking association, or trust company which is or which becomes a member of any Federal reserve bank shall establish and maintain reserve balances with its Federal reserve bank as follows:

"'(a) If not in a reserve or central reserve city, as now or hereafter defined, it shall hold and maintain with the Federal reserve bank of its district an actual net balance equal to not less than 7 per cent of the aggregate amount of its demand deposits and 3 per cent of its time deposits.

"'(b) If in a reserve city, as now or hereafter defined, it shall hold and maintain with the Federal reserve bank of its district an actual net balance equal to not less than 10 per cent of the aggregate amount of its demand deposits and 3 per cent of its time deposits.

"'(c) If in a central reserve city, as now or hereafter defined, it shall hold and maintain with the Federal reserve bank of its district an actual net balance equal to not less than 13 per cent of the aggregate amount of its demand deposits and 3 per cent of its time deposits.

"'No member bank shall keep on deposit with any State bank or trust company which is not a member bank a sum in excess of 10 per cent of its own paid-up capital and surplus. No member bank shall act as the medium or agent of a nonmember bank in applying for or receiving discounts from a Federal reserve bank under the provisions of this act, except by permission of the Federal Reserve Board.

"'The required balance carried by a member bank with a Federal reserve bank may, under the regulations and subject to such penalties as may be prescribed by the Federal Reserve Board, be checked against and withdrawn by such member bank for the purpose of meeting existing liabilities: *Provided, however*, That no bank shall at any time make new loans or shall pay any dividends unless and until the total balance required by law is fully restored.

"'In estimating the balances required by this act, the net difference of amounts due to and from other banks shall be taken as the basis for ascertaining the deposits against which required balances with Federal reserve banks shall be determined.

"'National banks, or banks organized under local laws, located in Alaska or in a dependency or insular possession or any part of the United States outside the continental United States may remain nonmember banks, and shall in that event maintain reserves and comply with all the conditions now provided by law regulating them; or said banks may, with the consent of the Reserve Board, become member banks of any one of the reserve districts, and shall in that event take stock, maintain reserves, and be subject to all the other provisions of this act.'

"SEC. 11. That that part of section 22 which reads as follows: 'Other than the usual salary or director's fees paid to any officer, director, or employee of a member bank and other than a reasonable fee paid by said bank to such officer, director, or employee for service rendered to such bank, no officer, director, employee, or attorney of a member bank shall be a beneficiary of or receive, directly or indirectly, any fee, commission, gift, or other consideration for or in connection with any transaction or business of the bank,' be amended and reenacted so as to read as follows:

"'Other than the usual salary or director's fee paid to any officer, director, employee, or attorney of a member bank, and other than a reasonable fee paid by said bank to such officer, director, employee, or attorney for services rendered to such bank, no officer, director, employee, or attorney of a member bank shall be a beneficiary of or receive, directly or indirectly, any fee, commission, gift, or other consideration for or in connection with any transaction or business of the bank: *Provided, however*, That nothing in this act contained shall be construed to prohibit a director, officer, employee, or attorney from receiving the same rate of interest paid to other depositors for similar deposits made with such bank: *And provided further*, That notes, drafts, bills of exchange, or other evidences of debt executed or indorsed by directors or attorneys of a member bank may be discounted with such member bank on the same terms and conditions as other notes, drafts, bills of exchange, or evidences of debt upon the affirmative vote or written assent of at least a majority of the members of the board of directors of such member bank.'"

And the Senate agree to the same.

ROBT. L. OWEN,
G. M. HITCHCOCK,
GEO. P. MCLEAN,
Managers on the part of the Senate.

CARTER GLASS,
MICHAEL F. PHELAN,
EDMUND PLATT,
Managers on the part of the House.

Mr. OWEN. Mr. President, the only point, I believe, that will arouse any controversy in connection with the confirmation of the conference report is the fourth section, which involves the question of a charge upon checks.

The language of the amendment which was added in the Senate is as follows:

Provided further, That nothing in this or any other section of this act shall be construed as prohibiting a member or nonmember bank from making reasonable charges, but in no case to exceed 10 cents per $100 or fraction thereof, based on the total of checks and drafts presented at any one time, for collection or payment of checks and drafts and remission therefor by exchange or otherwise.

The conference committee made changes by inserting after the words "making reasonable charges" the phrase "to be determined and regulated by the Federal Reserve Board," and at the end of the amendment inserting the words "but no such charges shall be made against the Federal reserve banks."

The Federal reserve act, of which this is an amendment, reads as follows:

Every Federal reserve bank shall receive on deposit at par from member banks or from Federal reserve banks checks and drafts drawn upon any of its depositors, and when remitted by a Federal reserve bank, checks and drafts drawn by any depositor in any other Federal reserve bank or member bank upon funds to the credit of said depositor in said reserve bank or member bank. Nothing herein contained shall be construed as prohibiting a member bank from charging its actual expense incurred in collecting and remitting funds, or for exchange sold to its patrons. The Federal Reserve Board shall, by rule, fix the charges to be collected by the member banks from its patrons whose

checks are cleared through the Federal reserve bank and the charge which may be imposed for the service of clearing or collection rendered by the Federal reserve bank.

Mr. SMITH of Michigan. Mr. President, is the Senator reading from the conference report?

Mr. OWEN. I read the Federal reserve act in its relation to the conference report. Now, the conference report practically modifies the Federal reserve act by permitting charges to be made on checks, but providing that the charge shall not be made against the Federal reserve banks, and providing that the Federal Reserve Board shall regulate the extent to which these charges are made, but not to exceed 10 cents a hundred dollars.

Mr. SMITH of Michigan. Mr. President, if I understand the Senator, the Federal reserve bank has no right, under this bill as it is now reported, to make any charge of the character described by the Senator from Oklahoma.

Mr. OWEN. No; it clears at par, by law.

Mr. SMITH of Michigan. And a member bank has no right to make a charge against the Federal reserve bank.

Mr. OWEN. The member bank, in remitting to the Federal reserve bank for a bunch of checks sent to that bank, has no right, under the present system, to charge the Federal reserve bank for such remittance. It sends its check on the Federal reserve bank to settle such daily checks remitted by the Federal reserve bank.

Mr. SMITH of Michigan. Now, suppose a member bank is clearing the checks of a State bank. Has the member bank, the national bank, the right to make a charge for that service?

Mr. OWEN. I should say that it would have a right to make a charge against the State bank by some mutual arrangement.

Mr. SMITH of Michigan. But I do not understand how it would be within the power of Congress to fix rules for State banks, desirable as that might be——

Mr. OWEN. Congress does not deal with the nonmember bank.

Mr. SMITH of Michigan (continuing). Or charge for the clearance of checks in a State institution.

Mr. OWEN. It is the intention of this amendment to the Federal reserve act to permit State banks and trust companies to open accounts with the Federal reserve bank and clear through the Federal reserve bank, at their option, if they choose to carry a balance for that purpose.

Mr. SMITH of Michigan. Is that provided for in the bill?

Mr. OWEN. That is provided for in the bill.

Mr. SMITH of Michigan. Any State bank?

Mr. OWEN. Any State bank may open an account with the Federal reserve bank, and draw checks against it, and clear against it.

Mr. SMITH of Michigan. Of course, Mr. President, it is a very serious burden to the business men of the country if they are obliged to pay an excessive charge for the clearance of their checks, and, as I understand, this bill as it now comes from conference is intended to remedy that situation.

Mr. OWEN. Yes. I am opposed to interfering with the clearing of checks at par by the reserve banks.

Mr. SMITH of Michigan. It at least opens the door for them, so far as the Federal reserve banks are concerned, and checks will be cashed at par, with the approval of the Federal Reserve Board.

Mr. OWEN. Yes.

Mr. SMITH of Michigan. That is the situation in which we find ourselves under this bill as amended.

Mr. OWEN. Yes. Of course a bank can take a foreign check and charge for taking it, if it pleases, and I do not object to this.

Mr. SMITH of Michigan. Personally I do not want to see business men burdened by any unnecessary charge of that kind.

Mr. OWEN. This amendment arose because of the complaint on the part of some of the country banks that they were not getting a sufficient compensation for checks which they remitted. That is where the complaints arose. Of course the business men would rather have their checks cleared at par everywhere; but a country bank that makes a remittance has the right, under the existing statute, to make a charge for it, if it sees fit to do it. Some of them do that and some of them do not. It depends upon conditions. Seven thousand six hundred and thirty-four national banks are now clearing at par through the reserve banks.

Mr. SMITH of Michigan. But the Senator, I think, agrees with me that Congress would be powerless to regulate that charge so far as it relates to State banks operating under State laws. They must account to the State and be governed by State legislation.

Mr. OWEN. Yes; I want to say this: It is a very important matter not to interfere with the clearing functions of the Federal reserve banks. I had a letter from the President with regard to that matter last May which it may be of interest to the Senate to hear. I will put it in the RECORD, if it be agreeable.

Mr. SMITH of Michigan. I hope the Senator will read it.

Mr. OWEN. He said:

MY DEAR SENATOR: I have been a good deal disturbed to learn of the proposed amendment to the Federal reserve act which seems to contemplate charging the Federal reserve banks for payment of checks cleared by them, or charging the payee of such checks passing through the reserve banks with a commission. I should regard such a provision as most unfortunate and as almost destructive of the function of the Federal reserve banks as a clearing house for member banks, a function which they have performed with so much benefit to the business of the country.

I hope most sincerely that this matter may be adjusted without interfering with this indispensable clearing function of the banks.

Sincerely, yours,

WOODROW WILSON.

Mr. PAGE. What is the date of that letter?

Mr. OWEN. May 29. Since that time the conferees have put on an amendment to this proposed amendment that these charges shall not be made against the reserve banks. The banks can charge each other for making these accommodations if they like, and they can adjust that to their own satisfaction with one another without troubling the reserve banks.

Mr. PAGE. Mr. President——

Mr. OWEN. I yield to the Senator from Vermont.

Mr. PAGE. May I ask the Senator whether that particular language does not really neutralize every benefit which the country bank is receiving in the way of collection? In other words, will it be practicable to collect 10, 20, or 50 cents, or even $1 or $2 from different banks scattered around the country if they are forced to look to these local banks for their collection charges?

Mr. OWEN. There is no reason why they should not adjust these accounts among themselves if they want to.

Mr. PAGE. Well, that will really be the result, will it not?

Mr. OWEN. They can do that if they wish to. They can do that under the existing law.

Mr. PAGE. Will it be practicable for a bank in Vermont, for instance, to collect from a bank in Oklahoma 10 or 20 or 50 cents for the collection of checks?

Mr. OWEN. They would undoubtedly find it more convenient to adjust these accounts monthly, and not follow up an account of 5 or 10 cents individually, when taking a check against an alien or distant bank many banks charge the person so accommodated; but taking the volume of business in a month, it will amount to a considerable item. As far as the Federal reserve banks are concerned, they found as an actual fact that the cost of clearing checks going through the Federal reserve banks, for clerical services and stationery, amounted to 1½ cents each. Whether it was a check of $10 or a thousand dollars, they found that the cost amounted to only a cent and a half, on an average; and now they distribute that cost against the member banks according to the volume of checks which are cleared for those banks.

Mr. SMITH of Michigan. That is, the postage and the clerical work necessary to the entry of these checks?

Mr. OWEN. Yes; it amounts to only 1½ cents each.

I think I have nothing further to say with regard to the matter, Mr. President.

Mr. PAGE. Mr. President, I confess that I am not satisfied with the proposed amendment. While it seems to allow the country bank to make a charge not exceeding one-tenth of 1 per cent for collecting an uncurrent check, it virtually compels the country bank to look to a bank in a far-off city. For instance, a Vermont bank may cash a check for some one in Oklahoma. The check may be for $100 or $200, involving a charge of 10 or 20 cents. That becomes a debt from the Oklahoma bank to the Vermont bank for a very small sum. But I am going to say, in view of the conditions that surround us just at this time, and inasmuch as this applies only to national banks, except as the State banks may conclude to accept the provisions, that purely as a matter of patriotism and with full knowledge and understanding, that our State banks are compelled to surrender a very valuable privilege, I am going to support this amendment. I do it under protest. I do it not because I believe I ought but because, in view of the conditions that surround us, I do not want to prolong the discussion of this bill; and I am rather inclined to accept it for that reason.

Mr. VARDAMAN. Mr. President, what are the conditions that make it necessary for the Senator to surrender to the conferees who have gone contrary to the instructions of the Senate on this matter?

Mr. PAGE. Well, Mr. President, the conditions that surround the Federal reserve banks to-day are, I think, very serious. They were discounting a comparatively small sum a month

ago. I do not recall the amount, but, I understand, within the last 30 days they have increased those discounts by some 300 to 400 per cent.

Mr. VARDAMAN. Does this impose any burden upon the banks?

Mr. PAGE. No; but I should like to see the bill passed, because it is a patriotic measure, and it ought to pass, and pass quickly.

Mr. HARDWICK. The bill can pass just as well with this amendment as without it, can it not?

Mr. PAGE. Yes; unless this amendment calls for a long debate, as it did the other day.

Mr. HARDWICK. Well, a few minutes, a few hours, or even a day is not a matter of great importance about this, is it?

Mr. PAGE. Well, I want to say that this amendment applies only to national banks; and I believe that whether the national banks are or are not willing to accept this provision the power of the Federal reserve banks over the national banks is sufficient so that in some way or other the national banks are going to be forced into whatever the Federal reserve banks think should be done. I believe that it is really a transference of a great burden from the city merchants to the country banks, but it is not a burden transferred to the State banks; and so far as they are concerned they may or may not, as they please, come into this arrangement. In view of the fact that it applies only to national banks who are, I hope, going to receive some great benefits from the Federal Reserve System, I think perhaps we ought to consent to the proposed arrangement.

Now, as to those benefits: I know that the country national banks have taken hundreds of millions of the liberty bonds. The result is that many of them will have their deposits drawn down so low by those who withdraw their money to put into these liberty bonds that they must borrow in very large sums of the Federal reserve bank. The amount will be so large that I do not know but that it is going to be a severe strain upon the Federal Reserve System, and in view of this fact I have thought it best to yield my convictions in regard to this matter of collection on checks and to aid in its prompt passage without further controversy about what has come to be a really unimportant feature of the bill.

Mr. WEEKS. Mr. President, there are many reasons for the passage of this bill, not only the one expressed by the Senator from Vermont, but, what is more important, the merits of many of its provisions.

In fact, this is a measure of very great importance, and there ought not to be any delay in passing it. We have been floating, successfully, a great loan. It has been done through the united endeavors of the Government forces, the business community, and the bankers of the country. It is a matter in which we should all take much pride that the country has responded as it has to the flotation of this loan; but we can not readjust the location of billions of credit and of dollars without straining something somewhere. There is going to be more or less disorder resulting from the placing of this loan, which we should provide against as far as possible, and to a considerable extent the provisions of this bill will enable the reserve banks and the Federal Reserve Board to provide for the contingencies which will arise.

I do not think there is any material objection to most of the features of this bill. There certainly should not be, but there have been objections in the paragraph relating to collections. These come from certain bankers. This is a practice which has grown up through many years, and is partially unjustified and partially justified. I am not going to discuss it in detail now, but the so-called Hardwick amendment would set back the policy on this subject provided in the Federal reserve act which attempts to provide for a general clearing system. There can be no objection to a Federal clearing system if it can be put into operation, because it does aid in simplifying business and reduces expense. No one in Washington, for instance, having an account in one bank, paying a bill with his check on his bank, would expect the payee depositing it in another, which in turn would send it over to his own bank, to have to pay for its collection, and yet that is exactly what is done by many of the country banks to-day, though it is not followed by all banks. There are whole sections of the country where clearing is done at par now, but there are many sections where that is not true, and the Hardwick amendment would encourage and probably result in all banks following the practice.

Mr. GRONNA. Mr. President——

The VICE PRESIDENT. Does the Senator from Massachusetts yield to the Senator from North Dakota?

Mr. WEEKS. Yes.

Mr. GRONNA. The Senator uses the words "country banks." I hold no brief, of course, for the country banks, but I want to assure the Senator that the country banks do not take advantage of the charging of exchange on checks any more than the banks in the larger cities. While I do not want to take the time of the Senator from Massachusetts, I could, if I would, give him instances where these large banks are really the ones who are charging the exchange.

Mr. WEEKS. The Senator is partially right and partially wrong. There are large cities where there are large banks which do make charges for collections, and there are large cities which have large banks where there is no charge for collections. In the territory where the Senator lives, which is tributary, in a way, to Chicago, collection charges are made by the Chicago banks. That is not true in St. Louis; it is not true in Boston; it is not true in various other large cities of the country. I am not saying anything against the country bank. I am simply stating a fact that has developed through the passage of time.

This will modify what has been a charge on business—to some degree an unfortunate and an unjustified charge on business. It leaves the situation so that, in my judgment, the expense of collections can be met either directly or indirectly, and that is all anyone ought to ask. We ought not to expect that a bank shall be able to charge for the collection of a check drawn on itself.

In other words, if you had a deposit in a bank and you gave a check on that deposit to me, and I sent the check for collection, under the present conditions many banks would charge for paying me your money deposited in their bank. There is not a single reason for that practice, and it ought to be discontinued.

Mr. HARDWICK. Will the Senator yield?

Mr. WEEKS. Yes.

Mr. HARDWICK. There is nothing in this amendment which authorizes it, and I never heard of a bank that did.

Mr. WEEKS. I think I know of hundreds of such banks. If the Senator will read the testimony before the Committee on Banking and Currency when the Federal reserve act was under consideration he will find innumerable instances.

Mr. HARDWICK. Will the Senator allow me?

Mr. WEEKS. Yes.

Mr. HARDWICK. The Senator knows very well the banks have no such rights—that any payee who presents a bank check over the counter can collect the last cent of it.

Mr. WEEKS. Mr. President, the Senator does not understand me. I said if I sent the check of another person to the bank on which it was drawn for payment it could charge me for cashing that check.

Mr. HARDWICK. They can not do it under any law of any State of the Union. I challenge that.

Mr. WEEKS. It has been done under the laws of many States of the Union, and I have no doubt it is being done to-day in many cases.

Mr. HARDWICK. I just make the statement baldly and boldly that it is not done to-day in any State in the Union.

Mr. WEEKS. The Senator from Georgia is not often mistaken, but he is radically mistaken on that subject.

Mr. HARDWICK. I do not wish to dispute about the practice. I know it has not been done.

Mr. WEEKS. Let me go one step further. If a merchant in a country town, for example, sent his check in payment for goods to the city of New York, and that check came back to the rural town through the usual channels for collection, the bank on which that check is drawn might charge for paying the check.

Mr. PAGE. May I interrupt the Senator?

Mr. WEEKS. Yes.

Mr. PAGE. I do not agree with the Senator's position in regard to the collection of checks. He knows very well, speaking from his experience, as I know from my own, that one by one the national banks of the country—I emphasize the word "national"—have been yielding to the persuasiveness of the managers of Federal reserve banks to come into this arrangement whereby no charge is to be made for the collection of checks. Our national banks have one by one yielded to this persuasiveness until I am inclined to think that a large majority of them have come into the arrangement whereby country checks are being cleared through the Federal Reserve System without charge.

The national banks of my section of the country have finally decided that it is best, all things considered, to enter the clearing-house system provided by the Federal reserve banks. We did not like to do it, for it took from us a little profit to which we thought we were legitimately entitled. But, Mr. President, here is a great system, which is endeavoring to clear at par the checks of the whole country, and while I fear it means a loss to the little national banks scattered throughout the country, yet I

believe that, in view of the conditions which surround us to-day, they had better yield to the extent asked for by this measure, and so while I have in the past sustained my good friend the Senator from Georgia in his contention I think the time has come when I ought to reverse myself on this matter, and I am going to vote to sustain the conference report.

Mr. VARDAMAN. Mr. President——

The PRESIDING OFFICER (Mr. WALSH in the chair). Does the Senator from Massachusetts yield to the Senator from Mississippi?

Mr. WEEKS. I yield to the Senator from Mississippi to ask a question.

Mr. VARDAMAN. Does not the Senator think that these little country banks have contributed something to the floating of this great loan, and that they are entitled to a little consideration at the hands of Congress?

Mr. WEEKS. Yes; and they are here permitted to pursue their own way in regard to this matter. So far as the State banks are concerned, I presume the State of Mississippi has a large number of State banks and they are not in any way controlled by this legislation.

Mr. GRONNA. Will the Senator from Massachusetts yield to me?

Mr. WEEKS. I yield to the Senator from North Dakota.

Mr. GRONNA. May I ask the Senator from Vermont if it is not true that the State banks are now being charged exchange by the national banks, by the Federal reserve banks, and will not the provision which is inserted in the bill protect the people who are doing business with the State banks?

Mr. PAGE. I do not think I clearly comprehend the Senator's question. If he will repeat it to me, I will answer the best I can.

Mr. GRONNA. Is it not a fact that the State banks or those doing business with State banks now pay exchange on their checks, while this amendment will not protect those who are doing business with the State banks?

Mr. PAGE. Will the Senator kindly illustrate that by a concrete example?

Mr. GRONNA. For instance, I have a State bank. My customers draw a check on my bank and send it through the Senator's bank. Under the law and under the rules of the Federal Reserve Board you have a right to charge exchange on the State bank's checks, and the same condition will prevail if you pass the amendment which is incorporated in the bill.

Mr. PAGE. Do I understand the Senator to say that he believes the State bank checks or the business of the State bank is in any way changed by this legislation?

Mr. GRONNA. No; it would not be changed; but exchange is being charged on checks issued through a State bank.

Mr. PAGE. Yes.

Mr. GRONNA. I do not say I believe that; I say I know that.

Mr. PAGE. I do not doubt that; but if the Senator's bank sends a check to New York and he does not have some arrangement by which it clears the check for his bank the New York bank charges him exchange. It is a reciprocal arrangement. On the other hand, I do not think there is any doubt but that the Senator's checks will go through the Federal reserve banks at par if he will agree with the Federal reserve bank that he will make them no charge when they send their checks on the Senator's bank for collection.

Mr. GRONNA. If the Senator from Massachusetts will further permit me——

Mr. WEEKS. I am willing to yield, but I have only a word more to say.

Mr. GRONNA. I wish to say to the Senator from Vermont that I know it to be a fact that the national banks which are connected with the Federal reserve banking system to-day charge exchange on checks issued by State banks, although these very same banks clear checks for that same particular bank. In other words, they are their own correspondents.

Mr. WEEKS. Mr. President, that is undoubtedly due to the local practice. If the Senator investigates it in other sections of the country than the one in which he lives, I think he will find that that condition is not true.

I rose, however, to say that in my judgment, in the first place, the so-called Hardwick amendment was unwise and unfortunate legislation, but its effect has been so modified by the conferees that I do not see how it can do any great harm to any particular interests, and that it would be very unfortunate if this legislation were delayed or changed from the form in which it has been reported by the conferees. I hope the report will be adopted.

Mr. PAGE. I should like to ask the Senator from Massachusetts a question before he sits down.

Mr. WEEKS. I yield to the Senator.

Mr. PAGE. I ask it because the Senator is very well informed in regard to banking matters of New England. I ask him if it is not true that perhaps two-thirds of the national banks of New England have entered into this Federal Reserve System and waive their charge on national-bank checks?

Mr. WEEKS. As far as I know, substantially all the national banks of New England have done so.

Mr. PAGE. That is my understanding; and inasmuch as this bill does not affect State banks, and inasmuch as the State banks have all entered into this arrangement freely, it seems to me perhaps wise that we should adopt the legislation suggested by the conference committee as to national banks.

Mr. HARDWICK. Mr. President, I am not quite willing to consent that the distinguished Senator from Vermont [Mr. PAGE] shall haul down the flag, for some of us anyway. Of course, the Senator may not have understood what he was voting for; I think not from his argument to-day, but most of us who supported this proposition did it because we thought it was right and because there was a real principle involved in it—namely, that we should not require service from anybody by law in this country without giving any compensation whatever for that service.

I can not consent, so far as I am concerned, to that sort of thing. I can not come in and say I want to surrender because a few minutes or a few hours might be taken up in debate when the fact is that the bill passed the House on May 5, passed the Senate on May 9, and was held in conference until a day or two ago simply because the conferees would not accept the judgment of both Houses of Congress on this question of exchange.

Mr. PAGE. May I ask the Senator a question?

Mr. HARDWICK. I yield.

Mr. PAGE. I would like to ask the Senator if it is not true in his State of Georgia that the great majority of all the national banks—and this amendment affects nothing but national banks—have concluded to yield to the arguments or appeals of the Federal reserve bank managers and enter their clearing-house system?

Mr. HARDWICK. Answering the Senator from Vermont, of course this legislation could not apply to anybody else except to national banks. We can not enact legislation of this sort with reference to State banks, and we are acting only for banks that are under the control and jurisdiction of the Federal Government.

Of course, it is true that under the language read by the Senator from Oklahoma [Mr. OWEN] in the progress of the debate, these banks, under regulations of the Federal Reserve Board, have been literally forced not to charge the exchange that they are justly entitled to. They were like a man who surrenders at the point of a weapon to a highwayman. Yet the Senator from Vermont and others urge that against them when they are required by law to give up this exchange under regulations established by the Federal Reserve Board.

Mr. PAGE. The Senator has not answered my question. I asked him if the national banks of Georgia have not practically all entered into this clearing-house system?

Mr. HARDWICK. I do not know. I know that the national banks of Georgia, certainly all in the country in smaller towns, are in favor of this amendment and are opposed to the position of the Federal Reserve Bank and the present position of the Senator from Vermont on this question.

Mr. PAGE. The Senator from Vermont has gone halfway in this matter. I supported the Senator from Georgia in his original plan, but now a concession has been made, though, I confess, a not very satisfactory one.

Mr. HARDWICK. I am going to take that up. I hope I may convince the Senator that he is mistaken in his present attitude. There is no need for any one to misunderstand the situation with respect to this amendment, for the conferees have destroyed the amendment, as I shall show.

Mr. PAGE. I agree that the House amendment very much lessens the real value of the collection charge.

Mr. HARDWICK. Not one that I know of has given up its exchange voluntarily except some large city banks who have rather catered to the jobbing trade than insist upon their own rights.

Mr. PAGE. Perhaps I ought not to have used the word "voluntarily surrendered."

Mr. HARDWICK. Of course, they obeyed the law. Every good citizen does whether he approves the law or not.

Mr. PAGE. They have surrendered this charge at the request of the Federal reserve banks.

Mr. HARDWICK. Who had the right under the law to make rules and regulations that they must comply with.

Mr. PAGE. The Senator misunderstands me. They have practically all entered this arrangement voluntarily.

The Senator says that this concession is granted without the slightest advantage granted to the national bank which makes the concession in return therefor. I must take exception to that statement, because every country bank which sends its uncurrent checks for collection is obliged to maintain a large deposit with its correspondent banks, as for instance in Boston or New York. In other words, the country bank is compelled to carry liberal balances with those banks which take care of their uncurrent checks. The Federal reserve bank does not require this except in a comparatively small amount, and there is no charge made to the national bank for collections. It is therefore not quite right to say that the country banks are receiving nothing for the concession they make.

Mr. HARDWICK. I say, as far as the exchange proposition is concerned, I think it is just as well to understand that we are getting nothing, according to my view of the matter, and my fear about how this amendment, as modified by the conferees, will be construed, as I will explain to the Senate, if we should accept the position now advocated by the Senator from Vermont.

Mr. PAGE. There is a large concession made. Let me illustrate. A bank in Albany compels a State bank in Vermont to carry three times——

Mr. HARDWICK. I hope the Senator will pardon me and will present this in his own time.

Mr. PAGE. I wish to make but one suggestion. I say the country bank has had to carry large balances to effect these clearances, and nearly all the national banks have now entered the Federal Reserve System, and why and whether voluntary or not is not material in the discussion of this matter at this time.

Mr. HARDWICK. Of course the Senator from Vermont must be the judge of his own conduct about that, but as far as I am concerned I do not want anyone in this body or outside to think that I believe for one minute that there is anything left in this amendment by the conference report. Both the Senator from Vermont and the Senator from Massachusetts contend that we ought to do this principally because of the great delay involved in sending the matter back to conference again. Before the Senate shall take that position I invite its attention to the fact that while this bill passed the House of Representatives on the 5th day of May and passed the Senate on the 9th day of May it was not until the 15th that the conferees reported it. It is a matter of common knowledge in this body and in the other House that for days and weeks the conference refused to take up this matter at all for the consideration of this measure that Senators now say is all important—this bill upon which the liberty loan and the fiscal operations of the Government depend.

The conferees refused to consider this bill for weeks and weeks, because they were not willing to yield to the expressed judgment of both Houses of Congress on that subject, after a fair discussion and direct vote on this question. In the House of Representatives, when this matter was under consideration, a distinguished Member of that body from the State of Mississippi, Mr. HARRISON, called attention to the fact that in writing to the chairman of the House Committee on Banking and Currency with reference to this matter the chairman of the Federal Reserve Board said in substance, "Yes, you have got this matter in conference where you can do what you please with it, not what the two Houses of Congress instructed you; not what the Senate said and what the House of Representatives said, but you can now do what you please with it." The Senator from Vermont knows just as well as I do that that is what has been done with this matter—what these gentlemen now report it from conference.

I do not want to hear any more speaking, for myself at least, and without, of course, intending offense to anybody, about delaying this bill. I do not want to hear the arguments seriously advanced in this body that we ought not to send the report back to conference for any such reason as that. We could have passed it long ago if the conferees had carried out the will of both Houses, and it is absurd to contend that we ought not to send this matter back to conference because a very brief delay might be involved, when for weeks and weeks these conferees would not meet at all, would not consider the question at all, and would not act at all, although both Houses had already acted, and acted in unison, on this question. The conferees would not agree to pass this great, important bill, because of this exchange question and because they wanted to substitute their will and the will of the Federal Reserve Board for the will of the two Houses of Congress.

Of course the Senator from Massachusetts [Mr. WEEKS] is satisfied with this amendment as reported by the conferees. He opposed the original amendment before, and every Senator who opposed it before ought to be satisfied now with the conference report; there is no reason why he should not be. Of course the Senator from Massachusetts is willing to vote for the conference report; but I am a little surprised that my friend from Vermont [Mr. PAGE] is willing to do so.

Now, let us see what they did. They went to conference. The Senate had adopted this amendment adding to section 3 a proviso which reads as follows:

Provided further, That nothing in this or any other section of this act shall be construed as prohibiting a member or nonmember bank from making reasonable charges, in no case to exceed 10 cents per $100 or fraction thereof, based on the total of checks and drafts presented at any one time, for collection or payment of checks and drafts and remission therefor by exchange or otherwise.

When the conferees, after much travail, after much delay, and after much propaganda from the credit associations and jobbing interests of the country, finally thought they had waited long enough to risk a vote, and everybody had had time to talk to everybody else and to use every sort of a—oh, a reasonable influence—and every sort of personal appeal that could be made they brought it back and asked the two Houses of Congress to reverse their position in this matter. The House of Representatives has done it by a very narrow margin; the Senate may do it if a majority of its Members want to do it; but I am determined that they shall not do it without knowing exactly what they are doing, exactly what it means, and certainly not with my vote, even if my distinguished friend from Vermont does favor such a course.

Let us see. The President intervenes in this matter; intervenes by letter—not by message to the two Houses of Congress, but by a personal letter to the distinguished Senator from Oklahoma [Mr. OWEN]. I am not going to be unduly critical of that; I quite realize that in the practical affairs of legislation it is not practicable for the President to write a message about every little matter when he feels he has some view to communicate, and I am not opposed to his expressing whatever view he wants to about this or about any other matter. I shall always agree with him when I think he is right, and I shall always disagree with him when I think he is wrong; and I hope every other Senator will do that, and that every Member of the other House will also do that; but the President writes this letter under date of the 29th day of May, 1917, addressed to the Senator from Oklahoma; he says:

MY DEAR SENATOR: I have been a good deal disturbed to learn of the proposed amendment to the Federal reserve act which seems to contemplate charging the Federal reserve banks for payment of checks cleared by them, or charging the payee of such checks passing through the reserve banks with a commission.

I digress there to show you what the President thought the amendment meant. He was not quite sure what it meant. The man who explained it to him did not understand it—of course I do not mean the distinguished Senator from Oklahoma—he did not understand it well enough to know exactly who paid the exchange, or it may be the amendment was so poorly drafted that its critics could not tell exactly which it meant; but they said it means one of two things: Either that the Federal reserve banks will themselves have to pay this exchange or the exchange will be paid by the payee of the check. The President says:

I should regard such a provision as most unfortunate and as almost destructive of the function of the Federal reserve banks as a clearing house for member banks, a function which they have performed with so much benefit to the business of this country.

I hope most sincerely that this matter may be adjusted without interfering with this indispensable clearing function of the banks.

Of course the amendment never did mean, and I do not think by a fair construction could have ever been seriously contended to have meant, that the exchange charges should be absorbed by the Federal reserve banks themselves, paid out of their own funds, and out of their own pockets; but unless these charges are to be collected from the payee, through the Federal reserve banks, it is utterly useless to contend that anything will be left of the amendment.

It is also my judgment that it is utterly impracticable for these member banks to open a thousand accounts with each other, as suggested by the distinguished Senator from Oklahoma. It might be that in a few cases where banks did a great deal of business with each other they could run such current weekly or even monthly accounts, but how on earth could they afford to do it for items that come once a month or once a year for 10 cents or 20 cents on a Vermont bank; 10 cents or 20 cents on an Oregon bank, from Georgia, or from Florida? Would it pay even the postage stamps to collect most of these exchange charges in that way? How would those amounts of money be transferred and collected? A money order for the exchange would cost more than the amount of the exchange itself in many cases. The allowance of this exchange and the crediting of

this exchange is a bookkeeping matter which must be done through the clearing banks, and unless you do permit the clearing banks to do this there is no need to go through the pretense of saying that you are allowing these men to collect exchange, because they will never get it.

I suggested to the distinguished Senator from Oklahoma, in a conference I had with him, that we avoid all trouble on this subject by amending this provision so as to provide that no such charges shall be made against Federal reserve banks, to be absorbed and finally paid by those banks. Just add those words to it so that these banks would be permitted simply to do the clearing and to do the bookkeeping, making each man who presents one of these checks have deducted that much from the credit that is given him for the item. Of course, if language like that were employed, nobody could contend that a single penny of this money could finally come out of the Federal reserve banks themselves, and there is no such desire on the part of anyone.

Mr. NORRIS. Mr. President——

Mr. HARDWICK. I yield to the Senator from Nebraska.

Mr. NORRIS. I have had no opportunity to read the conference report, and know of it only as it has been read from the Secretary's desk. I wish, therefore, that the Senator would point out specifically the difference between the Senate amendment and the amendment brought in by the conferees.

Mr. HARDWICK. I did that just a moment ago, but I will do it again for the benefit of the Senator.

Mr. NORRIS. I did not hear the Senator.

Mr. HARDWICK. The Senator remembers the amendment was adopted in substance. To the provision that nothing in this act shall be construed as prohibiting a member bank or nonmember bank from making reasonable charges, in no case exceeding 10 cents per hundred dollars, and so on, the conferees interpolated the words "reasonable charges, to be determined and regulated by the Federal Reserve Board," and, of course, that is objectionable.

I would not make that an insuperable objection, if that was all they did in connection with the provision, although we know the Federal Reserve Board is against this provision; we know it is hostile to it.

Mr. NORRIS. As I heard it read, I thought the only material change was in the clause that was added at the end.

Mr. HARDWICK. That is the most material change, because I say frankly that, while I do not like the words I have just quoted, I would not resist the conference report if it were not for the fact that the conferees added at the end of it, as the Senator evidently caught it, this provision:

But no such charges shall be made against the Federal reserve banks.

That destroys the whole amendment; and the President's letter proves that it was intended to destroy the whole business, and that it will be construed so as to destroy the amendment, because he says he does not want any amendment allowing a commission to be charged the payee of such checks passing through the Federal reserve banks.

Mr. OWEN. Mr. President, I call the attention of the Senator to the date of the letter, showing that it was written before the conference met, and that the language which was added related only to charging the Federal reserve banks with the items. It says nothing about the payee.

Mr. HARDWICK. Yes; while the language does not mean that, if it were given the construction that I should like to see given to it, and that I think the Senate ought to force to be given to it, if it is in its power to do so, yet I think, in view of the President's letter which the Senator has brought to us, that it is perfectly plain that the President's object is not only that they shall not have this exchange out of the pockets of the Federal reserve banks, which none of them wanted, but that they shall also not have this exchange on checks passing through the Federal reserve banks, which was exactly what they did not want to accomplish.

Mr. OWEN. Mr. President——

Mr. HARDWICK. I yield to the Senator.

Mr. OWEN. The expression of opinion by the President was in accord with the opinion of the Federal Reserve Board and the governors of the various Federal reserve banks. They all entertained this opinion generally against the proposed amendment as it was originally presented. They did not approve it in any form, for the reason that they believed that the business men of the United States and the depositors of banks should have the right to have their checks cleared at par, so as to avoid the necessity of bookkeeping in connection with every check of the hundreds of thousands and millions of checks that go through our banks and reserve centers. That was their belief, and it is the belief of a very large part of the banking world—I think almost nine-tenths of them.

Mr. HARDWICK. The Senator is very much in error, in my opinion, in that respect. As I explained to the Senate—and the Senator must have heard it—the proposition came from the great American Bankers' Association after city bankers and country bankers and everybody else had thrashed it out, and after practically all—I do not know that the vote was unanimous, but it certainly represented the overwhelming sentiment of that great association—determined on this very provision.

Mr. OWEN. I would remind the Senator that the membership of the American Bankers' Association is not confined to national banks.

Mr. HARDWICK. No; but many national banks——

Mr. OWEN. Just a moment.

Mr. HARDWICK. I beg the Senator's pardon; I am yielding to the Senator.

Mr. OWEN. The State banks, as a matter of fact, have a much larger number of members than have the national banks. They are numerically in excess, and the activity of the State banks in trying to force a change in the Federal reserve act I do not think is justified.

Mr. HARDWICK. Mr. President, in my judgment the Senator from Oklahoma is again mistaken. Those who are active in favor of this provision are not State banks in any State, but the country national banks. The present Federal law on exchange does not hurt the State banks; they can not do anything with them, or they have not tried to so far; they are not prohibited from getting the exchange; the law has not taken that away from them. The man who has been active in this matter is the man who feels that he has been deprived of this rights to charge something for a service, a right which nowhere else in this country have we denied to anybody by the law of the land.

Mr. VARDAMAN. Mr. President, if the Senator from Georgia will permit me——

Mr. HARDWICK. I yield to the Senator.

Mr. VARDAMAN. I have had a great many telegrams and letters from banks in my State, and I think that nine-tenths of the telegrams I have received have been from national banks in Mississippi. It is my judgment that fully nine-tenths of the national banks of the State of Mississippi and all of the State banks favor the Hardwick amendment as passed some weeks ago.

Mr. HARDWICK. Mr. President, of course, that is right. I think it would take but a moment's reflection to show that that is where it would come from. The State banks have not any interest in this exchange matter; they would not get any of it. The banks that are deprived of what they regard, and what I believe, are their just rights in this matter and of their legitimate earnings in this respect are not the State banks, but the national banks. They are the ones who are making this complaint.

The State banks have no interest in it, except, possibly, a sympathetic one, and a desire to see justice done.

Mr. NORRIS. Mr. President——

Mr. HARDWICK. I yield to the Senator from Nebraska.

Mr. NORRIS. I wish to ask the Senator a question for information, for I have been deprived of the privilege of hearing all the debate that has taken place on this question. I desire to ask the Senator if I am right in the belief, compressed into a nutshell, that the amendment, as the Senator introduced it and as it passed the Senate, would permit the national banks, member banks in the Federal Reserve Association, where they were asked by their correspondents to send exchange for checks that had been cashed by those correspondents, to charge exchange? Was not the provision really confined to business of that kind? If the correspondent who has cashed the check sends it to the bank on which it is drawn and asks that exchange be sent for the check, the question arises whether there should be allowed a charge for exchange or not?

Mr. HARDWICK. Exactly.

Mr. NORRIS. Is not that the real contention?

Mr. HARDWICK. That, of course, is the primary object; but let me say to the Senator—and I think I can draw the line pretty plainly, and the Senator from Massachusetts referred to it—this amendment was not intended to mean, it does not mean, and it can not mean that any banker in this country will be authorized to charge one penny of exchange to anybody who brings his own check and presents it across the counter of the bank where he keeps his deposit, and demands the money.

Mr. NORRIS. I agree with the Senator.

Mr. HARDWICK. The Senator from Massachusetts, however, thought otherwise if I understood him correctly.

Mr. NORRIS. The very contract between the banker and the depositor as a matter of law——

Mr. HARDWICK. Would force the banker to pay the full face value of the check.

Mr. NORRIS. It would force the banker to pay the check if lawfully signed whether presented by the depositor or any other person; but if the check were sent through the mail, or if the depositor or the payee went to the bank himself and, instead of getting the money which the bank would be compelled to pay on the presentation of the check without any diminution or commission, asked for a draft, then he is taking up a new proposition.

Mr. HARDWICK. He is asking for a transfer of either money or credit to another place for the performance of a service.

Mr. NORRIS. Yes. It has gone beyond the duty of the bank to pay the check.

Mr. HARDWICK. Exactly; and in every case that is true.

Mr. NORRIS. And the banker, of course, would have the right to charge him if he wanted to do so; to give him a draft or to refuse entirely to give him a draft if he wanted to do so.

Mr. HARDWICK. The Senator is right, and this amendment does not apply to any exchange, except where actual service is rendered either in the transportation of money or in the transfer of credit; and in every case not only are arrangements of that sort involved, but also bookkeeping and the transfer of book credits, where there is no actual transfer of currency itself.

Now, Mr President, I want to get through. I think the Senate understands this question pretty well. We voted on it twice in one form or another after full argument on its merits. The Senators who constituted the majority when these votes were taken believed that it was to the very best interest of the national banking system—of the Federal Reserve Bank System itself, if you prefer that term—that these country banks that were in the system as member banks in the smaller towns and villages of this country, who had small capital and comparatively heavy overhead charges, and to whom this item was a considerable and an important item, might be encouraged to remain in the system, which they are not likely to do if you do not allow this reasonable exchange, which all their State bank competitors can charge and do charge.

We also thought that in the interest of this selfsame Federal Reserve Banking System it was best to adopt a somewhat liberal policy toward these people with small capital and small business, and yet who are immensely important in the aggregate and on the whole to the great productive and industrial affairs of this country, to encourage these banks to become members of the national system; and we thought the best way to do it was to allow them these charges, so that they might come in where they had not already joined the reserve system.

Now, the situation has not changed. The question now is just exactly what it was then. It has not shifted one iota, in my opinion and judgment. There has been a good deal said about it, a good deal of influence brought to bear in, of course, a perfectly proper and argumentative way, on various Members of both bodies of Congress with respect to this matter.

Mr. PAGE. Mr. President, may I ask the Senator a question there?

Mr. HARDWICK. Yes; I yield to the Senator.

Mr. PAGE. The Senator says that this matter has not changed one iota since we passed upon it last month?

Mr. HARDWICK. Yes.

Mr. PAGE. I think if the Senator would investigate as to the inside facts he would find that, one by one, the country national banks have been approached by agents of the Federal Reserve System and have been told that they would be very glad indeed to have them enter this new clearing-house arrangement; and it is not impossible that these agents may have said to them that "if you will do this, we will be good to you if you happen to need especial aid later on." This is purely a suspicion on my part and is probably unwarranted. However this may be, I am willing to hazard the opinion that more than 75 per cent of all the New England national banks, and I shall be somewhat surprised if it is not found upon investigation—I have asked to have the investigation made—that 80 to 90 per cent of the New England national banks have entered this system.

Mr. HARDWICK. Since this amendment was voted on in the Senate?

Mr. PAGE. Many of them have come in since that time, but they have been coming in from time to time for many months.

Mr. HARDWICK. I know, but I should like to know how many of them have come in since that time.

Mr. PAGE. I hope I may give the Senator some light on this point from official sources before I get through. I have asked for it. I agree with the Senator on the general principle. I agree with him that the country banks should have some remuneration for the collection of and remittance for these checks. But if 80 or 90 per cent of the national banks for one reason or another have gone into this system and there are only 10 or 20 or even 25 per cent left outside, and those the smaller banks, and if the State banks are in no way affected by this legislation then it seems to me that this compromise should be accepted. I confess it is a pretty bad compromise; nevertheless, it is a compromise.

Mr. HARDWICK. If the Senator thinks so, then he has been badly outtraded.

Mr. PAGE. I think the advantage is, in part, made good, but even if not what is the use of the Senate saying that three-fourths or nine-tenths have gone into the system voluntarily, we should not now clean up the whole slate and have the national banks all go into it?

Mr. HARDWICK. Of course, it has not changed much since we voted in the Senate. If that is true, the Senator ought not to have voted for this proposition at all, in my judgment.

Mr. PAGE. I have no doubt that a large number of the national banks have entered the system within the last 30 days.

Mr. HARDWICK. Well, possibly; but not in my country. It may be different in the Senator's country.

Mr. REED. Mr. President——

The PRESIDING OFFICER. Does the Senator from Georgia yield to the Senator from Missouri?

Mr. HARDWICK. I yield to the Senator.

Mr. REED. I desire permission to make a statement more than to ask a question. I have been informed, from what I think are undoubtedly reliable sources, that if this bill is accepted as amended, very large numbers of the State banks and trust companies are coming into the Federal Reserve System.

Mr. OWEN. There is no doubt about that.

Mr. REED. And that some of the greatest of these companies have already formally made application in the expectation that this bill will pass.

Mr. HARDWICK. Would the Senator mind, unless this bears directly on what I am saying, withholding his statement for a minute? I am not going to take the time of the Senate much further.

Mr. REED. Will not the Senator give me just one instant?

Mr. HARDWICK. Yes.

Mr. REED. That is all I desire, and I thought this did bear upon the question—and that it is the opinion of the Federal Reserve Board, or at least some of its members, that it is necessary to mobilize as speedily as possible the financial resources of the country.

Mr. HARDWICK. Why did they hold this bill, then, for three weeks or four weeks, or longer, in conference, with no meeting of the conferees, and with this great, important measure held up simply on account of exchange?

Mr. REED. Well, I can not answer that.

Mr. HARDWICK. If it was of all that importance——

Mr. HITCHCOCK. Mr. President, I can not permit the Senator to say that this matter was held three or four weeks without a meeting of the conferees.

Mr. HARDWICK. I did not say that. I said that it was held up on account of this amendment.

Mr. HITCHCOCK. No; the Senator just said that it was held three or four weeks without any meeting of the conferees.

Mr. HARDWICK. Well, I did not intend to say "without any meeting of the conferees." What I meant was without effort to pass the bill and carry out the will of the two Houses on this question.

Mr. HITCHCOCK. Well, that is what the Senator did say.

Mr. HARDWICK. The Senator from Nebraska knows full well—and I will not yield to him right now—that in spirit and in substance the Senator from Georgia has stated what the condition was with reference to this matter. Now, I did not mean to say that the conferees had not met at all. I think the Senator from Oklahoma was away the most of this time.

Mr. OWEN. I should like to say that the gold amendment was adjusted after the other amendment had been agreed upon.

Mr. HARDWICK. There was no trouble except on this amendment.

Mr. OWEN. The Senator is mistaken.

Mr. HARDWICK. Well, I say there was no real trouble except about this amendment, in my judgment.

Mr. OWEN. The Senator is very much mistaken.

Mr. HARDWICK. Of course, I accept the Senator's statement; but will the Senator say, or will either of the Senators say—and if they will do it, I shall be glad to apologize to both of them, and it will be a pleasure for me to do so—that this matter was not really held up on account of this bank-collection amendment?

Mr. OWEN. There was a very serious difference between the House and Senate conferees over the gold amendment, and

that was a matter which was not agreed upon until after this had been agreed upon.

Mr. HARDWICK. Well, I do not yield to the Senator except to answer the question I asked. Evidently the Senator can not make the statement that I thought he could make, although I would have been glad for him to do it if he could. If the truth is, coming right squarely down to brass tacks on this proposition, that this conference report was not delayed all these weeks on account of this bank-exchange amendment, then I want to be corrected.

Mr. OWEN. I think the Senator is exaggerating the importance of this matter.

Mr. HARDWICK. I think the conferees did that. They ought to have accepted it and gone on and passed the legislation like the two Houses adopted it, in my judgment; and since they did not do so, it is now for the masters of the conferees—the body that appointed them—to say whether they will approve their action in not doing it, or not.

If this bill is of all the tremendous importance that is now contended, and if it is necessary to mobilize the industries of this country, the banking interests of this country, as my friend from Missouri suggests, I do not see why you delayed three or four weeks right at the critical time of raising the liberty loan on account of this one poor little amendment, or largely on account of this one poor little amendment providing a very small exchange for these country banks.

Mr. PAGE. Mr. President, will the Senator permit me to give one concrete instance?

Mr. HARDWICK. Certainly.

Mr. PAGE. I know of one bank in Vermont that has received notice from its depositors that, on the 1st day of July, when they can withdraw without loss of interest, $250,000 will be withdrawn largely by those who are going to put the money into liberty-loan bonds, and when that amount is withdrawn it will compel this bank to go into the markets and borrow. All who study the money market know that to-day the price of money is very high, and I do not believe there is any place to borrow money to-day without paying at least 5 per cent, or perhaps more than that, while their liberty loan is paying only 3½. The banks are facing a serious condition at this time. They have got to borrow, in large sums soon, in order to meet the demands that will be made by their depositors, purely to take care of these liberty loans. The Federal reserve banks are under moral obligations to make loans to national banks on liberty bonds as collateral at 3½ per cent, and we must strengthen their hands in every reasonable way or they will be unable to keep the faith with those banks which have lifted so heavily in floating liberty bonds.

Mr. HARDWICK. Well, now, grant it; grant it. If that is true, and I do not doubt it—the Senator is an able banker and a good financier, I doubt not, although I do not much like him as an ally in this sort of fight; but grant it—what happens? Where are we? If that was so important, what did these people delay this bill for? If this bill means anything to meet that situation, or has any connection with it or any relation to it, why were they, from the 9th of May until the 15th day of June, in working around to this amendment; and then, after it has been here two days, why do they come in and try to urge it through the Senate on the ground that the whole industrial and commercial and banking fabric of the country is going to fall to pieces unless we do it right away and exactly like they want it, when they let the whole thing wait from the 9th day of May to the 15th of June, in order to get it done a different way from the way the majority of us wanted it?

That is the way it impresses me; and I do not see why the Senate should permit itself to be dragooned into any such position as that. If this measure was important, and as important as they say it was, they had no right to delay it the length of time they have delayed it; and if they could delay it with safety to the country, in order to get their will about this matter, from the 9th day of May until the 15th day of June, we might take a day or two more in trying to get our will. I think if we do, if the Senate will take that position, and we ask these conferees to put on this bill at the end of it, leaving this thing like they reported it, this language—

> But no such charge shall be made against the Federal reserve banks, to be absorbed or finally paid by them—

We will have this amendment like we ought to have it and like they ought to accept it.

I have no interest in this matter except the interest of the Federal Banking System itself, except my belief that the strongest thing you can do for that system is to popularize it with the bankers of the small towns and villages, except my belief that you have not a right, either in banking or in anything else, to require of anybody by a law you write on the statute books that he shall give his services for nothing.

Because of those beliefs, and because of the condition that confronts us here, I hope the Senate will send this matter back to conference. I hope and I believe they will take, this time, the specific instruction of the Senate by this action, if it should take it, as binding absolutely upon them to make this amendment—to propose it to the conferees of the other House—and I feel sure—of course, this is merely my opinion—that the House of Representatives will agree to that modification without the slightest trouble.

So that if all these people want is to see that the Federal reserve banks themselves shall not pay this exchange out of their own pocket, we will write it double-riveted into this bill; but if they mean to use that language to destroy this amendment and to defeat the will of the Senate, then the better way to do would be to wipe it out entirely and not leave it in the bill the ghost of what it was, a mere remnant of what it was intended to be—something that appears and purports to mean something and yet means nothing.

I hope the matter will be sent back to conference again.

Mr. PAGE. Mr. President, before the Senator sits down I should like to ask him a question. Since I have been conversing with the Senator about this matter I have made inquiry of two Senators from New England with regard to the percentage of New England national banks that are now handling checks through the Federal Reserve System and without charge for collection, and in both cases the answer has been "probably more than 90 per cent." Now, if 90 per cent are already in, and if this can not apply to the State banks, does not the Senator think it would be wise——

Mr. HARDWICK. Will the Senator let me answer his question now? I understand it.

Mr. PAGE. Yes.

Mr. HARDWICK. The Senator must take a broader view about it than New England. The Senator must look at the whole country, not merely at Vermont or New England, either. That is not true, so far as I know, except maybe in New England. I have not heard of it elsewhere. It is not the condition in my State, or it has not been until very recently, if it is true at all.

This amendment in the form I have suggested, the Senator knows, would not do any harm; it would accomplish what he wants and what I want, and it would not put on the Federal reserve banks any of the things that the Senator from Oklahoma contends ought not to be put upon them. Now, why not do that?

Mr. PAGE. Well, it is a fair presumption that if 90 per cent of the national banks of New England have entered this system that a very large majority of all the other national banks have also gone into it. I believe it will be found to be true that more than three-fourths of all the national banks in the United States have already entered the Federal Reserve System and are to-day clearing their checks at par through that system.

Mr. VARDAMAN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Senator from Mississippi suggests the absence of a quorum. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Bankhead	Hitchcock	Nelson	Smith, Ariz.
Beckham	Hollis	New	Smith, Md.
Borah	Husting	Norris	Smith, S. C.
Brady	James	Overman	Sterling
Brandegee	Johnson, Cal.	Owen	Sutherland
Chamberlain	Johnson, S. Dak.	Page	Swanson
Colt	Jones, N. Mex.	Phelan	Thompson
Dillingham	Kendrick	Pittman	Trammell
Fernald	Kenyon	Poindexter	Vardaman
Gallinger	King	Pomerene	Walsh
Gerry	Kirby	Reed	Watson
Gore	McCumber	Robinson	Weeks
Gronna	McKellar	Saulsbury	Williams
Hale	McLean	Shafroth	
Harding	McNary	Sheppard	
Hardwick	Martin	Sherman	

Mr. McKELLAR. I desire to state that the senior Senator from Tennessee [Mr. SHIELDS] is detained from the Chamber by reason of illness. I should like to have this announcement stand for the day.

Mr. JAMES. I have been requested to announce that the Senator from New Jersey [Mr. HUGHES] is detained from the Senate on account of illness.

Mr. GERRY. I desire to announce that the Senator from Louisiana [Mr. BROUSSARD] is detained on official business.

Mr. SHAFROTH. I desire to announce the absence of my colleague [Mr. THOMAS] on account of illness.

Mr. SAULSBURY. I wish to announce the absence of my colleague [Mr. WOLCOTT] on official business.

Mr. GALLINGER. I was requested to announce the unavoidable absence of the junior Senator from Maryland [Mr. FRANCE] on account of illness.

Mr. SUTHERLAND. I desire to announce the absence of my colleague, the senior Senator from West Virginia [Mr. GOFF], on account of illness. I will let this announcement stand for the day.

The PRESIDING OFFICER. Sixty-one Senators have answered to their names. A quorum is present. The question is on agreeing to the conference report.

Mr. HITCHCOCK. Mr. President, I desire to say a few words before the question comes to a vote, because I think it is rather unfortunate that nothing has yet been said in support of a number of important provisions of this bill while great emphasis has been placed upon the so-called Hardwick amendment to it, and the modification of that amendment which was agreed upon by the conference committee. That modification of the Hardwick amendment has already been accepted by the House of Representatives. That amendment after all was only a small portion of the bill. It was a contentious portion because of the fact that a number of banks desired to have ingrafted upon the law an uncontrolled authority by which they could make charges for paying checks if remittance became necessary. The conference committee felt justified in making a modification of this privilege asked by the banks by requiring such charges to be subject to rules and regulations and limitations provided by the Federal Reserve Board. We believe that that modification is of the highest importance in order that business may not be burdened. We also made an additional modification that any charge made by a bank in remitting for checks against it, should not be a charge against the Federal reserve banks; and that also is of large importance to the country.

But, Mr. President, we ought not to lose sight of the fact that after all the Hardwick amendment as to the payment of checks and the contention which arose out of it is only a very small portion of this important legislation. The Senator from Georgia has indicated that conditions have not changed since this bill was considered in the Senate. He is mistaken in that.

Mr. HARDWICK. The Senator will pardon me, Mr. President. The Senator does not want to misstate my position.

Mr. HITCHCOCK. I will let the statement go as the Senator makes it. But conditions have vastly changed concerning the urgency of the bill.

We are undergoing now a most extraordinary transformation in the banking world. When this bill was considered by the Senate last month the banks of New York City held $147,000,000 in excess of their legal reserves. Week by week those reserves have run down until they now are only $54,000,000 in excess of the legal reserves; next week they will run lower, and the week after they will run lower still. The same change is going on all over the country. The banks are encountering a strong demand for loans. Their reserves are being materially reduced. They are now calling upon the Federal reserve banks for currency. There has been an extraordinary demand for rediscounts. That is to say, the national banks of the United States, which heretofore have called upon the Federal Reserve Board for almost no assistance, are now applying in large numbers for credit and currency. The amount of commercial paper rediscounted or purchased by the Federal reserve banks has increased enormously. A year ago the Federal reserve banks had discounted only about $20,000,000 worth of commercial paper. The banks were in an easy and comfortable condition with abundant funds. Even when this bill passed the Senate in May the reserve banks held less than $75,000,000 worth of commercial paper purchased of member banks. To-day they hold over $200,000,000 worth of such commercial paper which they have purchased of member banks which wanted currency.

Mr. VARDAMAN. Will the Senator allow me to ask him what bearing that has upon the Hardwick amendment?

Mr. HITCHCOCK. It has only a bearing upon the urgency of the legislation. We have undertaken to float a loan of two thousand million dollars. We have asked people to subscribe to those bonds and, if necessary, borrow money from the banks to do so. We have asked the banks to subscribe to those bonds, and they are assured that when they buy them in the tremendous amounts that they have subscribed for they can borrow of the Federal Reserve System with those bonds as security.

Mr. VARDAMAN. If legislation was so urgent, by the adoption of the Hardwick amendment the Senate and the House could have put the legislation on the statute books three weeks ago.

Mr. HITCHCOCK. That is true, but one of the contentions which the committee of conference had before it was closely linked with the strengthening of the Federal Reserve System. That was the gold amendment which the Senate adopted and which finally the House conferees accepted, but not until after a considerable time had been exhausted in debate. That gold amendment had been adopted by the Senate for the purpose of strenthening the Federal Reserve Banking System.

Mr. VARDAMAN. That is very true, I grant it, but the changes that the conferees made in the Hardwick amendment resulted in delay. If you had adopted that amendment your legislation would have been perfected some time ago.

Mr. HITCHCOCK. The Senator is not entirely informed of what went on among the conferees, and I am not privileged to state it. I know this, that the Hardwick amendment was agreed upon in conference long before the gold amendment was agreed upon, and that was the cause of much of the delay. It was not concluded until the House conferees finally accepted it.

Mr. President, this legislation amending the Federal reserve act is to strengthen the Federal Reserve System. We are proud of the fact that the Federal Reserve System was created. We believe that the Federal Reserve System has been a tower of strength for the United States during the last few years of crisis and extraordinary conditions; but the Federal Reserve System has not been put to its great test. It is about to be put to that test. Thousands of national banks which belong to the system have not heretofore applied to the Federal reserve banks to furnish currency by buying commercial paper. They are now beginning to do it, and within a few months thousands of national banks will be rediscounting commercial paper at the Federal reserve bank and the Federal Reserve System will be issuing notes against that commercial paper backed by 40 per cent in gold.

Mr. VARDAMAN. Does not the Senator think the system would be strengthened by offering an inducement to the State banks that would be affected by the Hardwick amendment to join in the system, while the small banks do not?

Mr. HITCHCOCK. Mr. President, this bill does offer inducement to State banks to come into this system, and the passage of the bill will undoubtedly be followed by many State banks entering the system. Not only that, the bill provides means by which State banks that do not desire to come into the system as members may nevertheless open deposits with the Federal reserve banks, a privilege they have never had before. When they open those deposits they will have relations with the Federal reserve banks which will be valuable. They can use in their deposits in Federal reserve banks checks on distant banks and deposit them at par, no matter whence the checks come from. That is one of the desirable provisions of the new act. That is the opportunity for the State banks all over the United States to establish deposits with the Federal Reserve System and get credit at par for all kinds of checks they may deposit. They in their turn give credit at par for checks against themselves.

The bill provides also in detail for establishing here at Washington a gold-clearing house, so that all the Federal reserve banks, by keeping large gold deposits here at Washington in the Treasury, can do their business in exchange with each other without actually shipping the gold from bank to bank, as they would otherwise be compelled to do. By this gold-clearing house the eight Federal reserve banks settle gold balances with each other by simply issuing to each other from time to time orders on the Federal Reserve Board in Washington, which holds the gold and keeps the accounts.

Mr. PAGE. Will the Senator please explain the very small amount which the country bank is compelled to carry with the Federal reserve bank in order that the Federal reserve bank may clear its checks at par?

Mr. HITCHCOCK. It is provided in the bill that the smallest possible amount to protect the Federal reserve bank deposited with that bank by a State bank, even though not a member of the system, will enable the State bank to clear its checks at par through the Federal reserve bank.

Mr. PAGE. They are compelled to carry only enough to cover the loss to the Federal Reserve System of the day or two of interest that is required to send it to another reserve bank and get it back. That is all that is required.

Mr. HITCHCOCK. That is true. Then another provision which we ought to hold in mind, which will immensely strengthen the Federal Reserve System is the release of unneeded reserve. This bill reduces the legal reserve of country banks to 7 per cent; it cuts the reserve of banks in reserve cities to 10 per cent and in central reserve cities to 13 per cent. This

cuts down the legal reserve requirements of the national banks something like $375,000,000, which will be added to the loaning power of those national banks. By that same provision also the gold deposits of 7,600 national banks in the Federal Reserve System will be increased several hundred million dollars, and that will increase the credit or loaning power of the Federal reserve banks.

So I say, Mr. President, these are the important provisions. These and others strengthening the system and improving it are in this bill and are virtually needed at the present time. They are provisions under which the eight Federal reserve banks of the United States will be able to gather six or seven hundred million dollars of additional gold into the vaults to protect the gold supply of the country and to act as a basis for loans for credits and for note issues. Under the provision for issuing currency against gold and gold certificates the eight Federal reserve banks will have their loaning power increased hundreds of millions of dollars. The reduction in legal reserve requirements for national banks will increase the loaning power of the individual member banks of the Federal Reserve System nearly as much more. These provisions to strengthen the Federal Reserve System are vital at this time, when there must inevitably be a tremendous expansion of our currency and our credit, if we are to meet the great war strain now placed upon the country.

I say, Mr. President, it would be unfortunate to have this great bill with these important provisions for the welfare of our whole financial system dragged down in the discussion to a mere question of what banks shall charge in the collection of checks. There will be no injustice to these country banks. I represent a State which has many country banks. I think we have more country national banks in Nebraska than there are in the State of Georgia. I know within a few months after this act is in operation those banks will realize that we have a system so improved that they will get the benefit of it. They will be enabled to get their checks cleared at par. Some of us remember the time in the United States when a bank note 100 miles from home was at a discount. When the remedy came for that evil and bank notes were made worth par whether 100 miles from home or a thousand miles from home, what a tremendous relief came to the business world. There is no more reason why a thousand miles from home a good check should not pass at par than a bank note, and this is designed to bring it to par. It is not done at the expense of one class of banks or another. It is a reciprocal matter. What one bank loses in one way another loses in another. Moreover, the Federal Reserve Board has shown that it is desirous of protecting all banks in any legitimate charge they made; and a bank today which is called upon to receive from the Federal reserve a batch of checks, if it has an account with a Federal reserve bank, can keep the currency there and the Federal reserve bank pays express charges on it. So, I say, it is important that this bill should be passed, and should be passed at once, in order that we can go forward and carry on the great work before the country.

Mr. VARDAMAN. Mr. President, I am ready to vote on this measure.

I think that when the senatorial mind is made up it is proper to permit an expression at the earliest practicable moment.

This is an important question to the small banks of the country and, I think, to the people generally; and if it were necessary, or if I thought further discussion would avail anything, I might hold the Senate a few moments longer, but I am sure the Senate is ready to act upon the matter, and what I might say will not change the vote of a single Senator.

I realize that further opposition to the adoption of this report will be futile.

The ukase of the President has been issued, the big banks have done their work, and the Senate is ready to do the rest.

It does not matter what becomes of the little man just so the big man prospers.

The big fish may have his doubts about some things, but he has no doubt but that the little fish were made especially for him to feed upon.

I am willing to vote now, but I ask for the yeas and nays.

Mr. GRONNA. Mr. President, I do not intend to delay a vote. The Senator from Georgia [Mr. HARDWICK] so thoroughly explained the provision of his amendment that I shall not undertake to amplify it. There is one thing, however, which I want to say in reply to what the Senator from Vermont [Mr. PAGE] said relative to the charging of exchange. If a check is sent from one community to another—if a check is sent from Vermont to Massachusetts—and the man who issued that check, if it is sent to his own local bank and if it is not presented by the man who made the check, the banker, of course, will have to make a draft and there will be a transfer of credit, and the banker in Massachusetts who remits the money to the man in Vermont will not get anything for his work, but he will be out the postage for the transmission of a bank draft to pay the check. I think the Senator from Vermont will agree that in the transaction of business that is exactly what will happen.

Mr. President, I said about all I care to say on this question when the bill was before the committee and before the Senate before it was sent to conference. I am for the Hardwick amendment. I was for it then as a question of principle, and I said then, and I say now, that it is not a question of charging the depositor exchange on his own money, because that is not being done now, nor will it be done under the Hardwick amendment. The whole question is, simply, shall the wholesaler, the jobber, the mail-order houses be able to cash all these checks without paying any exchange? The whole question is between the large banks, the wholesaler, the jobber, and the country banker, and that is all there is to it.

But, Mr. President, I was opposed to this bill on account of certain provisions in it which are more fundamental than even the Hardwick amendment, and that is the question of mobilizing all the gold from every bank in the United States into the so-called Federal reserve banks and these Federal reserve banks are not Government banks. Every dollar of stock is owned by individuals and not a penny is owned by the Government. They are private corporations as the Senator from Michigan [Mr. SMITH] suggests. When you take all the gold there is in the country and place that gold in the possession of a few men, you are liable to have the same thing happen now that happened during the Civil War when gold advanced to a tremendous premium of 285 per cent.

Mr. President, I have been told by some of the men who explained this provision and how important it is on account of the war. Of course, all legislation that will benefit the big interests of the country can always be pressed during a time such as we are having now. There is always an opportunity to pass legislation like this in times of war and especially when it is asked for the Chief Executive of the Nation.

There is another provision in the bill which is objectionable. There is a provision in the bill which will permit the organization of branch banks, and the American banker and the American people are not ready for branch banks in this country, I believe. It is true it does not apply to the whole country, but it is simply an entering wedge for branch banks.

Mr. President, the argument made by the senior Senator from Nebraska [Mr. HITCHCOCK] as to the necessity in order to mobilize the finances of this country I want to say to the Senator from Nebraska that the finances of the country have been mobilized while this amendment to the Federal law has been sleeping in the committee. The bankers all over the country, State bankers and national bankers, have shown their patriotism by subscribing and by paying their good hard money for the liberty bonds. They did not wait until this bill was passed, and so far as the mobilization of the finances are concerned the bill will not help the situation in the least. Not with the people in my part of the country; not with the people in any agricultural part of the country, because in an agricultural country they do not happen to have the paper that these Federal reserve banks want, and the Senator from Nebraska knows it. The Senator from Nebraska knows that the banks in the agricultural sections and the people in the agricultural parts of the country will not be able to borrow any more after the passage of this bill or with this amendment than they were before.

Mr. HITCHCOCK. I do not desire to have the Senator's remarks express my opinion, because I know a great deal better. I know that after this bill is passed the Federal Reserve System will perhaps have seven or eight hundred million dollars of possible loans to make.

Mr. GRONNA. Yes; and I can tell the Senator——

Mr. HITCHCOCK. I can speak for my own State by saying that we will have the paper to offer.

Mr. GRONNA. I say to the Senator I know what paper they will have to offer in the State of Nebraska. They will have these bonds to offer. They can not sell the bonds, but they will put them up as collateral. The conditions are no different in the State of Nebraska from what they are in my State. I repeat that no people of any agricultural country will be allowed to borrow any more after the passage of the bill with this amendment than they could before.

Mr. President, I do not care to take up any more time. I join with the Senator from Mississippi [Mr. VARDAMAN] and ask for a record vote. I am opposed to this legislation and I shall vote against the conference report.

Mr. OWEN. Mr. President, I ask to place in the RECORD a statement of the changes which are made in the bill as passed

by the Senate and the House, and a telegram from Philadelphia from some thirty banks wiring their approval of the conference report.

The PRESIDING OFFICER (Mr. KING in the chair.) Without objection, it is so ordered.

The matter referred to is as follows:

STATEMENT OF MANAGERS ON THE PART OF THE SENATE.

Section 1 of the bill as agreed to by the conferees was contained in the House bill as section 7, but was not in the Senate bill. It authorizes the Federal Reserve Board to require the establishment of branch banks where deemed necessary. The only substantial change from existing law is that the existing law does not give the Federal Reserve Board authority to require the Federal reserve banks to establish branches.

Section 2, relating to appointment of assistants to Federal reserve agents, is substantially as passed by the Senate, except that the bonds of the assistant Federal reserve agents are given to the Federal Reserve Board directly and not to the Federal reserve agent as provided for in the Senate bill.

Section 3 of the bill as agreed to by the conferees (relating to admission of State banks into the system) is identical with section 2 of the Senate bill, and is substantially the same as section 9 of the House bill.

Section 4, amending section 13 of the reserve act, and permitting nonmember banks to make deposits in the Federal reserve banks for check-clearance purposes, is identical in substance with section 3 of the bill as passed by the Senate, with the addition of the following words after the proviso authorizing a charge for the collection of checks and drafts: "No such charges shall be made against the Federal reserve banks." It is also provided that the charges shall be determined and regulated by the Federal Reserve Board.

Section 5, relating to acceptances, corresponds with section 3 of the House bill and section 4 of the Senate bill. The section as approved by the conferees is identical with the Senate bill down to the proviso. The proviso contained in this section of the Senate bill was as follows:

"*Provided further*, That in no event shall a bank accept for any one person, company, firm, or corporation to an amount equal at any time in the aggregate to more than 20 per cent of its paid-up and unimpaired capital stock and surplus."

This proviso was stricken out and the following House proviso inserted in lieu thereof:

"*Provided further*, That the aggregate of acceptances growing out of domestic transactions shall in no event exceed 50 per cent of such capital stock and surplus."

Section 6 of the bill as reported by the conferees corresponds with section 8 of the House bill. There was no similar provision in the Senate bill. The only substantial change in existing law provided for in this section is that the Federal Reserve Board is authorized to require a Federal reserve bank to open and maintain accounts in foreign countries. It provides that when such an account is opened the Federal Reserve Board may authorize any other Federal reserve bank to use this agency thus established under such regulations as may be prescribed by the Federal Reserve Board.

Section 7, relating to note issues on gold collateral, corresponds to and is identical with section 5 of the bill as it passed the Senate.

Section 8, permitting deposits of gold coin and gold certificates with the Treasurer to the credit of the Federal Reserve Board for purposes of convenience in bookkeeping, corresponds to and is identical with section 6 of the bill as it passed the Senate.

Section 9, relieving national banks of the necessity of keeping on deposit with the Treasurer United States bonds, corresponds to and is identical with section 7 of the bill as it passed the Senate.

Section 10, relating to reserves, corresponds to and is identical with section 5 of the House bill, and corresponds with section 8 of the Senate bill. It differs from section 8 of the Senate bill in the following particulars:

A country bank is required to maintain a reserve of 7 per cent. Under the Senate bill the requirement was 6 per cent.

Under the Senate bill every member bank was required to maintain till money equal to 4 per cent of its demand deposits. The section as adopted contains no such provision.

The Senate bill designated these balances as "reserves." The bill as adopted refers to them as "net balances."

The Senate bill excepted the Philippine Islands from those insular possessions in which could be maintained member banks. The bill as reported contains no such exception.

Section 11, permitting directors and officers of member banks to receive interest on deposits and to obtain accommodations under certain restrictions, corresponds to and is in substance identical with section 9 of the bill as it passed the Senate.

—

PHILADELPHIA, *June 11, 1917.*

Hon. ROBERT L. OWEN,
United States Senate, Washington, D. C.:

We approve the amendments to the Federal reserve act as submitted by the conference committee to the Senate and House under date of June 9, 1917, with the understanding that section 4 shall be construed as prohibiting member or nonmember banks from making any exchange charge on checks or other items deposited with and collected through the Federal reserve banks. We earnestly urge the adoption of said amendments.

Philadelphia National Bank, Bank of North America, Farmers' and Mechanics' National Bank, Southwark National Bank, Kensington National Bank, Penn National Bank, Girard National Bank, Tradesmen's National Bank, Corn Exchange National Bank, Union National Bank, First National Bank, Third National Bank, Sixth National Bank, Eighth National Bank, Central National Bank, National Security Bank, Centennial National Bank, Ninth National Bank, Tenth National Bank, Northwestern National Bank, Southwestern National Bank, Fourth Street National Bank, Market Street National Bank, Quaker City National Bank, Northern National Bank, Franklin National Bank, Textile National Bank, Land Title & Trust Co., Real Estate Title Insurance & Trust Co., Girard Trust Co., West Philadelphia Title & Trust Co., Philadelphia Trust Co., Pennsylvania Company for Insurance on Lives and Granting Annuities, Provident Life & Trust Co.

Mr. OWEN. I should like to state that there are 7,581 national banks now clearing at par, pretty nearly all of them.

The PRESIDING OFFICER. The question is on the adoption of the conference report.

Mr. HARDWICK. On that question I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. CHAMBERLAIN (when his name was called). I have a general pair with the junior Senator from Pennsylvania [Mr. KNOX]. In his absence I transfer that pair to the Senator from Tennessee [Mr. SHIELDS] and vote "yea."

Mr. GERRY (when his name was called). I have a general pair with the junior Senator from New York [Mr. CALDER]. I am informed that if he were present he would vote the same as I do. I will therefore vote. I vote "yea."

Mr. HARDING (when his name was called). I have a general pair with the junior Senator from Alabama [Mr. UNDERWOOD]. I understand that if he were present he would vote as I will, and therefore I will vote. I vote "yea."

Mr. HARDWICK (when his name was called). I have a general pair with the junior Senator from Kansas [Mr. CURTIS]. I transfer that pair to the junior Senator from Louisiana [Mr. BROUSSARD] and vote "nay."

Mr. KENDRICK (when his name was called). I have a general pair with the Senator from New Mexico [Mr. FALL]. Understanding that he would vote as I shall I am free to vote. I vote "nay."

Mr. McCUMBER (when his name was called). I have a general pair with the senior Senator from Colorado [Mr. THOMAS], who is absent from the Chamber, and I withhold my vote.

Mr. McKELLAR (when his name was called). I have a pair with the junior Senator from New Jersey [Mr. FRELINGHUYSEN] and I withhold my vote.

Mr. SIMMONS (when his name was called). I have a general pair with the junior Senator from Minnesota [Mr. KELLOGG], who is absent. I understand that if he were present he would vote as I would do, and I shall therefore vote. I vote "yea."

Mr. SWANSON (when his name was called). I have a general pair with the Senator from Washington [Mr. JONES]. In his absence I transfer that pair to the senior Senator from Illinois [Mr. LEWIS] and vote "yea."

Mr. SHAFROTH (when the name of Mr. THOMAS was called). I desire to announce the absence of my colleague [Mr. THOMAS] on account of illness and to state that he is paired with the senior Senator from North Dakota [Mr. McCUMBER].

Mr. SAULSBURY (when Mr. WOLCOTT's name was called). My colleague [Mr. WOLCOTT] is absent on official business. If present, my colleague would vote "yea."

The roll call was concluded.

Mr. BANKHEAD. I have a pair with the junior Senator from Maryland [Mr. FRANCE] and therefore withhold my vote. If at liberty to vote, I should vote "nay."

Mr. RANSDELL. I wish to announce the unavoidable absence of my colleague [Mr. BROUSSARD] on official business. If he were present, my colleague would vote "nay."

Mr. WEEKS. I wish to announce the unavoidable absence of my colleague [Mr. LODGE]. If he were present, he would vote "yea."

Mr. DILLINGHAM (after having voted in the affirmative). I inquire if the senior Senator from Maryland [Mr. SMITH] has voted?

The PRESIDING OFFICER. He has not voted.

Mr. DILLINGHAM. Then I am compelled to withdraw my vote, having a pair with that Senator.

Mr. WATSON (after having voted in the affirmative). I have a general pair with the junior Senator from Delaware [Mr. WOLCOTT]. In his absence I transfer that pair to the junior Senator from New York [Mr. CALDER] and will permit my vote to stand.

Mr. GALLINGER. I have been requested to announce the following pairs:

The Senator from Massachusetts [Mr. LODGE] with the Senator from Georgia [Mr. SMITH]; and

The Senator from West Virginia [Mr. GOFF] with the Senator from South Carolina [Mr. TILLMAN].

The result was announced—yeas 51, nays 14, not voting 31, as follows:

YEAS—51.

Ashurst	Husting	Page	Smith, Mich.
Beckham	James	Phelan	Smith, S. C.
Brandegee	Johnson, S. Dak.	Pittman	Sterling
Chamberlain	Jones, N. Mex.	Poindexter	Sutherland
Colt	King	Pomerene	Swanson
Culberson	Kirby	Reed	Thompson
Fletcher	McLean	Robinson	Townsend
Gallinger	McNary	Saulsbury	Trammell
Gerry	Martin	Shafroth	Walsh
Hale	Nelson	Sheppard	Warren
Harding	New	Sherman	Watson
Hitchcock	Newlands	Simmons	Weeks
Hollis	Owen	Smith, Ariz.	

NAYS—14.

Borah	Gronna	La Follette	Vardaman
Brady	Hardwick	Norris	Williams
Cummins	Kendrick	Overman	
Fernald	Kenyon	Ransdell	

NOT VOTING—31.

Bankhead	Goff	Lodge	Smoot
Broussard	Gore	McCumber	Stone
Calder	Hughes	McKellar	Thomas
Curtis	Johnson, Cal.	Myers	Tillman
Dillingham	Jones, Wash.	Penrose	Underwood
Fall	Kellogg	Shields	Wadsworth
France	Knox	Smith, Ga.	Wolcott
Frelinghuysen	Lewis	Smith, Md.	

So the conference report was agreed to.

CONSERVATION OF FOOD AND FUEL.

Mr. CHAMBERLAIN. Mr. President, I do not see the Senator from Oklahoma [Mr. GORE], the chairman of the Committee on Agriculture and Forestry, in the Chamber. In his absence I move that the Senate proceed to the consideration of the bill (S. 2463) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel.

The PRESIDING OFFICER. The question is on the motion of the Senator from Oregon.

Mr. HARDWICK. Mr. President, on Saturday last I gave notice that at the proper time I should raise, for the consideration of the Senate, the question that the Senate had no right to consider, and could not with propriety consider, this bill, because it violates the provision of the Constitution that all bills raising revenue shall originate in the House of Representatives. Upon a somewhat hasty examination of the bill—for the duties which confront us are so many that we are not able to give as much time as we should like to all these questions—I observe that section 12 of the bill provides:

SEC. 12. That, whenever the President shall find that an emergency exists requiring stimulation of production and that it is essential that the producers of any nonperishable agricultural products produced within the United States shall have the benefits of the guarantee provided for in this section in order to stimulate production of such products, he is authorized, from time to time, seasonably and as far in advance of seeding time as practicable, to determine and fix and to give public notice of what, under specified conditions, is a reasonable guaranteed price for any such products, in order to assure such producers a reasonable profit. Thereupon, the Government of the United States hereby guarantees every producer of any merchantable nonperishable agricultural products produced within the United States, for which a guaranteed price shall be fixed by notice in accordance with this section, that, upon compliance by him with the regulations prescribed by the President, he will receive for any such products produced in reliance upon this guarantee within the period, not exceeding three years, prescribed in the notice, a price not less than the guaranteed price therefor as fixed pursuant to this section. In such regulations the President shall prescribe the terms and conditions upon which any such producer shall be entitled to the benefits of such guarantee. When the President finds—

I invite particularly the attention of the Senate to this language—

that the importation into the United States of any such products produced outside of the United States seriously interferes or is likely seriously to interfere with the practical operation of any guaranteed price therefor fixed pursuant to this section, or materially enhances or is likely materially to enhance the liabilities of the United States under guaranties of prices therefor made pursuant to this section, and shall so proclaim, there shall be levied, collected, and paid a rate of duty, upon the products so imported, the amount of which rate of duty shall be ascertained and proclaimed by the President, which amount shall, when added to the value of the product at the time it is offered for entry be sufficient to bring the price thereof at which imported up to the price which shall have been fixed therefor pursuant to this section—

And so forth.

Mr. President, the Constitution of the United States provides that no bill raising revenue shall originate in this body. My recollection of the language is that it says in substance that all bills to raise revenue must originate in the House of Representatives—not bills that incidentally propose to levy a tax, but any bill which proposes directly or indirectly, to use the taxing power of the United States, must originate in the popular branch of Congress.

Mr. POMERENE. Mr. President, may I ask the Senator from Georgia a question?

The PRESIDING OFFICER. Does the Senator from Georgia yield to the Senator from Ohio?

Mr. HARDWICK. I yield to the Senator from Ohio.

Mr. POMERENE. Do I understand the Senator's objection goes to the entire bill or only to this particular provision of the bill?

Mr. HARDWICK. I think, giving the Senator my own opinion, that the Senate has no right to consider a Senate bill any part of which relates to the raising of revenue. My own opinion is that if the Senate were in future asked to pass this bill, namely, Senate bill 2463, the Senator from Ohio, if he should happen to favor it, and the Senator from Oregon [Mr. CHAMBERLAIN], who reports it and champions it, would find it necessary at least to strike from the bill every provision for the use of the taxing power of the Government of the United States before they could vote for it.

Mr. POMERENE. Mr. President, in order to get the Senator's view, may I ask another question?

Mr. HARDWICK. I yield to the Senator from Ohio.

Mr. POMERENE. Assume, for the sake of the argument, that Congress will pass this bill, even though it be conceded that it should have originated as a parliamentary matter in the other House, is the Senator still of the opinion that a court would be obliged to hold the law unconstitutional?

Mr. HARDWICK. I would answer the Senator from Ohio that frankly I would think not, as a general proposition, because I do not think as a rule—and I certainly think it is the correct rule—that the courts ought to go behind the certificates of the presiding officers of the two bodies and of the Executive, and that the courts can not concern themselves with the details of how legislation is enacted.

Mr. POMERENE. In other words, then, the Senator's view is that this provision of the Constitution is directory only and not mandatory?

Mr. HARDWICK. Yes. But it is mandatory on us.

Mr. POMERENE. I agree with the Senator.

Mr. HARDWICK. I am giving the Senator now again my personal view—my view as a lawyer—but the Senator from Ohio must remember that the day is not very far back in the past when the courts of the United States held that the cotton futures' law, which was enacted only a few years ago by the Congress of the United States, was unconstitutional because the provision taxing the cotton exchanges, or using the taxing power to regulate the cotton exchanges, originated in this body, instead of in the House of Representatives; and that the courts of the United States having so held the Congress of the United States reenacted the legislation in question to avoid that constitutional difficulty. I merely mention that as a part of the current history of the country.

Mr. POMERENE. Has the Senator the reference to that decision before him now?

Mr. HARDWICK. I do not remember the decision, but it is a case from the southern district of New York.

Mr. HOLLIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Georgia yield to the Senator from New Hampshire?

Mr. HARDWICK. I yield to the Senator from New Hampshire.

Mr. HOLLIS. The case was that of Hubbard against Lowe. It is found in 226 Federal Reporter, at page 135.

Mr. HARDWICK. I thank the Senator for the reference.

Mr. HOLLIS. But, if the Senator will permit me, the case was decided on a record that stated that it was a bill for raising revenue.

Mr. HARDWICK. Yes.

Mr. HOLLIS. It is quite doubtful whether it was or not; but that was admitted on the record. That was a decision of the district court; it was not carried to the court of appeals.

Mr. HARDWICK. I see, of course, where the Senator is leading up to; it is to the proposition that, if the bill were for something else besides raising revenue, the Senate might incidentally enact a taxing provision; but I utterly dissent from that position, and I do not believe any court in this country will ever so hold.

Mr. HOLLIS. Mr. President, will the Senator yield to me further?

The PRESIDING OFFICER. Does the Senator from Georgia yield to the Senator from New Hampshire?

Mr. HARDWICK. Yes.

Mr. HOLLIS. The Supreme Court has so held in two cases.

Mr. HARDWICK. I disagree with the Senator utterly. I am reasonably familiar with the decisions on which the Senator relies, I think, and possibly I have studied them as much as has the Senator from New Hampshire. I do not think any one of them can be fairly construed to mean what I understand the Senator will contend on this question, if I understood his interruption correctly.

But, Mr. President, I have been somewhat doubtful about the manner in which this question ought to be raised and when and how it could be decided. I frankly say to the Senator in charge of this bill that I do not believe it would be within the power of any Presiding Officer to sustain a point of order based on such a proposition, and I would not invoke such a ruling. No matter what the opinion of the presiding officer was on the question of constitutional law, I think it would be a matter for the Senate itself. So that at this stage of the proceedings, at the beginning of what will be a thorough and exhaustive discussion of this question, I do not think it is at all necessary to go into an extended argument of this phase of the question. I think it ought to be suggested to the Senate. It will, of course, be a matter resting upon the conscience and judgment and opinion of each Senator when he comes to vote upon the measure itself or when the motion is made, if it should be made, at a later stage of the proceedings, to recommit the bill for that reason.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Georgia yield to the Senator from Idaho?

Mr. HARDWICK. I yield to the Senator from Idaho.

Mr. BORAH. Suppose we should proceed with the consideration of this bill until the bill which is now in the House reaches the Senate and it should be substituted for this bill. That would obviate the Senator's objection, would it not?

Mr. HARDWICK. Undoubtedly; but I take it, Mr. President, the Senate would be in a rather humorous position to be debating, with a pretense that it was actually considering its passage, a bill that it never intends to consider, and could never pass. If we must pass a bill that originates in the House, if we pass any, we had better wait until the bill comes here from the House.

Mr. BRANDEGEE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Georgia yield to the Senator from Connecticut?

Mr. HARDWICK. I yield to the Senator from Connecticut.

Mr. BRANDEGEE. Without expressing any opinion as to whether or not the point raised by the Senator from Georgia is well taken, if the section which the Senator has quoted should finally appear to the Senate to be in violation of the provision of the Constitution to which the Senator has referred, and the Senate should strike it out, should we now assume that the mere introduction of a bill containing that provision tentatively should prevent the Senate from considering any part of the bill whatever? After we have debated the motion raised by the Senator it seems to me then would be the time for the Senate to decide what its powers are as to the enactment of that section.

Mr. HARDWICK. I am inclined to agree with the Senator; I think he is eminently correct about it; and, as I said just now, I do not think any Presiding Officer could foist upon the Senate or could, even in justice to himself, lay before the Senate his personal opinion of the merits of a question like that. It is for the Senate itself to determine, and I expect to ask the Senate at the first appropriate point in the proceedings to determine that question on its merits and standing by itself.

Now, when I have said that much, I do not care to delay these proceedings further, except to say that as to this bill itself I feel that we ought to give it a great deal of consideration and very careful consideration. It presents some of the most novel, some of the newest, some of the most far-reaching, and some of the most dangerous propositions that were ever presented to the representatives of a free people.

I hope that before the discussion shall end the country may get a somewhat different idea about this measure from that which is so assiduously circulated in some portions of the public press. If what the country wants is to deal with the food pirates of this country, the monopolists, the men who forestall and regrade and engross the food and fuel necessities of the Republic, and if the Sherman antitrust law is not adequate, I am willing to help enact adequate legislation at any moment. If the country is now denied adequate legislation in order to save it from the food pirates who are robbing it and starving and freezing it, it is not the fault of the Senate in any respect whatever, as has been pointed out this morning. Once the bill were passed that we considered some time ago relating to this question—the food-survey bill, I think it was called—with section 8 embodied in it, as proposed by the distinguished Senator from Montana [Mr. WALSH] and as drafted by the distinguished Senator from Washington [Mr. POINDEXTER], there would not be, in my judgment, the slightest excuse whatever for this legislation, nor the slightest basis upon which to rest any real propaganda for its enactment.

At the appropriate time, Mr. President, as soon as the Senators in charge of the measure shall make whatever statements they please, I expect to raise the constitutional question I have suggested and to press it for the judgment and decision of the Senate.

Mr. GORE. Mr. President, I wish to say that I hope the motion to make Senate bill 2463 the unfinished business will prevail. It was my intention to submit that motion when the conference report was disposed of, but it happened that I was temporarily absent from the Chamber.

The PRESIDING OFFICER. Will the Senator from Oklahoma pardon the Chair?

Mr. GORE. Certainly.

The PRESIDING OFFICER. The Chair understood the motion of the Senator from Oregon [Mr. CHAMBERLAIN] was that the Senate proceed to the immediate consideration of Senate bill 2463.

Mr. GORE. I understand that that was the motion of the Senator from Oregon, and I wish to express my satisfaction that he has made the motion.

I desire to add that the bill was introduced by the Senator from Oregon [Mr. CHAMBERLAIN] on Friday last. As chairman of the Committee on Agriculture and Forestry I assembled the committee the next morning—last Saturday morning—and the bill was immediately reported to the Senate, it will be recalled, without amendment and without recommendation. It was my desire and the desire of the Committee on Agriculture and Forestry to speed this measure to early consideration. I was not willing, and neither was any member of the committee willing, to assume the responsibility of occasioning any delay.

I wish to state further, Mr. President, that, as the bill is drawn, I do not feel in a position to support it. I can not vote for the measure unless it is materially amended. I think that it ought to have a fair chance for its life, however, in the Senate, and I shall, therefore, as chairman of the Committee on Agriculture and Forestry, ask the Senator from Oregon, both on account of his ability and his familiarity with this subject, to take control of this measure in the Senate. The bill ought to be in friendly hands; and, as I can not support it unless it is essentially modified, I shall request him to do the Senate this service.

I wish to add to what I have just said, Mr. President, that I am in favor of legislation to enable this Government, if such legislation be necessary, to cooperate with the allied powers in purchasing supplies in the markets of the world. These countries ought not to compete with each other in the world's markets in purchasing supplies; they ought not to run prices up against each other. To meet that situation and to obviate that difficulty, I have prepared and introduced a bill enabling representatives of this Government to cooperate with the representatives of the allied powers in making purchases so as to avoid competition. Undoubtedly that ought to be done.

I may say that I am also in favor of legislation punishing those who gamble in the necessaries of life. If there be monopolists and manipulators who would even seek to fatten and batten upon the needs and misfortunes of their countrymen, certainly the most severe penalties known to civilized jurisprudence ought to be inflicted upon them. I supported the Walsh amendment, being the Poindexter bill, to the measure which passed this body on June 1. Its object and its purpose were to penalize those who would make merchandise of the calamities of their countrymen. I regret that that measure is not already a law, and that the shield of this great Government has not been interposed to protect the consumers of the country against such machinations. I regret that the Department of Justice has not been armed with the sword which that measure sought to place in its hands to smite those who would smite their country.

The measure which passed this body on June 1 also carried the Nelson amendment, empowering the President to close the boards of trade and chambers of commerce if they undertook to manipulate the grain markets and food markets of this country, to run prices up unduly, or to permit and abet extortion. I regret that that measure is not already the law of the land in order that the consumers and producers alike might be vouchsafed the benefit of that protection.

I hope that this measure will assume such shape before the final vote shall occur as will enable me to render it my earnest and conscientious support. As now drawn I can not do so.

In addition to constitutional objections, there are many other objections which, to my judgment, are controlling. I think that the best asset, or at least one of the best assets, which this Republic has in this time of stress is the efficient business organization of this country. That ought to be conserved; it ought not to be destroyed. I fear that it would be seriously impaired if this measure should be enacted as drawn. If the powers sought to be vested by this bill are vested in any food controller or food administrator, and these powers should be exercised, I have not the slightest doubt but that the business machinery and business organization of this country will come down in one sudden and irresistible crash. If these powers should be so vested, and should not be exercised, they would, nevertheless, occasion such unrest, such anxiety, and such uncertainty on the part of business men as to be fraught with the most serious consequences. There are enough factors of uncertainty in connection with the future at the very best. We ought to minimize those uncertain factors rather than multiply them. This is an added reason upon which I base my position. On an appropriate occasion I shall take the time, perhaps, to elaborate my views more particularly and more at large. For the present I shall surrender the control of the measure to the distinguished and able Senator from Oregon.

The PRESIDING OFFICER. The question recurs on the motion of the Senator from Oregon [Mr. CHAMBERLAIN] that the Senate proceed to consideration of Senate bill 2463.

Mr. KENYON. Mr. President, it would be presumptuous in me to discuss the bill prior to the statement and argument to be made by the Senator from Oregon [Mr. CHAMBERLAIN], but I do not believe the statement of the Senator from Georgia [Mr. HARDWICK] should go unchallenged, because if this bill is really a bill for raising revenue, then we have no business to originate it in the Senate.

Section 7 of Article I of the Constitution, to which he refers, provides that—

> All bills for raising revenue shall originate in the House of Representatives, but the Senate may propose or concur with amendments as on other bills.

I had so much doubt of this question in my own mind that I raised it in the committee and suggested that we strike out the provision to which the Senator from Georgia has referred; but the committee was not of the same mind. I had not given the matter very much study at that time, but since then I have given to it what study I could in the rush of matters here, and am satisfied that this bill can properly originate in the Senate. If it can not, we ought to settle the question, and not be debating a bill which is not properly and can not properly be before us.

If the Senate will note the language of section 12 in connection with the purpose of section 12, it is not in any way a section to raise revenue. This bill is not in any sense a bill to raise revenue. Whatever revenue may be raised—and it is not certain that any ever will be raised—is incidental to the main purpose of the bill.

The section which the Senator cites is what is commonly known as the minimum-guaranty section. That is to say, the President is given power, as to certain staples, to fix a minimum guaranty. In order that this may be effective, the bill goes on and provides that where importations of products into this country may affect that minimum guaranty, then, and only then, the President can fix these tariffs to be levied and collected.

Now, that is not for the purpose of raising revenue at all. That is merely to make the minimum-price guaranty effective. Not only that—to which I shall cite an authority or two, so that they may be in the RECORD, so that the Senators may reflect upon them—but, further, this section of the Constitution which provides that bills for raising revenue must originate in the House is based on the old English philosophy, under which these bills must originate in the House of Commons because they represent the people. That section of the Constitution was placed there because the House, elected directly by the people, was supposed to represent the people more truly than the Senate, representing the States. Now that Senators are elected by the people the reason for that constitutional provision does not apply, because Senators are elected by the people the same as Members of the House.

Mr. HARDWICK. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Georgia?

Mr. KENYON. I do.

Mr. HARDWICK. Does it not occur to the Senator from Iowa, however, that the representatives of the people represent, each one of them, with one vote, exactly the same number of people, and that that is not true about the Senate, where two Senators may come from a State with 300,000 people and have only two votes, as against two Senators who come from a State with 9,000,000 people with only two votes?

Mr. KENYON. But is it not the philosophy of section 7 of Article I and was it not placed there because the Members of the House were regarded more directly as the representatives of the people, so that the people were voting this tax upon themselves? That is true of the English House of Commons.

Mr. HARDWICK. I think the Senator is right about that; but the consideration I have suggested, I believe, also enters into it, as you will find from reading the debates. And then anyway, if the Senator will pardon just one interjection, it is like the case of the man in jail: It is there anyway, no matter why they put it there.

Mr. KENYON. Oh, that is true. I am not making any particular point about it. It is not necessary; but I believe the section is practically obsolete now, since Senators are elected by the people.

Mr. WARREN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Wyoming?

Mr. KENYON. I do.

Mr. WARREN. We pass a great many bills that levy fines and collect money for certain delinquencies, but not especially for revenue. I take it from what the Senator says, and I agree with him, that this bill is more nearly like a bill of that kind than for the purpose of raising revenue.

Mr. KENYON. Yes; those bills are not for the purpose of raising revenue.

The Supreme Court of the United States has sustained this doctrine. I refer to the case of Twin City Bank against Nebeker, in One hundred and sixty-seventh United States, page 196. This question arose under section 41 of the national banking act, imposing certain taxes upon the average amount of the notes in circulation of a banking association. That was a taxing proposition. Among other things, the Supreme Court said when this very question was raised:

> The case is not one that requires either an extended examination of precedents or a full discussion as to the meaning of the words in the Constitution, "bills for raising revenue." What bills belong to that class is a question of such magnitude and importance that it is the part of wisdom not to attempt by any general statement to cover every possible phase of the subject. It is sufficient in the present case to say that an act of Congress providing a national currency secured by a pledge of bonds of the United States, and which, in the furtherance of that object and also to meet the expenses attending the execution of the act, imposed a tax on the notes in circulation of the banking associations organized under the statute, is clearly not a revenue bill which the Constitution declares must originate in the House of Representatives. Mr. Justice Story has well said that the practical construction of the Constitution and the history of the origin of the constitutional provision in question proves that revenue bills are those that levy taxes in the strict sense of the word, and are not bills for other purposes which may incidentally create revenue. (Story on Const., 880.) The main purpose that Congress had in view was to provide a national currency based upon United States bonds, and to that end it was deemed wise to impose the tax in question.

That is the exact question here. The court says:

> The tax was a means for effectually accomplishing the great object of giving to the people a currency that would rest, primarily, upon the honor of the United States, and be available in every part of the country. There was no purpose by the act or by any of its provisions to raise revenue to be applied in meeting the expenses or obligations of the Government.

The case of Millard *v.* Roberts (202 U. S., p. 429) arose over an act of Congress levying taxes in the District of Columbia for public improvements, and the court there, in a very interesting opinion, discusses this very question. This bill originated in the Senate, and was a bill for taxation, but not primarily for revenue. The court says:

> This language is applicable to the acts of Congress in the case at bar. Whatever taxes are imposed are but means to the purposes provided by the act.

And in Story, on the Constitution, is a most interesting discussion of the genesis of section 7 of Article I of the Constitution as it is derived and borrowed from the English law, because of the reason I have heretofore stated. This section,

which, it seems to me, settles the matter, I want to read for the purpose of the RECORD.

What bills—

Says Story, on the Constitution—

are properly "bills for raising revenue," in the sense of the Constitution, has been matter of some discussion. A learned commentator supposes that every bill which indirectly or consequentially may raise revenue is, within the sense of the Constitution, a revenue bill. He therefore thinks that the bills for establishing the post office and the mint and regulating the value of foreign coin belong to this class, and ought not to have originated (as in fact they did) in the Senate. But the practical construction of the Constitution has been against his opinion. And, indeed, the history of the origin of the power already suggested abundantly proves that it has been confined to bills to levy taxes in the strict sense of the words, and has not been understood to extend to bills for other purposes, which may incidentally create revenue.

That is the whole subject, Mr. President, and covers the whole thing.

The Senate in dealing with the income-tax bill substituted the corporation tax for the income tax. That was questioned in the courts, but never very seriously. The point I am making is simply this, that the provisions of section 12, which are the ones complained of, providing that the President may levy and collect a rate of duty, are only for the purpose of carrying out and making effective the minimum guaranty of that section, and in no way are they provisions for the purpose of collecting revenue. Hence, this bill with that section is not a bill for raising revenue, and can properly originate in the Senate.

Mr. HOLLIS. Mr. President, I believe the argument of the Senator from Iowa [Mr. KENYON] is unanswerable, and that the two Supreme Court cases which he has cited settle this question, but I think perhaps some of the Senators have in mind the cotton-future case, which apparently was decided the other way. Before I discuss that case briefly, however, I wish to call the attention of the Senate to the attitude of the Senate itself upon this question. It is found in Gilfry's Precedents, first volume, on page 230.

It there appears that the Senate has never conceded the sole and exclusive right of the House of Representatives to originate bills that are purely for the purposes of raising revenue. The Senate has always claimed that right, but frequently it has had conflict with the House of Representatives, and when the two Houses have been in conflict the matter has usually been disposed of without a decision. But it is stated in Gilfry's Precedents, page 230:

In 1883 the compromise tariff bill was introduced in the Senate by Henry Clay, but as the same bill was passed by the House of Representatives while Mr. Clay's bill was pending in the Senate, the latter was laid on the table and the House bill was passed.

Now, undoubtedly we shall have the same result here. If the Senate debates this bill at anything like the same length it has other bills that have been before the Senate, the House will have passed its bill long before the bill has been passed here.

But I continue to read from Gilfry:

When this bill was introduced a point of order was raised against its reception by Mr. Forsyth that it contained a section proposing an increase of duties on certain woolens and was, therefore, a bill in conflict with the clause of the Constitution above cited. It was introduced with the section retained, and the debate and action upon its reception and passage indicate the opinion of that Senate at least that a bill both to increase and reduce duties could originate in the Senate.

Numerous bills have originated in the Senate that subsequently became laws, and covering the period from 1815 to the present time, that give strength to the contention of those who believe the Senate has power to originate revenue measures.

And a fairly careful search finds no authority in the precedents of the Senate for the position stated by the Senator from Georgia [Mr. HARDWICK].

Referring to the cotton-futures case, which is freshly in the minds of some of the Members of the Senate, I wish to say—and I am now referring to the case of Hubbard *v.* Lowe (226 Federal Reporter, p. 135)—that that was a decision by the district judge of the Federal court for the southern district of New York, Judge Hough, and the case went off on that decision; but the real point involved was this, quoting from the opinion, on page 137:

I am perhaps saved from inquiry whether the cotton-futures act is a bill for raising revenue by the agreement of counsel on this point.

When counsel had agreed that the cotton-futures act was a bill to raise revenue there was nothing for the district judge to do but to write that it could not originate in the Senate. Where, however, we have a bill that is not intended primarily and principally for the purpose of raising revenue, but a bill that is intended to safeguard the United States Government and for the national safety and defense, with merely incidental revenue provisions, it clearly does not come within the inhibition of the Constitution.

This case of Hubbard against Lowe was not appealed. The Government did not care to appeal it, because the Congress repassed the bill immediately, having it originate in the House. So that as far as I can find there is no authority whatever for the position taken by the Senator from Georgia.

I merely make these few remarks in order that Senators who might be disturbed by the attack on our right to originate the bill here may look up the matter for themselves, if they have any further doubts.

The PRESIDING OFFICER. The question is upon the motion of the Senator from Oregon.

The motion was agreed to; and the Senate, as in Committee of the Whole, proceeded to consider the bill (S. 2463) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel.

Mr. CHAMBERLAIN. Mr. President, I do not propose at this time to enter into any lengthy discussion of the bill that has just been laid before the Senate, but I think it proper to make a very brief statement in reference to it, in view of the attitude of the distinguished chairman of the Committee on Agriculture and Forestry [Mr. GORE], who is in opposition to it.

Mr. President, this bill was reported out by the committee without amendment and without having been thoroughly discussed in the committee, for the reason that it had been argued at great length and extensive hearings had been had before the Agricultural Committee of the House of Representatives and the bill finally reported to the House from that committee, so that the bill as introduced in the Senate and as it was referred to the committee was an exact copy of the one which was reported by the House committee.

Now, there had been hearings before the Senate committee as well as before the committee of the House of Representatives on this whole subject, so that really nothing was to be gained by having additional hearings before the committee of the Senate. It was felt by many members of the committee, and I think properly so, that if the Senate committee, after a week's discussion, and after extensive hearings, agreed upon the form of a bill, the bill would still have to be discussed in all of its phases when it reached the Senate. So that the committee felt that time would be saved if the bill could be taken up in the Senate as an original proposition and the country advised as to its nature and contents.

Mr. GRONNA. Mr. President——

The PRESIDING OFFICER (Mr. KING in the chair). Does the Senator from Oregon yield to the Senator from North Dakota?

Mr. CHAMBERLAIN. I do.

Mr. GRONNA. Of course it was understood that the members of the committee had the right to oppose the bill.

Mr. CHAMBERLAIN. Oh, yes.

Mr. GRONNA. It was not understood that the members of the committee favored this bill.

Mr. CHAMBERLAIN. Oh, no, Mr. President; the Senator is right. It was left open for the members of the committee to take such position in the Senate as they might see fit.

Mr. VARDAMAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Oregon yield to the Senator from Mississippi?

Mr. CHAMBERLAIN. I yield.

Mr. VARDAMAN. I should like to ask the Senator from Oregon whether the bill has been read?

Mr. CHAMBERLAIN. Not yet.

The PRESIDING OFFICER. The Chair advises the Senator from Mississippi that the bill has not yet been read.

Mr. VARDAMAN. After the Senator from Oregon has concluded his speech I shall call for the reading of the bill.

Mr. CHAMBERLAIN. Mr. President, I thought it just as well to make a brief statement about it before the bill is read, and then, of course, it will have to be read.

Mr. REED. Mr. President——

The PRESIDING OFFICER. Does the Senator from Oregon yield to the Senator from Missouri?

Mr. CHAMBERLAIN. I do.

Mr. REED. If the Senator is going to make a statement in regard to this bill, I think we ought to have a full attendance of the Senate; and unless it is against the Senator's wishes, I will suggest the absence of a quorum.

Mr. CHAMBERLAIN. I really do not care, Mr. President. Senators do not remain very long after they get here.

Mr. REED. I suggest the absence of a quorum.

The PRESIDING OFFICER. The Senator from Missouri suggests the absence of a quorum. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Bankhead	Hitchcock	Martin	Reed
Beckham	Hollis	Myers	Robinson
Borah	Husting	Nelson	Shafroth
Chamberlain	James	New	Sheppard
Culberson	Johnson, S. Dak.	Newlands	Smith, Ariz.
Cummins	Jones, N. Mex.	Norris	Smith, Md.
Fernald	Kendrick	Overman	Sterling
Fletcher	Kenyon	Owen	Stone
Gallinger	King	Page	Sutherland
Gore	Kirby	Penrose	Swanson
Gronna	La Follette	Phelan	Vardaman
Hale	McCumber	Pittman	Warren
Harding	McKellar	Poindexter	Weeks
Hardwick	McNary	Pomerene	

Mr. GALLINGER. I desire to announce that the junior Senator from Maryland [Mr. FRANCE] is detained on account of illness. I will ask that this statement may remain for the day. I also desire to announce the unavoidable absence of the senior Senator from Utah [Mr. SMOOT].

Mr. HUSTING. I desire to announce that the Senator from Delaware [Mr. WOLCOTT], the Senator from Rhode Island [Mr. GERRY], and the Senator from Louisiana [Mr. BROUSSARD] are detained from the Senate on official business.

The PRESIDING OFFICER. Fifty-six Senators having answered to their names, there is a quorum present.

Mr. CHAMBERLAIN. Mr. President, as I stated a while ago, I do not propose at this time to enter into any lengthy discussion of the measure, but very briefly to state its purpose.

The bill is not very long, and it is so plain in its terms that it seems to me that it is a work of supererogation to undertake to tell what its purpose is. But, Mr. President, this country is involved in a war the probable duration of which it is impossible for any man to foretell. All of us in America have hoped and still hope that it may, at some time in the very near future, end as suddenly as it was commenced in 1914. But now that we are involved in it, and owing to the uncertainty of its duration, the United States has to place itself in the best possible position to successfully assist those who are allied with us in carrying it on, and at the same time protect our own people.

In order to win the war it is just as essential for this country to have a sufficient amount of food as to have the necessary munitions, soldiers, and battleships. A relative scarcity of food supplies has already been created by the war situation, vast amounts of labor having been diverted abroad from fields of production into the pursuits of war. As a result it has become of vital importance to the Nation to conserve existing food stocks and to consider such measures as may encourage further production and proper distribution.

Under normal conditions we have been accustomed to rely upon the force of competition to control economic relations affecting the production and distribution of the necessaries of life. With the advent of war, however, and the relative scarcity of food, it is clear that competition can not be relied upon to insure such production and distribution of food supplies as will be needed to safeguard the general interest. We must devise other methods of control that shall be available and adequate to meet the situation at hand and to meet the new situations that are likely to present themselves as the war advances.

Prices in the United States are soaring skyward all the time. The same condition exists in other countries, so that not only must we look to the production of food, but we must look to the care and conservation and distribution of it in such a way that these prices may remain at some figure the consumer can pay.

Mr. BORAH. Does the Senator prefer to go ahead, or will he yield now for a question?

Mr. CHAMBERLAIN. I would a little rather go ahead, because I am going to be very brief.

Mr. President, as tending to show that there has been a constant upward tendency in prices, not only here but abroad, I call the attention of the Senate to a table which shows the comparative level of food prices in the several countries on certain dates as compared with prices in July, 1914. In volume 17, No. 5, of the Labor Gazette issued by the department of labor of the Dominion of Canada, on page 394 will be found this table which I ask to have printed as a part of my remarks.

The PRESIDING OFFICER. Without objection it is so ordered.

The table referred to is as follows:

Approximate increases in the cost of staple foods and groceries in certain countries by percentages over July, 1914.

	1915		1916								1917			
	Jan.	July.	Jan.	Apr.	July.	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.
Canada	7	5	12	12	14	16	21	25	32	36	38	41	44	45
United Kingdom	18	32½	45	49	61	60	65	68	78	84	87	89	92	94
United States	1	— 1	6	7	9	12	16	19	24	25	25	31	31	[1]43
Australia	7	30	29	31	30	28	26	25	26	25	25	.....	.....	.....
New Zealand	11	12	16	18	19	20	18	20	23	25	27	26	.....	.....
Italy [2]	8	20	33	32	32	32	32	32	33	38	44	.....	.....	.....
Switzerland	.....	19	26	.....	40	.....	44	.....	.....	.....	.....	.....	.....	.....
Holland	13	30	35	42	50	50	53	58	62	65	65	65	.....	.....
Denmark	.....	28	34	.....	46	.....	.....	.....	[3]75	[3]78	[3]82	[3]86	.....	.....
Norway	[3]9	[3]19	[3]41	[3]55	[3]169	[3]82	[3]82	[3]82	[3]87	[3]94	[3]104	[3]102	.....	.....
Sweden	[3]15	[3]30	[3]39	[3]41	[3]51	.....	[3]68	[3]71	[3]79	[3]81	[3]85	[3]100	.....	.....
Stockholm	[4]13	[4]24	[4]30	[4]34	[4]42	.....	.....	[4]52	.....	[4]54	.....	.....	.....	.....
Austria	21	79	113	121	.....	178	169	.....	177	.....	172	.....	.....	.....
Germany	31	70	88	120	118	116	120	109	110	.....	.....	.....	.....	.....

[1] This number has been added to the table as published. For May it was 50 per cent.
[2] Seven foods only. In Milan, 18 foods in January were 70 per cent higher than in the first six months of 1914.
[3] Including coal, wood, and petroleum.
[4] Foods only, at Stockholm.

Mr. CHAMBERLAIN. Note the approximate increases in the cost of staple foods and groceries in certain countries by percentages over July, 1914. Taking Canada, in January, 1915, the percentage of increase was 7 per cent; in July, 1915, it was reduced to 5 per cent over the cost of 1914. In 1916 these prices continued to rise during every month in the year, and the same is true of 1917, when the increase for April was 45 per cent over the 1914 cost on these staple necessaries.

In the United Kingdom the increase in the cost of staple foods and groceries for January, 1915, was 18 per cent, and these increases gradually rose until April, 1917, when the rate was 94 per cent over the price of July, 1914. In the United States the rate of increase in January, 1915, was 1 per cent, and this rate gradually increased until April, 1917, when it amounted to 43 per cent, while to-day, according to estimates made, the rate of increase is far in excess of this last amount. It might be nearer accurate to say that the increase ranges from 75 to 100 per cent. What is said of these three countries is applicable to all of the other countries named in the statement herewith presented, the rates varying and being much higher in some countries than in others.

Mr. REED. Mr. President, just a question. Does the same table show the increase in the price of other articles than food?

Mr. CHAMBERLAIN. No; it shows the increases to be in staple foods and groceries only.

Mr. REED. I thought perhaps the Senator could show how the price of steel and copper and lead and zinc and coal and cotton and wool might have increased; whether it had gone along with the increase in food prices.

Mr. CHAMBERLAIN. The table does not show that. It only shows the staple food and groceries at the heading. I will say as a matter of fact as to the commodities which the Senator mentions the increases have been in the same proportion and sometimes in a very much larger proportion. I have not a table showing that before me.

Mr. REED. Then the rise in price has been general?

Mr. CHAMBERLAIN. Yes; general.

Mr. REED. It has not been any greater than it has been in many other of those prime necessities of life which must be had to be used by the people in all countries.

Mr. CHAMBERLAIN. That is correct.

Mr. President, with this constant soaring of prices there must be lodged somewhere the power to regulate. I do not know that anyone knows exactly what has been the cause of these rapid increases in the price of the necessaries of life. There is a conflict of opinion amongst many as to the real causes which have brought it about. But one thing is sure, Mr. Presi-

dent, that in those countries where this tendency upward has existed legislative regulation along the lines proposed has tended to hold the prices down.

If the wage paid labor in all walks of life kept pace in upward tendency with the increase in the price of necessaries of life the situation might not be so unbearable, but it is a fact that this has not been the case. Dr. Clyde L. King, assistant professor of political science in the University of Pennsylvania, in a hearing before the Senate committee, conclusively proved this by a careful study of the relation between the increase of wages on the one hand and the increase of food prices on the other, and the conclusion reached by him was that wages had not increased certainly over 20 per cent, and that foods have increased from 27 to 33 per cent for the period covered by his investigation, namely, during the year 1916 and a part of 1917. In other words, as he testified, "The actual wage has gone down; and it is very clear—I am giving these figures here in order to drive home the necessity for national action—it is certainly very clear that the actual wage can not continue to go down without very great suffering and real direful consequences." I call the attention of the Senate to his testimony upon the subject.

Mr. President, one of the main purposes of the pending bill is to provide for some governmental agency for the regulation of these prices. I have sometimes wondered that those individuals, associations, and corporations that are measurably responsible for conditions which it is now sought to regulate and restrain do not heed the warning voice of the public and restrain their avarice and greed in advance of legislation. It is one of the peculiar things in this world's history that these men will not listen to the murmuring of the hungry multitude but prefer to wait for actual revolution to come with its destructive hand. They wait and at all times have waited until these crowds, urged on by the demands of hunger, tear down the very walls within which these crimes against the masses are perpetrated and carried on. Have these agencies of evil not had warnings in our own country in the bread and hunger riots which have occurred in New York and other thickly settled communities? It would indeed be well for them to pay heed to the clamor of the starving and hasten to assist legislation instead of standing in the way by obstructive tactics.

Mr. REED. If the Senator will pardon another interruption—I do not interrupt to argue but to get light upon the question—is it not a fact that it is now pretty generally conceded that the recent bread riot in New York was instigated by the agents of Germany?

Mr. CHAMBERLAIN. Possibly. I would not like to say. I do not know but that suggestion has been made.

Mr. REED. I refer to the bread riot the other day. It was so charged by the papers.

Mr. CHAMBERLAIN. I think there are emissaries of interested Governments that are at work here all the time, not only instigating that class of riots but ready to instigate any other kind of riot or to commit any kind of crime in order to weaken the hand of our Government and those with whom we are allied in this contest.

Mr. President, this legislation with reference to the control of prices may seem revolutionary, but such legislation is almost as old as time. I was very much interested in a statement received by me from an old friend in Pennsylvania the other day giving me a copy of a decree issued by Zeno in A. D. 483, and the pending bill, or some of it at least, might have been copied from that ancient decree. So, not only in ancient times but in more modern times such legislation has been common. But the power to legislate has been so seldom exercised in the past century that our own people have forgotten that any such legislation was ever in effect in this country. It was in effect in colonial days and a part of the law of the land then. So while seeming to be revolutionary in its terms, it will be found that it conforms to the laws of other countries the world over, and more particularly in the recent past and since this war has been going on in Europe.

Mr. President, another problem arises in connection with food storage which the bill endeavors to solve. It is realized that there is both legitimate and illegitimate storing of food. Storing is legitimate when it is designed to supply food to the consumer as he needs it. Storing is illegitimate when it is designed to withhold food for the purpose of causing an increase in prices. Especially in time of war, such as this, when there is a relative scarcity of food there is increased temptation to hoard the same in order to take advantage of an anticipated abnormal rise in prices. Hoarding must be prevented in the public interest, and storage houses should be licensed in order that any tendency toward hoarding may be disclosed through proper inspection and the necessary remedies applied. It is to be assumed that if any dealer holds greater stocks than he ordinarily keeps on hand in the normal conduct of his business he acts contrary to the public interest and that such action should not be permitted.

At the same time there is need for legitimate storing and for the proper potection of legitimate storing business. Where the incentive to hoard and speculate exists an undue demand for storage space is created which may give storage concerns an opportunity to charge abnormally high storage rates. Such storage charges add to the cost of distribution and discourage legitimate storage. To protect and encourage legitimate storing, therefore, it is necessary to regulate storage charges.

Now, how much of that is done in this country it is impossible to state. I do not know whether there are any complete statistics on the subject, but we all know that is the fact, and this bill addresses itself to the regulation of those who are engaged in it.

Mr. REED. Mr. President——

The PRESIDING OFFICER. Does the Senator from Oregon yield?

Mr. CHAMBERLAIN. I yield.

Mr. REED. The statement the Senator has now made is a very interesting statement. We all know it to be the fact that a large amount of foodstuffs are being hoarded for the purpose of increasing the price. I am interested in having all the light we can get on that subject, because I want to convey it to the Attorney General's office and to the Federal Trade Commission and have these scoundrels sent to prison. I wish to ask the Senator now to kindly give us some specific information. I am in search of it, and I am in dead earnest about my request. Does the Senator know of any such cases? I should like very much to have him enlighten us.

Mr. CHAMBERLAIN. I do not care to enter into a lengthy discussion of it at this time; I am simply making a brief statement as to the purpose of the bill, but I think I will be able to accommodate the Senator some time during the discussion.

Mr. REED. I hope the Senator will.

Mr. WEEKS. Will the Senator permit me? I do not know what my position is going to be on this legislation, but I am interested in the discussion, and particularly interested in any development that may come from an investigation of the general charges that are made. The Senator from Missouri has just asked for specific evidence about hoarding. I noticed a couple of days ago in a Washington paper a statement that poultry in storage was five times greater than in June of last year. It goes on to say:

> Cold-storage houses held 54,834,191 pounds of frozen poultry June 1, 487 per cent, or nearly five times, greater than a year ago, according to a Department of Agriculture report. Stocks of broilers were 611 per cent larger, roasters 557 per cent, fowls 289 per cent, turkeys 976 per cent, and miscellaneous poultry 490 per cent.
>
> During May stocks increased, although marked decreases were reported during May, 1916.

I do not know whether the supply in May, 1916, was very low and this is a normal supply, but if there is any evidence of a violation of the law, there is evidence for the Attorney General to proceed against the people who are violating the law.

Mr. REED. With the permission of the Senator who has the floor, may I ask the Senator from Massachusetts what authority he quoted for this statement? The newspaper quotes some authority, I think.

Mr. WEEKS. It is the type of the Washington Post, and it does not give any authority for the statement.

Mr. REED. I thought there was something in the article that stated these figures were obtained from a source. I only wanted to know.

Mr. LA FOLLETTE. I think, as the Senator from Massachusetts read the clipping, the information is derived from a report of the Department of Agriculture.

Mr. CHAMBERLAIN. It says, "According to a Department of Agriculture report." The Senator is right.

Mr. LA FOLLETTE. So the Government is in possession of that information already, if that is authentic.

Mr. REED. If it is authentic.

Mr. President, may I ask one question further, and I beg the Senator's pardon? Does the Senator's article state the percentage?

Mr. WEEKS. It says "cold-storage houses held 54,884,191 pounds of frozen poultry June 1; 487 per cent, or nearly five times greater than a year ago."

Mr. REED. That would make about half a meal to the people of the United States. It is illustrative of the fact, if the Senator will indulge me, that figures can be given in such a way as to be startling and make people think there is some tremendously bad situation. For instance, I saw the other day that there was a corner on eggs, that there were 100,000,000

eggs in cold storage. It sounded big, yet that probably would not supply the breakfast table of the American people for two days.

Mr. CHAMBERLAIN. Yes, Mr. President, there are men out in the western country who have grown rich by simply buying eggs when they are cheap and storing them and selling them at high prices later.

Mr. REED. Exactly; but if they had not bought them up in the cheap season, eggs would probably have been sold by the farmer during two or three months for 5 cents a dozen, and they probably would have been paid for in the scarce months of the year, if there had been nothing in cold storage, at 75 cents to $1 a dozen. It is because eggs are bought in the spring of the year when hens are laying, and that steadies the price of them for the farmer in giving him a better price, and it is because eggs are then on hand to be sold in the scarce months of the winter that the citizen of a town is able to get them at all.

I am not saying, and I want to be understood about it, that there may not have been some attempt and some successful attempt of certain gentlemen to corner the supply of the necessities of life, but I am insisting that a figure which shows that there are 54,000,000 pounds of chickens in cold storage, which will not make one Sunday dinner for all the people of the United States, is a misleading thing when it is put before us in the form of per cents, that it is 487 per cent greater than it was last year, for instance. It means nothing.

Mr. VARDAMAN. May I ask the Senator from Oregon if there have been 54,000,000 pounds of chickens and other food supplies of that sort in cold storage, are not the laws on the statute books sufficient to deal with that problem and to correct that mistake without any additional legislation?

Mr. CHAMBERLAIN. If there was a conspiracy to do this on the part of a number of persons within the meaning of the statute, perhaps they could be reached under the Sherman antitrust law; but the Sherman antitrust law has not been effective to hold down the prices to consumers in this country.

Mr. VARDAMAN. If additional laws are made, what assurance has the Senator that they will be enforced? Is it necessary to have one man enforce the law and permit him to send a man to jail without benefit of clergy or trial by jury?

Mr. CHAMBERLAIN. I think there are other ways by which we are likely to catch them and correct the evils that are complained of. I think the Senator knows without my saying it that prices have gone up. There must be some reason for it. It is not a theory which confronts us, it is a condition that every man in the country knows exists.

Mr. WEEKS. If the Senator will permit me once more, there is a great deal of irregularity in prices undoubtedly. Of course, the Senator from Oregon would not contend that there should not be cold storage, because that does even up things and enables the keeping of a supply when it could not be obtained under normal conditions.

Only a few days ago, certainly within two weeks, we were seriously discussing the price of fish in the Senate and there was a proposition submitted to the Senate, an amendment to a bill providing that the Government should be put in the fish business—to catch fish and store them and cure them and sell them. I noticed in an evening Boston paper within 10 days—and Boston is the second largest fish port in the United States—a general statement which I should like to put in the RECORD, if the Senator from Oregon does not object. It says:

> Favorable weather off the coast of late has allowed the market fishermen to bring in good catches, and consequently prices are down to the usual summer basis. There is now no excuse for inflated prices for fresh groundfish, and fresh cod can be had at 8 cents—

And so forth Then it goes on and gives the price of various kinds of fish, which are the normal summer prices.

Mr. CHAMBERLAIN. I have no objection to having the statement the Senator makes inserted in my remarks, or anything that will assist in getting the facts before the country.

As I said a while ago, we do not always know what causes the rise in prices. In the Northwest, for instance, a year ago the price of the canned salmon went up enormously. It may have been due to the fact that a large part of the output had been engaged by the allies. The result was that prices generally went up. So conditions have been prevailing on account of war times that have made prices change, usually upward, but that does not account for all the abnormal prices existing here lately. Take the enormous cost of flour. It is not the producer who gets the benefit of it. I am advised that with the price of flour in New York to-day the farmer gets a comparatively small proportion of the amount of the increased value. It is true he gets a better price for wheat than he formerly received.

Mr. President, the purpose of this bill is measurably to assist in correcting that and other kindred evils.

Problems also arise in connection with the proper conservation of food materials in the hands of manufacturers. If food material is to be properly conserved, it may become necessary to prevent its utilization for certain uses other than those for human consumption in order to insure an adequate supply of human food. Here again the public interest is paramount. Manufacturers of food or food material should be licensed in order to insure that the proper utilization of food material be made as demanded in the interest of public policy.

It can be clearly demonstrated that enormous preventable wastes occur in food products while they are in transit, in storage, and held for sale. In the present emergency, when an adequate food supply is so essential to the winning of the war, it is imperative that every practicable means be employed to eliminate such unnecessary waste. Deterioration in food products, due to faulty storage or to improper handling in transit, and when held for sale, should be prevented by requiring the timely disposition of such products under proper governmental authority. One situation that inevitably leads to a great waste of this kind is a glut in the market in connection with the handling of a food product. Under the present war situation the Nation can not afford to incur waste of this sort. It is important therefore that such means as are available be utilized to prevent gluts and to promote the equitable apportionment of food products among markets. With the aid of the information which the Government obtains through its market news service, it is in a position intelligently to direct market movements when gluts are likely to occur or when other causes of unnecessary waste are operative.

Mr. VARDAMAN. Will the Senator explain what the urgency is against waste? Is it to prescribe the conduct of individuals in cooking and in preparing food for the family, or what is meant by it?

Mr. CHAMBERLAIN. There is very great waste in the transportation of perishable properties that might be cared for under proper regulations, and there are men wicked enough in this country to destroy commodities in order to increase the price.

Mr. VARDAMAN. That is covered by another section. That is not connected with waste. Probably it means that an order may be issued preventing some sort of waste.

Mr. CHAMBERLAIN. This is only addressed against knowingly or willfully permitting preventable deterioration. There is nothing very stringent about it.

Mr. STONE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Oregon yield to the Senator from Missouri?

Mr. CHAMBERLAIN. I yield.

Mr. STONE. Answering the question propounded by the Senator from Mississippi, I should like to call the specific attention of the Senator from Oregon and those collaborating with him to one source of waste that somebody in some way ought to prevent, if it can be done, and that is the enormous wicked waste that occurs about big hotels.

I have known men and women sitting at tables with great big steaks only eating a little of it, and my information from the chef and from the waiters is that what is not eaten of this very choice food is absolutely taken out and thrown away. The waiters can not be permitted to take it home, and it is not distributed to charity or for any other purpose. It is an absolute waste and amounts to many thousands of dollars.

Mr. VARDAMAN. I thought that was used in making hash.

Mr. STONE. There may be some of it used in making hash, but this is not a joke; it is a fact. There is in the large cities enough waste of that kind and more than enough to feed the people we hear so much about who are hungry around over the cities.

Mr. GALLINGER. Will the Senator permit me? How is the Senator going to regulate that? Would he have Mr. Hoover go to a hotel and say they shall not serve a juicy steak to a customer who is willing to pay for it unless he will eat it all?

Mr. STONE. I was not providing a remedy; I was merely calling attention to a specific case of waste and upon a large scale. It occurs in the city of Washington as well as elsewhere. Yet we are told that within a stone's throw of this Capitol—Mr. Hoover has said so and others—you will find women and children who are absolutely in a state of half want for something to eat. I think it is a wicked waste of nutritious food that ought to be preserved in some way. How you are going about it I do not know. If somebody could be authorized to prevent that waste it ought to be done.

Mr. GALLINGER. My observation has been when I was at a certain hotel, for that matter at several hotels in the city at

different times, large baskets of this unused food were given to charity and women and children came to the hotels and were supplied with the food to carry home. I do not know that they used it all, but a very considerable part of it was used in that way.

Mr. CHAMBERLAIN. I think a good deal of that is done now, I will say to the Senator. At least I have heard of its being done.

As already stated, one of the abuses affecting the food situation, in time of war especially, is the hoarding of food products and the consequent effect on food prices. To meet this situation it is not only necessary to have means at hand that may disclose such practices under a proper system of licensing, but it is also necessary that governmental authority be definitely delegated to prevent such practices. Food is so essential to national existence in time of war that any individual practicing hoarding thereby weakens one of the Nation's leading lines of defense. Such an individual should be compelled by the proper governmental authority to cease from such action under severe penalty.

It is necessary that the Government shall be able, as occasion may arise, to obtain the necessaries of life at reasonable prices for its military forces, for its civilian population, and for the entente nations of Europe. The public interest in obtaining such supplies at reasonable prices is paramount to all other interests. To this end Government authority should be delegated to requisition, if necessary, the particular food supplies needed and arrange for the just compensation for the same.

Even though the authority be delegated to requisition the necessaries of life, as suggested, such action would be effective only in so far as the existing stocks of the Nation were available. If it were known that the war situation would continue only for a period during which such existing stocks would be adequate, no further provision would be necessary. While it appears likely that further stocks will be produced as needed without additional governmental action, it is clear that the production of such stocks is of paramount importance to the Nation and that the public interest may require the continued operation of the factories and mines concerned. If necessary, therefore, in case of extreme emergency, authority should not be lacking under which the Government itself would proceed to take over and operate industries whose output was essential to a successful waging of the war.

Because of unusual forces affecting both the demand and the supply of the necessities of life under war conditions, there is a danger that evil practices may arise in connection with the operations and transactions of the market exchanges and that injurious speculation and manipulation may develop. At such a time especially such evil practices would be disastrous. These exchanges, while performing their proper and normal functions, are of vital importance to the public welfare. If involved in evil practices, however, they become a menace. The importance of these exchanges in relation to the Nation's distributive system requires that they should be subject to such governmental regulation as may protect them in the performance of their proper functions and at the same time prevent injurious speculation and manipulation.

The purpose of giving the President power to offer a guaranteed price to the farmer for any given product is to induce the farmer to produce a sufficient supply of the given product to meet the needs of the public. Under normal conditions the economic incentive expressed by market prices is ordinarily sufficient to induce adequate production. Under abnormal conditions, however, created by the war situation, the costs of production are increased and the prospective price becomes more than ordinarily uncertain. At the same time the Nation must feed its soldiers and thus becomes a leading buyer of food supplies. The civilian population must also be fed. The interests of public policy therefor require that such inducement be offered through price guaranty as will insure adequate production.

To insure an adequate and continuous supply of food has become of paramount public interest. Under these conditions the public welfare demands that any diversion of food material for other than food uses imperils and weakens the Nation. If the considerable portion of food materials and feed now diverted to the production of beverages should be needed in order to provide the food necessary for the people, the public interest demands that necessary steps be taken to prevent the use of such material for the production of beverages. To this end authority should be delegated by which the President may stop such diversions to the extent and in the manner that the public interest may demand.

Mr. GALLINGER. Mr. President, I had hoped that the Senator from Oregon would address himself to section 12 of this bill, which deals with fixing a minimum price. It provides, in effect, that the President shall fix a minimum price for nonperishable agricultural products, and if they do not bring the price fixed by the President that the Government shall pay the difference. That strikes me as being most extraordinary legislation. I know of no similar legislation in any country on the face of the earth. I think France did undertake to fix both the maximum and minimum prices, but it was a failure, as I have read. When the President of the United States says to a farmer: "Plant 10 acres of sweet potatoes; keep an account of the cost of them; and when you market them, if they do not bring a fair price the Government will pay the difference," I think we are going mad in the matter of legislation on this subject. That is exactly what is now contemplated, as I happen to know from a source that is unquestioned.

Mr. CHAMBERLAIN. I think that is the purpose of the legislation. I will say to the Senator that very many farmers in the West to whom I have talked have said that they were afraid to put in a larger acreage than will insure more than the average crop, because in these war times they feared the price might go down. If a certain price were guaranteed by the Government they would not be afraid to do so. It would stimulate production.

Mr. GALLINGER. But does the Senator think that the other taxpayers of the country, including those who are now, as the Senator pointed out, somewhat hungry, should be called upon to pay this difference to the farmers who may make a venture in the matter of raising an agricultural product that did not net them when they came to market it as much as they thought would properly compensate them for it? Does the Senator think that all the other taxpayers of the country should be called upon to make up that deficit?

Mr. CHAMBERLAIN. I do, Mr. President; but this is not a farmers' war; it is a war of all of us; and if a man is going to venture his all in the production of a crop for the whole country, and for the allies as well, I do not see any objection to guaranteeing him not less than a certain price for it.

Mr. GALLINGER. I will ask the Senator if there is any reason why that should not extend to all of the industries of the country? If losses are incurred and men venture upon enterprises that meet with losses, why should not such men be paid as well as the men who harvest nonperishable agricultural products? Why stop at that point?

Mr. CHAMBERLAIN. Well, Mr. President, this is to meet a single emergency at this time; it is for the stimulation of the production of food. That is the purpose of the bill. If it went out and gathered up all of the industries of the country I do not know whether or not we could ever get it through at this session.

Mr. GALLINGER. I hope the Senator will never get section 12 through at this session of the Senate or at any other session, because I think it is a most extraordinary and unheard-of proposition, and I do not believe that the people of the United States will ever indorse a proposition of that kind, though I may be mistaken.

Mr. CHAMBERLAIN. It has been adopted in other countries, I will say to the Senator.

Mr. GALLINGER. I think not. If so, where has it been done?

Mr. CHAMBERLAIN. It has been done during this war. The bill proposed is only for this emergency.

Mr. GALLINGER. I understand that.

Mr. CHAMBERLAIN. Therefore it could probably cover only one or two crops, and it would induce men who would otherwise not raise crops to put in large plantings.

Mr. REED. I desire to ask the Senator if it is not true that the authors of this very legislation when they started out did not have a maximum price for farm products?

Mr. CHAMBERLAIN. I think they did.

Mr. REED. Is it not true, if we fix a minimum price for farm products, that it will not do the farmer any good, unless it raises the price above what it would otherwise be?

Mr. CHAMBERLAIN. I do not know that I exactly understand the Senator's question.

Mr. REED. Is it not true that a minimum price will not do the farmer any good unless it raises the price above what it would otherwise be without the law?

Mr. CHAMBERLAIN. It will protect him against loss.

Mr. REED. Is it not also true that if you raise the price of farm products for the farmer you necessarily raise the price of farm products to the ultimate consumer?

Mr. CHAMBERLAIN. The only purpose of this is to guarantee the farmer against an actual loss in the production of a crop.

Mr. REED. How will you get at "an actual loss"? Here is one farmer who has ground that will raise 100 bushels of corn to the acre, and he can make money raising corn at 50 cents a bushel, and here is another farmer whose land will only raise 25 bushels of corn to the acre, and he can not make money unless he gets a dollar and a quarter a bushel for it. How are you going to get at a price regulation for conditions of that kind?

Mr. CHAMBERLAIN. The Senator from Missouri has doubtless had cases, as I have had in my experience, where it was undertaken to prove how much it cost to raise a bushel of wheat, for instance, or some other commodity, and no two men would testify exactly the same; but there is a general average that can be reached as to all these commodities.

I have endeavored briefly to direct attention to the purposes of the pending bill, although I question, in view of its brevity, if any statement upon the subject was necessary. The one thing that must be apparent to all is that in the present crisis some steps must be taken to regulate the food supply if the war in which America is now involved is to be brought to a successful termination. The remedy proposed by the pending bill may not be the best to apply, but, following in the footsteps of other countries, we are undertaking to profit by their experience, and every effort of every Senator ought to be directed to the accomplishment of the purpose which it has in view.

In this connection I desire to have printed as an appendix to what I have had to say a discussion upon governmental regulation of prices during the war, to be found in the Labour Gazette of the Dominion of Canada, volume 7, No. 5, at page 392.

The VICE PRESIDENT. Without objection, it will be so ordered.

Mr. CHAMBERLAIN. I desire to have printed as a Senate document a compilation on food control in Canada, Newfoundland, and Great Britain "Statutes and Orders in Council," which was compiled at my request from data furnished by the legislative-reference service of the Library of Congress. It shows the legislation of those countries for the regulation of the food supply during the present war.

The VICE PRESIDENT. In the absence of objection, that order will be made.

The matter referred to (S. Doc. No. 47):

GOVERNMENT REGULATION OF PRICES DURING THE WAR.

[From the Labour Gazette, official publication of the Department of Labor, Canada.]

From the first days of the outbreak of war in 1914 most countries in Europe took measures to conserve the supplies of food and materials and to keep down prices. When the main sources of supply were liable to be cut off at any moment and the regular movements of trade were already being stopped with the temporary cessation of sailings of ships and the use of railways for movements of troops, dealers would not be able to keep up stocks. There was, in many cases, a movement on the part of householders to lay in stocks before existing supplies in store should become exhausted and before prices should rise steeply. On the other hand, dealers would take advantage of the temporary or possible scarcity to raise prices of stocks on hand, expecting to be able to get future supplies or attempting to realize as much as possible in cash before a real scarcity, when the supplies were certain to be seized by the Government at fixed prices. Also some dealers would attempt to buy up stocks to anticipate the rise in prices expected. This abnormal buying on the part of dealers and householders would immediately tend to raise prices. To prevent a continuance of these conditions, various governments took power to fix prices and take over stocks. In many parts of Europe the law permits mayors of cities to fix prices of bread and other staple foods in a state of siege and at similar crises. These local powers were increased and placed under Government regulation in August, 1914, in many instances. Laws were generally made prohibiting the export of food and materials suitable for war supplies, and maximum prices for important foods were immediately set in many cities and regulated according to supplies until trading conditions had settled down to a war basis; this was denoted by the resumption of shipping and the completion of the mobilization of armies, permitting the railroads to resume freight carriage, for neutral countries mobilized their forces at least partially.

When it became evident that German warships would not be raiding commerce in European or North Atlantic waters, over-seas shipping was resumed, but many changes were necessary in the forwarding of goods. German merchant ships were not sailing, and many British ships were requisitioned by the Government; other governments and their agencies therefore had to charter ships and buy up supplies of food and raw materials, as these would no longer be available by the usual commercial agencies. Later the various governments cooperated in buying and chartering shipping to secure economy and efficiency. Holland, Denmark, Norway, Sweden, Switzerland, and Italy (while neutral) made arrangements with the British and French Governments as to the search of ships, detention of cargoes, and quantities to be passed to prevent the transportation of war supplies to Germany and Austria through these countries. These measures involved a direct responsibility on the part of these Governments for the maintenance of the food supplies and for the trade and industry of their countries. Under such conditions regulations tend to become far-reaching and to involve the detailed regulation of industry and of the lives of the people. In countries outside of Europe, where conditions were less affected by the war, fewer measures have been taken.

World conditions as to crops and supplies had a most important bearing on prices. The grain crops of 1914 were short in most countries, and in Australia there was practically a failure, so that large quantities had to be imported instead of exported. Also the Russian crop could not be marketed in western Europe. This condition made it necessary for many countries to make early efforts to obtain a grain supply. The record crops of 1915, on the other hand, made this problem much lighter in 1915 and 1916 than would have been the case if a great surplus from that crop had not been certain. Other foods also were plentiful from the 1915 crops. In 1916, however, shortages again developed, not only in grain but the potato crop was particularly short. Live stock had been considerably reduced in numbers by the demands of war and by the high prices of feed; a shortage of feed and the drought of the summer increased the prices of live stock. The demand for Government purposes and increasing losses due to submarine warfare combined to increase freight rates. Toward the end of 1916, therefore, different governments took still further measures for conserving the food supply, for increasing the efficiency of distribution, and keeping down prices. Experience had shown that the chief remedy lay in conserving or increasing the supply and facilitating distribution, although in the abnormal circumstances speculators and combines had sometimes found unusual opportunities for raising prices and increasing profits.

The advance of prices in various countries has been dependent on the degree to which local conditions were affected by the war. European countries drawing normally considerable supplies of food and raw materials from abroad were keenly affected by freight rates and by the increased cost in countries of origin. Germany and Austria, shut in to an increasing extent from over-seas supplies, experienced greater difficulties as their stocks and those in adjacent countries became exhausted, their own production being also decreased by the lack of supplies, such as fertilizers, cotton, etc. It has been difficult to secure reliable information as to prices in these countries, and, further, maximum prices have been set for many articles of which supplies often were not available or could be secured only by means of official tickets under a system of rationing. The labor department of the Board of Trade of the United Kingdom has calculated the increases in prices from month to month over prices in July, 1914, as shown in Prussian and Austrian official journals for Berlin and Vienna, respectively. For recent months, however, these figures have not been available. Many countries have long published index numbers of prices, but since the outbreak of war not only have many begun publishing prices and index numbers monthly instead of at greater intervals but several additional countries have begun the collection and publication of statistics as to prices, the information being necessary for the measures for the regulation and control of prices.

The accompanying table shows the comparative levels of food prices in several countries on certain dates as compared with prices in July, 1914. It should be noted that, particularly in northern climates, prices in July are usually somewhat lower than at any other time of the year, but the increases during the war have usually been so great as to make such differences of comparatively small importance.

Approximate increases in the cost of staple foods and groceries in certain countries by percentages over July, 1914.

[1] Seven foods only. In Milan, 18 foods in January were 70 per cent higher than in the first six months of 1914.
[2] Including coal, wood, and petroleum.
[3] Foods only, at Stockholm.

The greatest increases appear in Germany and Austria, but Norway had great advances in coke and coal. In Russia no statistics are available, but reports indicate that prices advanced steeply owing to a large extent to the prevalence of paper money, which was also a great factor in the rise in Germany and Austria-Hungary and to some extent in other countries. The inflation of money through the expansion of credit, the floating of large loans by governments, and great government expenditure is also stated by economists to be an important factor in raising prices.

Government purchases of wheat, meat, sugar, and other supplies in various parts of the world became important factors in affecting prices. The taking over of crops in some cases and the entire production of

materials exerted a steadying influence on markets. For instance, the British Government contracted for the meat production in Argentina, and the Indian wheat crop was taken over for the British Government. The 1915 wheat crop in Australia was taken over by the Government and a large part of it sold to the Imperial authorities. The wool production in Australia and New Zealand was similarly taken over, and the same policy was followed with regard to some other materials. In determining the prices for these products the prices received by the producer before the war were taken as a basis, allowances being made for increased cost of production.

The more important measures, so far known, taken by the various countries for the control of prices and regulation of trade are given below. Summaries of these laws and regulations, continuously amended, fill large sections of official reports. Owing to the irregularity with which foreign publications are received, newspaper reports and the correspondence of commercial and economic journals have to be relied upon to a considerable extent, and information as to recent developments is not always available, even from these sources.

THE UNITED KINGDOM.

Drawing supplies of food and materials from all parts of the world by sea, with its communications protected by its navy, there was little interruption to supplies and the immense wealth of the country increased the facilities for the purchase of supplies, the great investments of British capital in all parts placing the products in many lines freely at the disposal of the British investors in control. It was, however, thought desirable to take certain precautions, and the "unreasonable withholding of food supplies act" was passed on August 14, 1914; the act provides that "if the board of trade are of the opinion that any foodstuff is being unreasonably withheld from the market, they may, if so authorized by His Majesty's proclamation (made generally or as respects any particular kind of foodstuff) and in manner provided by the proclamation, take possession of any supplies of foodstuff to which the proclamation relates, paying to the owners of the supplies such price as may in default of agreement be decided to be reasonable, having regard to all circumstances of the case, by the arbitration of a judge of the high court, selected by the lord chief justice of England." No action was taken under this legislation. In the case of sugar, however, a commission was appointed to control the trade in the United Kingdom, etc. In normal times sugar came largely from Germany, France, Belgium, and other European countries, from which further supplies could not be expected. The commission, therefore, bought up stocks all over the world, particularly in the East and West Indies. The prices at which these supplies were sold were regulated by the commission. An advisory committee of dealers reported to the board of trade each week what the prices of the most important commodities ought to be or how much higher than normal they were justified in being. These prices were made public. This was discontinued in a few weeks, but was again done for meat early in 1915. Soon after the outbreak of the war the export of foods was temporarily prohibited and similar action has repeatedly been taken since. Steps were also taken to secure for the Government from time to time such commodities as wool, hides, leather, iron and steel products and various metals, etc. Supplies of meat and wheat were purchased by the Government in South America and in other countries. In the winter of 1915 the high price of coal, particularly in London, led to the appointment of a committee to investigate. As a result measures were taken to increase supplies and facilitate transportation and distribution and to regulate exports. Committees were appointed for England, Scotland, and Ireland, respectfully, to consider methods of increasing food production in 1916. These proposed various schemes for bringing more land into cultivation, especially for wheat production and for securing a maximum of production and minimum of waste. On June 17, 1916, the president of the board of trade appointed a committee to report on the supply and prices of foods, and a preliminary report on milk, meat, and bacon was made on September 22, 1916. The committee recommended further regulation of retail trading in these commodities and further action in obtaining increased supplies. The second report was on bread, flour, and wheat; and the third and final report on sugar, tea, and potatoes. These were presented in November and December, respectivly, but not published till spring.

Toward the end of 1916 the great falling off in the harvest in North America, South America, and Europe, and the increasing shortage of ships due to commandeering for Government service and losses by submarines, etc., led to the adoption of stricter regulations regarding the supply and prices of foods, restriction in exports and imports, and in some directions as to production. The import of wheat was placed almost entirely under the control of a royal commission. An order in council on November 16, 1916, further amended December 5 and December 25, gave to the board of trade full control of "any articles of commerce, the maintenance of which is important as being part of the food supplies of the country, or as being necessary for the wants of the public or for the wants of any section of the public." It was announced that there was no intention of limiting the amount of any article of food which would be allowed each person for consumption, but that such steps might be necessary. This had already in a measure been done in the case of sugar. Later, certain amounts per week for each person were recommended to the public as the maximum of consumption, which it would be necessary to enforce by ticket distribution if it were not adopted voluntarily. An order required that the percentage of flour extracted from wheat must be from 72 to 78 per cent, according to variety, and a later order provided that 5 per cent must be added to this, either by further milling or adding flour from barley, oats, corn, or rice, and millers were allowed to increase this to 10 per cent. Regulations as to courses and meals in restaurants and hotels were made. The use of wheat for brewing was prohibited, and the quantity of barley allowed for that purpose was reduced, while the use of any grain for the production of spirits was allowed only under license by the ministry of munitions. Potatoes being very scarce, regulations were made as to dealing in seed potatoes and establishing prices for the 1916 and 1917 crops. A plan was also drawn up to fix prices for the crops of oats and wheat for the next four years to encourage an increase in the areas in their cultivation, and a director general of food production under the board of agriculture was appointed. The use of sugar, milk, flour, and many other foodstuffs in the manufacture of luxuries was restricted. The output of beer was reduced. The shape of loaves of bread was prescribed and only weights in even pounds were allowed. Dealers were not allowed when selling any article to make conditions involving the purchase of other commodities. In February the coal mines were put under a controller of coal mines in the board of trade. On March 30 the control of the output of beer was transferred from the board of trade to the food controller. Further restrictions on the consumption of liquor were effected. In the middle of April one meatless day per week was ordered by the food controller, but this was later rescinded, as it led to increased consumption of bread.

The Board of Trade (United Kingdom) index numbers of wholesale prices of 47 articles, by groups, 1913 to 1916.

(1900—100.)

Year.	Coal and metals.	Textiles (raw materials).	Food, drink, and tobacco.	Miscellaneous.	All articles combined.
1913	92.5	135.0	117.7	109.4	116.5
1914 (January-July)	86.2	135.1	114.8	106.2	113.6
1914 (August-December)	88.8	116.8	130.4	119.1	122.6
1914 (year)	86.7	128.8	120.9	111.3	117.2
1915	116.7	119.8	154.1	143.8	143.9
1916 [1]	166.1	180.2	189.2	204.7	186.5

[1] Figures for 1916 are preliminary and subject to correction.

FRANCE.

Immediately after the outbreak of war in France two commissions were appointed—one to buy foodstuffs abroad and to transport the same to France, the other to gather stores in France. Maximum prices were set by the local authorities in Paris and other cities. Import duties on certain grains and hay, and also on frozen meats and potatoes, were suspended. The export of foodstuffs and contraband of war was prohibited. A special committee of stock dealers, butchers, and grocers was appointed to fix maximum prices. In September duties on imported live stock were removed and a department was created to facilitate imports of food and their distribution. Exports of other commodities were prohibited and special credits were voted by Parliament to purchase and supply food for the civil population. Flour was provided below cost for bakers in Paris and some other cities, but it was stated that bakers were still making bread at a loss. The intervention, with the support of the Government, of chambers of commerce in facilitating distribution was reported to be a success in some cases, but a failure in others, where cooperation with the Government was lacking. In the autumn of 1915 officials were authorized to requisition grain for the civil population at maximum prices. This action was to be taken on the authority of the minister of commerce, who was to distribute according to need, and the minister was empowered to fix maximum prices for flour according to the price of wheat and to delegate the power to the local authority. The duty on grain was revived, thus in practice placing all imports in the hands of the Government. The result of this importation and distribution of wheat and flour, below cost, by the Government has been that bread has risen very little in France. Coal prices were also made subject to regulation, the Government paying importers a bonus to cover any loss in selling at domestic prices. In the spring of 1916 arrangements were made with the British Government to secure coal for France at maximum prices of French and foreign coal. The sale of oleomargarine was also permitted. In April, 1916, a law was passed giving the Government power to fix maximum prices for certain commodities, including grain, certain foods, and materials. In November the list was added to. The list of articles whose import was permitted only by the Government was extended. Early in 1917 a ministry of food supplies was created and the Government enacted restrictions on meals served in restaurants and also regulations for restriction in the consumption of meat. The food minister set maximum prices for milk, butter, and cheese throughout the country. A scheme for rationing sugar through the use of cards was also put in force.

RUSSIA.

Russia, the greatest grain-producing country of the world, was lacking its normal means of export through the Baltic and Black Seas, and the surplus wheat was therefore to a great extent shut in. The problem was not one of food supply so much as of distribution. The great extent of territory, the scarcity of railways, and the necessity of devoting these first to the transportation of troops and army supplies made distribution difficult. Normal means of importing manufactured goods, etc., were also lacking to a great extent. Disorganization and congestion caused scarcity and high prices in many localities, particularly in the large cities. Maximum prices were fixed in many localities. In March, 1915, the export of food and forage, except under Government license, was forbidden. The Government also took over a

monopoly of the sugar trade. In the summer of 1915 it was found that the setting of maximum prices locally caused insufficient supplies to come, and the prohibition of the transfer of cattle and provisions from one district to another did not make supplies obtainable. In October, 1916, all sugar in the Empire was requisitioned. The card system of distribution was introduced in many localities. In January, 1917, rules for requisitioning foodstuffs were changed and fixed prices for Government purchases were supplemented by proportional allowances.

ITALY.

Early in the war the Government was authorized to take such measures for conserving food supply and regulating prices as became necessary. The export of food was forbidden and the municipalities generally fixed prices. The Provinces and chief towns were authorized to unite for the purchase and distribution of grain and flour in the public interests. The city of Rome purchased and distributed food extensively. In January, 1915, import duties on grain and flour were removed from February 1 to June 30. The freight rates on railways and shipping lines were decreased by state subsidies and the same measures were taken for transportation of foreign grain. The minister of the interior was authorized to seize stores of grain and flour and to make regulations in conjunction with the minister of agriculture as to the baking of bread and the sale of bread and flour. The percentage of flour to be obtained from grain was set in March at 80 per cent. Municipalities were required to set maximum prices for bread. The suspension of import duties on grain and flour was extended. In October, 1915, bread was allowed to be made of inferior quality and sold at maximum prices, the quality to be stated. The Government required all stocks of grain should be registered, and each family was allowed 3 quintals for a year, with additions for seed and live stock. The price at which corn was to be requisitioned by provincial commissions was made subject to review by the war office. In March, 1916, prefects were required to fix maximum prices for wheat, flour, and corn meal, and were allowed to do so for macaroni. Prices and the size of the bread loaf were fixed in each municipality. Export of grain could be forbidden by prefects. Wheat was to be milled to 85 per cent and only bran removed. In April, 1916, a decree gave to the ministers of agriculture, commerce and industry, and of the interior power to fix maximum prices for all necessities. In September, 1916, a central provision commission was established at the ministry of agriculture, with power to requisition supplies of cattle, sheep, and pigs, with a view to regulating the consumption of meat and to consider the importation of frozen meat. A general supervision and control over the trade and production of goods of which there was a lack was conferred. In October, 1916, a commission was appointed to supervise the consumption of sugar, a commissioner being stationed at each refinery. In December, 1916, luncheons served in hotels and restaurants were limited to two courses, while the use of meat and pastry was restricted and two meatless days per week were prescribed. In January, 1917, a committee was appointed to increase the fuel production, with power to provide for greater efficiency in mining when necessary. A commission, consisting of the ministers of agriculture, interior, and transportation, was authorized to exercise the functions of the Government as regards food supplies and the functions previously conferred on the minister of agriculture in the control of food were vested in a commissioner general under this commission, except that the purchase of food supplies continued under the temporary department created for that purpose. In February, 1917, bonuses for increased grain production were provided. In April restrictions on imports were made. The production, sale, and delivery, even gratuitously, of sweets of all kinds, except certain chocolates, preserved fruit, and crackers, in public shops was forbidden.

GERMANY.

The food problem in Germany, as in Austria, was from the first different from that in other countries, as these countries were cut off under war conditions from the chief foreign sources of supply. With France and Russia, and later Italy, they were at war, and the shipments by sea and by way of adjacent neutral countries were affected at first by restrictions on the shipping of contraband goods, including under some circumstances foods, later by the declaration of the allies that all foods were contraband, and finally by the declaration and continual tightening of a formal blockade. Duties on foods and raw materials were immediately removed and imports arranged for. Almost from the first maximum prices were set locally, stocks being seized and sold by officials if rules were evaded under a law of August 4. The small crop in 1914 caused a shortage of grain which the imports from Hungary and Roumania, considerable producers, could not fully meet, especially as feed for live stock had to be provided to a considerable extent. Maximum prices were set by the various State and municipal authorities almost from the first. A mixture of wheat, rye, and potato flour only was allowed for the making of bread. On February 1, 1915, the Federal Government took over all stocks of grain and flour, and these were rationed out to the various localities according to population; each State controlled its own supply. Difficulties arose between various parts of the Empire and between urban and rural districts. The 1915 crop afforded a better supply of grain and permitted a smaller proportion of potato flour. Various foods, however, became scarcer and maximum prices were set for additional articles. These prices had constantly to be advanced, since no goods could be otherwise secured; for instance, the high price of feed made it impossible for dairymen to produce milk without higher prices for the products. The local control of supplies, setting of maximum prices, etc., at length was abandoned. By the spring of 1916 a food dictator for the whole Empire was appointed. Nearly all staple commodities were put on a rationing basis, each family receiving tickets, according to its size, without which none of the prohibited commodities could be purchased. A census of the meat supply was taken. The harvest of 1916 was short, especially in potatoes, and the increasing scarcity of fodder had seriously depleted live stock and reduced the supply of milk, butter, and fats. Reports indicated that such articles were unobtainable at times and the consumption of milk had to be restricted chiefly to children.

AUSTRIA-HUNGARY.

Conditions were much the same as in Germany, especially in Austria, Hungary being to a greater extent an agricultural country, and so local supplies of food were larger, but these were greatly depleted by shipments to Austria and to Germany. Authority to establish maximum prices, etc., was given at first to local authorities as in Germany, but as scarcity increased all control was vested in a single official.

BELGIUM.

Under authority of a law of August 4, 1914, a decree was issued on August 14, setting maximum prices for flour, bread, potatoes, wheat, salt, sugar, and rice, authorizing governors of Provinces and burgomasters to requisition stocks and crops at these prices, with penalties for monopolists, etc. On October 6 a decree authorizing maximum prices to be set in each commune by a commission consisting of the military governor, the civil governor, and the burgomaster of the capital of the commune. Further powers were given the local authorities in requisitioning foods, in distribution, in controlling flour mills, etc. As the country passed into military occupation all control passed into the hands of the military authorities. Later the Belgium Relief Commission imported supplies and distributed them to the people according to a system of tickets for each person or family for each commodity supplied.

HOLLAND.

On August 3, 1914, an act was passed to supplement the expropriation act of August 28, 1851, and the Government was empowered through the mayors to seize food, materials, etc. Very soon maximum prices were established for many articles, including foods and fuel, and the Government took over the stock of wheat, prohibiting the export of cheese, butter, and (except under military authority) bread. A bureau was instituted for the distribution of grain and flour with authority to requisition, to set prices, etc. A reserve supply of sugar was provided for. Rye was to be used for fodder only if unfit for human food. In October, 1915, a royal commission on the supply and export of foodstuffs was appointed. Bureaus were established to deal with special commodities in connection with the commission, to regulate export according to stocks available for home consumption and to regulate maximum prices. In May, 1916, the import of feeding stuffs was put under the control of the Government and prices for the compulsory purchase of the 1916 rye crop by mayors for the Government were set. In June, 1916, brown bread was made compulsory, no white bread being allowed. In July, 1916, it was provided that all stores of food, fuel, and household articles above the requirements of the owners were to be handed over to the State. Municipalities were required to report on their estimated needs of food and fuel supplies on hand and to be responsible for supplying the needy. Retailers were to estimate the quantities required and wholesalers were to fill orders only with the approval of the authorities. Over $30,000,000 was voted to facilitate purchases by the authorities. In December, 1916, measures were taken for the cultivation of pasture lands. It was promised that good prices for 1917 crops would be guaranteed by the State and the production of luxuries was prohibited. In January, 1917, maximum prices were fixed for buying as well as for selling prices of wholesalers and retailers. In March it was required that potato flour, bran, etc., should be mixed in all flour for bread.

DENMARK.

In August, 1914, commissions were set up to regulate the export of goods and to regulate prices. The export of various foodstuffs and materials and supplies was forbidden. Local commissions on food supply were created. In November a grain census was taken and the use of wheat and rye for fodder was forbidden. In December the price regulating committee recommended fixing maximum prices for rye, wheat, and flour purchased in America, while in the same recommendation prices for native rye were set. In January, 1915, the Government took over supplies of wheat flour and all stores of rye were to be placed at the disposal of the Government for the millers and bakers. An inquiry was made into the country's yield and supplies of cereals, fodder, potatoes, etc. Maximum prices for home-grown wheat and bran were set. In the spring the Government bought rye and wheat in America and Russia, and placed it at the disposal of farmers. In milling, rye and wheat were to give at least 64 and 68 per cent of flour, respectively. Millers were to report bimonthly as to quantity of grain and flour milled from it. Brewers were forbidden to use native barley for beer. Export of live hogs was forbidden and regulations were made respecting the export of pork. Maximum prices for bacon were set, and the export of various foods was forbidden. The export of eggs was allowed only under Government supervision. In September, 1915, the State food commission arranged for large imports from the United States. In December, 1916, the use of flour in bread making was restricted and the consumption of sugar was restricted to 1 pound per head per week. In the spring of 1917 the Government took over all supplies of rye and wheat, allowing each farmer a certain amount for his own use.

NORWAY.

In August, 1914, a commission to administer the food supply was appointed and maximum prices were established for certain necessaries, and the use of grain and potatoes for brewing and distilling was forbidden. The export of certain commodities was prohibited. A commission was appointed to carry out the law with local commissions. In December the commission bought a large quantity of wheat and flour and in the summer of 1915 the import of corn and flour was made a state monopoly, and it was provided that this power could be extended to other foods, and that goods might be expropriated. Imports and exports in many commodities were kept under Government control. In January, 1917, the Christiania victualing department fixed maximum prices for coal and coke, supplies being rationed out to each family.

SWEDEN.

On August 11, 1914, a State commission on food supply of four Government officials was appointed to ascertain the food supply and, subject to royal order, to fix maximum prices for certain goods. On August 7 local commissions had been appointed and the central commission was to cooperate with them and with producers, distributors, etc. The Government loaned $134,000 to the National Farmers' Federation for a year to meet the expenses involved. In October, 1914, it was provided that maximum prices might be established from time to time for fodder, fuel, food, clothing, etc., and the authorities could seize and sell in the public interest any articles not required by their owners for their own use if owners refused to sell at maximum prices. In November a commission on food supply was appointed to purchase wheat for a reserve. The food-supply commission and millers agreed on a maximum price for wheat and flour. Some municipalities also purchased wheat. In December, 1914, import duties on wheat, rye, and flour were suspended till May and from time to time the suspension was continued. In March, 1915, regulations were made as to the milling of rye, 90 per cent flour being required, no other flour to be used in bread for sale. In April an inquiry was made as to quantity of grain farmers would require before next harvest. Maximum prices on bread were set for certain districts. Regulations were made as to the price and quality of bread. In June an act provided for the regulation of transportation and delivery of goods. Costs of transportation and delivery were made subject to regulation by the King. In Stockholm the Swedish provision committee purchased and retailed potatoes, eggs, peat, turf, etc. In September, 1915,

a committee of experts in various departments was appointed to share in the discussion of the commission on the food supply. Bureaus were established to deal with special products. Regulations as to the prices and exports and imports of various products were made. In October, 1916, the Government made arrangements for the control and distribution of raw materials and foodstuffs especially. In February, 1917, butter and margarin were admitted free of duty.

SWITZERLAND.

In August, 1914, an order prohibited the unreasonable raising of prices for foodstuffs or the taking of unusual profits. Maximum prices were to be established by cantonal governments and other restrictive measures were taken to prevent undue raising of prices or withholding of commodities. The Federal Council was authorized to take all measures necessary for the interests of the country and was given an unlimited credit and the right to fix prices for all Switzerland. It was provided that only one kind of flour was to be milled and all bran was to be removed. In September the Government undertook to buy all native grain directly from producers to sell on behalf of the people to millers who were to grind and sell immediately, one month's supply to be furnished at one time. Considerable purchases of grain by the Government averted actual distress. In January, 1915, the import of cereals, flour, and fodder was made a Government monopoly. In March, 1915, producers of hides and skins were required to provide tanneries with all supplies needed, exports of the surplus only being permitted. In August, 1915, the minister of war was authorized to suspend the act re the purchase and milling of native grain. Later in the month all stores of food were taken over by the Government. In October and November two committees were provided to control and supervise supplies of certain foods and materials. In November the minister of agriculture and industry was authorized to forbid temporarily the manufacture of milk products, the industries affected to be compensated. In January, 1916, a state monopoly of sugar was instituted and the cantonal governments were to seize all stocks and set maximum prices. A bureau was created to regulate the importation and distribution of petroleum and benzine. In November, 1915, it was forbidden to build or open new hotels without authority from Parliament. Maximum prices were set for butter and cheese. In December the Swiss National Purchasing Trust began operations in the purchase of necessary supplies and raw materials. In September the central bureau for the potato supply bought directly from the producers and sold directly to consumers. Private trade in potatoes was to be conducted in the public interest. Maximum prices for various kinds of wood were set in October and wood cut was reserved for Swiss industries. In December the authorities were given power to regulate the manufacture of paper. In Berne the municipal authorities sold food at reduced prices to families with less than $579 per year. In January, 1917, maximum prices were fixed for wholesale buying as well as for selling and for retailers. Shoe factories were placed under State control.

SPAIN.

In August, 1914, certain foods and fuel were exempted from customs duties and those on other articles were lowered 50 per cent. Local authorities took steps to regulate prices. All exports were temporarily prohibited in December, 1914, and it was provided that the duties should be regulated according to prices. In February, 1915, the Government was authorized to decrease or suspend import duties on necessary foodstuffs and raw materials, and to decrease freight charges in foods, recompensing the railways, also to buy foodstuffs and sell to municipalities who could sell at an advance of 3 per cent. In April, 1915, it was provided that the Government should inform the national food committee of the prices paid for foreign cereals, this body to inform the district committees who were to see that the price of flour did not exceed the price of wheat by more than specified amounts. The price of bread per kilogram was not to exceed the price of flour per kilogram. The committees were to supervise the retail sale of all other articles of food, taking into consideration the cost of production, the expenses of sale, and market, so that profits did not exceed 15 per cent. The duty on coal was removed. In November the Government advanced the cost of importing a large quantity of wheat. In January, 1916, most of the import duties were removed, while the export of foodstuffs was restricted. In February all food supplies were commandeered by the State. In November, 1916, an economy board was formed with a committee of men of all parties to carry out a law consolidating most of the previous measures and authorizing the Government to seize Spanish ships not engaged in Spanish trade, also to seize mines and coal depots and to suspend private contracts. In December, 1916, the export of many articles was prohibited. The Government was authorized to buy all necessary foodstuffs and raw materials in order to sell them at regulated prices. In January, 1917, owing to dissatisfaction with the enforcement of the subsistence laws, further regulations as to maximum prices and exports were made. In February the maximum price of wheat in producing districts was set at $2.95 per hundred pounds and in other districts the price plus the normal cost of transportation. Selling prices of flour and bread were fixed accordingly. In March an inventory of wheat was taken and the central provisions board bought 200,000 metric tons for importation.

PORTUGAL.

During the first few months of the war the export of certain foodstuffs was prohibited and regulations were made as to the prices of certain staples, maximum prices being set for some commodities, but as markets were not greatly affected by the war, prices were not much higher. Powers were given to a commission to purchase and retail foodstuffs and fuel. It was reported that the moral effect of the measures taken was considered of the most importance. During 1915, steps were taken to increase the production of rice, the tax being abolished, maximum prices being established and imports prohibited till native stocks were exhausted. In April, 1916, import duties were removed from live animals, certain grains, potatoes, and meats. In October the district committees were abolished, their functions being transferred to the civil governors. In March, 1917, duty on wheat, bread, and other cereals was removed.

GREECE.

Under a law of 1835 the police in Greece may, with the approval of the ministerial council, regulate prices, and at the beginning of the war it was reported that the exercise of this power and the setting of maximum prices prevented speculative advances, but in districts where the usual imports of supplies were cut off prices advanced. Early in 1915 the Government purchased wheat to be distributed to millers at the lowest possible price. When mobilization was expected, toward the end of 1915, a law was enacted to be put in force by the minister of justice, in the event of mobilization, against taking unreasonable profits on the sale of foodstuffs or other goods. The authorities were empowered to seize the stock of anyone guilty of (1) taking advantage of existing conditions and scarcity of goods to make unreasonably high profits; (2) withholding from the market the necessaries of life for such a purpose; (3) destroying such goods, limiting production thereof or trade therein, or attempting in any way to raise prices; (4) taking part in any contract having such aims in whole or in part. The exportation of wool, woolen yarn, and sugar was prohibited.

BULGARIA.

In the autumn of 1914 the export of foodstuffs was prohibited and the Government authorized the municipalities to fix the prices "of all edible and other objects of first necessity." In the following March the only commodity under maximum prices was maize. In the spring of 1917 it was decided to replace the committee on supplies by a military officer by committing into his hands the absolute control of all food supplies and necessaries of life.

ROUMANIA.

In December, 1914, legislation was passed providing for regulation of food prices and food supplies by fixing maximum prices, etc. In April, 1915, maximum prices on certain articles were established. In May, 1916, a commission was appointed to decide on the quantity of grain required for home use and available for export. In the summer of 1916 the use of meat was prohibited on three days per week instead of two.

SERBIA.

On the outbreak of war the Government fixed prices for the necessaries of life in those parts to which the population fled before the invading enemy, and thus, it was reported, stopped the advances in prices.

TURKEY.

Owing to advances in prices on the outbreak of war the Government placed an embargo on foodstuffs and fixed maximum prices for certain articles, but it was reported that this only checked the movement. Mobilization of the armies took the peasants from the fields and the situation grew worse, prices advanced still more steeply, and supplies became scarcer.

INDIA.

Early in the war in Bombay the food prices committee, in cooperation with trade associations and merchants, fixed prices periodically and the price lists were published by the Government. In Calcutta official prices were also set and measures were taken to provide food for the poor. In April, 1915, export of wheat was allowed only through Government agents, maximum prices were set, and any profit from sales in London went to the Government. In August the export of raw hides and skins to foreign countries was prohibited, with certain exceptions. In December, 1915, the period for which these regulations had been made was extended indefinitely. In March, 1917, further measures for the control of tanning materials were taken and also for the control of mines and industrial establishments.

SOUTH AFRICA.

In September, 1914, legislation was passed providing for fixing prices for foodstuffs. The Government also made provision for stores of materials and to finance producers. In July, 1915, the export of coal and coke to foreign countries was prohibited. A commission was appointed to investigate the rise in prices in July, 1916, and report remedies. In August wool and yarns were added to the prohibited list.

EGYPT.

Prices advanced immediately on the outbreak of the war, apparently due to panic, as supplies were not affected, until maximum prices for foodstuffs and articles of primary necessity were fixed at about normal levels by a commission. These were revised each week, posted in the markets, and published in the newspapers.

AUSTRALIA.

The severe drought in Australia in 1914, causing a great crop shortage and loss in live stock, quickly made the problem of supplies and prices at the beginning of the war very serious. The great distance from Europe, where its products are largely marketed and many of its supplies obtained, was the more severely felt on account of the presence of German cruisers in the Pacific and Indian Oceans, and it was some months before this danger was removed. Freights, insurance, and the difficulty of shipping were thus greatly increased. Immediate action was therefore taken by the Commonwealth and the various State governments, and, owing to the necessity of further action arising from time to time and the uncertainty or conflict of jurisdiction in these matters, some confusion developed. As a result a comprehensive scheme was, in August, 1916, adopted by the Commonwealth coordinating local and central control.

In August, 1914, New South Wales passed legislation for the control of prices of necessaries of life, and a commission of three was appointed to report on prices. Maximum prices were declared by the Government, with penalties for offering for sale at higher prices and provisions for the seizure of commodities by the State for distribution to the public. Prices were fixed for wheat in November and merchants' stocks were seized. A commission was appointed to control prices. In September the State government of Victoria legislated against undue restriction of the supply of goods or undue raising of prices of seed in time of war. The Government was authorized to appoint a prices board to inquire into and report on prices, distribution, and supplies on hand. The Commonwealth Government prohibited the export of wool and allowed the export of meat, wheat, sugar, and coal only under ministerial license to Great Britain and allied countries. A food supplies commission was appointed, and it was estimated there was a sufficient quantity of wheat. The various State governments fixed prices for wheat, some higher than others, guaranteed to take over the next crop at fixed prices, arranged to supply seed to those having none, and attempted to increase the acreage.

In November the Victoria Government decided to discontinue the policy of fixing prices of wheat and flour. It was found that the regulations of the various States prevented the movement of wheat as, for instance, purchases of wheat by one State government in another State would be unavailable owing to the prohibition of movement by that State. The duty on wheat was repealed but the duty on sacks was allowed to remain and this nullified the action to a great extent. The seizure of wheat by the New South Wales Government deprived the other States of supplies. A conflict as to jurisdiction between the New South Wales Government and the Commonwealth government was taken to the courts and decided in favor of the latter. The conflict over the

jurisdiction of the prices boards in the various States, it was reported, made the attempt at price regulation a failure. The Queensland Government took over the business of sugar refining and fixed prices for the growers and arranged to sell to the Commonwealth government at cost. In the summer of 1915 the Commonwealth government bought butter in the United States to sell at fixed prices. Toward the end of 1915 the Commonwealth government chartered ships to carry the new wheat crop to Great Britain. It was arranged to pool the wheat crop and pay for it according to prices received in England for it. In the spring of 1916 the Commonwealth government undertook to set the local prices of bread to prevent the local manipulation of prices prevailing. The question of jurisdiction was carried to the courts and decided in favor of the Commonwealth government. A comprehensive scheme for the fixing of prices throughout the Commonwealth was adopted in August, 1916, to apply to foodstuffs, necessary commodities, and to services. A commissioner was appointed in each State to make recommendations to the Federal prices board, which would coordinate the recommendations received and make representations to the minister. In the fall of 1916 the sugar-growing industry in Queensland found the fixed-prices scheme of the State government a heavy burden and the industry was placed under the full control of the Commonwealth government. The Canadian trade commissioner at Melbourne, in reporting on these regulations, in the Weekly Bulletin of the trade and commerce department for March 12, remarks:

"Traders' difficulties through fixed prices: It can not be denied that Australian importers and manufacturers—particularly of foodstuffs—have been much perturbed, since the inception of fixed prices, at the uncertainty as to whether the legal rates imposed would prove remunerative, and in regard to future determinations applicable to orders placed oversea for forward deliveries. The price fixed on regulation corn sacks (required for wheat, etc.) of 9s. 6d. ($2.31) per dozen was claimed by importers to be unremunerative, hence this very necessary commodity was not ordered from India in speculative quantities with the result that a very serious shortage exists during the present harvesting in the State of Victoria. The price fixed on tin plates 20-inch by 14-inch of £1 15s. 0d. ($8.52) per box is stated to be less than the present landed cost and, obviously, importers are not disposed to part with their stocks at a loss.

"Other instances have been quoted, but it is beyond question that the commissioners have been working under extraordinary pressure in making investigations desired by consumers, hence, with greater experience, some of the anomalies that exist may be rectified in due course.

"Results claimed: Although it is yet too early to definitely indicate the extent to which Australian consumers have benefited by the fixing of prices of foodstuffs and necessary commodities, it is claimed by the Federal commissioners that large savings have been effected without subjecting the trading community to any material hardship or denying them profits in the same ratio as those they received prior to the war."

Recently the Commonwealth government has made an arrangement with boot manufacturers, tanners, and others, restricting prices of boots, leather and hides, and controlling the export of hides, in order to prevent a rise in the prices of boots of 25 per cent above the prices of December 1, 1916.

NEW ZEALAND.

In August, 1914, the supplies of wheat and flour usually obtainable from Australia were not available owing to drought there, and in fact there was a demand for fodder from Australia. Owing to the uncertainty there was an unusual demand for provisions, especially flour and sugar. The Government set maximum prices for wheat and flour in order to prevent speculation and to protect the consumer. The export of foodstuffs and war materials was prohibited except to certain countries and under authority from the minister of customs. This list was added to and revised from time to time, thus placing the produce at the disposal of the British and Allied Governments. On June 28, 1915, a commission on food supplies and prices reported that the crop had exceeded expectations and would nearly suffice, any deficiency being made good by imports from Vancouver. The commission found that retailers generally, while receiving higher prices for some articles, were seldom making more profit than in normal times, that in regard to butchers' meat no indication that undue profits were being made nor was there any evidence of any combination of merchants to maintain a higher level of prices. In December, 1915, maximum prices were set for mineral oil imported prior to August 26, 1915, on which date customs duties were imposed. The appropriation act, 1916, was passed to prevent unfair competition by importation of wheat and flour. Government was authorized in such case to increase the customs duty, but not to exceed the present rates payable in Australia.

The "cost-of-living act, 1915," established a board of trade under the presidency of the minister of commerce and industry, to investigate and report on infringements of the "commercial trusts act, 1910," to inquire into all questions of trade, unreasonable prices, markets, development of commerce and industry. The "commercial trusts act, 1910," which forbade combinations or agreements to affect the supply, demand, or trade in certain commodities and foods was amended to include all foodstuffs. The governor in council was also empowered to make regulations authorizing and controlling borough councils in carrying on business in milk, cold storage, fish trawling, bakeries, and brick making. For the purpose of inquiry the board was authorized to delegate its powers to one or more of its members, or to any fit person with the approval of the governor in council. The first investigation was in regard to the prices of wheat, flour, and bread, and the trade in these commodities. No serious manipulations were found, but certain improvements were recommended by the board, including scales of prices in certain districts according to circumstances. At a later date investigations were made into coal, gasoline, butter, and other commodities. Some improvements in distributing methods were recommended for action by the Government and some maximum prices were recommended and put into effect by the Government.

THE UNITED STATES.

In the United States the foreign demand in the early days of the war was followed by high prices for food, although the export was held up temporarily by the suspension of sailings of ships; resolutions of the House of Representatives on this matter were referred to the Secretary of Commerce. The Department of Justice instructed its special agents to ascertain whether these price increases were due to combinations in restraint of trade or other unlawful action. In some localities the United States district attorneys found conditions calling for further inquiry. The mayor of New York appointed a food committee to investigate conditions and the Federal Department of Commerce sent a special agent to assist. New city markets where producers could sell directly to consumers were opened in New York. Before long it was reported that the demand was so curtailed by high prices that the prices fell. Later it was reported that no evidence of conspiracy in restraint of trade had been found. The various antitrust laws were mainly depended on to prevent abuses in regard to prices and legislation along these lines in Congress, supplementing previous legislation, much of it introduced before the war, was proceeded with and considerable powers in investigating alleged combinations and methods of trading were conferred on the new Federal Trade Commission.

When prices again rose rapidly toward the end of 1916, this body was able to make investigations in cooperation with the Department of Justice. Early in 1917 a special appropriation was voted by Congress to carry on such investigations and the Attorney General appointed a board to conduct the investigation. The prices, supply, and distribution of coal, which constituted a serious problem during the late winter months, were investigated. The high price of news-print paper was also investigated. Bakers were warned that agreements to raise the price of bread by decreasing the size of the loaf were illegal. Among local investigations those in New York were most important. The New York State commissioner of foods and markets also made investigations, the governor of New York State and the mayor of New York appointed committees on food supply, and the State legislature appointed a committee. These authorities discussed proposals for an extensive State market department to guard the interests of the consumer and producer with local departments in each city. The bill introduced in the legislature for this purpose, however, was not passed. In April, 1917, the National Defense Council appointed a food board, and the Secretary of Agriculture, in response to a resolution, sent to the Senate proposals for Government action in regulating prices and supplies of foods and other commodities, giving the President large powers to use in the national interest by controlling stocks and production, fixing prices, etc.

NEWFOUNDLAND.

A commission to investigate the increasing cost of living was recently appointed by the government of Newfoundland, with power to take evidence under oath. The commission consisted of the president of the legislative council, three government officials, and the former mayor of St. Johns.

CANADA.

The export demand for wheat, flour, meat, oats, eggs, butter, etc., on the outbreak of war led to advances in prices. There was considerable buying by householders to lay in stocks before prices advanced, and the abnormal demand was a factor in raising prices. The Dominion Government directed the deputy minister of trade and commerce and the chief statistician of the department of labor to act as a committee on prices and report as to any needed action. The department of labor secured statistics of retail food prices in each city weekly instead of monthly as before, and reports as to market conditions were secured from various quarters. In "the war-measures act" the Dominion Government was given full power to control prices and trading by order in council. Exports of goods of value to the enemy were prohibited except to certain countries. From time to time exports were temporarily prohibited in the case of certain commodities supplies of

which were required for war supplies, such as hay, wool, etc. In addition there was already in existence the criminal code prohibiting conspiracy to raise prices unduly or restrain trade, and the combines' investigation act, 1910, provided for a special investigation on petition of six persons, if approved by a judge. In a short time the disturbance on the market subsided and the demand for supplies for export remained as the chief factor influencing prices, together with some shortage in certain foods due to an unfavorable crop season. The 1915 crop, however, was unusually large and was a great factor in preventing steep advances until the summer of 1916, when crop shortage not only in Canada but in other parts of the world appeared to be imminent. The potato crop was particularly short in Ontario and Quebec, and prices advanced steeply and rapidly. Butter, eggs, and cheese were also rising, as feed was high and constantly advancing. Various municipal councils discussed the high prices and charges as to abnormal storage of foods in cold storage warehouses, and as to manipulation of potato prices and shipments were made. A delegation from various city councils met a committee of the Dominion Government in the House of Commons at Ottawa on October 20, 1916, and asked for remedial measures. On November 10 an order in council was passed, under the authority of the war-measures act, having the force of an act of Parliament, making it a criminal offense for any person or corporation to conspire or combine to restrain or limit trade or production of any necessary of life, or withhold from sale at reasonable prices any such articles beyond the ordinary needs of his household or business. Farmers and gardeners were exempted in respect to holding the products of their land, as also were associations of employees and workmen in combining for their reasonable protection as such. The minister of labor was authorized to require information as to stocks, supplies, time held, prices, and such other information as might be required as to contracts and agreements from any person operating a cold-storage plant, factory, mine, etc., where any necessary of life was held, produced, etc. It was also provided that the council of any municipality might make an investigation on its own account into the stocks, prices, etc., of necessaries of life within its bounds, if it was believed excessive prices were being charged, and might report the result to the minister of labor if the circumstances justified it; also any person withholding information might be reported to the minister. The minister could thereupon further investigate and take evidence under oath. If, in the opinion of the minister, any offense under the regulations had been disclosed, the information was to be forwarded to the attorney general of the Province in which it had been committed for such action as might be instituted by way of indictment or where a contravention of the order is disclosed the municipality or any individual may, with the consent of such attorney general, institute such action under the Criminal Code, a penalty of $5,000 or two years' imprisonment, or both was named. The minister of labor then undertook an inquiry as to stocks, prices, and methods of trading in supplies, coal, butter, potatoes, and other necessaries of life, the prices of which were rapidly advancing. Several municipalities also conducted local investigations under the regulations.

Index numbers of wholesale prices by groups of commodities in Canada from month to month, 1916.

[Average price, 1890–1899—100.]

[1] The number changes during the year according to season.

[2] One line of spelter was dropped in 1915.

Considerable publicity was given to many features of the trade in some commodities and the conditions affecting prices. In some cases leave for prosecution was secured from the attorney general concerned. No further legal proceedings were instituted, however, as the firms concerned discontinued the illegal practices. Complaints from consumers in various localities as to agreements among dealers to advance milk and bread prices elicited an announcement from the minister of labor that such agreements or understandings were illegal, which constituted a warning to dealers throughout the country. The Government of Manitoba also authorized the public utilities commissioner to investigate the rise in prices in that Province, and after extended public hearings he reported no evidence of illegal measures for raising prices. The agricultural committee of the Legislative Assembly of the Province of Quebec also investigated conditions and considered remedies in the way

of increased agricultural production, inspection of cold-storage warehouses, and prohibition of the export of live stock and foods. Early in 1917, owing to the scarcity and high price of paper, the Dominion Government placed the control of export and of prices of paper under the minister of customs, who arranged with producers for a lower price than that recently reached, at 2½ cents per pound for news print. Owing to congestion in shipping coal, etc., in winter the railway commission reduced the number of passenger trains on certain lines.

Mr. REED. But it is just as impossible to reach the price that it will cost any individual farmer to raise a bushel of wheat until he has actually tried it out, as it is to do any other impossible thing. After a crop has been raised you can perhaps approximately arrive at the general average of the cost, but the general average of the cost will not compensate the man whose productive capacity is below the general average, and it will allow a large profit to the man whose productive capacity is the highest. So, when you talk about framing a law so that the farmer will simply be compensated for what he puts into his ground you will have to keep a set of books with every farmer in the United States, and you will have attempted a thing that is an utter impossibility.

Mr. President, before leaving the floor I desire to send to the desk, and have read, an article from the American Cooperative Journal, a farm journal, printed at Chicago, Ill. I ask to have it read in the order I have marked. I invite the attention of the Senate to this article from this farm journal.

The VICE PRESIDENT. Is there objection to the request of the Senator from Missouri? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

At the very time when the Government fixes the price on wheat, then, to insure patriotic effort and an ample food supply it should also fix or control the price on labor, farm tractors, gasoline, oil, coal, plows, harrows, drills, seed, fertilizer, lime, binders, binding twine, wagons, harness, and thrashers, all of which enter into the production of a single wheat crop.

The bill which fixes the farmer's price on corn should also control the price on the labor, disk, planter, cultivator, shovels, harvester, sheller, and engine used in the production of the corn.

As a guaranty of continued increased production, the same rule should apply to oats, barley, rye, potatoes, beans, rice, and all other food products as they are put alongside of steel, lumber, shoes, clothing, and the other products of the mines, the forests, and the factories.

Mr. BORAH. Mr. President, will it interrupt the Senator from Missouri if I ask a question at this point, in order to understand, if I may, this article? I do not understand that this bill undertakes to fix prices at all, except the minimum price, which at this time I do not think will do any harm or any good; but I take it that the article—I have read it, and it is a very illuminating article—was written at a time when this bill was supposed to fix the maximum price.

Mr. REED. It will not take very much logic or very much study to know that under the terms of this bill the power is absolutely conferred upon the food dictator, whoever he may be, to fix one price.

Mr. BORAH. That is the minimum price.

Mr. REED. One price. When he fixes the minimum price he can make that the only price.

Mr. KENYON. What section gives that power?

Mr. REED. That is not found in express terms in the bill, but it is found in the power of this man to absolutely control the market; and unless he does control the market, then the bill is even worse than it otherwise would be. He is also allowed to requisition supplies and take them over at a price fixed by the Government. There is no question, if the Senator will put his very keen mind on this bill, that he will speedily find that a man who possesses the powers provided in this bill can fix one price to the farmers.

Mr. BORAH. I confess, Mr. President, that I have been at a loss to know just what the powers are under the bill. I have been endeavoring for the last few days to analyze the bill sufficiently to get a guide as to what is intended upon the part of the sponsors of the bill. I asked the question for information, because I knew the Senator had given a great deal of attention to it.

Mr. REED. The Senator says he has been unable to grasp the powers conferred by the bill. The Senator likewise has been unable to grasp the infinitude; but he has a sort of faint, auroral dawn of opinion as to what it might be.

Mr. BORAH. I have an intuition, as it were.

Mr. GALLINGER. Let the reading proceed, Mr. President.

The VICE PRESIDENT. The Secretary will continue the reading.

The Secretary continued the reading, and read as follows:

ERADICATING CERTAIN EVILS.

As the Government is hunting down those pirates who would wish to make profit by exploiting life's necessities under the stress of these terrible times, we wonder if they should not go beyond the actual authority given to them by the antitrust law.

This magazine has always condemned speculation, not so much because of its influence on prices as because of its moral effect upon the speculator. Our country is literally honeycombed from one end to the other with speculation. The most easily discerned and probably the worst form of speculation consists of the small group of "incompetents" who sit around the click of the telegraph instrument in almost every small town and try to beat the market. If there is no law that will force these people to depend upon results of honest labor for a livelihood, then the instruments which make possible their daily practice should be taken away from them.

We are a nation of speculators. The housewife who lays in an unnecessary supply of food products because she fears an advance is a speculator. The merchant who stocks his shelves for the next 12 months is likewise a speculator. The farmer who holds his grain for a higher price is a speculator. There may be a fundamental moral difference between the man who buys a million bushels of wheat because he believes the price will go up and a million housewifes who buy a million bags of flour because they think the price will go up, but the effect upon the price is the same and the principle underlying the act is speculation.

Another evil fully as bad as speculation has been the unnecessary and reckless advancing of prices on all commodities, regardless of cost or any other consideration excepting profit. The demand and apparently the money supply has been such that men could sell almost anything they could manufacture or offer at almost any price they wished to ask. We have sometimes said that merchandisers have simply closed their eyes and made prices, being only careful not to get them too low. This condition, which we all know exists at this time, may lead some of us, who do not think clear through to the end, to the opinion that the only solution is for the Government to fix or control prices. We doubt if any man is wise enough or conceited enough at this time to say that he knows what the future will bring forth, or even what it is best to do in these matters to-day.

One safe and conservative opinion which rather appeals to us might be put in the following language: Let us be sure that we have a suitable substitute for systems of production and distribution and for methods of price making before we destroy or overthrow the systems now in use. Let us set about with great care and thoroughness and with much counsel to correct the evils and limit the abuses which may be the result of avaricious and evil men rather than the fault of the system. Revolutions which will throw many men out of employment, dispense with those who are most skilled and practical in a given line, and substitute therefor those who are zealous and patriotic but lacking in knowledge may result disastrously to the country.

CAN VALUES ARBITRARILY BE "FIXED."

Gold is the Nation's standard. On it are based the values of all products of the soil and manufacture. A few short years ago the platform of one of the political parties had for its chief plank a recommendation that gold divide its responsibility with silver at the ratio of 16 to 1. The friends of silver lost out and we are still on a gold basis. If the stocks of gold are doubled, then it is logical to assume that its buying power is divided in two. Statements are published showing that stocks of gold, due to a flow of the yellow metal into the United States, have increased over 50 per cent since the war began. An analysis of this condition would indicate that manufactured articles had advanced in proportion to the increase in the gold supply. Certain commodities, notably steel products, were not only responsible for bringing the supply of gold to this country, but the owners of these industries have benefited more than any other class. When a farmer seeks to buy machinery and other articles necessary to run his farm, he must pay the advance brought about through an agency of which he has been a very small factor. If values are dependent upon the gold supply and fluctuate in adverse ratio to that supply, then it must appear as an unjust discrimination for the price of any commodity to be arbitrarily fixed. Controlling of values, either "fixed" maximum or minimum, must be done in absolute harmony with relation to all other commodities, as well as to our gold standard. Astronomers tell us that we could not stop a planet in its onward course without throwing the universe out of gear, and economists tell us that we can not take one commodity and arbitrarily fix its value without upsetting other related commodities.

PRICE FIXING THAT FAILED.

Governmental price fixing without the proper complementary machinery for production and distribution has not only utterly failed within the past year in France, but it has greatly reduced the efficiency of both production and distribution, according to Mr. A. R. Decker, special correspondent for the Chicago Daily News, now in Paris.

The trouble in France came from discrimination. Had price fixing been universal and scientifically done, had enforcement been possible, the results might have been different.

It was a mistake, for instance, to fix prices on potatoes and butter by law, and at the same time allow the price on farm implements and material for use on farms to increase.

Mr. Decker ascribes the present prevailing high prices in France not alone to scarcity but to disturbed economic conditions. At the first sign of a decrease of production the people feared a scarcity of foodstuffs and commenced hoarding nonperishable food, such as macaroni, canned goods, sugar, and potatoes. This created a false demand. While the large percentage of the people were thus speculating, each in a small way, through fear and hysteria, the ever-present, greedy money grabber speculated for profit.

Theoretically price fixing seems simple, but practically it has not worked out successfully at any time in any country, so far as we know.

Mr. SHEPPARD. Mr. President, immediately after the declaration of war the Secretary of Agriculture, David F. Houston, with that diligence and clarity of vision which so signally characterize him, called a conference at St. Louis, Mo., on April 9 and 10, of State agricultural officials and representatives of agricultural colleges in States east of the Rocky Mountains. President Wheeler, of the University of California, was requested by Secretary Houston to hold a similar conference at Berkeley, Cal., on April 13, for the Rocky Mountain and Pacific Coast States.

The conservation and production of foodstuffs for the United States and the nations of Europe allied with the United States formed the subject of these conferences. A definite and comprehensive program was adopted. Manifestly nothing could have been of more vital importance than these conferences and the subject with which they dealt. The program which they developed prescribed cooperation between Federal and State agencies

as to production and labor, distribution and prices, the proposed care and use of foodstuffs, and the effective assembling of the various instrumentalities for food production, and food preservation.

On April 6 the Council of National Defense cabled Mr. Hoover, who was then abroad and who had made a magnificent record there in the handling of foodstuffs, in their preparation, conservation, and distribution among large masses of people, to return to this country. Unselfishly and patriotically he came, in answer to his country's call. After going over the subject thoroughly with the President, the Secretary of Agriculture, and the Council of National Defense, he was named by President Wilson, on April 20, as the administrator of food matters. He did not thrust himself upon Congress and the country, but was asked to come here; and he is entitled to gratitude and appreciation, not to criticism and suspicion.

On April 18 Secretary Houston transmitted to the Senate recommendations based largely on the action of the St. Louis and Berkeley conferences.

Indeed, Senate resolution No. 26, adopted on April 6, the author of which was no other than the Senator from Missouri [Mr. REED] had requested the Secretary of Agriculture to submit to the Senate—and I now read from the resolution:

A comprehensive plan for increasing the production of food supplies, especially by the cultivation of town lots and unused lands adjacent to towns, and of the arid or semiarid lands, and by promoting the raising of all classes of food or food-producing animals, and for the creation of an organization to promote and in a practical and effective way carry out the purposes aforesaid, together with his estimate of the amount of moneys necessary to be appropriated by Congress for the promotion of the purposes aforesaid.

After submitting his report of April 18, the Secretary conferred with the members of the Agricultural Committees of both House and Senate, and at their suggestion proposed tentative measures embodying the substance of needed legislation. These measures involved two distinct propositions: First, food production on a larger and more expeditious scale; second, food control to the extent made necessary by the existing emergency.

Hearings were held by the House and Senate Committees on Agriculture, and as the hearings proceeded changes were made in the tentative measures proposed by the Secretary at the request of Representatives and Senators.

Two measures were finally introduced along the lines heretofore indicated, the one dealing with production, the other with control.

The measure relating to production has passed the House and Senate and is now, or is soon to be, in conference. It provides, first, a survey of the national food supply; second, authority for the Department of Agriculture to furnish seed at reasonable prices under certain conditions; third, stimulation of live-stock production, conservation, and utilization of meat, poultry, dairy, and other animal products, larger means of resistance to animal diseases and pests, which cause a loss of over $200,000,000 every year; fourth, larger means of resistance to plant diseases and pests, which cause losses difficult to measure; fifth, protection of perishable stuffs by teaching better methods of storage, drying, canning, and so forth; sixth, enlargement of cooperative demonstration forces by placing at least one county agent in every rural county in the Nation, there being at present county agents for only 1,300 out of 2,850 rural counties; seventh, larger development of educational forces relating specially to women in agriculture; eighth, enlargement of the market news service for fruits and vegetables; ninth, cooperation with Department of Labor in dealing with the farm-labor problem; tenth, extension of the work of the Bureau of Crop Estimates, the Bureau of Chemistry, of the Biological Bureau in the destruction and control of animals that prey on live stock and crops, and of the agencies of the department dealing with publicity and information.

The other measure is known as the food-control bill and is now before the Senate.

Mr. REED. Mr. President——

Mr. SHEPPARD. I yield to the Senator.

Mr. REED. Those provisions which the Senator has now presented are in consonance with the resolution which I introduced. That bill was introduced in the House May 4; it was passed by the House on May 28; it was reported from the Senate committee on May 29, the very next day, and passed by the Senate June 1, 1917. It does relate to a stimulation of production. The bill has remained in the House of Representatives absolutely without action up to the present time. I have been informed that the chairman of the committee in the House has declared that it shall not receive consideration by the House until the present bill is taken care of. The Senator has just stated that that bill is about to become a law.

Mr. SHEPPARD. No; I stated——

Mr. REED. Can the Senator give me any information showing that I was in error?

Mr. SHEPPARD. I was under the impression that it was about to go to conference. However, be that as it may, the bill has passed the Senate, and I am describing it.

Mr. REED. It passed the House; it then was amended in the Senate, and it has gone back to the House. That is the situation, and the Senator's description of it, I think, is accurate; I am not criticizing that. The thing I am interested in is the statement of the Senator that the bill is going to conference, which would seem to indicate that it might become a law speedily. I should be glad to know the truth about that, and I thought perhaps the Senator could tell me.

Mr. SHEPPARD. I stated that the bill had gone to conference or was about to go to conference, and I wish to take this opportunity of expressing the hope that it will soon go to conference and soon become a law. I thank the Senator for his suggestion. I am merely describing the bill in order to present a connected description of the entire food program embodied in the two bills.

The first section of the bill now before the Senate, the food-control bill, states its purpose, and that section is as follows:

That, by reason of the existence of a state of war, it is essential to the national security and defense, for the successful prosecution of the war, and for the support and maintenance of the Army and Navy, to assure an adequate supply and equitable distribution, and to facilitate the movement, of foods, feeds, fuel, and articles required for their production, hereafter in this act called necessaries; to prevent, locally or generally, scarcity, monopolization, hoarding, injurious speculation, manipulations, and private controls, affecting such supply, distribution, and movement; and to establish and maintain governmental control of such necessaries during the war. For such purposes the instrumentalities, means, methods, powers, authorities, duties, obligations, and prohibitions hereinafter set forth are created, established, conferred, and prsecribed.

The bill provides that there is, by its terms, established—

A governmental control of necessaries which shall extend to and include all the processes, methods, activities of, and for the production, manufacture, procurement, storage, distribution, sale, marketing, pledging, financing, and consumption of necessaries, which shall be exercised and administered by the President for the purposes of this act; and all such necessaries, processes, methods, and activities are hereby declared to be affected with a public interest.

It further provides that in carrying out the purposes before mentioned—

The President is authorized to enter into any voluntary arrangements or agreements, to use any agency or agencies, to accept the services of any person without compensation, to cooperate with any agency or person, to utilize any department or agency of the Government, and to coordinate their activities so as to avoid any preventable loss or duplication of effort or funds.

No penalties are established in connection with this section. It is, therefore, a mere definition of the general course which the President may pursue, if in his discretion he finds it necessary so to act.

Mr. WOLCOTT. Mr. President——

Mr. SHEPPARD. I yield to the Senator from Delaware.

Mr. WOLCOTT. I assume that the Senator has given to this bill careful study. I am struck by what seems to me to be a curious sentence in section 3, which the Senator from Texas has just read, starting on line 8:

Provided, That none of the penalties of this act shall apply to this section.

Mr. SHEPPARD. I called attention to that clause.

Mr. WOLCOTT. I should like to know the purpose of any such sentence. Section 3 defines no duty laid upon anybody, and it imposes no prohibition upon anybody. Where is there anything in section 3 which in human reason could be spoken of in connection with the possibility of penalties? Hence, why the necessity of an exception from penalties of the things referred to in this section?

Mr. SHEPPARD. The section provides that the President may cooperate with any agency or person and may utilize any department or agency of the Government. If there were a penalty attached to the section, the department or agency refusing to cooperate would be subject to the penalty, if the President indicated a desire to have either cooperate.

Mr. WOLCOTT. Do the subsequent sections of the bill at any time define the failure to cooperate as a crime?

Mr. SHEPPARD. I think the addition of a penalty here would do so.

Mr. WOLCOTT. It simply strikes me as a curiosity. A penalty is attached to a crime, which must be defined somewhere. There is no definition of a crime in section 3. Now, I ask the Senator, is there anything in any other portion of the bill that will make criminal something in section 3 for which the penalties are otherwise prescribed somewhere else?

Mr. SHEPPARD. I have said to the Senator that in my opinion the addition of penalties here would make anyone who

failed to cooperate with the President subject thereto. I say to him, however, in answer to his question, that there is nothing else in the bill relating directly to this section.

Mr. REED. Mr. President, suppose the President, then, were to undertake to exercise the powers of section 3. Does the Senator mean to say that he could not exercise them, that he could not carry them out?

Mr. SHEPPARD. He could not, except in so far as his own powers of appeal and persuasion extended. There is no penalty clause in this particular section relating to the entire bill or to this section alone.

Mr. REED. That is an interesting statement, "That the President could not carry out these provisions contained in section 3 except in so far as his powers of persuasion are concerned." Of course, we all know that the President will not do this individually. He could not. He will do it through an agency, through a man; and let us assume that that man will be Mr. Hoover, because the Senator has already stated that Mr. Hoover was brought here for that purpose.

Mr. GORE. Mr. President——

The VICE PRESIDENT. Does the Senator yield to the Senator from Oklahoma?

Mr. REED. Let me finish my question, please.

Now, if it be true that there are no powers to be exercised under the provisions of section 3 except the powers of persuasion, so that Mr. Hoover can simply appeal to the people of the United States and ask them to produce foods in large quantities, to conserve such foods, to exercise economy, and to do voluntarily those other things which might make for a greater plenty in our country, if that is all there is in section 3, I am for it; but I can not conclude that the language of that section, taken in connection with the other language of the bill, means only a mere power of persuasion.

Mr. GORE. Mr. President, I think section 17 probably will illuminate that subject. That is a general penal clause, and provides for the punishment of anyone who resists any of these proposed activities.

Mr. STONE. That does not apply to this section.

Mr. GORE. It applies to the whole act.

Mr. SHEPPARD. No; this section states specifically that none of the penalties of the act shall apply to it.

Mr. CHAMBERLAIN. Mr. President——

Mr. REED. Now, let me get the Senator's view, because the Senator is supporting this bill, and it is important that we understand each other and that the Senate understand the matter. The Senator's assertion, as I understand it, is that in this section—section 3—there is no power conveyed except the power of persuasion.

Mr. SHEPPARD. In this particular section?

Mr. REED. In that section.

Mr. SHEPPARD. This particular section, however, is a very small part of the bill.

Mr. REED. I understand. Does the Senator mean to say that there are not clauses in other parts of the bill which give the right to enforce everything that is found in section 3?

Mr. CHAMBERLAIN. Mr. President, may I call the Senator's attention to one thing? Will the Senator from Texas permit me?

Mr. SHEPPARD. Certainly.

Mr. CHAMBERLAIN. Section 3 stamps the governmental activities provided for in this act as affected with a public interest, and authorizes a governmental control of the production, manufacture, procurement, storage, distribution, sale, marketing, pledging, financing, and consumption of necessaries, and so forth. I think the purpose of the exemption of the Government official acting under that section from the penalty prescribed in another section of the bill—section 6, for instance, which prevents the hoarding or storing of these things—is because the Government officials who store them will be storing them for the public use.

Mr. REED. I want to get at this. I do not care to cavil about terms or methods of expression. I want to know if it is the purpose of the Senator in charge of this bill, or the distinguished Senator who now has the floor, to have section 3 so limited that it is nothing but a section giving powers of persuasion? And if that is their construction are they willing to accept an amendment making that purpose plain and that limitation clear?

If they are, so far as I am concerned debate on that section is ended now, and I am ready to accept it when it is so stated. I am not only ready to accept it when it is so stated, but I am ready to vote any reasonable amount of money to help perfect an organization to exercise these persuasive powers, to carry to all parts of the country every bit of information that can be gathered that will be of use, and to do all of those things which may make for a greater production through persuasion. But if, on the other hand, this section, in connection with other sections, proposes to lay the strong hand of the law, or the hand of the agent of the law, upon the private property of citizens, and to control the prices that are to be paid and received, and the amount of food that is to be eaten upon the tables of our people, and the character of that food—if those powers are to be conferred, then, of course, we have a very different question.

Just now, with reference to section 3, I come back to my question—whether the Senator in charge of the bill is willing to accept an amendment which will provide that all of the powers above enumerated are to be exercised solely and only by persuasion? I should like to get an answer to that question.

Mr. CHAMBERLAIN. That is not the purpose of the bill, Mr. President, or any part of it.

Mr. REED. That was the Senator's argument; that is all.

Mr. FLETCHER. Mr. President——

Mr. SHEPPARD. Not at all; not at all. I think the section is plain enough. Let me say this: The section now under discussion applies to all acts except those specifically penalized in other sections of the bill. I do not think there is any room at all for controversy over the meaning of the section.

Mr. GORE. Mr. President——

The PRESIDING OFFICER (Mr. HOLLIS in the chair). Does the Senator from Texas yield to the Senator from Oklahoma?

Mr. SHEPPARD. I yield to the Senator.

Mr. GORE. I merely desire to say that I think the point in section 3 is the phrase stamping these activities, processes, methods, and so forth, with a public character. It declares that these things shall be affected with a public interest. Of course the purpose of that is to render these activities, processes, and methods liable to the public regulation provided for in subsequent sections of the act, and the entire measure hangs on that provision, on that section, and, indeed, on that clause, "affected with a public interest."

I may say that the Supreme Court has recently held that a legislative body can not stamp a private business with a public character; that the ipse dixit of the legislation of Congress is not final on that point, but that it is a matter of fact to be determined by evidence, and to be determined by the character of the business itself.

That is the point involved in section 3. I intend to discuss that a little more fully hereafter.

Mr. REED. Mr. President——

Mr. SHEPPARD. The Senator from Florida [Mr. FLETCHER] desired to interrupt me. I yield first to him.

Mr. REED. I wanted to say a further word with regard to this particular matter.

Mr. FLETCHER. I yield to the Senator for that purpose.

Mr. REED. I simply wanted to say that if the Senator from Oklahoma is correct—and of course he does correctly define this section in many respects—but if all that the section is intended to do is merely to define these various activities as within the public control, then there was no use in ever putting in the sentence "*Provided*, That none of the penalties of this act shall apply to this section," because, as was said by the Senator from Delaware [Mr. WOLCOTT], that is a meaningless thing.

Mr. FLETCHER. I suggest to the Senator that that proviso is a restriction on the power of the President. It is intended to say that if the President directs and orders these things to be done as they are pointed out in section 3, and they should not be done, then no one is subject to the penalties or to be punished for refusing to do them.

Mr. SHEPPARD. Unless the refusals are specifically penalized in other sections of the bill.

Mr. GORE. That is the point. That lays the foundation, and the other sections are the superstructure providing specific penalties.

Mr. FLETCHER. In other words, the arrangements provided for in section 3 are to be practically voluntary arrangements. Whatever arrangements the President may make are to be voluntary.

Mr. GORE. Except such matters as are involved in subsequent sections which establish specific penalties for specific acts.

Mr. FLETCHER. Precisely. The proviso is a limitation and restriction rather than an extension of the power of the President.

Now, I should like to ask the Senator this question: The bill deals with "foods, feeds, fuel, and articles required for their production." Before the Senator concludes, I should like to have him consider and discuss that portion of the bill which deals with articles essential for food production. I can see, of course, that in section 10 of the bill provision is made for the President commandeering plants and warehouses, for instance, and mills and manufacturing establishments, for the purpose of supplying these things called necessaries, which I take it are

included in the expression "supplies necessary for the production of food."

In other words, this situation has been presented to me by constituents, and I have no doubt it has been to others. There is no trouble about producing ample crops, it has been stated—and I think it is pretty generally accepted to be true—provided they can get fertilizers, in one instance. The complaint is that fertilizers have gotten beyond the reach of the farmer. The prices have been advancing and advancing and advancing, and within the last week there has been another advance of $6 a ton on fertilizers, so that they have gotten almost beyond the reach of the farmers. Now, the farmer can not produce these crops without fertilizer. He must have the fertilizer, and particularly in my section of the country, and certain of these crops can not be produced without fertilizer. If the Government will provide a means whereby he can get the fertilizer, he can produce the crops. If that is covered in this bill, it seems to me it is quite an important thing to consider.

In another instance, I am assured that there is no trouble about producing cattle, no trouble about getting a sufficient supply of beef or meat, provided the producers can get wire fencing. They say, "We can not get wire fencing; we can not inclose any plat of ground because it is impossible to get the fencing." Now, that is a situation that is very important. If the people are ready to produce the cattle, and can produce the cattle providing they can get the fencing, that would solve their problem.

On the other hand, there are people ready to produce all sorts of foodstuffs—potatoes, vegetables of all kinds, and so forth—if they can get fertilizer. But they must have that fertilizer in the one instance, and in the other instance they must have the wire fencing; otherwise, they can not produce the ordinary supplies.

Although this is entitled a bill to conserve the supply and distribution of food products, and so forth, and is said to deal with foods and feeds and fuel and articles required for their production, I do not know where the matters I mention are covered in the bill unless it is in section 10, which gives the President the power to take over manufacturing plants like those that manufacture fertilizer or wire fencing.

Mr. SHEPPARD. I think the question of the Senator may be answered by the statement that the ultimate definition of the term "articles required for their production" will rest within the discretion and the judgment of the President.

The bill makes it unlawful for any person, first—

Willfully to destroy any necessaries for the purpose of enhancing the price or restricting the supply thereof.

The penalty on conviction being a fine of $5,000 or imprisonment for not more than two years, or both.

Mr. WOLCOTT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Texas yield to the Senator from Delaware?

Mr. SHEPPARD. I do.

Mr. WOLCOTT. I am very much attracted by the statement made by the Senator from Texas. Let me make sure. Is it the Senator's view that the phrase "articles required for their production" is to have as wide a scope as the discretion of the President might give to it?

Mr. SHEPPARD. The discretion and judgment of the President. I do not see any other ultimate construction.

Mr. WOLCOTT. Well, let us suppose that the President exercised an arbitrary judgment—is it final?

Mr. SHEPPARD. It is; just as final as any of his other acts as Commander in Chief of the Army and Navy of the United States. We are in a great emergency, and we are investing him with that character of power.

Mr. WOLCOTT. I want the Senator to understand that I am not speaking in antagonism.

Mr. SHEPPARD. I understand. That is why I am describing the power.

Mr. WOLCOTT. Let me put this hypothetical case: Suppose the President entertains the opinion that steel, for instance, which must be used in the manufacture of farm implements, is an article required for the production of foods and feeds. Is it the Senator's view that the President will have the discretionary power to bring the steel within the scope of this food bill?

Mr. SHEPPARD. Undoubtedly. I should hate to think that he did not have the power to do so if the manufacturers of steel should so conduct themselves as to place farm implements beyond the reach of the farmers. I should hate to think that we did not have the power somewhere to correct a situation of that kind.

Mr. REED. Mr. President, if the Senator will permit me——

Mr. SHEPPARD. Certainly.

Mr. REED. I am sure there can be no doubt left in the mind of the Senator from Delaware that this bill undertakes to confer on the President power to take over every mine in the United States, almost if not quite every manufactory in the United States, and I think it will reach every bank in the United States, although I do not assert that positively; but it does reach the financing of all the various activities, and that comes mighty close to the banks, if it does not get them. Indeed, I do not see why they should not be taken. If the farms are taken, the cattle are taken, the sheep are taken, why not the banks?

Mr. STERLING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Texas yield to the Senator from South Dakota?

Mr. SHEPPARD. I yield.

Mr. STERLING. The Senator has passed over, as I understand, the subdivisions of section 4.

Mr. SHEPPARD. No, sir; I am coming to that.

Mr. STERLING. I will wait, then, until the Senator has discussed that section before I ask him any questions about it.

Mr. SHEPPARD. Secondly, the bill makes it unlawful for any person knowingly to commit waste or willfully to permit preventable deterioration of any necessaries in or in connection with their production, manufacture, or distribution; third, willfully to hoard any necessaries; the penalty on conviction being a fine of not exceeding $5,000 or imprisonment for not more than two years, or both.

Necessaries are deemed hoarded within the meaning of the act when—

(a) held, contracted for, or arranged for by any person in a quantity in excess of his reasonable requirements for use or consumption by himself and dependents for a reasonable time; (b) held, contracted for, or arranged for by any manufacturer, wholesaler, retailer, or other dealer in a quantity in excess of the reasonable requirements of his business for use or sale by him for a reasonable time, or reasonably required to furnish necessaries produced in surplus quantities seasonally throughout the period of scant or no production.

Mr. STERLING. Mr. President, may I ask where the Senator is reading from just now? Has he not passed over a portion of section 4?

Mr. SHEPPARD. Not at all. If the Senator will look at line 16 of section 4 he will note the following language:

To hoard, as defined in section 6 of this act, any necessaries.

Mr. STERLING. Oh, yes.

Mr. SHEPPARD. I am passing to section 6 to show what "hoarding" means within the terms of this act.

Mr. STERLING. I understand the Senator.

Mr. KIRBY. Mr. President, with the permission of the Senator, I desire to suggest the absence of a quorum.

Mr. SHEPPARD. I would not yield for that purpose.

The PRESIDING OFFICER. The Senator declines to yield for that purpose.

Mr. SHEPPARD. To resume the analysis of the bill, it states that necessaries shall be deemed to be hoarded when—

(c) withheld, whether by possession or under any contract or arrangement, from the market by any person for the purpose of unreasonably increasing or diminishing the price: *Provided, however,* That any accumulating or withholding by any farmer, gardener, or any other person, of the products of any farm, garden, or other land owned, leased, or cultivated by him shall not be deemed to be hoarding within the meaning of this act.

Proceedings to enforce the provisions against hoarding shall be had in the United States district court of the district where the hoarded necessaries are found, and shall be in the nature of a libel for condemnation, conforming as nearly as may be to proceedings in admiralty, except that either party may demand trial by jury on the issues of facts.

If adjudged to be hoarded, the necessaries are to be disposed of by sale in such manner as to provide the most equitable distribution thereof, as the court may direct; and the proceeds, less legal costs and charges, are to be paid to the party entitled thereto. The United States attorney for the district where hoarded necessaries are found shall institute and prosecute action on the presentation of satisfactory evidence.

The bill makes it unlawful—

Fourth. To monopolize or attempt to monopolize, locally or generally, any necessaries.

Fifth. To engage in any discriminatory and unfair, or any deceptive or wasteful practice or device, or to make any unjust or unreasonable rate or charge in handling or dealing in or with any necessaries.

Sixth. To conspire, combine, agree, or arrange with any other person (a) to limit the facilities for transporting, producing, manufacturing, supplying, storing, or dealing in any necessaries; (b) to restrict the supply of any necessaries; (c) to restrict distribution of any necessaries; (d) to prevent, limit, or lessen

the manufacture or production of any necessaries, or to enhance the price thereof; or (e) to exact excessive prices for any necessaries; or to aid or abet the doing of any act made unlawful by this section.

Mr. STERLING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Texas yield to the Senator from South Dakota?

Mr. SHEPPARD. I yield to the Senator.

Mr. STERLING. The Senator from Texas has now read that to which I wished to call his attention a moment ago; that is, the various subdivisions of section 4, beginning with (a).

Does the Senator understand that it is meant by these subdivisions, taking subdivision (a) first, for example, to limit in any event the facilities for transporting, producing, manufacturing, supplying, storing, or dealing in any necessaries? If so, what about this situation?

Suppose that there were, in the case of any particular kind of necessaries, no demand for them. Suppose there were no price sufficient to warrant their manufacture or production. Would the manufacturer or producer, under this provision, be prohibited from laying off his help or shutting down a portion of his plant? He would, would he not, under the strict terms of the bill?

Mr. SHEPPARD. Under a strict and technical construction probably he would; but I have not the slightest idea that such a construction would be applied.

Mr. STERLING. Well, take this case: He is prohibited from restricting the supply of any necessaries. Suppose the supply has already exceeded the demand, and there is no sufficient price to warrant the further production of those necessaries; yet, under the provisions of this bill, he would be prevented from restricting the supply, and so with the distribution.

Mr. WOLCOTT. Mr. President, I will suggest to the Senator that his statement, perhaps, is not entirely correct. The penalty here would not be applicable to the individual.

Mr. STERLING. I understand.

Mr. WOLCOTT. There must be a conspiracy, a confederacy, with some other person.

Mr. STERLING. I understand.

Mr. WOLCOTT. If there is that combination or that agreement between one manufacturer and another, then I think the Senator's statement is correct.

Mr. STERLING. Does the Senator from Delaware think that there ought to be a prohibition against an agreement between producers or manufacturers in regard to restricting the supply, the production, or the manufacture of any article called necessaries of which the market is already full?

Mr. WOLCOTT. Certainly there ought not to be any legislation that affects that situation—no new legislation that affects it, anyhow.

Mr. SHEPPARD. I think the clear intention of the bill is to apply to actions which injuriously affect the conservation of the food supply or its distribution.

Mr. STERLING. Should not all these restrictions be, in order to make them prohibitory, such restrictions as would unreasonably enhance the price thereof?

Mr. SHEPPARD. I think perhaps the meaning might be made clearer along the line I have indicated.

The bill provides that whenever the President shall find it essential to license the importation, exportation, manufacture, storage, or distribution of any necessaries, in order to carry out the purpose of the act, and shall publicly so announce, no person shall, after the date fixed in the announcement, conduct any business specified in the announcement without a license. The President may prescribe such regulations of licenses as are essential to prevent the uneconomical manufacture and inequitable distribution of necessaries and otherwise to carry out the purpose of the act.

Mr. REED. Mr. President, may I ask the Senator if that does not give Mr. Hoover, or whoever is appointed, the right to go into and take charge of any factory and tell the factory owner how he shall run it? And now, just about what kind of a manager does the Senator think Mr. Hoover would make—not of one factory, for I think he is a man of very great ability—but if he should undertake to manage all the factories of the United States, how does the Senator think he would succeed?

Mr. SHEPPARD. Mr. President, the bill provides that this authority shall be exercised only when the President finds it essential to exercise it in order to carry out the purposes of the act.

Mr. REED. Then very few——

Mr. SHEPPARD. This provision applies, like other provisions of the bill, only when the President thinks the emergency is sufficiently ominous to justify it.

Mr. REED. It does give the power, however——

Mr. SHEPPARD. It does give the power.

Mr. REED. Over all factories in the United States?

Mr. SHEPPARD. If the President should consider the situation sufficiently emergent.

Mr. REED. All that would be necessary would be for the President to issue a general order saying: "Mr. Hoover, proceed and see that all these factories are run right," and Hoover could take possession——

Mr. SHEPPARD. A specific order applying to a specific factory?

Mr. REED. I do not see anything in the bill which says it shall be specific; it is general.

Mr. SHEPPARD. The chances are that the conditions would be specific and exceptional. At any rate, the power must be reposed somewhere in an emergency of this kind.

Mr. President, when we have entered the most tremendous war of history, and when the very existence of the Nation is in the balance, I am not afraid to intrust such a power to the President or to the man he selects to effectuate it.

Mr. REED. Will the Senator pardon me if I ask him if he thinks the people of the United States should not have something to say about who should possess this power? I think they wrote something in the Constitution to the effect that property should not be taken without due process of law.

Mr. SHEPPARD. The American people realized, however, that exceptions might be made in time of war when in adopting the Constitution they made the President Commander in Chief of the armed forces of the United States, and authorized Congress to raise and support armies, to provide and maintain a Navy.

Mr. REED. The Senator holds——

Mr. SHEPPARD. Let me answer the question. The American people realized, further, that it might be better in some emergencies temporarily to part with or to modify some rights in order that such rights might be permanently preserved.

Mr. REED. Does the Senator think that when the Constitution made the President Commander in Chief of the Army of the United States and the Navy it made him Commander in Chief of Congress, Commander in Chief of the Supreme Court, Commander in Chief not only of the Army but also of the civilian population of the United States——

Mr. SHEPPARD. Under modern conditions——

Mr. REED. Does the Senator think that?

Mr. SHEPPARD. Under modern conditions the entire American people compose the American Army. All our people and all our resources must be placed, if necessary, under one authority in order that the Nation may most efficiently prosecute war.

Mr. REED. Has the Senator forgotten that Congress has the power to raise the army, to prescribe its size, and has he now in mind any law of Congress declaring that all the people of the United States are hereby drafted into an army?

Mr. SHEPPARD. That is what we are doing now.

Mr. REED. Does the Senator claim that that is done by this bill?

Mr. SHEPPARD. Congress is doing it. The President realizes that Congress must do it, and therefore he asks for this legislation.

Mr. REED. Does the Senator say this act, which provides that the President may take possession of the private property of citizens through an agent, and that agent is to be Mr. Hoover, although not named in the bill, is an act of Congress raising an army within the meaning of the Constitution?

Mr. SHEPPARD. It is, under modern conditions. The bill provides, however, that property taken must be paid for and furnishes legal redress.

Mr. REED. What have the modern conditions to do with the act of Congress?

Mr. SHEPPARD. To-day war can not be efficiently conducted unless the resources and the people are mobilized equally with the soldiers at the front. It is the people's army and the people's war.

Mr. REED. That is a new doctrine.

Mr. SHEPPARD. It is a new emergency.

Mr. REED. Has it not always been true that a nation in carrying on a war had to draw for its resources upon the property of all the people? And yet that did not make them a part of the army; they would remain a part of the civil population. Does the Senator mean to say now as a lawyer that he thinks this bill is authorized by the provisions of the Constitution which authorizes Congress to raise armies? Does he say that this bill that relates to food and factories, and so forth, is a bill to draft an army?

Mr. SHEPPARD. I think so; in part at least.

Mr. REED. The Senator thinks that?

Mr. SHEPPARD. I do.

Mr. REED. That is beyond discussion, Mr. President.

Mr. SHEPPARD. It is true, however, these regulations may also include systems of accounting, reports, entry, and inspection by the President's duly authorized agents and places of business of licensees. Licensees must within a reasonable time comply with the President's orders to discontinue any rate, charge, or practice found by him to be unjust, unreasonable, discriminatory, unfair, or wasteful. The President may find what is a just, reasonable, nondiscriminatory, fair, or economical rate, charge, or practice, and in any court of competent jurisdiction this finding shall be prima facie evidence. Violation of provisions as to licensees is punishable by fine not exceeding $5,000 or by imprisonment not exceeding two years, or both. These provisions are not applicable to any farmer, gardener, or other person with respect to the products of any farm, garden, or other land owned, leased, or cultivated by him, nor to any retailer with respect to the retail business actually conducted by him, nor to any common carrier, nor shall they authorize any duty or tax, imported to or exported from the United States or any State, Territory, or the District of Columbia.

The bill provides that in order to carry out the purposes of this act the President is authorized to purchase and to provide for the production or manufacture of necessaries; to store them and provide storage facilities for them by construction, purchase, lease, or otherwise; to sell them; to require any person controlling any necessaries or storage space suitable for storing of necessaries to furnish the whole or any part of such necessaries or storage space to the Government in such quantities, at such times and at such prices, as the President shall determine to be reasonable. If compliance is refused or fails, the President may requisition and take possession of such necessaries or storage space and pay for them at the price he determines to be reasonable. If the price is not satisfactory to the person entitled to receive it, such person shall be paid the amount prescribed by the President, and shall be entitled to sue the United States to recover such further sum as the court may find to be just. No natural person, however, shall be required to furnish to the Government any necessaries held by him and reasonably required for consumption by himself and dependents for a reasonable time.

Mr. President, I do not believe that I can conclude within a reasonable time this afternoon, and I shall discontinue for the present.

COMMITTEE SERVICE.

Mr. MARTIN. Mr. President, there are one or two little matters in reference to committee assignments which I should like to have disposed of before the Senate adjourns. They have been agreed on between the Senator from Wyoming [Mr. WARREN] and myself.

In the first place, I ask unanimous consent that the membership of the Committee on Public Lands be increased from 15 to 17 in order to make places for two Senators.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MARTIN. Now I ask unanimous consent that the membership of the Committee on Indian Affairs be increased from 15 to 16 in order to make place for one minority Senator. I move that the Senator from Wyoming [Mr. KENDRICK] be assigned to one of the vacancies on the Committee on Public Lands which have just been created.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MARTIN. I will state that the Senator from Wyoming [Mr. WARREN] will fill the other vacancies on the Committee on Public Lands and Indian Affairs by the appointment of a member of the minority party.

I move that the Senator from Utah [Mr. KING] be assigned to the Committee on Indian Affairs.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MARTIN. The Senator from Wisconsin [Mr. HUSTING] is at present chairman of the Committee to Investigate Trespasses on Indian Lands. At his request, I ask that he be relieved from the chairmanship of that committee and that he be assigned to the chairmanship of the Committee on Fisheries.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MARTIN. That, I believe, covers the points I wished to dispose of. The Senator from Wyoming has some assignments which he will ask the Senate to agree to.

Mr. WARREN. I am authorized to announce the resignation of the senior Senator from New Hampshire [Mr. GALLINGER] as a member of the Committee on Manufactures, the resignation of the senior Senator from Utah [Mr. SMOOT] as a member of the Committee on Public Health and National Quarantine, the resignation of the senior Senator from Washington [Mr. JONES] as a member of the Committee on Pacific Railroads, the resignation of the Senator from Idaho [Mr. BRADY] as a member of the Committee on Expenditures in the Department of Commerce, the resignation of the Senator from Wyoming [Mr. WARREN] as a member of the Committee on Irrigation and Reclamation of Arid Lands.

Having announced these resignations, I now ask the adoption of the following order:

Ordered, That Senator MCNARY, of Oregon, be appointed a member of the following committees:

On Expenditures in the Department of Commerce, to fill the vacancy occasioned by the resignation of Senator BRADY, of Idaho.

On Indian Affairs, to fill an original appointment.

On Irrigation and Reclamation of Arid Lands, to fill the vacancy occasioned by the resignation of Senator WARREN, of Wyoming.

On Manufactures, to fill the vacancy occasioned by the resignation of Senator GALLINGER, of New Hampshire.

On Pacific Railroads, to fill the vacancy occasioned by the resignation of Senator JONES, of Washington.

On the Philippines, to fill the vacancy occasioned by the death of Senator Lane, of Oregon.

On Public Health and National Quarantine, to fill the vacancy occasioned by the resignation of Senator SMOOT, of Utah.

On Public Lands, to fill an original appointment.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. WARREN. I will state that on to-morrow or some early day I shall ask the Senate to consider the matter of a couple of chairmanships that we wish to change on the minority side, but I am not ready to present the matter to-night.

CONSERVATION OF FOOD AND FUEL.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 2463) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel.

Mr. VARDAMAN. Mr. President, I realize that economy and prudence are very necessary at this time, but the products of the garden, the field, and the ranch are not the only things where economy should be practiced. The revelations made by the public press this morning regarding the rise in the price of steel and the refusal on the part of Chairman Denman, of the Shipping Board, to approve contracts made by Gen. Goethals for the building of steel ships at an exorbitant price should challenge the attention of Congress. The prodigality with which money from the Public Treasury has been expended during the last six months is a matter of profound concern to the people whose labor and toil produce the materials with which these bills are to be paid, and it ought to interest the Representatives of the people in Congress.

I read from the Washington Post of June 18. It is suggested that the steel mills of this country will hold out for a price of $95 per ton for the steel that goes into the great fleet of merchant vessels to be built by this Government. And also an interview of Chairman Denman, of the Shipping Board, regarding this matter:

"I shall sign no contracts at that figure," said Mr. Denman. "The price is absurd when the Navy is getting steel at $30 a ton less."

Although Maj. Gen. Goethals, general manager of the Shipping Board's emergency-fleet corporation, has entire charge of the shipbuilding program, Mr. Denman, as president of the corporation, signs all contracts.

MAY DECIDE AUTHORITY.

Now that the chairman has apparently thrown down the gauntlet to Gen. Goethals, close observers here believe that it will lead to one of two alternatives—the resignation of Gen. Goethals or else his designation as the one authority having power to build ships, which would mean that the Shipping Board would confine its work to operating ships after they are built.

This will be decided very quickly, probably within the next two or three days, when the President designates who shall have authority to expend the $500,000,000 appropriated last week by Congress for shipbuilding purposes.

PRICE LEFT TO COMMITTEE.

In a statement yesterday Gen. Goethals said the price of steel would be left to the committee on raw supplies of the Council of National Defense, and contracts would be let with the understanding prices determined on by the committee would govern present contracts also.

Chairman Denman said yesterday that the committee would act in an advisory capacity.

"I feel," he said, "that we would embarrass the committee if we were to embody in contracts now Gen. Goethals's tentative agreement with the steel men for $95 a ton steel because in so doing we would give respectability to a price which on its face is absurd for the Government to contemplate."

Mr. President, I shall not animadvert upon the conduct of the parties to this controversy, but I do know that Congress ought to take notice of this sudden rise in the price of steel. Evidently, if the papers are telling the truth about it—and I am inclined to think they are—some plutocratic patriot is taking advantage of this world emergency to put money in his pocket or the pockets of his stockholders. The American people are able to pay for everything which the Government needs, every legitimate necessity, but the representatives of the American people ought to see to it that they are not robbed even by the preparedness patriots of the Steel Trust.

If necessary, the President ought to commandeer every steel plant in the United States, use the output, and then pay a fair profit to the stockholders.

A man who would take advantage of this abnormal state of things to make money out of this Government is a public enemy, and ought to be treated as such.

This revelation ought to be a warning to Congress against the tendency to concentrate all the powers of government in the hands of one man or a few men.

Congress has its proper functions to perform in these days of trial, and it ought to perform them fearlessly, independently, and intelligently.

I know it is popular to the point of becoming a fad to insist upon the concentration of authority and placing in the hands of the President or some bureau head autocratic powers.

Now, I have no criticism to make of any individual. I have no fault to find with the man who occupies the office of President, but I do know that he is merely a human being, with the faults and frailties which belong to his race. I do not think he is infallible. I know he is not without error. The only man who possessed the qualities of infallibility was crucified 2,000 years ago. I might add that He was crucified by the character of men who are now attempting to rob and plunder their Government in this hour of stress. I hope I may be permitted in this connection to express my utter lack of patience or tolerance with that pack of Cerberean poodles and self-constituted guardians of the White House, who are provoked to vociferous barking every time anybody happens to question the inerrancy of the President or one of his bureau heads, some of whom are insisting on running the Government in their own way regardless of the interests of the masses of the people.

The American people owe Chairman Denman a debt of gratitude for calling attention to this piece of unwarranted extravagance.

Mr. KING. Mr. President, in view of what the Senator from Mississippi [Mr. VARDAMAN] has just said, and in the light of the eulogistic statements so frequently made of late in the Senate, concerning Gen. Goethals, it seems to me that it is not inappropriate, assuming the truth of the newspaper report just read, to commend Mr. Denman for the course which he has taken with respect to the contracts for the building of ships for the Government. Senators will remember that a few days ago when the conference report upon the appropriation bill was being considered there was considerable discussion as to whether if adopted it would permit the discharge of Gen. Goethals from the position now held by him. There was a great deal of apprehension expressed upon this point, and some Senators in strong terms approved of this selection and spoke of the confidence in which he was held by the people of the United States. While there was no condemnation of the Shipping Board, it was clear that the Senators who spoke upon the subject were willing to support a very large appropriation for the construction of ships providing Gen. Goethals was placed at the head of the enterprise.

It seems to me, Mr. President, that if Gen. Goethals has entered into tentative contracts of the character referred to in the article just read he has not been quite just to the American people; that he has not quite served the best interests of the Government; and in view of the condemnation, at least by inference, of Mr. Denman upon the floor of the Senate, it seems to me that we should pause for a moment to express our commendation of the course which he has taken in trying to prevent the Government from being robbed by the steel interests of the country. I do not think, Mr. President, that it would be inappropriate for the Senate to serve notice upon the Steel Corporation and all other corporations with which the Government must deal, and from which the Government will be compelled to make large purchases, that if they attempt to extort from the Government it may lead to the course just suggested by the Senator from Mississippi [Mr. VARDAMAN]. I would regard it as very unfortunate if the Government were compelled to take over and operate the railroads, the great steel and shipping plants of the United States, and other manufacturing institutions engaged in producing the multitudinous articles needed by the Government in the prosecution of this war.

Mr. SMITH of Arizona. The Senator might mention the paper industry.

Mr. KING. Yes; and my friend, the Senator from Arizona, refers to the paper industry, which he denominates a trust. I believe the best interests of the public will be subserved if business, so far as is possible in these abnormal times, can be conducted in a normal way. Every effort should be made to encourage and stimulate legitimate business. No one desires its demoralization or destruction, and no one should desire to see a Government paternalism rest upon the country. So far as I am able to determine, there is no disposition upon the part of Congress or the administration to place the business activities of the country in the hands of the Government. Many Senators are averse to the requisitioning upon the part of the Government of the manufacturing plants, which have been so efficiently managed by those in control of the same; but if an attempt be made to levy tribute upon the Government, the Government may be compelled to seize those plants and to operate them as Government instrumentalities.

Mr. VARDAMAN. Mr. President, if the Senator will pardon me, the Government ought to do it now, before the contracts are made. Congress ought to see to it that contracts are not made whereby the people are to be robbed, as they would be under this $95 a ton proposition.

Mr. KING. I am not willing at present to assent to the suggestion of the Senator from Mississippi. I would not care to go further than what I have just suggested; but I do think, Mr. President, that if those corporations that control the steel output of the United States should attempt to hold up the Government in order to swell their profits the Committee on Finance might with propriety take cognizance of such conduct when they frame the provisions of the bill now being framed which deal with excess profits. If corporations drive piratical contracts, and by so doing obtain enormous and unconscionable profits, I am inclined to think there may be a disposition upon the part of some Senators who want to be fair to the corporations and to the business industries of the country, and who desire them to derive large profits upon their investments, when the revenue bill comes before the Senate, to levy upon them such excess profits taxes as will place back into the Treasury of the United States the millions that they may seek to take from the Treasury of the United States. I venture the hope that the Finance Committee will take into consideration, in passing upon the revenue bill now before it, the question of excess profits and the attitude of corporations dealing with the Government, whether it is fair or extortionate, and that where profits are excessive and enormous, as the result of the monopoly enjoyed by them, such taxes will be levied as will meet the situation and in a way repress further and continued unlawful exactions.

Mr. MARTIN. I move that the Senate adjourn.

The motion was agreed to; and (at 5 o'clock and 25 minutes p. m.) the Senate adjourned until to-morrow, Tuesday, June 19, 1917, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

MONDAY, *June 18, 1917.*

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

We thank Thee, our Father in heaven, for the eternal principles revealed by the Master, principles which our fathers used in laying the foundation upon which the great superstructure of our Republic has been reared: Fatherhood, Brotherhood.

"In the beauty of the lilies, Christ was born across the sea,
With a glory in His bosom that transfigures you and me.
As He died to make men holy, let us die to make men free,
While God is marching on."

In the crucial test through which we are passing, the call to the colors has gone forth to the young men of our Nation to go forth and battle for the right. Give them strength, courage, valor that they may carry Old Glory with its bright stars and broad stripes to victory; that the principles which it represents may live a blessing to all mankind. In the name of Him who lived and died that they might survive the flight of time, the wreck of worlds. Amen.

The Journal of the proceedings of Saturday, June 16, 1917, was read and approved.

SPEAKER PRO TEMPORE TO-MORROW.

The SPEAKER. The Chair designates the gentleman from New York [Mr. FITZGERALD] to preside to-morrow.

LEAVE TO EXTEND REMARKS.

Mr. GREGG. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by inserting a short poem entitled "Origin of the Banner," written by Mrs. Rose C. Deming, of Palestine, Tex. Mrs. Deming is the editor of the Palestine Advocate, which is one of the oldest, if not the oldest, weekly paper published in east Texas.

The SPEAKER. Without objection, that leave will be granted.

There was no objection.

Mr. HERSEY. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by inserting the address of Hon. Elihu Root, chairman of the United States commission to the Russian people, delivered on Friday, June 15, 1917.

The SPEAKER. The gentleman from Maine asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. HOWARD. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by inserting a speech of Hon. F. David Warfield, of Baltimore, upon the rate proposition.

The SPEAKER. The gentleman from Georgia asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. CLASSON, indefinitely, on account of sickness in his family.

To Mr. ALMON (at the request of Mr. SMALL), indefinitely, on account of illness.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Waldorf, its enrolling clerk, announced that the Senate had passed a bill of the following title, in which the concurrence of the House of Representatives was requested:

S. 2356. An act to amend the act to regulate commerce as amended, and for other purposes.

SENATE BILL REFERRED.

Under clause 2, Rule XXIV, Senate bill of the following title was taken from the Speaker's table and referred to its appropriate committee as indicated below:

S. 2356. An act to amend the act to regulate commerce as amended, and for other purposes; to the Committee on Interstate and Foreign Commerce.

EDWARD F. WARFEL.

Mr. PARK. Mr. Speaker, I present the following privileged resolution from the Committee on Accounts.

The SPEAKER. The gentleman from Georgia presents a privileged resolution, which the Clerk will report.

The Clerk read as follows:

House resolution 102.

Resolved, That the Clerk of the House be, and he is hereby, authorized and directed to pay, out of the contingent fund of the House, to Edward F. Warfel, clerk to Daniel W. Comstock, late a Representative from the State of Indiana, at the time of his death, May 19, 1917, the sum of $125, being an amount equal to one month's salary of a clerk of a Member of the House.

The resolution was agreed to.

PANAMA CANAL.

Mr. FITZGERALD. Mr. Speaker, I ask unanimous consent for the present consideration of the joint resolution which I send to the Clerk's desk.

The SPEAKER. The gentleman from New York asks unanimous consent for the present consideration of a joint resolution which the Clerk will report.

The Clerk read as follows:

House joint resolution 105 (H. Rept. No. 82).

Joint resolution to correct an error in the sundry civil appropriation act for the fiscal year 1918.

Resolved, etc., That that portion of the act entitled "An act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1918, and for other purposes," which reads: "For maintenance and operation of the Panama Canal, salary of the governor, $100,000." is amended to read as follows: "For maintenance and operation of the Panama Canal, salary of the governor, $10,000."

Mr. FITZGERALD. Mr. Speaker, this is to correct an error that was made in the printing of the sundry civil appropriation bill.

The joint resolution was ordered to be engrossed and read a third time, and was accordingly read the third time and passed.

On motion of Mr. FITZGERALD, a motion to reconsider the vote by which the joint resolution was passed was laid on the table.

FOOD CONTROL.

Mr. LEVER. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill (H. R. 4961) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel, and pending that motion, Mr. Speaker, if I may have the attention of the gentleman from Iowa [Mr. HAUGEN], I would like to see if we can not enter into some agreement as to the time for concluding the general debate on this bill.

Mr. HAUGEN. There have been a great many requests for time, and I imagine it will take a good deal of time. I suggest that we run along for the day, and then possibly we can reach some agreement later. I have not had an opportunity to discuss the matter with all the members of the committee and others who have requested time, as to the time they may desire, and which it will be necessary to give.

Mr. LEVER. Will there be any objection on the part of the gentleman to running until 10 o'clock this evening in general debate on this bill?

Mr. MADDEN. I shall object to that, I will say to the gentleman.

Mr. HAUGEN. I shall not object.

Mr. MADDEN. I shall object if you run after 6 o'clock.

Mr. GILLETT. If you are going to run this evening, ought you not to take a recess from 5 o'clock until 8?

Mr. LEVER. I would be perfectly willing to recess at half past 5 and reassemble at 8 and run until 10 during the general debate. I would like to do that, but not without the committee knowing that we are going to do it. Would the gentleman from Illinois object to that arrangement?

Mr. MADDEN. I think if you sit here all day in this bad air you have done pretty well. Of course, a great many Members do not sit here. Other people do. Some men feel as though they ought to be here all the time because they are elected to sit here. Other men feel as if it is not necessary to be here, and it is easy for them to agree to something that they are not going to participate in.

Mr. LEVER. I appreciate that.

Mr. MADDEN. Personally I am not in favor of sitting here after 6 o'clock.

Mr. LEVER. But the thought in my mind was that we might recess at 5.30 until 8, so that Members might get their dinners and a little fresh air, and assemble and run until 10 o'clock in the general debate.

Mr. MADDEN. How long does the gentleman expect the general debate to run?

Mr. LEVER. I am hoping we may be able to conclude the general debate under such an arrangement as I suggest by to-morrow night at 10 o'clock.

Mr. MADDEN. How soon does the gentleman expect we will get a vote on this bill?

Mr. LEVER. I hope to pass this bill, if we pass it at all, and I think we will, by Friday or Saturday.

Mr. HAUGEN. There is no disposition, so far as I know, to delay the passage of this bill.

Mr. LEVER. I am sure of that.

Mr. HAUGEN. I believe everybody agrees that if we are to pass it at all it should be passed immediately.

Mr. LEVER. Exactly.

Mr. HAUGEN. And no effort will be made to delay, so far as I know, and I think we can gain time by running along this afternoon, and if the House sees fit then to take a recess from 6 to 8, very well, but we had better go along good-naturedly, I think we will make better time and progress.

Mr. LEVER. Undoubtedly.

Mr. HARDY. May I be allowed to make a suggestion in the interest of saving time? If you can not succeed in limiting the time for general debate, can you not agree that the speeches in general debate shall be limited to the subject of the bill?

Mr. LEVER. Yes; I shall insist in general debate that speeches be limited to the subject of the bill.

Mr. HAUGEN. My understanding is that it is an unwritten rule that everything is in order under general debate, and I do not think we can gain anything by adopting a special new rule for the discussion of this bill. If anybody has a campaign speech in his system, you might as well give him an opportunity at one time as another. I do not think you would save any time.

Mr. COOPER of Wisconsin. Mr. Speaker, I am opposed to the suggested restrictions on general debate. Several times since I have been a Member of the House attempts have been

made to change its practice and to restrict discussion during general debate to the bill. Gentlemen do not seem to understand fully all that is implied in the proposed restriction. A House organization closely united, having in control its Committe on Rules, can bring in such measures as it wants considered, and if general debate is to be thus limited the Members could not discuss any subject at all except such as it might please the House organization to have discussed. Very often the only way that subjects of great public importance can effectively be brought before the people of the country is in general debate in Congress. If the press refuse to mention them, there is then no place in the United States where these things can be thoroughly, effectively presented and brought to public attention except in general debate here. That is the reason for the present rule containing no restrictions as to the matters which may be talked about during general debate on this floor. Members of the House now have the right and they ought to retain the right, in general debate, to speak upon any subject which they may deem of importance to their respective constituencies or to the Nation. I am opposed to the suggested restriction.

Mr. LEVER. But that proposition is not before the House.

Mr. COOPER of Wisconsin. It was before the House by the gentleman's own proposition.

Mr. LEVER. I will withdraw it. Mr. Speaker, I ask unanimous consent that the time for general debate on the bill shall be equally divided between the gentleman from Iowa [Mr. HAUGEN] and myself, and that it shall be controlled by the gentleman from Iowa and myself, and that the yielding of time shall be alternate.

Mr. EMERSON. Reserving the right to object, is the gentleman from Iowa opposed to the bill? I am in favor of the bill, and I do not know where I am to get my time from.

The SPEAKER. The gentleman can get his time from the gentleman from South Carolina or, if the gentleman from Iowa is in favor of the bill, get it from him.

Mr. YOUNG of Texas. Reserving the right to object, I would like to know where under this arrangement men stand who are absolutely opposed to the bill from start to finish. As the gentleman knows, I have fought this bill from its inception. As far as I know, the men controlling the time on this side will probably vote for the bill.

Mr. LEVER. The gentleman from Iowa has filed a minority report.

Mr. YOUNG of Texas. I shall not make any agreement unless I get an opportunity to be heard, especially after I have fought the bill five weeks in committee.

Mr. HAUGEN. A parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. HAUGEN. My understanding is that if the time is divided, as suggested by the gentleman from South Carolina, it is the duty of the Republican Member to parcel the time between the Republicans, and the duty of the gentleman from South Carolina to parcel the time among the majority.

Mr. LEVER. My thought was that this bill has two sides to it and no political side; that the gentleman from Iowa and the gentleman from Texas—certainly the gentleman from Texas—is opposed to the bill——

Mr. HAUGEN. Mr. Speaker, the gentleman has no right to make such an insinuation. I have filed my minority report and if the gentleman has read it he knows why I am opposed to such a provision. My objection to the bill is that it singles out the farmer for slaughter when it comes to the regulations.

Mr. LENROOT. Mr. Speaker, I would like to make this suggestion, that the gentleman from South Carolina couple with his request the further request that the time controlled by the chairman of the committee and the ranking Member on the Republican side be divided by them equally between those for and against the bill. That would take care of the Republicans on this side and the Democrats on that side who are opposed to the bill.

Mr. LEVER. As far as I am concerned, I am perfectly willing to do that although I think it would expedite and clarify the situation to have it the other way. I assure the gentleman from Texas [Mr. YOUNG] that he shall have such time as he desires, certainly not less than an hour.

Mr. YOUNG of Texas. Reserving the right to object, as far as I am personally concerned, I shall want one hour.

Mr. LEVER. The gentleman shall have it.

Mr. GILLETT. Mr. Speaker, may I make a suggestion? Ought it not to be understood that if we have evening sessions there shall be no business transacted except general debate on the bill?

Mr. LEVER. Undoubtedly, Mr. Speaker, I ask unanimous consent that the time be controlled by the gentleman from Iowa and myself, half and half, and that the gentleman from Iowa shall take care of those on his side of the House both for and against the bill, and I shall take care of those on this side both for and against the bill, and that the gentleman from Texas [Mr. YOUNG] shall have one hour.

The SPEAKER. The gentleman from South Carolina asks unanimous consent that the time be divided equally, to be controlled by the gentleman from Iowa [Mr. HAUGEN] and himself, and that each one shall take care of the Members who are opposed to the bill, and that if there is any evening session, nothing shall be transacted except general debate on the bill. Is there objection?

Mr. DYER. Reserving the right to object, is the gentleman from South Carolina going to make another unanimous consent request that the debate be ended to-morrow night?

Mr. LEVER. Not just at this time.

The SPEAKER. Is there objection?

There was no objection.

The motion of Mr. LEVER to go into Committee of the Whole House on the state of the Union was then agreed to; accordingly, the House resolved itself into Committee of the Whole House on the state of the Union, with Mr. HAMLIN in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 4961, which the Clerk will report.

The Clerk reported the title of the bill.

Mr. LEVER. Mr. Chairman, I ask unanimous consent to dispense with the first reading of the bill.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. LEVER. Mr. Chairman and members of the committee, I desire in presenting this bill to do so, at least for a time, in a connected and uninterrupted manner, and I shall therefore decline to yield to any questions or to anyone until I have in a measure covered, as I see it, the general purposes sought to be accomplished by the proposed legislation. I make that statement so that no one may feel that by refusing to be interrupted I am discourteous.

Mr. Chairman, whether the country realizes it or not, we are now engaged in war with the most thoroughly organized and autocratic military nation on the face of the earth. Her people are the most stubborn in thought, tenacious in purpose, resourceful in methods, and for generations have been schooled and trained with the one predominant thought of world dominance through industrial and military prowess. Their industries have been organized down to the minutest detail to fit into the military machine which is recognized to be the most efficient and capable and powerful ever brought together since the beginning of time.

The contest between German autocracy and American democracy will be determined in the end by the character and strength of the organization which one can put against the other. A loose-jointed, unorganized democracy has no ghost of a chance in a contest with such an autocracy as is Germany. Organization is the only weapon with which organization can be overcome. Organization, as the term is used here, means not only whipping into shape the man power of the Nation, the money power of the Nation, but as well every resource of the Nation which may be used in the contest.

That a democracy can be organized has been demonstrated repeatedly in history. It is being demonstrated in a remarkable way at this very time in this country.

In the short space of a few months the foundation of a great army has been laid, the expenditure of $7,000,000,000 has been authorized, and the machinery for the mobilization of this stupendous sum is well under way. The enthusiastic reception by the American people of the liberty bonds, largely oversubscribing them, is the best test of their willingness to get together as one in the prosecution of the task before them; order is being worked out of chaos in the shipping industry of the country; the railroads are rapidly developing plans to meet the strain upon them incident to the enlarged and rather disorganized commerce of the Nation; the Federal Reserve System, with its power to assemble quickly and at strategic points the financial resources of the Nation, fortunately is already well established and in operation; our munition factories are highly efficient, and our navy yards are capable and ready.

Indispensable as are these, they do not include all that is needed to win this war.

Germany was ready with her great army, her navy, her industrial machinery, her State-controlled shipping, her State-controlled transportation facilities, her closely coordinated banking system, her navy yards, her great Krupp's establishment, and her warlike attitude of mind. All these she had, but within five days after the mobilization of her army on the French front her food and fuel became a matter also of the most rigid State control.

In the light of events it is easy to understand the German Government's solicitude in the past for agriculture. She realized, as we must be made to realize, that the Napoleonic axiom that armies fight on their bellies was true when uttered, and is even more true now. Hungry armies do not win victories. Men who fight must be fed. Those who send their loved ones into the ranks must likewise be fed. The supreme duty as well as the supreme necessity of this hour is to feed our fighting forces, the fighting forces of our allies, and adequately to provide necessaries at living prices for our own people and, as largely as we can, the civilian population of our allies.

Agriculture becomes to-day the one industry more important than all others. The American farmer never occupied such a position of responsibility. I do not doubt how he will meet it. It was the embattled farmer at Lexington that set the flames of revolution and liberty going. [Applause.] It was the heroic farmer at Kings Mountain that assured these liberties we now enjoy, and for the preservation of which we are now fighting. The American farmer to-day is no less a patriot, no less equal to the discharge of the responsibilities placed upon him, than were his forebears at Lexington and Kings Mountain. He can and will furnish all food necessary in this conflict. It is our duty to see that those for whom he toils shall not be gouged and robbed by heartless and unpatriotic intermediaries; it is our duty to see that the results of his patriotic efforts shall not be made the football of the gambler, the manipulator, the hoarder, the unconscionable food speculator and cormorant. It is equally our duty to see that the products of his labor shall reach the consumer without the waste necessarily incident to an uncontrolled and unorganized system of distribution. [Applause.]

That some kind of food and fuel control is necessary to their most efficient mobilization is imperative thoughtful men everywhere recognize.

Immediately upon the entrance of the United States into the war the Secretary of Agriculture called a conference at St. Louis of the agricultural leaders of the Nation, including the State agricultural officials, commissioners, representatives of the agricultural colleges of each of the States, and representatives of more than a hundred farm journals, with a total circulation aggregating approximately 11,000,000. Later the Secretary, realizing the special importance of ascertaining the views of the executive heads of the great national farm organizations, invited them to confer with him. There were represented the Grange, the Farmers' Union, the Gleaners, and the Farmers' National Congress. Later the American Society of Equity appeared before the House Committee on Agriculture. In general these agricultural leaders indorsed the proposals contained in the food-products bill, which has already passed both Houses of Congress, and the propositions contained in the bill which I now present for your consideration.

The bill deals with foods, feeds, fuel, and articles required for their production. It aims to facilitate and clear the channels of distribution; to prevent hoarding; to prevent willful destruction of necessaries in order to enhance the price or restrict the supply thereof; to eliminate injurious speculation; to regulate exchanges and boards of trade in order to prohibit undue fluctuation of prices, unjust market manipulation, or unfair or misleading market quotations; to reduce waste, including the power to regulate or completely to prohibit the use of cereals in the manufacture of alcoholic beverages; and to stimulate production by assuring the farmer a reasonable profit guaranteed by the Government, and a free and open market for his products, unrestricted by manipulation and uncontrolled by gambling operations. [Applause.] We intend in this bill to drive from the established agencies of distribution the market manipulator, the gambler, the man who buys as cheaply as he can and sells as dearly as he may, the Shylock of commerce who would rob the widow and the orphan or filch the pennies from the blind man upon the street corner with as much complacency and unconcern as he would evidence in ordering a meal at a down-town restaurant. [Applause.]

I shall not undertake to discuss the constitutionality of this bill. A very thorough and able brief has been filed with the committee, with full citations of the decisions of the Supreme Court, which, from a casual reading at the hands of a layman, seems to me to sustain the constitutionality of the bill. I am going to rely for the presentation of that phase of the subject upon my colleague upon the committee, the gentleman from Ohio [Mr. OVERMYER], and my other colleague on the committee, the very distinguished lawyer and able and growing young statesman, the gentleman from Minnesota [Mr. ANDERSON], whose services in the preparation of this bill have been absolutely invaluable. [Applause.]

The measure we proposed is a war measure pure and simple, and is predicated upon the idea of providing for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel, both for the uses of ourselves and our allies. These are the ends sought.

In attaining them, Mr. Chairman, the bill establishes a governmental control of necessaries, which shall be exercised and administered by the President through voluntary arrangement or agreement and in cooperation with any agency or person. This is the most far-reaching and important provision of the bill, and upon it we confidently rely for that sane and adequate control necessary to the stabilization of prices and for the satisfactory and orderly distribution of necessaries. The administrative directive authority is here conferred without which any real solution of the problem of food and fuel control is impossible, and without which control the same chaos and confusion and waste and lost motion and manipulation and sky-rocketing prices of the past few months will only be exaggerated and increased, both for ourselves and for those for whom we fight.

The power is conferred upon the President to require the fullest publicity of the methods and practices of persons engaged in the importation, exportation, manufacture, storage, or distribution of necessaries as defined in this bill, by requiring such persons to hold an unrevoked, unsuspended license from the President to do business, and such business must be done under such methods as will provide for the highest efficiency in manufacture and the most equitable methods of distribution. The authority is also conferred upon the President to fix in lieu of any rate, charge, or practice of any licensee that is unjust or unreasonable or discriminatory and unfair or wasteful a rate which is just, reasonable, nondiscriminatory, and fair or economical.

Under this power we propose that those who furnish the machinery which links up the producer and the consumer shall stand always during this war emergency in the full light of publicity, upon the theory that darkness is the haven of the criminal and light his death. I am happy to believe that the great overwhelming majority of the business men of this country engaged in distribution of necessaries are not unwilling to allow the light to be thrown upon their dealings, because I know that they are as patriotic as any class of citizens that we have. More than this, I am confident that the larger per cent of these men actually desire some such regulation as here proposed as a protection to themselves against the crooks found in every particular line of business—that small fraction to be found in every occupation.

Why, members of the committee, men have come to me from the four corners of this Nation, business men doing millions of dollars of business, and they have said, "We want some kind of regulation such as you are proposing so that we shall not be forced as a matter of self-protection to engage in some of the practices of the men in our own business." That statement can be verified a hundred times over by letters on file in my office.

It is not fair nor just to the patriotic business men of this country that any infinitesimal minority of them shall, under the cover of the patriotism and honesty of the majority, ply their tricks of crookedness and thievery which must cast suspicion upon the entire trade. No honest business man can be hurt under this power. Some small inconvenience may be occasioned him by these requirements. It is not intended that any honest business man shall be hurt. It is the crook that shall suffer in the sunlight, and it is the crook, unpatriotic, selfish, and greedy, that we are after.

Further to accomplish the purposes of this bill certain conduct is declared to be criminal, such as hoarding, the destruction of food or fuel to enhance prices, or to limit supply, and under certain described conditions speculation and the use of foods and food materials in the production of alcoholic and nonalcoholic beverages, and suitable penalties are provided for these offenses.

Such in general is the machinery set up to carry out the purposes described in the title of the bill. There are other important features which will be discussed in detail under the five-minute rule. I have hoped to give a succinct but sufficiently comprehensive outline of the bill to enable the members of the committee to understand what we seek to do.

Some small inconvenience may be occasioned by these requirements, but there is not a man, woman, or child in this great land of ours—110,000,000 of them—who is not going to suffer inconvenience by reason of the fact of our entrance into the war, and I believe the business men engaged in distributing the necessaries are quite as willing to do their bit as any other class of citizens in the United States.

Mr. Chairman, I desire to express the personal belief that in a sane and wise use of the machinery here created business can not and will not suffer undue disturbance, but, on the contrary, from a fuller understanding and appreciation of the national and international needs, and the coordination of effort to meet these needs, business in the end is going to profit largely.

One further suggestion in this connection, and it is that the mere conferring of many of the powers in this bill will make the exercise of them unnecessary.

I want now to discuss with you, if I may, certain conditions existing in this country which must challenge the thoughtful attention of every member of this committee, and which must make every wise man pause before he is willing to cast his vote against the measure, which, at least, holds out some measure of relief. What are the conditions?

This bill, Mr. Chairman, grants extraordinary and unprecedented powers to the Executive. It will be attacked as a remarkable proposal. I freely admit that it is unprecedented and remarkable. The burden of justifying the enactment of this bill into law is upon the committee which reports it favorably. Willingly I assume my share of that responsibility. Unreservedly I press upon your favor the general purposes of this legislation as being necessary in the emergency which confronts the people of the country. Unprecedented, yes; but we are engaged in an unprecedented war, which is shaking the foundations of the world to its very center. We are about to make sacrifices in treasure and blood which no one is wise enough to measure. We must either confer the so-called autocratic powers upon the constitutional head of our Government or be prepared to have them assumed by the German Kaiser. "No war was ever won by a debating society." The time is upon us for getting down to brass tacks. Every man, woman, and child must be prepared to make sacrifices—great sacrifices—and no man is going to be permitted to stand behind fine-spun theories and technicalities in his opposition to this measure. This is no pink-tea affair, nor is it a ladies' sewing-club matter. It is a war against the most powerful autocracy the world ever saw.

My friends, in my long service here with many of you, I think you will agree that I am not given to making alarming statements. I am, by training, thought, and breeding, a conservative, but I have looked into this question closely, thoughtfully, and the statement just made, I say to you, is supported by every fact that comes to my attention from every source. What are the facts? I want to read to you a statement showing how wages have increased since 1907 up to 1916, and then I shall give you the comparative increase in prices of things that wages must buy in order that people may live. I take my figures from a table prepared by the Bureau of Labor Statistics. This table shows that while union wages increased throughout the United States 19 per cent between 1907 and 1916, retail prices increased 39 per cent during the same time, and if February 17 is taken as a base, then the retail prices of food increased 62 per cent.

These facts in themselves are startling, but they are not nearly so startling as some others that I shall later present for your consideration. Nineteen per cent increase in wages and 62 per cent increase in the price of retail foodstuffs since 1907!

Mr. Chairman, I ask unanimous consent now that I may have leave to print in the RECORD these various tables to which I am referring.

The CHAIRMAN. Is there objection?

There was no objection.

Index numbers of union-wage rates and hours of labor 1907 to 1916, and of retail prices of food, 1907 to February, 1917.

Year.	Rates of wages per hour.	Full-time hours per week.	Rates of wages per week full time.	Retail prices of food.
1907	100	100	100	100
1908	101	100	101	103
1909	102	99	102	108
1910	105	99	104	113
1911	107	98	105	112
1912	109	98	107	119

1914	114	97	111	125
1915	115	97	112	123
1916	119	96	116	139
January, 1917				156
February, 1917				162

Mr. LEVER. Now, Mr. Chairman, I desire to call attention to a statement appearing in a series of articles written for the New York Evening Post by Miss E. Miller King, a very remarkable young student of political economy. She has made a first-hand study of prices in the great city of New York, and this is one excerpt bearing directly upon this proposition that I think is worth while. It is headlined, "The Wife's Account Book."

I do not suppose you would print some of the totals from Jane's account book. They talk. Here they are—

This is first-hand information—

Living expenses (food) for the month of April, 1910, $40.43; 1911, $52.63; 1912, $80.13; 1917, $170.90.

That is for one month. She summarizes it by years. Let me give you those:

Totals for food expenses for the years from 1910 to 1916 tell the whole story: Nineteen hundred and ten, $567.36; 1911, $608.90; 1912, $785.82; 1913, $851.51; 1914, $950.29; 1915, $1,005.94; 1916, $1,051.17.

Mr. SIMS. The same size family?

Mr. LEVER. Of course, the same size family; a family of five.

Mr. SIMS. The family might have increased in that time, I did not know.

Mr. LEVER. Mr. Chairman and members of the committee, when you think that the wages of the average man of America to-day is less than $1,000 a year you get some little comprehension of the problem that is before this country with prices rising every day. I am standing here to-day in no spirit of demagogy at all, but with all the earnestness of my soul, because I come from a line of people pleading for this Congress to give the machinery and intrust to the President of the United States the machinery by which the mothers, the wives, the widows, and the babies of this country may at least be fed during the coming war. [Applause.] But that is not all, members of the committee. What I have read you just now was written by a young lady. You may attack her facts, because she may not be an accredited authority on political economy. I propose to submit to you now a statement from a man who is known the world over as one of the great economists of America, Prof. Irving Fisher, of Yale University. Nobody will dispute that he is capable of stating the facts and drawing conclusions therefrom. Prof. Fisher says that by April last prices had risen in Russia since the war began by 165 per cent; in Germany, 111 per cent; in France, 87 per cent; in England, 66 per cent; and even in neutral Sweden, 46 per cent.

The price level in the United States had at that time risen only 19 per cent, but it is now 40 per cent higher than before the war. That is a statement by a well-recognized political economist. My friends, I have great difficulty in giving proper weight to figures. It took me 10 long years to learn how to work long division, but when you talk in terms of dollars and cents and bushels and things of that sort, while I have had some bushels but not many dollars, I can understand. I want to give you some figures now of what took place in the interior of the United States. I want to bring to your attention conditions that are prevailing in the city of Washington, not last year, not last December, but now, in the way of prices for things that men and women must eat. You have heard of the Old Dutch Market, which runs a chain of stores all over this country, I understand, and is a reliable concern. This is a statement which shows the comparison of retail prices of food during April, 1914, before the war, and April, 1917, which comparison will show the prices and a comparison of figures. I am going to read you a few and then print the others. Sugar is one of the necessaries of life, and I may pause to say that the best authority in this country tells me that unless there is some adequate control of the sugar situation this country in six months will be facing a sugar famine. The price of sugar in 1914 in the city of Washington was 4 cents per pound. April, 1917, it was 9 cents per pound, or an increase of 125 per cent. Flour is undoubtedly a necessity. Bread is the staff of life, and in 1914 flour sold in the city of Washington at $7.25 per barrel, and in April, 1917, that same barrel of flour sold at $14 per barrel, or an increase of 93 per cent.

Mr. MEEKER. Will the gentleman yield for a question?

Mr. LEVER. I am sorry I can not yield. I will after I finish my general statement. If I yield to you, I would have to yield to others.

Milk, the food of the babies of America, in April, 1914, sold at 9 cents per can. In April, 1917, it sold at 15 cents per can, or a 67 per cent increase. Members of the committee, that is in the city of Washington. Corn, a staple article of food, in April, 1914, sold at 7 cents a pound. In 1917 it sold for 13 cents per pound, or an increase of 85 per cent in those few years. Baked beans sold at 8 cents per pound in 1914, as against 13 cents per pound in 1917, or a 65 per cent increase. Rice—now listen, members of the committee, because there is no reason on earth, except that manipulators are controlling it, why the price of rice should increase, because the crop is good and the supply is plentiful—rice in 1914 sold in the city of Washington at 8 cents

a pound, and is now selling at 9 cents a pound, or an increase of 12 per cent—not so awfully much. And even prunes increased in price during that time 60 per cent. Listen! Navy beans show an increase in price of 140 per cent since 1914, lima beans an increase of 185 per cent since 1914, canned sirup an increase of 41 per cent since 1914, black-eyed peas an increase of 100 per cent since 1914.

Now we come down to meat—roast beef, chuck roast, beef per pound, sirloin, hamburg—and there is an increase of 25, 30, 23, 42, 60, 38, 33 per cent since 1914. Coming to ham, shoulders, pork, corned shoulders, smoked ham, sausage, the range of increase runs 50, 80, 75, 50, 65, 47, 50, and 42 per cent. Lard, an absolute necessity, pure lard and compound lard, an increase of 100 per cent since 1914. Butter, first grade, an increase of 83 per cent. Eggs, an increase of 80 per cent. Potatoes, per peck, 23 cents in 1914 and 90 cents in 1917, or an increase of 291 per cent. Even spaghetti and macaroni increased from 65 to 75 per cent in the city of Washington.

But that is not all, members of the committee. I am not going to weary you with this, but I want you to get the picture. I want this House to know the facts. I want you Members to realize what you are up against and then put your conscience up against the price and the facts against the finespun theory of governmental power. It is a serious proposition with me.

I was not satisfied with that. I wanted to see if the prices were continuing to increase, and so I wrote my friends, the Old Dutch Market, and asked them to give me the prices from January, 1917, up to May, 1917. I would have had them for June, but I had hoped to have this bill through before now. Now, listen. Let us see what happens to sugar. Sugar in January, 1917, sold at 7 cents a pound in Washington. In May it sold for 10 cents per pound, or 43 per cent increase in three months. Flour sold at $9.60 in January this year, and in May it sold at $15.20, or a 58 per cent increase. Baked beans were 10 cents in Jannary and 15 cents in May, or an increase of 50 per cent. Macaroni and spaghetti show an increase of 62 per cent since January, 1917.

I could go down the line here and show you that in a total of 79 items on this list the average increase in price from January, 1917, to May, 1917, was 51 per cent. And yet the orator, who loves to hear his own voice, and who has convinced himself long since that in him is centered all there is of constitutional knowledge and patriotism, loves to stand up and squawk and scream about the conferring of autocratic power on somebody somewhere. Whom do you think the people of this country prefer to have this thing go to for the purpose of regulating it—the food gambler, the manipulator, the cormorant, the man of greed, or the chosen head of 100,000,000 people? [Applause.] That is the question, members of the committee. So much for that.

Comparison of retail prices of foods during April, 1914, before the war, and April, 1917.

My friends, I want to read you a brief letter here from one who is evidently a very bright woman, writing from Philadelphia: "There are no cheap cuts of meat in Philadelphia to-day. The shin of beef is 22 cents per pound." That is all I want to read you. Do you know what the shin of beef is? It is a bone, which has not enough of meat on it to satisfy the hunger of an ordinary kitten, and out of which the poor people of this country make their soups. It used to sell at 1½ to 2 cents per pound in every market. It is 22 cents a pound in Philadelphia.

I bring these facts to your attention. Are you going to call me an alarmist when I say that good citizens, good men and women, sometimes are forced to desperation? My friends, these facts convince me that this is no time for the tom-tit politician nor the leather-lunged orator. I read that deliberately, because I wanted the country to have it.

Mr. DYER. To whom is the gentleman referring?

Mr. LEVER. Those whom the shoe fits.

If the people have not demanded relief, it is because they are long-suffering and patient, but even patience in the face of actual and acute necessity may cease to be a virtue. To delay in this matter, to dillydally, to hesitate, to waver, is but to stay temporarily, very temporarily, the day of wrath. The people are not going to be satisfied with the silly excuses the delegation of legislative power to the Executive. They trust the great man in the White House, they believe in his sense of justice, and in his love for those who earn their living from the sweat of their brows. The wrath of the people is not going to be appeased by the screams and squalls about conferring autocratic powers upon the President. They know that the fathers of the Republic gave him the control of our Army and Navy, they know that we ourselves in this very Congress have given him the power, the absolute, unrestrained power, to select from the 10,000,000 registered manhood the 600,000 of them who must first bare their breasts to the fire of the enemy. They know that if we can trust him with the lives of our boys, we can not find excuse in refusing to trust him with a restrictive and definitely formulated plan for the control and regulation of the vital necessities of life. Be not deceived; the American people are not asleep. Their eyes are upon this Congress. Twenty-two cents per pound for a soup bone with not enough meat on it to satisfy the hunger of an ordinary tom cat may make dangerous men and women out of ordinarily peaceful and good citizens. I am no alarmist, and by nature I am conservative, and I have no fear as to the outcome in this matter, because I have an abiding faith in the wisdom of the American Congress. [Applause.]

Now, my friends, I hope I am not wearying you. I shall conclude soon. Now, what are the causes, members of the committee? What are the reasons for these extraordinarily high prices? We must find the reasons before we can apply the remedy. I want to discuss my view of the causes underlying this situation.

First, there is a world shortage in foodstuffs, due in part to a universal failure of crops for the season of 1916. I am giving you now what I concede to be the natural causes that enter into this elevation of prices.

Second, the withdrawal from the arts of production into the arts of destruction of 30,000,000 or more men, with an increase of 33 per cent in their consumptive necessities, due to the hardships of the trenches. Is that plain?

Third, the complete disruption of commercial relations between our allies and the central powers of Europe, and the termination or the cessation of the trade with Russia, with the result that our allies have had to draw on new sources of supply for many products, either from America or from countries from which America obtained some of her supplies.

Fourth, the world-wide inflation of currency, reducing the purchasing power of money, thereby enhancing prices. Even before the war there was a very considerable increase of the money supply of the world, and this fact found expression in gradually rising prices.

These statements I can verify with the facts, but I will not weary you with them. To illustrate, $1 during the nineties had a purchasing power equivalent to about $1.37 in 1912, 1913, and 1914 in the case of all commodities. In the case of farm products $1 during the nineties had a purchasing power equivalent to $1.60 in 1913, and $1.65 during 1914. This rise in price was a world-wide phenomenon. The salary of a Member of Congress to-day, based upon the purchasing power of money now as compared with that of the early nineties is about $3,500. Is not that about right? Why, after all, members of the committee, do not deceive yourselves that you are getting a very large salary.

Now, since the war began the increase in the volume of money in this country has been enormous. The paper circulation of Great Britain has increased 534 per cent; of France, 175 per cent; of Russia, 426 per cent; of Italy, 144 per cent. True, the gold holdings of these countries have decreased from the normal level, but the decrease is many times offset by the increase in the volume of paper currency. The gold holdings of the United States, as we all know, have increased tremendously since the war began. The net importation from August 1, 1914, to May 18, 1917, according to the Federal Reserve Bulletin of June 1, 1917, amounted to $1,146,839,000, or about 49 per cent.

Now, we can account for some of the rise in prices upon the theory of the reduced purchasing power of money, owing to a world-wide inflation of currency. But, my friends, I shall undertake to prove that while these causes which I have mentioned and described as normal causes are important, they are not the only factors entering into this equation of prices. Some curious things that I want to call to your attention have come to my attention in the study of this problem.

For example, while the paper currency of England has increased 534 per cent since the war began, and while England is many thousands of miles from her bases of food supplies, with the dread submarine lurking around her borders, sending food ship after food ship to the bottom of the sea; and while the increase of gold supply of the United States in the same time has increased only 49 per cent, yet we find old potatoes, Irish potatoes, white potatoes, selling in New York of date May 12, 1917, for $3 to $3.30 per bushel, while the same character of potatoes exactly were selling on the same date at Liverpool, England, for $1.54 per bushel.

You can not account for that difference on the theory of an inflated currency, because the currency of Great Britain is many times more largely inflated than is the currency of the United States; and yet potatoes are selling in England almost at one-half the price that they are selling for in the city of New York on the same day, and that day May 12, 1917.

That is not all. We find that bread on April 16 sold in Washington at 7 cents per pound, while in London and Liverpool it sold at 6 cents per pound—bread, as suggested by my distinguished friend from Wisconsin, made out of wheat grown in this country, paying the cost of transportation, insurance, and the dread of the submarine. These are curious facts, are they not?

But that is not all. We find that bacon sold in New York at 31 cents per pound on May 12, and in Liverpool at 28 and 29 cents per pound, practically the same price—bacon that they bought from the farmers in the district of my friend from Kansas, my colleague on the committee [Mr. DOOLITTLE], paying the charge of transportation half across the continent and 3,000 miles across the Atlantic Ocean, and then selling at a price equivalent practically to our own. It is curious, is it not?

That is not all. We find that wheat, No. 2 hard winter, sold at New York at $3.25 per bushel on May 9, in Liverpool at $2.40 to $2.45, and in Paris at $2.45 to $2.55 per bushel—our own wheat, in all probability, wheat that the farmers of the great Northwest produced by their toil. We also find that butter sold in New York and Liverpool at practically the same prices, while sugar sold at a somewhat lower price in New York than in Liverpool.

Listen! Even in Germany the price of bread has been held to a figure that amounts to a little less than 5 cents per loaf as against our 8 cents per loaf on May 3. Think of that. Germany, surrounded with a ring of steel, cut off from the supply of the world, dependent absolutely upon her own resources, seeing to it that her consuming population is getting bread

at 5 cents a loaf, while we, the richest and freest and greatest Nation on the earth, with nothing to interrupt transportation facilities, with nothing to interfere with our getting to our bases of supplies, wherever they have been, are permitting our consuming population to pay 3 cents more per loaf than they are paying in Germany. Those are curious facts; very curious.

That is not all. Sugar in Germany has fluctuated between 7 and 8 cents per pound, while sugar in Washington in the same time has fluctuated from 4 cents in April, 1914, to 10 cents per pound in 1917. Potatoes are being sold at $1.75 per hundredweight, or about $1 per bushel in Germany, although it is stated that during the past year in Germany potatoes were exceedingly scarce. We are paying $3 and $4 and $5 per bushel for such potatoes. Curious, I say. These are strange facts.

And in that connection, members of the committee, for fear you may undertake to explain it on the theory that Germany has a contracted currency, I desire to call your attention to the fact that the inflation of currency in Germany since the war began amounts to 359 per cent. You can not explain it on that theory. I have made some little study of the German prices, and I have come to this conclusion, which I think is absolutely inevitable from the presentation of the facts, that wherever there is food control the prices of the articles so controlled are within reach of the wage earner, and where there is no control prices are within the reach of the wealthy only. Is there any proof of that? Let me give you the proof. There is no control over the price of poultry in Germany, and poultry is sold there at $1.50 to $2 per pound live weight. Only the wealthy can buy poultry at $1.50 per pound. I repeat that my study of German prices leads me, inevitably forces me, to the only conclusion which can be reached, which is that where there is price control the articles of human necessity are within the reach of the average man, and where there is no control the prices are absolutely beyond the reach of all save the rich. I shall extend my remarks along this line with further facts.

WHOLESALE PRICES OF POTATOES ON OR ABOUT MAY 12, 1917.

New York, old potatoes, $3 to $3.30 per bushel. ($9 to $10 per 180 pounds.)

Liverpool, England, $1.54 per bushel. (12 shillings per 112 pounds.)

Paris, France, new, southern, $6.30 to $9.98 per bushel. (120 to 190 francs per 100 kilograms.)

WHOLESALE PRICES OF VARIOUS FOODSTUFFS ON OR ABOUT MAY 12, 1917.

NOTE.—Owing to disturbed markets and local variations in grades and conditions of sale some of the quotations below may not be comparable even approximately.

Article (representative or medium grades).	New York, United States.	Liverpool, England.	Paris, France.
Wheat, No. 2 hard winter, per bush.	[1] $3.25	$2.40 -$2.45	[3] $2.45-$2.55
Wheat flour, per barrel	[2] $15.40 -16.15	[4] 24.00 -29.83	
Bacon, American, per pound	.31	.281- .295	
Sugar, granulated, do	.0750- .0755	.09	.125
Butter, do	.37 - .38	.399- .424	.578
Eggs, per dozen	.34 - .35	.50 - .60	.42- .45

[1] May 9.
[2] In various provincial markets. No grade specified.
[3] Spring patents.
[4] Imported flour.

London quotations reduced to United States money on the basis of 1 shilling = 24 cents.

Paris quotations reduced to United States money on the basis of 1 franc = 19.3 cents.

RETAIL PRICES OF BREAD.

[Monthly Review of the United States Bureau of Labor Statistics, June, 1917.]

Washington, D. C.:		
Apr. 16, 1917	per pound	$0.071
May 3, 1917	do	.083
Denmark (Copenhagen), February, 1917	do	.081
Sweden (Stockholm), February, 1917	do	.122
United Kingdom: London and Liverpool (official price) Apr. 23, 1917 (1 shilling per 4 pounds)	per pound	.06

Let me call your attention to another fact, my friends, which is that every nation engaged in this war has been forced—some of them reluctantly—to some kind of food directorship. Even Australia, New Zealand, and Canada have adopted rigorous food-control measures. Much of the theory and even the language of this bill follows the Canadian law, which I am told has worked without a jar or a hitch, and to the satisfaction of all concerned. Are we to profit by the inevitable logic of the facts? Are we to profit by the experience of others, or shall we shut our eyes to the situation which confronts the people of this country? The utter chaos which characterized the marketing and distribution of necessaries of life during the past few months, the very hysteria which is driving men to hoard and secrete necessaries, the wild speculation that has thrown wheat up or down 50 cents in the course of one day, can be attributed to a lack of control at the hands of some one with the power to do it and with a complete view of the entire situation.

Another thing, my friends. Most of you remember the description of the wild scenes on the Chicago Board of Trade during the month of May, and on all other grain exchanges, when prices were rising and falling with lightninglike rapidity and men were becoming millionaires and paupers in the twinkling of an eye. Why? I will tell you why. In my judgment it was due to the unrestrained, uncontrolled, foolish, competitive bidding of the agents of the allied Governments for wheat, which of course set in motion the speculative instinct of the American people, which added somewhat to it. So wild, so horrible were the conditions that the board of managers of that exchange, on their own initiative, closed the exchange temporarily, and finally fixed a maximum beyond which prices should not be allowed to go.

Mr. SIMS. Beyond which settlements could not be made.

Mr. LEVER. Now, my friends, I want to ask you if I am not correct in this conclusion: The allied Governments now have concentrated or pooled their buying power. One man in New York will buy all the wheat that goes from this country to the allied nations. The man who has the power to fix the price upon the export wheat of this Nation largely fixes the price of wheat in the hands of the producer.

If there were no other reason for setting up some kind of an agency for food control in this country than this it would be that we can not permit the power of fixing practically the value of the wheat crop of this country to be held by some foreign agent who has no concern with the price of wheat in the hands of the farmer. It is absolutely necessary that we ourselves shall put into operation our own machinery in order to protect our own producers against what might be a selfish, radical, and revolutionary reduction in the price of wheat next fall. I bring that out incidentally, and I shall hurry through because I am physically exhausted.

I have been discussing the necessity for food control largely from the domestic viewpoint. The international aspect of the question is of equal importance. We not only have a duty with respect to helping to feed our allies and their armies, but as a matter of national security for ourselves it becomes an absolute necessity that we should do it. Every bushel of wheat, every pound of meat, every loaf of bread, every bushel of potatoes that we may save under proper control, means just so much more for export, for the feeding of our allies, who are now almost totally dependent upon us. America has an excess of food supplies. Everybody knows that. We have got more food in this country to-day than we know what to do with, is the judgment of men who ought to know. It is only a question of conserving it and making it go the farthest.

The wastage in this country is tremendous. The saving of 1 pound of bread per week for each person, so Mr. Hoover tells us this morning, will increase the export supply of wheat 100,000,000 bushels per year, and that 100,000,000 bushels of wheat may win this war. That 100,000,000 bushels of wheat may mean victory or disaster for the allies in this contest before the full strength and weight of the great American people can be thrown into the scale in man power and other resources. The problem of properly feeding our allies in order to keep their armies going and to assure tranquillity back of the lines is stupendous. Listen! The population of England is 45,000,000; of France, 40,000,000; of Italy, 35,000,000; of Belgium, 10,000,000; a total of 130,000,000 men, women, and children who are practically dependent upon us and on what little they can produce themselves for meeting the necessities of life. That is the problem. The bulk of the foodstuffs for this tremendous population in the past, aside from local production, came from Argentina, Australia, India, Russia, Roumania, and Bulgaria. To-day these sources of supply for practical purposes are cut off. Argentina has a crop failure and an embargo.

Australia has a good crop and a large accumulation of foodstuffs, but she is three times farther from the point of demand than we are, and requires three times the tonnage, and is much more liable to submarine attack.

In addition to these difficulties, my friends, the crop yields of England and France have been materially reduced by heavy frosts in early April. The conclusion from this statement is that the bulk of food for the allies must come from us. The conclusion from this is that if we are to supply it we must set up such an agency of control as will both stimulate production, eliminate waste, and conserve the supply. [Applause.]

Unless we can find some way of relieving the shipping situation with respect to Australia and India, we are going to be forced to supply our allies with 1,000,000,000 bushels of grain, of which at least 500,000,000 bushels must be wheat. Our natural export of wheat is from 100,000,000 to 150,000,000

bushels a year. The largest export we have had since the war began was in 1915—the bumper-crop year—when we sent abroad 332,000,000 bushels. With somewhat better prospects for a grain crop this past season, we may be able, under present conditions, to export as much as 45,000,000 bushels. Canada would supplement this with 200,000,000 bushels. But even this does not meet the situation fully, and unless we can greatly reduce our own consumption by sane methods of conservation, and unless we can relieve the shipping situation in respect to Australia and India, the problem of feeding our allies and keeping the Army going stands out as the all-important critical problem ahead of us for solution. Can we do this? If so, we win this war certainly and in a comparatively quick time; if we can not, it means of a long-drawn-out struggle, with the burden of men, money, and other sacrifices falling most largely upon us.

We can control the situation if we will control it—if we will have the courage to forget our own little theories of government for the time being and if we will have the wisdom to awake to the awful truths. Which shall we do? Shall we send biscuits to our allies, and in proportion as we do that keep our boys among us, or shall we debate and split hairs over technicalities and complain about autocratic power and all that kind of thing while our allies collapse for want of food?

Ah, Mr. Chairman, you give Germany the control of the seas, with the English, French, and Italian Fleets combined with her own, and I should have doubt for the safety of New York City or Charleston for 30 days. Shall we mobilize to the last ounce of efficiency now at this hour every resource of the Nation, or shall we debate until the fatal words "too late" have been written upon the scroll? Mr. Hoover says:

> But what I wish chiefly to convey to you is the gravity of the situation and the problem, from the military and naval point of view, that it is up to us to secure for them—the allies—during the next year as large a surplus as we can produce from our own people.

Mr. Chairman, imperfectly stated, this is the case of the majority of the Committee on Agriculture. To summarize: The problem for our solution is to find ways and means of securing for our own domestic population foods and fuel at prices within the reach of the wage earner, to provide necessities for our own Army and Navy, and to largely increase our contribution in foodstuffs to the support of our allied army and civilian population. The central thought in the mind of the committee in the framing of this bill is that in modern warfare food is as important to successful military operations as is ammunition. To accomplish these purposes we have authorized the President to set up an agency with broad powers over the food and fuel of the country in the confident belief that through the wise exercise of these powers we shall bring about a system of better and more economical national and international distribution, the elimination of injurious speculation, hoarding, manipulation, and combinations for injurious restraint in manufacture or distribution, and the stabilizing and steadying of the whole fabric of commerce in foodstuffs. That is our case. [Applause.]

Mr. LENROOT. Mr. Chairman, I would like to ask the gentleman a few questions.

Mr. LEVER. I shall be glad to yield to the gentleman.

Mr. LENROOT. First, with reference to section 3, which establishes governmental control, whether it is the gentleman's theory that section 3 creates any greater control over necessaries or confers greater powers upon the President than those specifically enumerated in the bill?

Mr. LEVER. It is.

Mr. LENROOT. It is the gentleman's theory that under section 3 the bill would be complete in itself and all of the remaining sections of the bill are simply by way of adding penalties and making suggestions to the President and making the appropriations?

Mr. LEVER. Very largely that is true. If the gentleman will permit, I will say in my own mind section 3 is the hub around which this whole business revolves.

Mr. LENROOT. The gentleman's construction of section 3 is that the President is given unlimited power, with no limitation whatever over the control of necessaries?

Mr. LEVER. That is essentially true, except as to the limitations there may be in the bill.

Mr. LENROOT. But there are none, are there?

Mr. LEVER. Practically none.

Mr. LENROOT. Then with reference to the sale of necessaries to our allies. In section 12, the one providing for the guaranty of minimum prices——

Mr. TOWNER. Mr. Chairman, if the gentleman from Wisconsin will permit, before he leaves that other section, I would like to have the opinion of the gentleman from South Carolina in regard to the language used in this respect:

> There is hereby established a governmental control of necessaries * * * which shall be exercised and administered by the President for the purposes of this act.

I would like to have the gentleman's idea as to whether that is a limitation on the control?

Mr. LEVER. I probably made my statement in answer to the gentleman from Wisconsin [Mr. LENROOT] too broad. I think the President, under section 3, can not go beyond the purposes of this act.

Mr. LENROOT. Mr. Chairman, will the gentleman yield there?

Mr. LEVER. But that is a matter for the discussion of lawyers rather than laymen.

Mr. LENROOT. The purpose of this act is to provide for the national security and defense?

Mr. LEVER. Yes.

Mr. LENROOT. So that anything that would come within that scope under the gentleman's construction would be within his power?

Mr. LEVER. Certainly. The powers conferred in section 3 are very broad, and are intended to be so.

Mr. TOWNER. Let me suggest to the gentleman that it does not say the purpose, and it certainly could not be held as an intendment of a general statement of the purpose of what was meant, but it says "for the purposes of this act," and certainly that would be enumerated, as I understand, as to the various provisions made in the bill with regard to it. As I would construe that language, it would only mean that the President was given this control within the purposes as expressed in the act, just as if the language was expressly stated "that for the purposes expressed in this act" the President, and so forth.

Mr. LEVER. And if the gentleman will permit, for the purpose of encouraging the production and conserving the supply, and so forth.

Mr. LENROOT. The gentleman's theory is that if there is anything in connection with encouraging the production or conserving of the supply and controlling the distribution of necessaries that are not treated of in this act, section 3 confers the additional power on the President?

Mr. LEVER. I am not so sure about that.

Mr. LENROOT. That is very important. If that is not so, if it is limited to the things specifically enumerated in the act, what application could the proviso to section 3 have—

> Provided that none of the penalties of this act shall apply to this section.

Mr. ANDERSON. Mr. Chairman, if the gentleman from South Carolina will permit, I intend to develop that when I get into my argument. There are two theories of control involved in this bill, one of which is through voluntary arrangements and agreements with the trade itself, putting into operation through those agreements rules and regulations which the trade is willing to consent to. Section 3 deals solely with voluntary arrangements and agreements of that character. Section 3 is not regulatory in its terms, and for that reason the proviso to the effect that the penalties of the act should not apply to it was attached, so as to make it perfectly clear that this was not a regulatory or penal section. There is no substantial authority previously conferred in the bill.

Mr. LENROOT. I wanted the gentleman's construction of that.

Mr. ANDERSON. The authority in the bill for voluntary agreements is in section 3. The bill does not confer any such authority anywhere else.

Mr. LENROOT. So far as voluntary agreements are concerned?

Mr. ANDERSON. Yes.

Mr. LENROOT. But section 14 is in exactly the same class.

Mr. ANDERSON. I think not.

Mr. CAMPBELL of Kansas. Mr. Chairman, may I ask the gentleman a question?

Mr. LEVER. I yield to the gentleman from Kansas.

Mr. CAMPBELL of Kansas. Is it under the contemplated power under section 3 that the President is now directing a Mr. Hoover to proceed to organize the country with a view of carrying out some of the provisions of this act?

Mr. LEVER. Yes; surely.

Mr. ANDERSON. I think likely that is true.

Mr. CAMPBELL of Kansas. That is, then, the unpenalized portion of the proposed section?

Mr. LEVER. Yes.

Mr. CAMPBELL of Kansas. Is it proposed to clothe the President with any authority in addition to that which he expressed in his letter on yesterday?

Mr. ANDERSON. I have not seen the letter.

Mr. LEVER. I have not seen the letter.

Mr. CAMPBELL of Kansas. He gave very broad instructions, as though authorized by law, to Mr. Hoover.

Mr. LEVER. To proceed by voluntary arrangements?

Mr. CAMPBELL of Kansas. No; to proceed to carry out the authority that he was given.

Mr. DYER. That is to housewives.

Mr. LEVER. Purely a voluntary arrangement?

Mr. DYER. Yes.

Mr. CAMPBELL of Kansas. And he was authorizing this man to proceed to organize the country.

Mr. BORLAND. Mr. Chairman——

Mr. LEVER. Has the gentleman from Wisconsin finished? If the gentleman would permit, I will say that I am very tired, and the gentleman knows that I am not very strong.

Mr. BORLAND. I would like to ask the gentleman from Minnesota a question upon this section.

Mr. ANDERSON. I will ask the gentleman to wait until I get the floor.

Mr. LEVER. I would prefer to answer these questions in the five minute debate, because I am now very tired.

Mr. LENROOT. I would like to have the gentleman's construction at sometime.

Mr. LEVER. I should be very glad to give it. More than that, I would say that the gentleman from Minnesota [Mr. ANDERSON] is going to discuss the legal phases of this bill.

Mr. LENROOT. I was not going to ask any question of the gentleman concerning the legal theories.

Mr. LEVER. Go ahead.

Mr. LENROOT. I wanted to ask the gentleman with reference to retailers. The gentleman cited the very great increase in retail prices, and I want to ask the gentleman if there can not be as great an evil through a combination of retailers exacting extortionate prices as by wholesalers or by manufacturers?

Mr. LEVER. I would say to the gentleman that the committee considered that very carefully, and it was the thought of the committee that it would be almost impossible to keep in very close, definite, and efficient touch with some 200,000 retailers in the country.

Mr. LENROOT. I appreciate that. I was not coming to that point.

Mr. LEVER. In that connection I may say to the gentleman that I happened last night to be reading a statement from the Harvard School of Economy to the effect that the retailer as a general proposition is a pretty decent kind of a fellow; that he did not get very large profits, although I can very well see that there might be a combination; but it is hard to combine a large number of people.

Mr. LENROOT. Now, section 4—that is what I am coming to—makes unlawful certain practices, by whomsoever indulged in, and also makes unlawful conspiracies, by whomsoever indulged in, but there are no penalties anywhere in this act for the violation of that section.

Mr. LEVER. The theory of the committee on that was this: That, inasmuch as the penalties there were so broad and applied to so many people and so many different classes of people, and the terms themselves were in some particulars rather indefinite, we were afraid we would disturb business and keep people in a state of fear if we were to attach penalties, so we took certain of these propositions made unlawful here into other sections of the bill and attached penalties.

Mr. LENROOT. So far as the provisions of this section are concerned as to which there are no penalties attached, they are valueless in the bill. Is that the gentleman's idea?

Mr. LEVER. Except as a notice to people that they ought not to commit these things.

Mr. LENROOT. One other question. With reference to the sale of necessaries to our allies, I find in the bill that the only place that is authorized is in the section where our Government has previously guaranteed a minimum price. I want to ask the gentleman whether there should be any such limitation as that? Why ought not we be authorized to sell to our allies for the purpose of carrying on this war any necessaries purchased by this Government under any condition?

Mr. LEVER. Has the gentleman read section 9 carefully?

Mr. LENROOT. Yes, sir. That is the one I refer to. Does the gentleman think that does it?

Mr. LEVER. I do.

Mr. LENROOT. I want to ask the gentleman this question, although perhaps I ought to ask the gentleman from Minnesota [Mr. ANDERSON], because it is somewhat of a legal proposition: Does the gentleman think we can authorize as a war measure the President to purchase necessaries and sell them to neutral Governments or to anyone whom he saw fit?

Mr. LEVER. As a legal proposition I prefer not to answer. As a matter of necessity I think he should have the power to do it.

Mr. LENROOT. To neutral Governments?

Mr. LEVER. I thought the gentleman meant our allied Governments.

Mr. LENROOT. That was not the question——

Mr. LEVER. My own thought about that is that the President should be exceedingly careful to see that all our wants are supplied and the wants of our allies before neutrals are supplied.

Mr. LENROOT. Does not the gentleman think inasmuch as in the case of guaranteeing prices express authority is given to sell to our allies the same authority ought to be given in all cases where the Government purchases——

Mr. LEVER. That might be; I will be glad to discuss that later.

Mr. SMITH of Michigan. Will the gentleman yield?

Mr. LEVER. The gentleman from Illinois [Mr. SABATH] desired to ask me a question some time ago. I yield to him.

Mr. SABATH. The gentleman realizes my interest in this bill and in this legislation in view of the fact I have taken the matter up with him frequently as to the prevention of gambling in the necessaries of life and bring about a certain control. The gentleman from Wisconsin [Mr. LENROOT] has pointed out the provision which exempts the retailer from the operation of the act, but somehow he has omitted to note that the provision also excludes the farmer from the operations of this act.

Mr. LEVER. On the same theory exactly.

Mr. SABATH. Namely, section 5, as well as section 6, and under this act as it is drafted and the provisions of this bill it authorizes and legalizes the farmers' organizations all over the United States to withhold from the markets their products. Now, in view of the fact that it has been the practice to a great extent, due to a combination on the part of the farmers of various sections of the country, due to agreements through their organizations, being responsible for withholding the products from the markets, which to my mind is bad and has a bad effect upon the high cost of living, does not the gentleman believe that it is a mistake to have that provision or exemption in this bill?

Mr. LEVER. No; the gentleman does not; on the contrary this bill is built upon the theory not only of cleaning out the channels of trade so that the gentleman's constituents may get the farmers' products without the heavy charges of the intermediaries, some of whom are illegitimate intermediaries——

Mr. SABATH. Many of them.

Mr. LEVER. Many of them. But also it is built upon the theory of stimulating production. In other words, the committee acted on the thought that unless the farmer is encouraged to produce there would be no necessity for any legislation.

Mr. SABATH. A little while ago the gentleman stated that no one can tell what a large surplus of food we have in this country. Of course I agree with the gentleman, because for many months I have been endeavoring to secure the passage of a bill giving the Government and the Congress the right information.

Mr. LEVER. The gentleman has been exceedingly diligent in that respect.

Mr. SABATH. Then I am still of the opinion that the gentleman is correct that we have in this country tremendously large surpluses of wheat and other foodstuffs, but, due to manipulation and due to withholding on the part of certain farmers' organizations and the gamblers of the country, the people of this country are robbed and are obliged to pay twice as much for some of these articles, as the gentleman stated a few minutes ago, as they are paying in Great Britain, in France, and in Germany.

Mr. LEVER. If the gentleman will permit me just one minute, when I come to discuss this bill under the five-minute rule I will demonstrate to the entire satisfaction, I am sure, of the gentleman and of the committee that the price that the farmer gets in comparison with that which the consumer pays will make a satisfactory showing to relieve the farmer of any criticism in that respect.

Mr. SABATH. I believe the gentleman is right as to the average farmer, but there are certain combinations of farmers who are given to this practice.

Mr. SMITH of Michigan. As I listened to the gentleman's able argument I thought it was based largely upon the food control. Now, one of the purposes of the bill is to aid in the supply. In reading the bill rather cursorily I discovered that the President was authorized to fix the price of certain commodities, and now I hear the gentleman say in answer to the gentleman from Illinois [Mr. SABATH] that in allowing them to store their product that is done for the purpose of increasing the supply. Is there any other theory in the bill by which they are encouraged to increase their supply except the power given to the President to fix the minimum price and the right to the farmer to store his products?

Mr. LEVER. If the gentleman has read the bill with the understanding that there is any power in it anywhere to fix the maximum price, then he has not read the bill correctly.

Mr. SMITH of Michigan. I have not read it with that purpose.

Mr. LEVER. And if the gentleman has read this bill with the thought of fixing a minimum price in the general interpretation and meaning of that word, he is mistaken in that. What is undertaken to be done in section 12 is to write a guaranty of profit to the farmer in order to stimulate and encourage production.

Mr. SMITH of Michigan. The theory is to stimulate production simply by guaranteeing a minimum price?

Mr. LEVER. Yes; and also in providing for the farmer a free and uncontrolled market for his products.

Now, I yield to the gentleman from Iowa [Mr. TOWNER].

Mr. TOWNER. The only thing I wanted to call attention to was that the combinations that the gentleman from Illinois [Mr. SABATH] referred to are not exempted by the terms of this bill, because it provides to only limit it to those products of the farm, garden, or other land owned, leased, or cultivated by him. So it is an individual exemption, not to any combination or to any person who would accumulate or control in any form all farm products. They would still be subject to the penalties of the bill.

Mr. LEVER. The gentleman is entirely right.

Mr. EMERSON. Could this proposition be settled by regulating the profit from the farmer to the consumer?

Mr. LEVER. You mean the basic price?

Mr. EMERSON. A basic profit, by regulating the profit, not the price. I do not believe the farmer is to blame for the high price of living. It is in the passing from the producer to the housewife.

Mr. LEVER. The theory of the gentleman is, at least, that if you will open the channels of trade, if you will give the producer on the one hand and the consumer on the other hand a free and uncontrolled market, the prices are very likely to be regulated at both ends of the line. That is what we are proposing.

Mr. EMERSON. And Uncle Sam is to act as a sort of middleman in this crisis?

Mr. LEVER. Yes.

Mr. DYER rose.

Mr. LEVER. I will yield to the gentleman.

Mr. DYER. I was going to say that I know the gentleman is fatigued, and I was going to make the point of no quorum unless he is relieved.

Mr. LEVER. I will first yield to the gentleman from Oklahoma [Mr. MORGAN] and then to the gentleman from Tennessee [Mr. AUSTIN].

Mr. MORGAN. In reply to the suggestion made by the gentleman from Michigan, as I have read the bill, section 12 is the only provision that is intended to stimulate production?

Mr. LEVER. Yes.

Mr. MORGAN. The other provisions are largely for the control of distribution. Those other provisions naturally tend to depress the prices to the farmer.

Mr. LEVER. Not at all. The gentleman understands that for time without memory they have been begging for legislation that would prohibit their products being made the football of gambling and speculation, and we are trying to bring that about in this bill.

Mr. MORGAN. Now, just this question: Then the increase of production, it seems to me, is a very large part of the proposition, and yet you have but one provision in here tending to increase the production, and that is the so-called guaranteed price?

Mr. LEVER. On the contrary, the gentleman is entirely mistaken. We have in this bill that which I think will do more to encourage production than even the so-called minimum guaranty, and that is guaranteeing to the farmers that if they will produce we will see that their products shall not be made the football of manipulation. That is the very thing the farmers have been contending for for years.

Mr. DYER. Mr. Chairman——

The CHAIRMAN. Does the gentleman make the point of no quorum?

Mr. DYER. I will do so unless the gentleman is relieved from further questioning. I think he is fatigued.

Mr. AUSTIN. Will the gentleman yield?

Mr. LEVER. I will do so, and then I will stop.

Mr. AUSTIN. I was called out of the Chamber and did not hear all of the very excellent speech delivered by the chairman of this committee. I would like to know his opinion of Mr. Hoover, inasmuch as he is acquainted with him, who will practically have the administration of this legislation.

Mr. LEVER. That will be a personal opinion, but I can say this——

Mr. AUSTIN. I would like your judgment on that.

Mr. LEVER. I have been in rather close contact with Mr. Hoover several times, and he strikes me as being a man of very broad vision, of very great patriotism, and with a mind trained to grasp thoroughly big propositions. I have been very favorably impressed with him.

I will yield to the gentleman from Ohio, and then decline to yield further.

Mr. FESS. I wanted to ask two questions. One question was referred to a while ago, when the gentleman was speaking about the bidding against each other in American markets by the allies, which naturally ran up prices. That will be cared for? That will be regulated, will it?

Mr. LEVER. Yes. My judgment is that that entire matter will be brought under very strict regulation and control.

Mr. FESS. The other question my friend is just as much interested in as I am. In our State there is a good deal of trouble to secure labor on the part of the producer just now. For example, the farmers say they can not get labor for their clover crop and for their corn crop, and they say labor is being taken almost entirely from their immediate vicinity, which I know to be true, much of it going to Akron, where it receives $6 or $8 a day, where expenses are very high, but not so high but that that is a high price, because that is the rubber section and the automobile section. A good deal of it is also going over to Osborne, at the aviation field, where the Government is now putting 18 acres under roof and making great bids for labor. One correspondent says he is absolutely embarrassed about the lack of labor, and it has caused him to entertain fears as to production; and, secondly, he says the price is going to be prohibitive. While this bill does not touch it, are we in a position to say to them that we will care for them ultimately?

Mr. LEVER. I will say to the gentleman from Ohio that I am frank to say that I believe we are not just yet in a position to relieve that situation. I understand that the Department of Labor and the Department of Agriculture have some kind of a joint arrangement by which they are undertaking to work the problem out. I do not know just what kind of a solution it will be. I have been busy with other matters.

Mr. FESS. It is not possible to use the conscription method to secure labor for the farm?

Mr. LEVER. I do not think we have come to that yet. We may come to it later.

Mr. FESS. It is a very serious problem.

Mr. LEVER. Yes; I agree with the gentleman that it is a very serious problem.

Gentlemen of the committee, I thank you very much for your kindness. [Applause.]

MESSAGE FROM THE SENATE.

The committee informally rose; and the Speaker, having resumed the chair, a message from the Senate by Mr. Waldorf, its enrolling clerk, announced that the Senate had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H. R. 3673) to amend the act approved December 23, 1913, known as the Federal reserve act as amended by the acts of August 4, 1914, August 15, 1914, March 3, 1915, and September 7, 1916.

CONSERVATION OF FOOD AND FUEL.

The committee resumed its session.

The CHAIRMAN. The gentleman from Iowa [Mr. HAUGEN] is recognized.

Mr. LEVER. Mr. Chairman, I understand that the gentleman from Texas [Mr. YOUNG] desires to follow my opening. If the gentleman from Iowa will let him, I will yield to him.

Mr. HAUGEN. I have promised to yield to the gentleman from Minnesota [Mr. ANDERSON].

Mr. YOUNG of Texas. I think the opposition should be heard.

Mr. HAUGEN. It seems fair that this side of the House ought to be heard.

The CHAIRMAN. The gentleman from Iowa is entitled to recognition.

Mr. LEVER. If the gentleman from Iowa will agree, I yield to the gentleman from Texas [Mr. YOUNG] one hour.

The CHAIRMAN. The gentleman from Texas is recognized for one hour.

Mr. YOUNG of Texas. Mr. Chairman and gentlemen, it is not usual, when the Committee on Agriculture brings a bill on

the floor of the House, to have opposition views expressed, and there is some good reason for that in the ordinary legislative affairs that come before that committee. But the present bill is without a parallel in the history of this country. It has no parallel in the history of any other country in the world. And then it would be remarkable indeed on that committee of 21 men if somebody did not have an opposition view.

Ah, you call it a "food-control" bill. I do not care what name you give to it. But when you read the language of this bill you read in it that we have forgotten that there is a Magna Charta of our liberties that our fathers gave to us, and you have got to forget that you have a Constitution if you vote for everything that there is in this bill.

The idea of making a dictator's office located here in our Capital, that will go to the remotest precincts in the State of Texas or the State of Washington and take charge of the little, humble farmer who is seeking to eke out an existence for himself and his hungry children! That is what this bill does.

They try to change the word "dictator" now, do they not? They call it an "administrator." That may be a very apt name to give the gentleman who is going to occupy that position, because I believe that administrators usually have the charge and care of dead men's estates. We may have a whole lot of people whose estates are going to be administered on.

Now, what is the purpose of this bill? They say that one of the purposes is to encourage production. Well now, if there is not anything in this bill that will do that, what is the reason for enacting such a bill? The farmer is an intelligent man. He has got the same kind of brain power that you have got and that I have got. Do you know what is the greatest thing on earth to make a man expend every ounce of energy that he has got in any line of business? It is that he is going to be richly rewarded for spending that energy.

Oh, we have heard these high prices discussed. Yes; we have got those high prices. I am not going to controvert that. But when you come in with a power vested in one man, and they say we have all got confidence in the President, I answer, "So have I." No man disputes that he is a great man. But God knows that man has more on his shoulders with a foreign war to fight than he ought to be called upon to bear, and when you write these extraordinary powers in any bill and say you are giving the powers to the President it is a fiction of the law, because those powers are going to be exercised by some agent just an ordinary human being. So that leaves the President out of it.

The power is put into the hands of this dictator or administrator, as you may care to term him, for what? How is he going to exercise it? To encourage production, that not only our own people may be fed, but that our allies and the neutral nations of the earth may be fed. We all want to feed them, and we are going to do it. Yes; we are going to do it. Are you going to encourage the farmers by this kind of legislation? We *are talking* as sensible men here, one to the other, in trying to reach conclusions that ought to be just and proper, and if we make a mistake in the language that we insert in this bill, that mistake will not only be felt by us as a nation but it will be felt also by our allies and the neutral nations of the earth.

Let us get back to the proposition. I want you to see what it is. I want you who represent the agricultural districts to listen to this suggestion: Is there a man from an agricultural district who hears me speak who has the slightest doubt that every farmer in his district knows that the world at this moment is short of food supplies, and does not every farmer in your district and in mine know that he has a crackajack opportunity of getting a magnificent price for everything he grows this year? Does he need encouragement along that line? Is he not doing everything that it is physically possible for him to do to make the old earth bring forth everything that she will produce? He is doing it. He is going to get the prices for it. Now, let me inject this remark: Suppose that we had more wheat and more oats and more barley and more corn and more cotton and more oil than we could consume at this minute, even though the war is going on. Suppose we had that condition, do you think you would see such a bill as this on the floor of this House? It would not be here. It would not have been reported here, but the shortage that exists has called for the request for this extraordinary power.

The farmer is not uneasy if you will let conditions go as they are. He is not uneasy about getting value received for his services this fall, but he is uneasy when you step in with an untried law and say that you are going to fix the value of the stuff that he grows. It is like throwing a wet blanket on him and on his energies and his industry. He is not a beggar. He is not a pauper. He is just as patriotic as you are and just as patriotic as I am, and he is going to do his bit on the farm or at the battle front while this war is on. Now you step in with these powers, and you are going to fix a profit on the stuff he grows. Who says so? Did you read the language of this bill? Who says so? Ah, it does not say what profit, except that it does say that the only crops on which there are any risks—that is, the perishable crops—are excluded, and they say, "We do not guarantee you any profit on those crops." So that leaves the staple crops, and they are going to apply the price-fixing power to those crops and leave the farmer to bear all of the risks incident to those perishable crops, like tomatoes, beans, and other vegetables. You excuse the Government from protecting the farmer on those great perishable crops, but when you come down to the crops that the world must have and that the farmer knows it must have, then you step in and say, "We are going to guarantee you, Mr. Farmer."

Mr. MADDEN. Will it interrupt the gentleman if I ask him a question?

Mr. YOUNG of Texas. I ask the gentleman to defer his question until I get through with my main statement.

The CHAIRMAN. The gentleman declines to yield.

Mr. YOUNG of Texas. We have had over here recently commissions or committees representing the allied Governments, advising us of the errors and blunders that they have made in this war, and warning us not to follow in their footsteps along certain lines; and I want to ask my colleagues on this committee if we are going to take their advice on these war matters—and we ought to do it, in my judgment, where they have made blunders—why do you not take that same advice when it comes to putting these powers in the hands of a man to control the farmers' products?

There is not a man on the Committee on Agriculture who can stand on this floor and tell this committee anything except that when the other nations undertook to place the price-fixing power in the hands of any one man they have been in every case rank and egregious failures. Yet you come in here and ask us to do what those nations have failed in. I am willing to follow their advice when it is good, but when they have made a blunder, I say, we should steer clear of following in their footsteps.

Now, what happened in Germany? That is an autocratic government. I will tell you what happened there. I am just a little fearful of giving these great powers that we are giving every day here. I am fearful that in a democratic form of government like ours—down at home, in every district in this land, there will arise in the hearts of our constituency the thought, "Is this free America? Am I a free American citizen?" That thought may not be expressed, but I am afraid it will be in the minds of our constituents. There is danger incident to these powers, and they ought not to be granted except as an actual war emergency. I am willing to grant them within constitutional limitations when it comes to handling the Army and Navy, and the Constitution was so framed that our President is clothed with the authority, and I will go the limit with any man in Congress to see that the President has every authority given him under that Constitution of ours. But we are going beyond that, and are taking charge of the individual citizen. What happened in Germany? They tried price fixing. They tried it maximum and they tried it minimum. Gentleman, I have not been able to keep up with this bill. We have had it under consideration for five weeks and it has been reprinted so often I have lost track of it, so that I do not know how many different prints have been issued, but I do know that five pages of powers have been cut off from the original bill. Five pages of power have disappeared at the end of a five weeks' fight. I do know that in the original bill and up to the very last issue there was carried in the bill the right to fix maximum prices, but that has disappeared in the last issue that you are now considering.

But those were the powers that they asked us to give. How about Germany? The testimony that came before our committee from Germany, given by Dr. Taylor, of the University of Pennsylvania, who spent weeks in that country studying war conditions, was that this price fixing was a failure, and here was the result in that country, as it appeared to him. He said it did not increase production. The farmers were dissatisfied with what they were getting under the supposed guaranty price, and the consumers in the great congested centers of that nation were dissatisfied because they were thinking they were having to pay too much for the products of the farms. That is your maximum and that is your minimum. Gentlemen, let me tell you this language guaranteeing a profit is only molasses to catch flies, to fool somebody. That is what it is going to do. They are endeavoring to fool the producers in this language, as I will show you later. But I want to say to you as Members of this Congress, if this statute were to accomplish what its advocates say it will accomplish, even if it encouraged the producer to produce more, I should have to cast my vote against

it. It is class legislation pure and simple. You hold up the farmer as a class. If you carry out the law, as you say you mean to have it carried out, you guarantee the farmer a profit on his energy and his industry. You have made a separate class out of him, and you are protecting him by statutory enactment. Are you going to do that for anybody else? How about the manufacturer? Can he not come in and ask the same kind of privileges? How about the miner? Can he not come in and ask the same kind of privileges? How about railroad men, they can come in and ask for the same privilege? Are you going by legislation to cut the citizenship up into classes and legislate for a class? That is what this bill does. I am speaking from the farmer's viewpoint. God knows that every relative that I have got is on the farm making a living. When old age overtakes me every dollar of revenue that I shall have will come from the farm, and I want to say to you as a farmer, whose relatives are all farmers, whose friends are all farmers, we do not want the United States Congress or any other body of men to make a special class out of us, impeach by that our patriotism, impeach by that our love of citizenship. We will do our mite; do not make a class out of us, because there will come a day when other classes will be made and anarchy will rule and prevail in this fair land of ours. That is what happened to Germany, the country people and the city people are at the throats of each other, each believing that the Government has unduly cared for the other.

I am talking to you men from the great congested centers, and I am appealing to you from the point of view as I see it. The people are paying higher prices. The farmers are large consumers, and they have to pay higher prices for things that they consume. Are the farmers responsible for the prices you city people pay? Let us see what is the condition in your part of the country and in mine. What has been the condition for years past and gone? The people are leaving the farms and going to your congested centers. Why? Because there are broader opportunities for them and they can get more for their labor, they can reap richer rewards, and that is true in every part of the country. They leave the farm where they get $1.50 or $2.50 a day and go to the automobile centers where they get $5 to $8 and $10 a day.

What effect does this have on the farm? We have less producers, we are having more trouble year by year in getting enough stuff grown to feed our people. As long as the farm does not bring in the same reward that other lines of business bring in you are going to find that the farmer will continue to leave the farm.

Now, how are you going to get around it? It is not what the farmer gets out of the product that has made the people pay great prices, it is the distribution process. There is where the trouble comes in. Take wheat. Flour reached $17.50 a barrel recently. Mr. Hoover happened to be before our committee and was testifying about the time flour went to that price. You know what he said the average price the farmer got for his wheat? One dollar and thirty cents a bushel. Wheat goes from the farm into the elevator, into the centers, and across the water, the farmer receives $1.30, and the flour which is made out of that wheat sells for $17.50 a barrel. Is the farmer to blame for that?

Suppose you should go to the farmers of Texas and agree to underwrite them, and say you will give them $1.30 for all the wheat they raise in 1918. There would not be an acre planted to wheat in Texas. They would plant something else. They could not make a dollar on that basis. There is where the blunder is going to be made. Exercise this power, place it in the hands of a man that does not know whether peanuts grow on the vine or on the tree. If you are going to exercise this power, why not get a good common-sense farmer who knows that line of business and is patriotic. But I am against placing this power in the hands of anybody. The farmer gets $1.30 a bushel, flour sells for $17.50 a barrel. There is where the people have the trouble.

What is the remedy? There is a part of this bill which I agree to, and I am going to show you how we can have legislation, if the chairman of the committee will agree with me, in less than a week's time. You have now lying snugly in the Speaker's desk at this moment a bill which we passed from the Agricultural Committee appropriating money for the Department of Agriculture. It went to the Senate. They put an antihoarding clause on the bill and I am for that. I, too, am for legislation that will not only stop the hoarding, but for a strong statute that will govern operations of the speculators. We have such a paragraph in this bill; clip it out and paste it in the other bill and rigidly control the exchanges and boards of trade. Paste it on that bill and see how quick you will have legislation, and products raised by the farmers all over the country will come into the open channels of commerce and help you city people out and you will have to pay only legitimate prices. Do that and you have done sensible legislation.

Oh, power! power! They say they are not afraid to grant these powers. Well, I am. I have not forgotten that the blood of our ancestors was shed to give us these liberties. We do not want to give away these powers unless it is absolutely necessary and advisable under our Constitution and our theories of government. I have not yet reached that point, and God knows I never want to reach it, where socialism is on one hand and kaiserism is on the other.

However, men differ on this all-important question. When I have reached the point that the distinguished chairman of the committee has reached when he presented this bill with a favorable report, I can understand how he does it when he gives utterance to a statement through the press in the early days of the bill that reads thus:

> If I should meet the world leader of socialism I would say to him, "Take off your hat to me for I give you a measure that is more socialistic than any you ever dreamed of."
>
> If I were to meet the Kaiser I would say to him, "Take off your hat to me, for this bill would make our President more of an autocrat than you ever dared to be."

[Applause.]

Mr. Chairman, men will stand for wild things when they have reached that kind of a conclusion in a democracy like ours. You have got to forget your democracy, and I do not want to be guilty of having an apology rendered to me by the Kaiser; I do not want to do anything that will make me get down on my knees to the socialists of this country. [Applause.]

Let us see if this thing is thought of. You gentlemen have got to act upon this. They have put this bill under whip and spur in the committee, of which I have the honor to be a member, and they have shot me pretty full of holes in the last three or four weeks, but I have stood there representing the thought of the people as I understood it, just as I am standing here representing their thought to-day as I understand it. We are not going to starve to death.

Mr. HARDY. Mr. Chairman, would the gentleman mind naming the sections which he approves?

Mr. YOUNG of Texas. I will get to the numbers after a while. This thing has not had from the beginning the most active support of some of those close to the administration. It is only recently that new friends have been had for this bill, and if members of the Cabinet are only recently converted to extending these great powers, had not you and I as Members of this House better think a while before we record our votes yea or nay on the great powers this bill confers? Let us see about that. I think the Secretary of Agriculture thought a good deal of our trouble now is hysteria, and I desire to read to you from an article recently published in one of the food journals by the Secretary himself. He says:

> There is nothing in the food situation of the country which justifies hysterical thinking or action.

The concluding paragraph in it is as follows:

> The department and all agricultural agencies of the country are giving definite and careful attention to these problems. The Federal Government, through several of its departments, is giving continuous consideration to the immediate problems presented and to the possibility of remedial legislation.

And now listen—

> The solution will certainly not involve a Federal dictatorship—

And yet what is in this bill? They call him an administrator. A rose is just as sweet by any other name—

> The solution will certainly not involve a Federal dictatorship, and it is highly unlikely that it will involve a dictatorship in any State or community.

I appeal now to you gentlemen to listen to this further thought, and say whether it is not that which springs from the heart of every American citizen—

> America does not take kindly to dictators. The difficulties in any event would be very nearly insuperable. We have a continent to deal with, and there are difficulties of double jurisdiction.

Yet this bill tells us to ignore State lines. That is what it says—

> Consider, for instance, the matter of fixing a minimum price. The Federal Government could deal only with commodities passing into interstate commerce. The States might be hampered in attempting to fix prices.

That was his opinion just a few days ago. He states pretty sound doctrine, it seems to me; and yet this bill, bearing the name of my distinguished colleague, the chairman of the committee, saw its birth in the Department of Agriculture, and reached our committee for consideration. Are you gentlemen ready to swallow it?

Mr. SISSON. When was the article from which you quote written by the Secretary of Agriculture?

Mr. YOUNG of Texas. Recently. The ink was hardly dry on it when the bill came to our committee. What are you going to do about it? Here is your price fixing. Do you think the farmers will approve of it? On what basis are they going to figure? It strikes me that if you are going into a great big business venture you should start at the right point. You are going to figure out all of the details, and farming is a great big business proposition in the United States. Possibly 30,000,000 people arose before daylight this morning and will not retire until after nightfall. They have been following the plow throughout this day, while we are here debating their rights on the floor of Congress. They are leaving it to us to reach a conclusion that will not do an injustice to them. They think just as you do and just as I do. He has got to buy his cultivators, he has got to buy his teams, he has got to buy his plow tools, he has got to buy his power of different kinds. You fix the value of his product. How are you going to know whether it is a profitable price or not, and how are you going to know how to fix it until you go into the price-fixing business from the pin point up. The farmer can never be made to understand that you can guess at the value of his stuff and say to him in the same breath that you will not fix the value of the plow tools or of the harness that he has to buy or of the clothing on his back or of the wagons in the field. He will never understand it, and neither would you or I if we were down there like he is to-day. We had that tested out before our committee. A very learned gentleman, a very intelligent gentleman, came in from the city of New York. His business there was to build great warehouses on the water front in which to store articles that went into the commerce on this side of the water as well as on the other. His is a very useful business. He committed himself to the proposition that we ought to fix a price upon the farmer's product and guarantee him a profit.

It came around to my turn to cross-examine. I said to him, "Your business is a legitimate business. The country must have you as one of the middlemen; we need your kind of people to get these products from the farmer to the consuming world, but if you are going to fix the price on the farmer's stuff let us go up a little, and why not fix the price on the service which you render?" Gentlemen, he had nothing to say, but when pressed for an answer, what do you suppose that answer was? He said, "Mine is a great business institution, and if the Government should appoint an agent to tell me how to run my business I would have to go out of business." Yet when cross-examined further he admitted that he could go to his books and tell every dollar that he had invested in the plant; he could tell every dollar of labor that went into that line of business; he could tell every dollar of expense of any description, and he could strike his profit and loss account any day of the week, and yet with those definite figures, with this succinct data he said, "Do not, for God's sake, put the power in the hands of an agent of the Government to fix the price of my service," and they have not done it. Now, I turned it on him. I said, "Mr. Warehouseman, the farmer plants in faith, and he is betting his seed and his labor that the winter's freeze will not get it; he is betting his time and his work that the summer's drought will not get it; he is betting the time of himself and his children as they follow the plow that the summer floods and the winter rains will not destroy his crop, and that the insects will not take from him every prospect that he has." These are some of the uncertainties that surround the farmer. Do you now think it good business to guess off prices by some agent of the Government who knows nothing of the farming business?

Oh, then he back tracked and said, "I am not advocating that you fix the price on farm products." Your farmers are going to ask that question, gentlemen. When you go to Texas they are going to ask some right pointed questions. When you go to Texas they are going to ask you why it was that you put the power in the hands of a man who has never seen or never heard of the farmer's problems, the power to fix the price of the products of his labor, and you do not put the power in the hands of some one to fix the manufacturer's price, to fix the miner's price, to fix the railroad's price, to fix the price of their products between him and the consumer. What excuse could you give? I asked Mr. Hoover why not go into the price-fixing business right, and I thought it was a perfectly legitimate discussion, because he is the power that is behind that matter. I asked him why should not he fix the manufacturer's price, the clothing man's price, the shoe man's price. "Why," he said, "you could not get enough machinery together to fix the prices of all those people." What are they going to do? Mr. Farmer walks behind the plow way down in Texas and Washington and Maine, and they make a guess-off as to the farmer, but they never dare guess off as to these great business institutions of this country who are making the things that the farmer must buy before he can produce his crop. How are you going to answer the question? I can not do it. How recent has been this proposition of the power of the Government to step in on the farmer and make a special class out of him? How recent is it? I appeal as I would appeal for my life, that if this Congress does it, you are making a blunder that will rise up to plague you in the days to come. In 1914 this same war we are now engaged in was going on. I then happened to represent a section of the country which produced a great crop of cotton. Nature fixed it so that my section should be the cotton country.

From the bowels of the earth of Pennsylvania and States like that come ores and oils. Nature fixed it so as to be a great manufacturing section, and nature fixed it so that the South is the cotton-producing section. Change it if you will, you have got nature's laws to contend with. We go forth and grow the cotton that goes to all the peoples of the world, both in food and clothing. In 1914 this war was on. My people and the people of other States that grow cotton had given their energy, their time, their money, and had put in a great crop that year; 16,000,000 bales of cotton were produced. War came in the nick of time, commerce was closed; 65 per cent of that crop had heretofore found a market in Germany, in England, in France, in Russia, in Italy, and when some gentlemen who lost their heads stood on this floor and pleaded for all kinds of socialistic wild ideas as to cotton, gentlemen here said, "The Government can not go into anything like that; we have certain principles of government." The only thing we could have done under that condition was to do like the Government does in great industrial centers, put some money in the banks and thereby help the banks and business men so that the crop might be financed. That is all I can see that could be done, but gentlemen here said that there was a governmental principle to take care of, that while they sympathized with the people in their loss they could not help. Our people did go bankrupt selling cotton at 5 and 6 cents a pound when it cost 11 and 12 cents to make it, and to-day, my friends, the farmers in my district well remember that in 1914 when their cotton was sacrificed the Government was impotent. It was impotent and said that nothing could be done for the great cotton belt of this country. What do you say in this resolution? My friend from South Carolina, the chairman of this committee, who has my utmost esteem and respect, and how I reverence the State from which he comes because it is the birthplace of my mother who in the pioneer days of Texas went to that great empire State and helped mold its destiny—how the mighty have fallen and democratic principles have fallen in the great old State of South Carolina when the chairman of this committee will raise his hat to the most ardent Socialist in the world and ask the pardon of the Kaiser. [Applause.] I am not ready to do it. We have got to account to the people for this. I am ready to go as far as anyone to help win this war. The farmer is going to do his part, just let him alone.

Open up these channels of commerce and let his stuff get out from the farm to the consumer. He can not hold it. It goes when it is ready for the market. Stop speculation, stop this hoarding, stop gambling.

You are in deep water, my friends. There are some agencies between the producer and the consumer that you must take care of. How would it accomplish the purpose to pass some legislation here that would destroy the cold-storage plants of the country? The egg-producing seasons are in the spring months, and the eggs are taken at the market price and held over by the storage plants until the months of nonproduction. It is a useful piece of machinery and you have got to care for it. So all along the line; you can not destroy the useful machinery, the useful agency.

You have a bill here, but we do not know how it will be interpreted. There is power placed in the hands of a man that we never heard of. He can exercise this power, it is said.

What are you giving it to him for? I do not want to give a man power that ought not to be exercised. That is a pretty safe legislative rule. How do you think this law, if written on the statute books, will affect the business of the country? I know what it is doing to the cattlemen of Texas. We have 7,000,000 head of cattle in that State. It is the great breeding ground of the world, and when we get through with the cattle tick we will feed the world. We are getting rid of the tick pretty rapidly now. It is a pretty difficult proposition to get a man to invest his money in cattle. It is only a few men now who handle cattle on a great scale. The small fellows, with 50 or 100 head of cattle, are nearly all out of business. While you are legislating do not, in one fell swoop, put in the hands of one man the power to destroy the cattlemen of this country. Did ever any of you own 100 head of cattle? Did you ever drive them into the stock pens for shipment? Here is one grade you put in one pen, and some

in another, and you can not fix the price on those grades of cattle yourself. You can not tell within $10 a head of what they will bring when you get to market. And yet they mean to put the power in one man, to put it in his power to place a price at such and such a sum, and drive them into bankruptcy, and you scare him to death. You men who represent these great business centers better think a little of what your folks are thinking on these things.

I want to read what those representing the great cattle interests of Texas have to say on this subject:

JUNE 2, 1917.

Hon. HERBERT C. HOOVER,
Washington, D. C.

DEAR SIR: The undersigned were appointed by Gov. James E. Ferguson, of Texas, to confer with you in regard to the meat situation from the standpoint of the cattleman, and after conferring with you on May 31 it was understood we were to see you again and lay before you our views as to what action should be taken, if any, by you, as "food administrator," or by other governmental agencies at Washington to increase the production of meat-producing live stock and with respect to fixing prices for such animals and their carcass or flesh, we beg to report:

1. We believe the Government should not fix either a maximum or minimum price on meat-producing animals, as it would demoralize the business, frighten many producers out of the business entirely, and could not be successfully carried out.

To attempt to do this would first require fixing the price of all foodstuffs that are necessary to be used in finishing the stock, to regulate pasturage charges, and fix stable carriers' charges.

If a minimum price should be fixed per pound on fat cattle, you would have to take into consideration the many classes of beef; and if this was scientifically determined and an adequate price agreed upon, the cowman could not know whether a charge to his injury might not be made six weeks later, and the result would be that where the cowman was operating on borrowed money and leased range, as is the case in a majority of producers, he would ship out his herd and quit the business, thus decreasing the production.

Suppose you fix a price per pound, say, 10 cents on foot. The packers buy and slaughter more than 55 per cent of all cattle, and, in our opinion, absolutely fix the commercial price of all fat cattle, and they are only willing to pay 8 cents. Who will pay the producer the other 2 cents? And if they can buy for 8 cents they might say, "Well, the Government must protect the minimum price, so we will only pay 6 cents."

As before stated, you would have to fix the price of hay, corn, cottonseed products, and other foods used in fattening cattle; you would have to take into consideration the several grades and kinds of hay and other foods in determining the price the farmer should receive for such feed, which would be an endless job.

By the way, I see that the Government has bought a whole lot of hides, many millions and millions and millions of dollars' worth. Who fixed the price on that great bargain that was made? Who fixed that price less than a week ago? If it has the right to fix it on the man who walks betwen the plow handles, that must create the food to feed starving stomachs and help win this war, why was it not right for the Government to say to these great packers, who owned 55 per cent of the hides of the country, "We have got to have your material, and we say to you, here is the price"? And then let them fix the price. Oh, no. It is barter, and we deal with these great business institutions. Under this bill when we barter with the farmer it is a contract with one party to it. The farmer has no word in his own behalf. When I studied law I understood there must be of necessity two parties to a contract. But the farmer under this bill has no right to say what the price is that is to be fixed.

I will read:

2. It is our opinion that to increase production in cattle you should speedily say to the Nation, there will be no price fixing of cattle on the hoof, and the stock farmers and ranchmen can be depended on to increase their herds, if they are assured and believe they will have an open, fair, and unmanipulated market for their stock.

We believe that the price of beef on the hoof will remain sufficiently high to stimulate production without any attempt at fixing prices by the Government. We further believe that the fixing of prices is economically unwise and contrary to economic principles, and will have a tendency to lower prices, because it is impractical for the Government to fix prices, guarantee, and maintain them.

To sum it up, if the cowmen know they will have a competitive market, free from ill-advised governmental regulation and free from combinations in restraint of trade, they believe they would then have stable prices, and confidence in the cattle business would be restored and production increased.

We indorse the memorandum of suggestions on this subject filed with you by the American National Live Stock Association and National Wool Growers' Association on this day.

Respectfully,

DAYTON MOSES,
IKE T. PRYOR,
R. J. KLEBERG,
Committee.

That is a committee of cattlemen from my State, who represent that great industry, and that is the way they are looking at this legislation. How are you business men looking at it? How are you farmers looking at it?

Let the farmers know when they write you about this bill that their perishable stuff, by the language of the bill, is stricken from the guaranteed price. Let them know that nothing but the staples, things that will not perish, remain in the bill. Let them know there is nothing in this bill that demands that this power must be exercised nolens volens by the agent the President is to appoint and has appointed, but that it rests within his sweet will to exercise that power. Let them know, again, if their farms prosper and they produce more than is needed by our Nation or the nations of the allies, let them know that every farmer will be called upon to sustain the loss caused by overproduction. It is a fact that there is an underproduction of grain this year, and naturally the farmer has lost his land, has lost his labor, and his seed. Naturally his price ought to go up, so that he may be compensated in some measure of profit in order to take care of his wife and his children. Let them know that this is a suspended power in the hands of this dictator, and that just one logical conclusion can be drawn, and that conclusion is inevitable that he will step in and exercise that power, because grain and wheat will be too high, and therefore every farmer by reason of underproduction again becomes the goat. That is the law. That is the power you are giving. They have been rushing this bill, gentlemen. They first told us that they must have this legislation out by the 15th of June. That time is here, and we are a good long ways from enacting the legislation, are we not? They were in a big hurry to get it out by the 15th of June. According to the last statement, they must have it by the 1st of July. That is the statement that they gave out. Why? I can tell you why. I want you gentlemen from the great Northwest and the great West, which are the granaries of the earth, to understand. It is your wheat that this power is aimed at as a primary proposition. Take it from me.

They must have this law enacted by the 1st of July. Why? Down in my country the farmers are mowing their grain, working night and day in trying to harvest the wheat and the oats and the other grain grown in that State, and it is going on the market. They want this power to reach out and get the farmer's grain in Texas and in Illinois and in the Dakotas and the other States that grow grain. Look out. Texas is a little ahead of you. When it comes to getting the grain and putting it on the market they want to use this law swiftly as a means of reaching this Texas grain, and they will "reap you in due season if they faint not."

Eighteen million bushels of grain will be grown in Texas this year. Much of that country is making less than 5 bushels to the acre this year. Are you going to take care of that man? The farmer has lost his time and his team's work. His children and his wife have been at work. Some of them may have less than 5 bushels to the acre. In some of those great farms down there the binder will not be used at all. Will you take care of them?

They say they will strike general averages over a series of years back. When you do that will you inquire about the higher prices necessary to make a crop? Oh, no. My poor farmer, who has suffered from the drought, who has suffered from the flood, who has suffered from the green bug, is still patriotic. If you do not believe they are patriotic, go down there and see what they are trying to do. They are doing their very best. They want to go after the little grain, perhaps in some places 5 bushels to the acre, and——

Mr. BLACK. Mr. Chairman, will the gentleman yield for a moment there?

Mr. YOUNG of Texas. Yes.

Mr. BLACK. Is it not true that Mr. Grant Hamilton, of the American Federation of Labor, gave out a statement last week to the effect that we must hurry up with the enactment of this law because they are now beginning the Texas wheat crop?

Mr. YOUNG of Texas. Yes; and that sentiment goes up a little closer to the central authority than that, higher up than these laboring people.

That is the situation that confronts us. Does that encourage us to make more this year? I want to burn this into you gentlemen who represent this committee from the Southern States: You have got to answer it to your constituencies in the States you come from, and I want especially to refer to my friend from Alabama [Mr. HEFLIN], who talks so eloquently in season and out of season about cotton—I want to burn this into him: In the year 1914 his people were absolutely driven to starvation by reason of the prices of cotton going to nothing on account of this war. Cotton is now worth 25 cents a pound. Let my eloquent friend explain to the Alabama farmer about cotton. Let him explain why this Government in 1914 was asked to give the cotton farmers relief, and why in 1917, with the war still on, when cotton is selling at 25 cents a pound, you now say we give you a dictator to cut down that price. The cotton farmer still owes his debts of 1914. Now he has a chance to get even with his losses of 1914. Explain that to him in the South.

Mr. Hoover said they would have to attack the cotton problem from two sources. God knows, one is enough under the powers that are given here. One is a food product and the other is a product which is to go into the manufacture of cloth. There is no cotton in the world. It has been all used up. It is not here. The farmers do not get that 25 cents a pound for it.

Mr. MEEKER. Mr. Chairman, will the gentleman yield?

Mr. YOUNG of Texas. Yes.

Mr. MEEKER. Is it the opinion of the gentleman that if the dictator could get hold of that proposition the price of cotton would be put down?

Mr. YOUNG of Texas. I will tell you what I could do if I were a dictator. I am talking about giving powers. I do not want to impeach anybody's honesty or integrity. I am making an argument for four and a half million people in Texas who grow cotton and wheat. I will tell you what I would do with that power if I were a dictator. You know two great exchanges in this country have had much to do with the dictating of the prices of our cotton products. Suppose an appeal were made to me as a dictator to the effect that the Army has got to have tents, that the soldiers have got to have uniforms, that the gunners must have powder, and the automobiles must have tires.

God knows we will make the cotton, although the cold weather has given us a close race. But suppose those fellows interested in the bear side of it could convince me as an act of patriotism that cotton was too high, and I had come to that conclusion and knew that to-morrow morning I was going to write into the headlines of the newspapers of this country that cotton was a thing that we must have as a war measure and that I would fix the price of cotton at 15 cents a pound. Where, gentlemen of the South, would your cotton go? What a rich harvest for the bear gamblers! And if it can be applied to cotton, I appeal to you—gentlemen from the Northwest, where you grow wheat, and where in a similar manner you have to contend with these gambling leeches that exist between the producer and the consumer—where would your wheat go? Are you ready to give this dictator that power?

Mr. REAVIS. Mr. Chairman, will the gentleman yield for a question?

Mr. YOUNG of Texas. Yes.

Mr. REAVIS. I have listened to the speech of the chairman of the committee [Mr. LEVER] with reference to the high price of products and the desire to encourage this production, and I want the gentleman's judgment——

Mr. YOUNG of Texas. My time is about up.

Mr. REAVIS. I will make it very brief.

Mr. YOUNG of Texas. I have only two minutes left and I must close. There is a lot of this bill that I can not discuss. I wanted to take it up more fully. I can not yield to anybody now unless I can get more time.

Mr. FERRIS. Mr. Chairman, I ask unanimous consent that the time of the gentleman be extended 15 minutes.

Mr. WEBB. That he be allowed to conclude his remarks.

The CHAIRMAN. The time is controlled by the gentleman from South Carolina [Mr. LEVER] and by the gentleman from Iowa [Mr. HAUGEN].

Mr. LEVER. How much time does the gentleman want?

Mr. YOUNG of Texas. About 20 minutes.

Mr. LEVER. I yield to the gentleman 20 minutes.

Mr. REAVIS. Will the gentleman allow me to finish my question?

Mr. YOUNG of Texas. If the gentleman will ask it rapidly.

Mr. REAVIS. The point I want to get at is this: There are two declared purposes in this bill—one to increase production and one to reduce the price.

Mr. YOUNG of Texas. Yes.

Mr. REAVIS. How can you increase the production by reducing the price to the producer? [Applause.]

Mr. YOUNG of Texas. That "can't be did," except that you open up channels of distribution, cut out speculation, and stop waste.

Mr. LEVER. Let me answer by saying that you do not do that.

Mr. YOUNG of Texas. There is another little power hidden away in this bill that also gives the authority to sort of limit our rations.

Mr. REAVIS. If the purpose of this bill is not to reduce the price, why does the chairman of the committee utilize so much of his time in telling us of the exorbitant prices now obtaining which should be reduced?

Mr. LEVER. I hope to show, if the gentleman from Texas will permit, that the producer of the things which are consumed does not get the price by any means which the consumer pays, and we are trying to take care of the sweet-smelling gentlemen who come in between the producer and the consumer. [Applause.]

Mr. YOUNG of Texas. All of which can be done readily by clipping out these three or four sections on speculators, exchanges, hoarders, and so forth, and putting them in the bill that is snugly ensconced on the Speaker's table. If you had ingrafted those provisions, as I intended to ingraft them on that bill, this bill could not have gotten anywhere in this House.

Mr. HARDY. Will the gentleman state what section in the bill fixes the prices?

Mr. YOUNG of Texas. Section 12 fixes prices.

Mr. HARDY. And also the sections that the gentleman approves?

Mr. YOUNG of Texas. I have not got the numbers. The gentleman can read them. They are all in there. I read from a food journal here, which says, "Don't tie the hand that feeds you." I think this journal circulates in the Northwest, in the wheat belt of the country. It struck me as being a very fine argument that I should like to read it to you gentlemen.

Do not fix the price on what the farmer grows to sell unless the prices are fixed on what he must buy as well.

You can not get that out of the minds of the farmers. Here is what the article says:

DON'T TIE THE HANDS THAT FEED US—DON'T "DISCRIMINATE" AGAINST THE FARMER—"FIXED PRICES" ON FARM PRODUCTS WILL REDUCE PRODUCTION—DON'T "FIX THE PRICE" ON WHAT THE FARMER GROWS TO SELL UNLESS "PRICES ARE FIXED" ON WHAT HE MUST BUY AS WELL.

Steel sold at $30 before the war; now sells at $130.
Coal has advanced from 100 to 200 per cent.
Wire has advanced 100 per cent.
Wagons have advanced 30 per cent.
Prepared feeds have advanced 100 per cent.
Tankage costs 100 per cent more now.
All fertilizer has advanced 50 per cent; potash 600 per cent.
Binder twine has advanced from 8 cents to 18 cents.
Plow shovels that were bought for $2.50 now cost $7.
Cultivators sold at $28 before; now $50.

All men and all industries in America are equal before the law. Don't "make a goat of the farmer."

On May 22 Congressman A. F. LEVER, of the House Committee on Agriculture introduced an administration bill, the text of which gives the President the power, among other things, to fix the price of food products as a war measure. On about the same day Senator GORE introduced the companion bill in the Senate. The committees of both Houses have been struggling with these bills ever since. Revisions, modifications, amendments, have been urged upon them from all sections of the country.

These legislative attempts, taken together with the appointment of Herbert Hoover as food administrator and his well-known theories of price control, have awakened a nation-wide discussion more interesting and absorbing, it seems to us, than any discussion before the country except that of the declaration of war itself. The sweeping plans and positive ideas of food control promulgated by Mr. Hoover, as set forth by our Washington correspondent in this issue, outlines methods of fixing prices on grain and other food products in such a manner that we wish to enter our protest in the following language:

When this great Nation, which was conceived in liberty and dedicated to the proposition that all men are created free and equal, suddenly appoints a "food dictator" and introduces into its National Congress a "food bill," the text of which empowers the President to seize all food, fix all prices on the same, and arbitrarily and at will close the natural channels of trade through which the products of our farms have from the beginning of our very existence passed in distribution, it is fitting and proper that every man whose freedom, whose business, or whose just and equal rights are thus disturbed and even threatened with destruction should lift his voice in solemn warning and in patriotic protest. He owes this not alone to himself and those dependent upon him for care and protection, not alone to his country and its just and righteous laws, but to all humanity. A war for liberty and humanity can be waged to a successful conclusion only by the strictest possible adherence to those same principles in the conduct of the internal affairs and relations of the citizens of the Nation in their private as well as their public work.

Why all this food hysteria? Is anyone hungry? Does famine stalk abroad through the land? Is the visible supply of food exhausted? Are our prospects blighted? Who can explain why our allies have bought so wildly or why our housewives have stored so generously for the future? Are we all suddenly crazed with fear? Surely there is no immediate appalling calamity and no reasonable explanation for hysteria. We are not hungry. There is no famine. There is plenty and there will continue to be plenty and to spare. Look sanely from your window. God is in His heaven. The farmer is in his field. To-day we sow abundantly; to-morrow we shall "reap as we have sown." The harvest is almost here.

Has this war into which we have hardly entered and which need not cut down our acreage of production now or at any known date in the future changed the relation of equality and a square deal between different classes of our patriotic people? Is it necessary or in any sense just at this stage to single out the producers of food or any other separate products or commodity and say to these producers: "Your price shall be fixed by the Government; so much shall you have and no more"? Is the toiler in our fields to be treated by a special code of war ethics, rules, or laws designed for him alone? If so, why, and by what course of reasoning can such a procedure be explained and justified?

The American farmer is a high-born patriot. He is a property owner. He has gone through all the stages from log-cabin and sod-house discomforts, privations, and denials to these days of relative comfort and convenience. He knows better than any other class of American citizen by what processes America has become the most beautiful, the wealthiest, and in many respects the greatest Nation on earth. He loves his country with the same devotion and concern that a mother loves a strong young man whom she has nursed from a weak and puny babyhood. Just as the mother remembers all the days of misgivings and doubts and the

nights of prayer and watching, so he remembers all the crop failures, all the lonesome, neighborless days, the pests, and the exposures by which the wild, unguarded prairie was converted into a fruitful, life-sustaining, comfort-giving home. Just as the mother now takes a mother's full degree of pride as she looks upon a strong young man reared by her nursing and care to do a man's work in the world, so the farmer looks with pride upon a country which he has had a large part in making worthy of defense.

These builders of the Nation at the very outset of this war should not receive at the hands of their Government any discouraging or unfair discrimination on the products of their toil. Listen to the plea of the organized grain growers of the great West:

DON'T TIE OUR HANDS.

"We, the organized farmers of the grain belt, a half a million strong, claim to be as patriotic, as courageous, and as ready to sacrifice our sons, pour out our last drop of blood in defense of 'liberty and humanity' as any like army of our fellow citizens, but in fairness to the land we love and the country we have had a large part in building, we plead for fair treatment and a square deal right now.

"If in the judgment of our National Congress it shall be necessary here and now to fix the price on food, which is the sole produce of our farms (we have no by-products, no side lines) so as to limit our profits and net returns in behalf of the Nation, then we submit that mere and simple justice demand that prices on all other commodities and products produced or distributed by our fellow countrymen shall be fixed in the same way and at the same time.

"Be assured that in our effort to increase our acreage we have purchased feed, seed, machinery, and necessary farm supplies at an increase in prices of from 100 to 1,000 per cent. For example, plow shovels which cost $2.50 before the war now cost $7; cultivators which sold at $28 before now sell at $56; binder twine which sold at 8 cents before now sells at 18 cents; potash has advanced 600 per cent, fencing 100 per cent, wagons 30 per cent, prepared feeds 200 per cent, tankage 100 per cent. The price for labor advances with the high prices already being offered by all other lines of industry.

"We must meet the ravages of cholera, drought, frost, rust, rain, and hail. Already some of our crops are gone and our fields are being replanted. Of these things we do not now complain.

"So long as the Constitution of our country is upheld, so long as our business is surrounded by the same degree of protection that is thrown around all other industries, our country will receive at our hands a full measure of sacrifice, devotion, and cooperation."

Let us not tie the hands that feed us.

When I see that the laboring people are going to petition Congress to pass this bill, I wish I could send this to them so that they would read it. The farmer is the laboring man's friend. The farmer's work is not governed by any eight-hour day. He works from sun till sun. The farmers are being driven off the farms because they are not prospering on the farms, and when you come in here and advocate legislation that will put another burden on the back of the farmer who has been feeding you while you have been drawing these high salaries in these congested centers, you drive another man off the farm to enter competition with you, and produce that much less on the farm. If you keep up that line of conduct you will drive him to that desperate condition where with him it will be—

Me and my wife,
And my son John,
And my son John's wife,
Us four and no more.

Do you want to drive him to that condition? Keep up this conduct of putting these burdens on the farmer that are not put on anybody else and you can not expect him to give forth that energy that he is now giving forth. Some things you can not do by law. Can you make an additional bushel of wheat by law this year? Why, when I listened to the chairman of the committee [Mr. LEVER] this morning, it appealed to me as though if we wrote this statute the granaries would all be amply filled with wheat. You can not create an additional bushel of wheat by law. You can not make an additional bushel of corn by statute. You can not make an extra bale of cotton by statutory enactment, but I want to tell you how you will make it. If you will give the freeman who gives his time and his energy not only the inducement of patriotic sentiment, but that same inducement that every other man has, and that sentiment that wants to earn something for himself and family, let him go unshackled, and you will get your additional bushels of wheat, you will get your additional bushels of corn and bales of cotton. Would not a man be a fool if he should undertake by statutory enactment to change the law of gravitation? What fool would undertake to do that?

God Almighty made some laws in this world, and those are inevitable laws. Human agency may buck against them, but those laws still rule and still operate. There is another law almost as immutable as the law of gravitation, and that is the law of supply and demand. You may impede it, you may hinder it, you may call out leeches who will take your grain and hoard it, but after all the great, fundamental, underlying law that controls commerce in this country is the law of supply and demand. If you make short crops, inevitably the price is going to be high and you can not help it, and those crops are going to move out to the markets where they get the highest prices. You can not change that. If you have an overproduction, the price is going to be low. The speculator may get in and may upheave and depress prices here and there, but the great, fundamental, underlying law is there and you can not change it by these statutes that you are asking this American Congress to write on the statute books of the country. Then what is the remedy? The remedy is simple, and it is all that you can do. Open up these channels of trade. Control exchanges, boards of trade, speculators, and your hoarders, and when you have done that the farmer is satisfied and happy, praising his God that that relief has come to him that he has prayed for these many years; that these leeches shall no longer prosper at the sacrifice of the farmer. But do not try to fool the farmer. Do not throw a wet blanket on him and offer to guarantee something to him with a suspended power, not one that the law says he must exercise, and Mr. Hoover says there are only seven or eight articles he wants to exercise it on—wheat, barley, rye, corn, oats, and hogs. Now, if I were to speak selfishly about it I would say, "For God's sake do not go any further and get cotton." I do not want that power exercised on cotton. That is what he says in his testimony that he may exercise it on, but he does not promise to exercise it on any. How about potatoes? He says the farmers have got to carry potatoes through in their barns and houses. There might come up an extremity, and then he might exercise the power.

What are the extreme conditions? There could be but one, and that is the shortage in potatoes.

Mr. MADDEN. What about coal?

Mr. YOUNG of Texas. I do not know much about coal. We burn firewood down in Texas.

Mr. REAVIS. What about cattle?

Mr. YOUNG of Texas. Mr. Hoover was up in the air about the cattle business.

Mr. OVERMYER. Will the gentleman yield?

Mr. YOUNG of Texas. Yes.

Mr. OVERMYER. The gentleman stated awhile ago what he could do in fixing the price of cotton over night if he were a dictator. Does not the gentleman know that any price fixed under this bill must be fixed in advance of seed time, before the crop is planted, and that there is no price fixed in the bill, only a guaranty for a minimum price? Will the gentleman explain how any farmer can be harmed by knowing in advance what the lowest price will be that he will get for his crops? [Applause.]

Mr. YOUNG of Texas. Oh, it is true that they cut out the maximum price after I fought it for five weeks, but you put in another section in the bill that gives the President the power to purchase everything under the sun; and when you give him the power to purchase, you give him the power to buy the surplus and make the maximum and minimum price both, and I take it that when they agreed to cut out the maximum price and it went out of the bill, that the other section, that gives the President or his agent the power to buy anything under the sun, that clothes him with the power to fix maximum as well as minimum prices. You also give $150,000,000 in money to enable a "corner" on the part of the Government so as to "fix" prices. Where is the poor farmer going to be when that power is in the hands of a man who has hold of both ends of the string?

Mr. LEVER. Will the gentleman yield?

Mr. YOUNG of Texas. Yes.

Mr. LEVER. Is there any power in this bill to compel a man to sell?

Mr. YOUNG of Texas. No; down in your country or my country it is not necessary to have the power to compel him to sell. When a man has starving babies, as they have in Texas and South Carolina, there is a power greater than any law that you can put on the statute books. He must sell the stuff that he has raised.

Mr. RAGSDALE. Will the gentleman yield?

Mr. YOUNG of Texas. Certainly.

Mr. RAGSDALE. For what purpose was the $150,000,000 put in the bill if it was not for the purpose of breaking down the price and making the seller sell?

Mr. YOUNG of Texas. It might have been put in to give him the power to make a corner, a governmental corner.

Mr. LENROOT. Will the gentleman yield?

Mr. YOUNG of Texas. I will yield to the gentleman from Wisconsin.

Mr. LENROOT. The gentleman assumes that the question of making of a maximum price has been eliminated from the bill. I want to ask whether under section 3——

Mr. YOUNG of Texas. I know what the gentleman is going to ask; and as my time is limited, I will say that we might as well wipe out all the rest of the bill. You gentlemen who are lawyers read section 3, and if you can find a power under the sun that is not in that section 3 I would like to have you sleep on it overnight and tell me to-morrow morning what power

has been left out of section 3. They have not left anything out. If they left anything out, it was an egregious blunder, for they tried to get it all in.

Mr. EMERSON. Will the gentleman yield?

Mr. YOUNG of Texas. Yes.

Mr. EMERSON. The gentleman has made an excellent speech against the bill, and I would agree with him in time of peace, but when the country is at war, does not the gentleman think that that changes it?

Mr. YOUNG of Texas. This bill is supposed to increase the food supply. That is the only purpose it has. If you know the farmer like I know him, you will let him alone, and he will give you a food supply, but if you hamstring him with power to be exercised by some man that is not a farmer, you will fail. Now, I am not reflecting on Mr. Hoover. That is not my purpose. I take it that he is a man with a big heart; he has been over there feeding starving people for two and a half years, sustained by voluntary subscriptions. That big heart has welled up in him to save lives, and he can have but one instinct coming back from that field of action, and that is in coming to the ground where the food is made to go to the ultimate consumer and make it as low as possible, but you handicap the farmer with the power that hamstrings him and your war will lag. You leave the farmer alone, take it from me, and he will feed not only our Army and our allies but he will feed the starving nations. If there is a man in the House who thinks that the farmers in his district are not doing all they can without a law to handicap them in any way, if you have constituents that are not patriotic enough to do everything they can, then you vote to hamstring him by voting for this bill. I know that my people are doing all they can.

Mr. McLAUGHLIN of Michigan. Will the gentleman yield?

Mr. YOUNG of Texas. I will yield to my colleague.

Mr. McLAUGHLIN of Michigan. The gentleman referred to section 3 and said if there was any power to be conferred on the President or the food administrator that was not conferred in this section he would like to have somebody mention it. I answer it by saying that there is absolutely no power conferred in section 3 upon the President except to make volunteer arrangements or agreements with those with whom he would cooperate.

Mr. YOUNG of Texas. Then the gentleman agrees with me that it ought to be stricken out.

Mr. McLAUGHLIN of Michigan. It is entirely voluntary, entirely declaratory of the desire to have food control.

Mr. YOUNG of Texas. With all due deference to my colleague, I do not think he heard the chairman of the committee when he was discussing so eloquently the features of this bill, and he said that section 3 was the hub of the wheel around which the whole bill revolved. That is what he said. [Applause.] I desired to strike out section 3, and I want to strike it out now. The power is so general and indefinite and so far-reaching that no American citizen knows when he wakes up in the morning whether overnight he has not become a felon under the provisions of this bill. You go then to section 9, and if they have left out anything in section 3 they get it in in section 9. This matter of licensing legitimate business institutions—if he does not apply for a license and get a license he becomes a criminal. Does the gentleman think that they are going to encourage business, do they think they are going to encourage food production, do you think a man has wisdom enough overnight to reconstruct business affairs of this country when men have devoted generations to building it up? Do you think one man is wise enough to do it? I do not believe it. These business men are patriots, and I believe that they will exercise good common sense and sound judgment and will do their best to provide the crops for caring for the armies and the folks at home. All we need to do is to shackle the speculator and the gambler and the hoarder; and when you have done that, patriotism of business men and of farmers will do the rest. I thank you, my friends. [Applause.]

Mr. HAUGEN. Mr. Chairman, I yield one hour to the gentleman from Minnesota [Mr. ANDERSON].

Mr. ANDERSON. Mr. Chairman and gentlemen of the committee, I should deprive myself of a real pleasure and the gentleman from South Carolina [Mr. LEVER] of something that is justly due him if I did not at this time acknowledge the very generous compliment which he paid me during the course of his speech. If I have been zealous, the gentleman from South Carolina has been more zealous. If I have been diligent, he has been more diligent. He has brought to the consideration and discussion of this bill the splendid energy and ability which he possesses in such abundant measure, and he has done it with an eye single to the general welfare and success of the United States in this war. [Applause.] He has turned away from his own political future and the political future of that party of which he is an able and distinguished member. There have been differences in the committee; there are differences in the committee now. I think it would have been absolutely impossible to reconcile those difficulties, even to the extent they have been reconciled, had it not been for the endless patience and the infinite tact of the gentleman from South Carolina. [Applause.]

Mr. Chairman, we are beginning the consideration of the most far-reaching, important, and drastic legislation which the Congress has ever been called upon to consider. The powers granted under this bill are so potential for good or evil that we may well hesitate to grant them, and those to whom they are granted may well shrink from exercising them.

These facts in themselves require that the conditions which make the granting of these powers both expedient and imperative should be thoroughly well understood, their purposes well defined, and the manner of their exercise fully appreciated not only by the Congress but by the people of the United States. It is only in the light of that full information that we can expect the cordial and patriotic cooperation and support both of the industries and businesses affected and of the people of the United States as a whole.

With this end in view, I propose to discuss the bill frankly in relation to the conditions which it is designed to affect and remedy and the method by which these remedies are expected to be enforced. Suppose we make an estimate of the situation, as they say in the Navy.

For nearly three years 14 of the great powers of the world, with a total area of 33,000,000 square miles and a population of over a billion people, have been engaged in the most destructive and expensive war of all history. In this war 25,000,000 men have been withdrawn from productive employment. With the exception of England, none of them is producing a normal supply of food, and none of them is producing a sufficient amount for its own needs. The food supply is low—exceedingly low—in all of them; how low it would not be wise to state.

At least seven neutrals are in substantially the same position, especially as they are under the necessity of maintaining constantly a considerable army for the preservation of their neutral status.

In all of them, belligerents and neutrals alike, and especially in those engaged in war, the normal ration has been greatly reduced, in some to very close to the minimum. Each of them is and has been under the sternest necessity known to man—that of preventing actual starvation among the civil population and providing amply for the men at the front, who must be fed under all circumstances.

The necessities of the soldier in the field and the civilian population of these belligerent and neutral countries are brought face to face at the present moment with a food shortage, augmented by an actual destruction by submarines aggregating, perhaps, as much as 300,000 to 400,000 tons per month. At the best, there is certain to be a world food shortage, which will make necessary among our Europeon allies further reductions and deprivations among the civilian population, at least, of these countries.

There is, and will be, a sufficient amount of food for the people of the United States without resorting to rationing, but the compelling economic pressure of the tremendous demand of both belligerents and neutrals presents possibilities of price inflation and food scarcity which, if unchecked, can not be contemplated without the keenest concern.

The situation with respect to the food supply from the angle of our own people is dangerous in three particulars. First, the demands of neutrals and belligerents upon our own none-too-large supply of food, if unchecked, is likely to result in an actual scarcity in this country; second, the competition of allied and neutral countries with our own Government and civilian population, particularly upon forward contracts, is likely to result in a price level which will mean actual deprivation on the part of the poorer people of the country of sufficient food to prevent starvation; third, the desire of both neutral and belligerent nations for a certain and continuous supply has resulted in excessive forward contracts; that is, contracts for future delivery. The prices fixed in these contracts, which must of necessity be high in view of the existing uncertainty in the food situation, will set the price for all at a level which can not be exacted from the domestic consumer and maintain tranquillity.

And it may be suggested that the maintenance of tranquillity is one of the first requisites in the successful prosecution of a war.

Another phenomenon of the abnormal situation with which we are now confronted is that legitimate and patriotic businesses have been forced by it into practices which are in themselves

uneconomical and into the establishment of a price level which in the aggregate, combined with the economic pressure caused by the excessive demand and insufficient supply, imposes burdens which no people can or will bear without social disturbances and phenomena which I do not care either to contemplate or describe.

Again, the economic forces and instrumentalities of commerce, which ordinarily in normal times control the distribution of food products and serve to maintain a fairly constant level of prices, have so broken down under the pressure of the conditions which I have described that they no longer serve their normal functions.

The condition which I have just outlined is one which readily lends itself to the manipulation of the speculator, to food monopolization and the evils which attend it, to extortion, to waste, and to every uneconomical and evil practice which imagination can conjure up. It is inconceivable to me that any man should take the position, either that this condition should not be remedied or that the forces which so far have proven utterly incapable of controlling it will by some miracle or alchemy of nature be able to control it in the future, when the conditions which have rendered their control by natural forces impossible in the past will have increased tenfold in difficulty.

To sum up, the food situation is fast getting out of control—running away, as it were. There is immediate and imperative need for some intervention which will reduce this abnormal condition, so far as our own people are concerned, to something approaching the normal. These are the conditions which confront us. How are they to be remedied?

It is proposed that the Government shall step in and by the exercise of the powers conferred in this bill restore the situation to approximate normality. The first essential to this control is to set up an engine by means of which the whole situation can be brought under a single hand. This it is proposed to accomplish by the appointment of a food administrator, who will, in the first instance, administer the powers conferred. Through the food administrator, arrangements will be made to combine, or pool, the purchasing power of all our allies, and to compel them and neutral Governments to purchase their supplies under the direction and control of a single central agency.

Two results will follow from this policy: First, it will eliminate competitive bidding for future delivery; second, it will enable us to retain at home a sufficient supply of food to support our population.

Then there will be set up separate engines of control under the direction of the food administrator for each commodity which it is necessary to control. These bodies will be so selected as to be representative of each link in the chain of distribution from the producer to the consumer, and will exercise a general restraining and regulating influence by arrangements and agreements, and by the adoption of rules and regulations accepted by the trade, with a view to taking up the slack and eliminating the useless links, and correcting evil and uneconomic practices.

It is the theory of this bill that industry in America is in general patriotic, and well organized to perform the functions of distribution; that the abnormal conditions which exist have combined to force industry into uncertainties and practices which industry itself would be glad to be rid of; and that most of the objects to be accomplished by the bill can be accomplished by voluntary arrangements with the trade, and by the establishment of rules and regulations for the conduct of a business which the legitimate trade itself will be entirely willing to adopt. It would be unfair, however, to bring legitimate industry within the scope of limiting and restricting rules and regulations unless a means were provided for compelling the unwilling, the unpatriotic, the vicious, and the unscrupulous, who, unfortunately, seem to exist in every line of business, to subject themselves to the same restricting rules and regulations. The penal provisions of the bill are therefore designed to compel the latter element to abide by the rules and regulations which legitimate industry recognizes are necessary for the control of distribution in the crisis which now confronts the country.

It is the intention of the committee in reporting the bill that legitimate industry shall not be unduly restricted or hampered, on the one hand, and, on the other, that no person guilty of crime against the food supply of the country shall be permitted to go unpunished.

In this legislation there can be no halfway station. The worst thing that could happen, both from the standpoint of the people as a whole and from the standpoint of legitimate industry everywhere, is that the control established should be so restricted as to be only partial or incomplete, for such control would not serve to reduce the uncertainty in which business now finds itself, but, on the contrary, would increase this uncertainty by placing legitimate industry at the mercy of both the skunk and the parasite. If we are to cross the river which confronts us, the means adopted must be effective enough to get us to the other side.

Having discussed the conditions which justify the bill as a whole, it is my intention to discuss its merits in their relation to its legal basis. It is not my purpose to quote extensively from books, but to state the conclusions at which I have arrived after a somewhat extensive examination of the decisions. These conclusions, I believe, can be sustained in every instance by the decisions of the Supreme Court.

It is my opinion that the provisions of this bill are well within the constitutional powers of Congress, that it in no case violates or invades any right guaranteed to the citizen, and that every section in it can be justified upon well-settled principles of law.

War is a fact. The existence of this fact brings into operation the so-called "war powers" of Congress and of the President. The war powers of Congress are "to declare war," "to raise and support armies," "to provide and maintain a navy," and "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States or in any department or officer thereof." I do not quote all of them, but only those which seem essential to the discussion which I have in mind.

These powers are both inclusive and exclusive. The powers granted Congress in the commerce clause are limited to transactions between the States or with foreign countries. The war powers are not so limited, and operate without reference to State lines or to the power of the States to regulate intrastate transactions.

> The Government of the United States, within the scope of its powers, operates upon every foot of territory under its jurisdiction. It legislates for the whole Nation and is not embarrassed by State lines. (Pensacola Telegraph Co. *v.* Western Union Telegraph Co., 6 Otto, 1, 10.)

The power to declare war is, of course, the power to carry on that war to a successful conclusion, and therefore to use any and every means necessary or appropriate or adapted to that purpose. (McCulloch *v.* Maryland, 4 Wheaton, 316.) The question of whether the means adopted is necessary or appropriate is, subject to review by the courts, to be determined by the legislative discretion. Whether the means are appropriate or necessary must be determined by the conditions which exist or which the legislature finds are likely to exist during the operation of the war power.

The subject matter of the bill under discussion is "To provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel." What is the relation between the national security and defense and the conduct of the war with Germany, on the one hand, and the conservation and regulation of the food supply, on the other? Is there such a relation between the conservation and regulation of the food supply and the conduct of the war as will make these purposes necessary or appropriate to the conduct of the war? Unless this question can be answered in the affirmative the legal basis of this bill fails altogether, for it is not contended that it can be sustained wholly under other provisions of the Constitution if it fails to come within the war powers.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON. Yes.

Mr. MADDEN. Does the gentleman think that we have the power to authorize the President of the United States to levy customs duties as provided in this bill?

Mr. ANDERSON. There is no such provision.

Mr. MADDEN. What about section 12?

Mr. ANDERSON. It does not convey any such power.

Mr. MADDEN. I think it does.

Mr. ANDERSON. The gentleman has reference to the minimum price proposition?

Mr. MADDEN. I have reference to the authority granted to the President to levy customs taxes on importations.

Mr. ANDERSON. I shall come to that shortly.

I think I can dispose of this whole question by three statements: First, if the allies should be wholly cut off from the food supply of America for 30 days they would within that time be compelled to make terms of peace; second, if the allies and neutrals are permitted to have unchecked access to the food supply of America there will be an actual shortage of food in the United States within eight months; third, if the abnormal conditions which now exist are not reduced to approximate normality, and the restraints and uneconomic practices which have grown up under and by reason of this abnormal condition are not removed, the price of food will be so high in this country

as to result in social disturbances wholly inconsistent with the successful prosecution of the war.

These facts demonstrate a direct and conclusive relation between the prosecution of the war, and therefore between the war power, and food regulation and control.

Having thus established the relation between the war power and the conservation and control of the food supply I intend now to discuss the bill section by section, but not necessarily in the order in which the sections occur, with a view of establishing the legal purpose and the legal basis of each.

In considering the legal basis of the bill, section by section, consideration must always be given to the general basis established, the general conditions outlined, and, of course, to the fact that this general basis is the foundation of all of the discussion which follows relative to the particular sections, and, further, that much of the discussion pertinent to one section is likewise pertinent as establishing the legal basis for others.

Section 1 of the bill declares in legal terms the fact which I have just undertaken to establish, namely, that for the purpose of conducting the war and maintaining the Army and Navy, the legislative provisions which the bill contains are essential. The purpose of this declaration is to establish the essentiality of the legislation to the prosecution of the war by the deliberate finding of the Congress, it being the judgment of those who are responsible for the language of the bill that while the court has the power, upon review, to determine that question for itself, it would be less likely to determine it adversely to the constitutionality of the bill in the face of such a legislative declaration. The power of Congress to make such a declaration, while not conclusive upon the courts, is certainly unquestioned.

Under the conditions which now exist, or which are in contemplation as reasonably probable, there are two possible devices for preventing local or general scarcity, which, of course, includes the equivalent of local or general scarcity due to the fact that food is held at a price which the general public can not pay, either of which might be used alone or in combination with the other. They are: First, the regulation of the distribution of the food supply, including limitations upon exports; and, second, control by Government purchase and possession of the necessaries themselves, or by Government manufacture. The first method is provided for in sections 3, 5, 6, 7, 11, and 13. The second method is provided for in sections 9 and 10.

The first device is in turn again subdivided into two methods of accomplishing control and regulation: First, by setting up voluntary arrangements and agreements with the trade and the voluntary adoption in the trade of rules and regulations for the government of its operations; second, the regulation of the practices, devices, rates, charges, and transactions within the trade by legislative provisions and the promulgation of regulations under penalty. Section 3 relates exclusively to the first method.

Section 3 is, in some respects at least, the most important section of the bill, for by its express terms it declares the intention of the Congress to establish a governmental control of food to extend to all the processes, methods, and activities of and for the production, manufacture, procurement, storage, distribution, sale, marketing, pledging, financing, and consumption of necessaries. It is in no sense regulatory, because the authority which it confers can only be exercised through voluntary arrangement and can in no circumstances by its express conditions be enforced under legal penalty.

Mr. LENROOT. Mr. Chairman, will the gentleman yield, or would he prefer to wait until he gets through?

Mr. ANDERSON. I am willing to yield at this time. I only want to say that there are a great many gentlemen who want to speak upon the bill, and every minute that I occupy of course deprives some other gentleman of time.

Mr. LENROOT. That is true; but this bill is very important, and time may be so limited under the five-minute rule that we can not discuss this matter fully. I think upon these crucial things time should be given now, but I do not want to interrupt the gentleman if he desires me to wait.

Mr. ANDERSON. I will be very glad to yield at this time.

Mr. LENROOT. The gentleman, then, does not concur with the view of the chairman of the committee, that this creates in itself a power beyond and outside of the other sections of the bill?

Mr. ANDERSON. Only to the extent that this confers an additional power to make voluntary agreements.

Mr. LENROOT. Yes.

Mr. ANDERSON. Which power is not carried in any other section of the bill.

Mr. LENROOT. I want to ask the gentleman this: The proviso provides that none of the penalties shall apply to this section. If this relates to voluntary agreements, is it the thought of the committee that if a voluntary agreement is entered into with the Government, even though it may violate the express provisions of the act, the penalties shall not apply?

Mr. ANDERSON. I do not know that I catch the idea that the gentleman has in mind.

Mr. LENROOT. Let me state it differently.

Mr. ANDERSON. If the act was not a violation of some other section of the bill, of course no legal penalty could be applied to it as a violation of this section.

Mr. LENROOT. Then, what possible penalty could be applied to it? What does the proviso mean unless it does modify other penalties in the specific sections?

Mr. ANDERSON. I will say to the gentleman that I am responsible for this section, whether good or bad. As I drew it originally it did not contain this proviso, because it was my thought that by its express terms without the proviso no penalty could attach to it, but there were gentlemen in the committee who wanted that made perfectly plain, and so, in order that it might be made perfectly plain, we adopted an amendment in the form of the proviso now in the bill.

Mr. LENROOT. Then I want to ask the gentleman a further question. Under familiar rules of construction, that being there, will not the court look for some purpose for its being there and therefore, in all probability, permit voluntary arrangements in violation of express prohibitions if they are made voluntarily?

Mr. ANDERSON. As far as I am concerned I am perfectly willing that it shall go out. I think it would be much better out than in, but the gentleman knows, as I do, that in consideration of a bill in the committee there are necessarily compromises, and this is a compromise.

Mr. LENROOT. I do not intend any criticism of the committee, but I am anxious to get their construction of the question.

Mr. REAVIS. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON. Yes.

Mr. REAVIS. Acts committed under section 3, if committed under voluntary agreement, would not be a violation of the law, but would be a violation of the law if not done under voluntary agreement. Is that it?

Mr. ANDERSON. I do not think that the mere fact that a man to-day entered into a voluntary agreement with the Government under section 3 would relieve him from responsibility for a violation of any other section of the bill.

Mr. REAVIS. The point I am getting at is this: If they are relieved of liability under section 3, would not the practical operation of the bill be that those who wanted to violate other sections, to relieve themselves of liability, would enter into a voluntary arrangement?

Mr. ANDERSON. I do not feel that that result could follow at all. I venture to say that if the committee had taken the other horn of the dilemma, and had provided the power conferred in section 3 under penalty, instead of by voluntary arrangement and agreement, every gentleman in the House would be tearing his hair because the committee had given the power to the President of the United States to regulate every business in the country under penalty. There could not be a penal violation of a voluntary agreement.

Mr. REAVIS. Do not misunderstand me. I am trying to get myself into an attitude so that I can support the bill.

Mr. ANDERSON. I shall be very glad to help the gentleman come to that attitude.

Mr. REAVIS. That is what I am seeking to have the gentleman do now. What I want to know is this: Is not section 3 a sort of harbor of safety for those men who violate other sections of this law? Would they not be relieved of liability if they entered into voluntary arrangement?

Mr. ANDERSON. I do not see how it could possibly be. The Government will not make that kind of a contract.

Mr. REAVIS. I do not see how it could be otherwise.

Mr. ANDERSON. There can be no agreement in violation of any section of this bill between the Government and the trade.

Mr. REAVIS. I appreciate that, and the point I am getting to is this: If there is a voluntary agreement between certain individuals and the Government with reference to the provisions of section 3, there can be no penal liability for a violation of those things in that section, can there?

Mr. ANDERSON. Not if nothing were done any further than to make a voluntary arrangement.

Mr. REAVIS. But acts under that section if committed under other sections, in the absence of a voluntary agreement, would have a penal liability attached to them, would they not?

Mr. ANDERSON. Yes.

Mr. REAVIS. And is it not within the realm of possibility that some one who seeks to violate the other sections will make

himself immune from penal liability by entering into a voluntary agreement?

Mr. ANDERSON. I do not see how he can make himself immune by entering into a voluntary arrangement. Of course if the voluntary agreement were violated it would fail at once.

Mr. REAVIS. But until it did fail the immunity would prevail.

Mr. ANDERSON. I do not regard it as immunity at all. I do not see how there can be any immunity about it.

Mr. REAVIS. I say the provision makes him immune; it relieves him of his liability.

Mr. ANDERSON. It relieves him of penal liability for violation of a proposition he has entered into by voluntary arrangement.

Mr. REAVIS. Yes; but those same acts committed under other sections of the bill would have a penal liability attached to them.

Mr. ANDERSON. That is an assumption which the gentleman makes which I do not think is justified by the facts.

Mr. REAVIS. Does not the bill declare so?

Mr. ANDERSON. I do not get the gentleman's point of view at all. What the committee was trying to avoid was making it a penal offense to fail to obey an order or direction or to enter into an arrangement which might be made or required under the broad terms of this section if its provisions were subject to penalty. The purpose of the proviso was to make it certain that the powers granted were to be exercised and the purposes to be served brought about by voluntary agreement.

Mr. NORTON. Will the gentleman yield?

Mr. ANDERSON. I will yield.

Mr. NORTON. The gentleman has suggested if the Government made a voluntary agreement with a concern it should carry on, for instance, the business of the exchange of grain, and that concern violated the purposes of this bill in such respect as to increase the prices unfairly, would not the Government at once put an end to the voluntary agreement?

Mr. ANDERSON. Unquestionably, and the penalty would be the loss of the voluntary arrangement.

Mr. NORTON. It seems to me that safeguards it; there is no question about it.

Mr. ANDERSON. Section 3 is, and is intended to be, all inclusive in its provisions and to permit the control of necessaries from the time they leave the hands of the producer until they reach the consumer. The principal legal question involved in the section, which controls the scope of the authority of the bill, is whether the control provided goes beyond that which is necessary, appropriate, or adapted to the purposes of the legislation. It is the conception of the committee that no scheme of control of the food supply can be stronger than the weakest link in the chain of control. To put it in other words, if the scheme of control fails at any point in the chain of distribution from producer to consumer, the whole scheme of control fails. It is a well-settled principle of law that where the power of Congress operates it operates absolutely and without limitation, except as to the limitations laid down for the protection of the rights of the citizen by the Constitution itself.

In Veazie Bank *v.* Fenno (8 Wall., 533, 549), upholding an act of Congress imposing a tax on the circulation of State banknotes, the court said:

> Having thus in the exercise of undisputed constitutional powers undertaken to provide a currency for the whole country, it can not be questioned that Congress may constitutionally secure the benefit of it to the people by appropriate legislation. To this end, Congress has denied the quality of legal tender to foreign coins and has provided by law against the imposition of counterfeit and base coin on the community. To the same end, Congress may restrain, by suitable enactments, the circulation as money of any notes not issued under its own authority. Without this power, indeed, its attempts to secure a sound and uniform currency for the country must be futile.

Therefore if food control is essential we have the right to extend that control by legislation or regulation to every process, method, or activity affecting the supply or distribution. The control proposed in this section is obviously appropriate and essential to the conservation and regulation of the distribution of food, which, as I have already outlined, is in its turn directly related, necessary, and appropriate to the conduct of the war.

Section 3 also includes a legislative declaration which is designed to afford a legal basis for the provisions of the bill, which authorize the requisitioning of food and the regulation of its distribution, as well as for the taking over of plants for the manufacture of food under certain circumstances. It declares that necessaries and the processes, methods, and activities incidental to their production, manufacture, procurement, storage, distribution, sale, marketing, pledging, financing, and consumption, are affected with a public interest. This declaration is related to and rests upon the basis of the conditions surrounding the food situation, which I have already outlined. It is my own theory that when there is an actual undersupply of food, and the probability that this undersupply will result in disturbances inimical to the public welfare and wholly inconsistent with the successful prosecution of the war, that the public interest in the food itself and the things and instrumentalities which are indispensable to an adequate supply, is paramount to the interest of the individual, and that that public interest, following the decision of the court in the case of Munn *v.* Illinois (94 U. S., 113) warrants, and in a legal sense justifies the regulation of the commodity and the activities connected with it to an extent and in a manner which would not be justified in the absence of the existence of such a public interest. In addition, the declaration of this public interest forms a basis for those provisions in the bill which authorize the requisitioning of foods and the taking over by the Government of plants for their manufacture, storage, and so forth.

It follows as a necessary consequence of the essentiality of a continuous and adequate supply of food for the conduct of the war that all of the means which are reasonably calculated to increase the production of food are within the purview of the war power.

It is a well-established fact that the aggregate price received by the producer for a short crop has invariably been greater than the aggregate price received for a long crop. The Government is officially asking the farmers of the country to increase production to raise the largest crop in the history of the country. In making this request, we are asking the farmer to take a risk which no other line of business is required to take, namely, first, that he will receive less money for the crop than if he had produced less; second, in the event of the ending of the war at an earlier date than is now anticipated, or in the event of the control of the submarine menace, he may be confronted with an actual loss, due to a price below the cost of production, considering the very high cost of everything which enters into that production.

To express it in a few words, it is our conclusion that one of the means of increasing production is to remove from the purview of the farmer uncertainty and the possibility of loss due to a price below the cost of production. In order to give this stimulus to production the committee has provided that the President may guarantee to the farmer a price below which he shall not be required to sell his product.

Mr. MADDEN. Will the gentleman yield there?

Mr. ANDERSON. Yes.

Mr. MADDEN. How would the President or anyone else fix the price for a man's crops where it was more than three-fourths of a failure or fix the price of a crop of a man who had a very large crop of the same cereal?

Mr. ANDERSON. That is a risk which a man would take in any event and takes under normal conditions.

Mr. MADDEN. But it might be a loss to one man and a great profit to another man.

Mr. ANDERSON. That is true, but that is a situation that pertains all the time and is not peculiar to the conditions with which we are now dealing.

Mr. GORDON. Will the gentleman yield to me right there?

Mr. ANDERSON. I will.

Mr. GORDON. The gentleman cited the Munn case against Illinois; that is the case, I believe, where the Government asserted the power over the control of the service of elevators, was it not?

Mr. ANDERSON. Yes.

Mr. GORDON. What analogy is there between a case that affected the service rendered by elevators and railroads and any other public servant?

Mr. ANDERSON. The analogy is not in the facts; the analogy is in the conclusions. The court in that case held that the power to regulate existed because the legislature had declared the instrumentality to be regulated affected a public interest. The court found as a matter of judicial fact——

Mr. GORDON. It was affected by public interest. Would the court necessarily have to find that because Congress had simply declared it is affected by public interest therefore we will take jurisdiction and legislate upon it—is that conclusive upon the court?

Mr. ANDERSON. I did not say it was conclusive upon the court. I said that the declaration served a legal purpose, as the basis for the regulations provided in other sections of the bill. The court would not be precluded by the declaration. It could determine for itself that the facts justify or do not justify the declaration of public interest in the instrumentalities affected.

But the court would be more likely to find that the facts do justify if the declaration is contained in the law.

Mr. GREEN of Iowa. While I think the gentleman may be correct in the analogy which he draws, I think, technically speaking, he is hardly correct as to the finding of the court in reference to the Munn case. Was not the finding this, that the elevators were impressed in the public service and undertook to render a public service, and for that reason were subject to legislative control?

Mr. ANDERSON. The character of the service and the conditions govern. I am not contending that this declaration, any more than the declaration in section 1 of the bill, is conclusive upon the court. In drawing this bill we very naturally attempted to give it all the legal basis that we could, and with the view of establishing that legal basis we undertook to provide a legislative declaration by Congress to the effect that in view of the conditions concerning which we are now legislating there was a public interest in the control and distribution of food.

Mr. MADDEN. Will the gentleman yield to me for a question right there?

Mr. REAVIS. Will the gentleman yield?

Mr. ANDERSON. I will yield first to the gentleman from Nebraska.

Mr. REAVIS. That declaration is put in the legislation, as I understand the gentleman, with no hope other than it may prove persuasive if the act is ever construed by the court, not as a conclusive determination of the policy?

Mr. ANDERSON. I do not think we could make a determination of the policy that would be conclusive upon the court.

Mr. REAVIS. The only purpose in putting it in there was in a persuasive capacity?

Mr. ANDERSON. The gentleman puts it very mildly, I think. Courts usually are very reluctant to overturn a legislative finding of fact, and, I think, would be very reluctant in this emergency to overturn a legislative finding of fact with respect to this particular proposition.

Mr. REAVIS. That was the purpose of its incorporation?

Mr. ANDERSON. Yes.

Mr. MADDEN. Will the gentleman yield?

Mr. ANDERSON. Yes.

Mr. MADDEN. Would the Government of the United States, under this bill, have the power to fix minimum prices on farm products that did not enter into interstate commerce?

Mr. ANDERSON. Well, the war power is very extensive, and whether it applies to any particular condition or not must always depend upon the condition itself. The courts must find as a matter of judicial conclusion that the particular method or means provided is essential or adapted to the carrying out of some purpose which the Congress has the power to carry out under the Constitution.

Mr. MADDEN. The question is, Have we the power under the Constitution to authorize anybody to fix the price upon a thing that does not enter into the realm of interstate commerce?

Mr. ANDERSON. My answer to that is that that limitation which applies to the commerce clause in the Constitution does not apply to the war power.

Mr. LENROOT. Will the gentleman yield right there?

Mr. ANDERSON. Yes.

Mr. LENROOT. I agree with the first construction; but this is also true, is it not, that the court might look at the act as a whole and in all of its parts and determine whether the given legislation is intended by Congress as an exercise of the war power? If it is, it will be sustained. If, on the other hand, they find the intention of the Congress in a particular thing was municipal, it could not be sustained.

Mr. ANDERSON. The gentleman's argument is persuasive. I do not know that it is conclusive in the form in which he puts it.

Mr. REAVIS. Does the gentleman believe, even though the court should determine in construing the legislation that it was the intention of Congress to exercise the war power, but the facts did not justify the exercise, that the intention would be persuasive enough upon the court to decree the legislation constitutional?

Mr. ANDERSON. The court, of course, would not construe this act to be constitutional upon what it thinks the intention of Congress was. It will construe it upon the intention which is expressed in the act.

Mr. REAVIS. Will not they construe it, rather, upon the fact itself, that if the legislation is a legitimate use of the war power of the Constitution it will be held valid by the court without regard to the intention of Congress?

Mr. ANDERSON. I said some time ago that the question of the constitutionality of this act or any act under the war power was very largely a question of the determination of fact, and that any legislative declaration of the essentiality of a provision was only worth what it was worth on its face as a declaration.

Mr. REAVIS. The only thing that is valid would be what is determined by the courts to be necessary for the conduct of the war?

Mr. ANDERSON. Yes.

Section 4 of the bill serves a legal purpose. This purpose primarily is to avoid the vice of delegation of legislative power to the Executive, and in it we undertake to lay the legal basis for the regulation which is provided in sections 5 and 11, by declaring that it is unlawful to—

> destroy any necessaries for the purpose of enhancing the price or restricting the supply thereof; knowingly to commit waste or willfully to permit preventable deterioration of any necessaries in or in connection with their production, manufacture, or distribution; to hoard, as defined in section 6 of this act, any necessaries; to monopolize or attempt to monopolize, either locally or generally, any necessaries; to engage in any discriminatory and unfair or any deceptive or wasteful practice or device, or to make any unjust or unreasonable rate of charge, in handling or dealing in or with any necessaries; to conspire, combine, agree, or arrange with any other person (a) to limit the facilities for transporting, producing, manufacturing, supplying, storing, or dealing in any necessaries; (b) to restrict the supply of any necessaries; (c) to restrict distribution of any necessaries; (d) to prevent, limit, or lessen the manufacture or production of any necessaries, or to enhance the price thereof; or (e) to exact excessive prices for any necessaries, or to aid or abet the doing of any act made unlawful by this section.

Neither the Executive nor the courts can make any act or omission unlawful. But where Congress has declared certain things to be unlawful the Executive may, by administrative action, by the making of rules and regulations, prevent the doing of the things which Congress has declared to be outside the law. All of the things prohibited constitute offenses against the express purposes of the act, namely, to conserve the food supply and provide for the equitable and economic distribution thereof. If food is essential to the conduct of the war, it is necessary that the restraints which prevent its manufacture and production in the largest possible quantities and in the most equitable and economic manner should be removed. This fact brings the prohibitions of section 4 within the purview of the war power.

Section 5 rests for a legal basis upon the statement which I have just made that if a continuous and adequate supply of food is essential to the conduct of the war, it is within the purview of the war power to remove from it the restrictions, evil practices, and unjust, discriminatory, unfair, and unreasonable charges and devices which prevent or hinder or limit the procurement, manufacture, or use of food in the most economical and efficient manner from the standpoint of the country as a whole.

Again, if food and the processes, methods, and activities connected with its production, manufacture, procurement, and so forth, are, as I have attempted to demonstrate, affected with a public interest by reason of the conditions obtaining as a result of the war, food and the activities, methods, and processes connected with its production, manufacture, procurement, and so forth, are subject to a regulation extending beyond that which would be legal as applied to articles or instrumentalities not so affected. We have therefore undertaken to establish a control of food and the processes, methods, and activities to which I have referred by prohibiting these activities except under licenses issued under authority of the section, when the President shall have found the fact that this regulation is essential to carry into effect the purposes of the act. Using the license as a convenient method of control, we undertake to regulate through this section the practices, devices, rates, and charges which any of the instrumentalities licensed may use or adopt.

Mr. MADDEN. Will the gentleman yield there?

Mr. ANDERSON. Yes.

Mr. MADDEN. Are these licenses supposed to be voluntary agreements entered into with the people?

Mr. ANDERSON. They are not. The license is compulsory when required at all. We have established a legislative basis of authority for the exercise of the power of regulation conferred in this section by declaring in section 4 that it is unlawful to engage in any discriminatory and unfair or wasteful device or practice, or to make any unreasonable or unjust rate or charge, and by requiring the administrative power to determine the fact that a given practice or device is or is not discriminatory and unfair or wasteful, or that a given rate or charge is unjust or unreasonable.

Mr. GREEN of Iowa. Will the gentleman yield there?

Mr. ANDERSON. I yield to the gentleman from Iowa.

Mr. GREEN of Iowa. Was there any special reason for not providing a penalty for a violation of section 4?

Mr. ANDERSON. Yes. It was the opinion of the Solicitor of the department that the prohibitions of this section were of such

a general character that to apply a penalty to all of them would put the entire country under fear and adversely affect the ordinary processes of trade. That in many instances the offense, if I might call it that, was stated in such general terms that it probably could not be sustained in any event as a purely criminal statute subject to penalty. That is the reason given by the Solicitor, which the committee accepted.

Mr. PLATT. Mr. Chairman, will the gentleman yield further?

Mr. ANDERSON. I yield to the gentleman from New York.

Mr. PLATT. Is there any reason why there should not be a penalty for willfully destroying necessities for the purpose of enhancing their value?

Mr. ANDERSON. There is a penalty for that in another section of the bill. I might add that there are some things in the section which are not now penalized which I think ought to be penalized, but I think they ought to be penalized separately instead of attempting to apply a general penalty to all of them.

Mr. PLATT. It seems to me that a penalty for unlawfully destroying things would be the most important penalty in the bill.

Mr. ANDERSON. There is a penalty in another section covering that.

Now, sections 7 and 8 deal with the hoarding of food. Everything that I have already said with reference to the power to enact this legislation justifies the provisions of these two sections. If it is necessary to maintain an adequate supply of food, it is essential to remove the restraints which prevent the equitable distribution and use of that food and to make it available for the use of the Army and the Navy, the civilian population, and our allies. No one, I think, can successfully controvert that conclusion.

Section 7 makes it a crime to hoard food. For the purpose, first, of giving notice to the public of what hoarding is; second, to make the crime sufficiently definite to bring it within the legal requirement that the crime shall be so defined as to put the public upon notice as to what acts or omissions constitute it; we have undertaken to define it. The definition is self-explanatory, but a word may make its purpose clear. The definition provides that food shall be deemed to be hoarded within the meaning of the act when (a) held, contracted for, or arranged for by any person in a quantity in excess of his reasonable requirements for use or consumption by himself and dependents for a reasonable time. This language is designed to protect the householder in the ordinary practices of his household with respect to purchasing or holding a supply of food for domestic use.

Mr. CAMPBELL of Kansas. Mr. Chairman, will the gentleman yield there?

Mr. ANDERSON. Yes.

Mr. CAMPBELL of Kansas. The gentleman is acquainted with farm life, as most of us here are, and he knows of farmers who have probably carried over from last fall to this spring anywhere from 1,000 to probably 2,000 bushels of wheat. If this law had been in effect, this food dictator could have taken Mr. Abrams, for example, who carried over 2,000 bushels of wheat, and socked him in jail, could he not?

Mr. ANDERSON. No. The gentleman is entirely mistaken about that.

Mr. CAMPBELL of Kansas. Then why not?

Mr. ANDERSON. Because there is a proviso at the end of this section that exempts from its operations food that is withheld by any farmer which was produced upon land owned or operated or leased by him. This hoarding section does not apply to the farmer at all.

Mr. TOWNER. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON. Yes.

Mr. TOWNER. That is the latter part of section 5, on page 6.

Mr. CAMPBELL of Kansas. I asked the question because of the construction that the gentleman had placed on the bill as a whole—that any person who held more than enough for himself and his immediate necessities and those dependent upon him would come within the operation of the act.

Mr. ANDERSON. The gentleman unfortunately interposed at a point in the middle of the definition. If the gentleman had waited a moment, we would have gotten to the point where his inquiry would have been entirely pertinent.

Food is hoarded under this section if it is held, contracted for or arranged for, by any manufacturer, wholesaler, retailer, or other dealer in a quantity in excess of the reasonable requirements of his business for use or sale by him for a reasonable time, or in excess of a quantity reasonably required to furnish necessaries produced in surplus quantities seasonably throughout the period of scant or no production. Two purposes are served by this part of the definition. First, it protects the manufacturer, wholesaler, or retailer in holding or contracting for a supply of raw materials or other products used or sold by him in accordance with the usual practices of the trade; second, it is designed to provide for the storage of the character of foods which are produced in large quantities at some seasons and produced either in small quantities or not at all at others.

Mr. SINNOTT. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON. Yes; I yield to the gentleman from Oregon.

Mr. SINNOTT. I would like to have the gentleman's explanation as to how this hoarding provision will affect, for instance, the northwestern fruit raisers and apple raisers. They ship out some 10,000 or 15,000 carloads each year. They have some warehouses in the West where they store their apples. The apples are harvested by October or November and are either placed in the warehouses in the West or they are sent to eastern points, where they are sold thereafter. Some of those apples do not become ripe or mellow until January or February, and the growers are compelled to store the apples. I would like to have the gentleman's view as to how they are affected by the provisions of the bill.

Mr. ANDERSON. They would not be affected at all unless they were held or stored in unreasonable quantities or for an unreasonable time—that is, if they were held or stored in quantities in excess of the amount required to take care of the season of no production or short production.

Mr. SINNOTT. Is it the gentleman's view that they will be permitted to carry on the business in the future as they have done in the past in the face of this provision?

Mr. ANDERSON. Absolutely so.

Again, food is hoarded when it is withheld, whether by possession or under any contract or arrangement, from the market by any person for the purpose of unreasonably increasing or diminishing the price. It is apparent that food may be withheld from the market just as effectively by a contract or series of contracts as by actual possession, and it is the view of the committee that when so withheld by either possession or contract or arrangement, solely for the purpose of increasing or diminishing the price, the possession or withholding for that purpose ought to and properly does constitute hoarding within the purview of regulation of the food supply for the purpose of successfully conducting the war.

May I have the attention of the gentleman from Kansas [Mr. CAMPBELL]? I am referring now to the matter about which he asked a moment ago. The section also exempts from the operation of the section products of the farm or garden accumulated or withheld by any person who produces them. The power of the legislature to make the distinction which is herein made is well established, and in this case only amounts to a declaration on the part of Congress that under the conditions which now exist regulation of food products actually produced by the farmer or gardener and withheld by him is not essential for the purposes of the act. Manifestly the exemption is within the rule with respect to classification laid down in German Alliance Insurance Co. *v.* Kansas (233 U. S., 389), in which the court said, page 418:

> A citation of cases is not necessary, nor for the general principle, that a discrimination is valid if not arbitrary, and arbitrary in the legislative sense—that is, outside of that wide discretion which a legislature may exercise. A legislative classification may rest on narrow distinctions. Legislation is addressed to evils as they may appear, and even degrees of evil may determine its exercise.

Mr. SWITZER. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON. Yes; I yield to the gentleman from Ohio.

Mr. SWITZER. Do I understand the product of the farm is not exempt unless it is produced by the man who raised it? Suppose a man is on a farm and he receives so much in grain as rent? He does not produce it.

Mr. ANDERSON. This is the language, and it probably expresses the thought better than I could do it in a similar number of words:

> *Provided, however,* That any accumulating or withholding by any farmer, gardener, or any other person, of the products of any farm, garden, or other land owned, leased, or cultivated by him shall not be deemed to be hoarding within the meaning of this act.

The gentleman will note that the language is very broad and seems to cover every possible contingency.

Mr. SLOAN. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON. Yes; I yield to the gentleman from Nebraska.

Mr. SLOAN. Has the gentleman made any estimate, based on the conditions obtaining this year, as to how much the food product of this year could be reached, eliminating, of course, that which was held on the farm and that which was held by the legitimate retailer or wholesaler, leaving a portion of it to be under the ban or control of this law? Can the gentleman tell

how much would probably be affected by the bill, eliminating the farm holdings, and so forth?

Mr. ANDERSON. It would vary, of course, a great deal with different products. I might say that our theory about it is that there is not any necessity, and if there was any necessity it would be absolutely impossible to undertake the regulation of the food until it leaves the hands of the producer. In making that statement I base my conclusion very largely on the experience which I understand Germany has had in that direction. She has attempted to require the farmer to sell his products. That attempt has been a failure, because she found that the only way she could compel him to sell was to take them away from him. When she came to take them away from him she found that she did not have the actual wagons and horses and machinery to do it, so that any attempt to take the product out of the hands of the producer has been an absolute failure wherever it has been tried, and would be here.

Mr. ALEXANDER. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON. Yes; I yield to the gentleman from Missouri.

Mr. ALEXANDER. To undertake to do that would be to discourage the production itself, and thus defeat the whole purpose of the legislation.

Mr. ANDERSON. Yes. I agree with the gentleman on that.

Mr. PLATT. Mr. Chairman, will the gentleman yield again?

Mr. ANDERSON. Yes.

Mr. PLATT. Is it not a fact that a considerable number of western farmers, owning thousands of acres, do store a great deal of grain and are really speculators as well as farmers?

Mr. ANDERSON. There are a few, but they are by far the exception, both in number and in quantity of grain controlled.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HAUGEN. Does the gentleman want more time?

Mr. ANDERSON. Yes.

Mr. HAUGEN. How much?

Mr. ANDERSON. I do not know. It may take me 20 minutes, if I am not interrupted.

Mr. SNOOK. Mr. Chairman, I want to ask one question.

Mr. LEVER. I suggest to the gentleman that he proceed without interruption.

Mr. ANDERSON. I should be glad to do that.

Mr. SNOOK. I should like to ask the gentleman one question on this section, which he has been discussing.

Mr. LENROOT. I should like to ask the gentleman one question before he concludes.

Mr. ANDERSON. All right.

Mr. LEVER. The gentleman from Iowa [Mr. HAUGEN] has control of the minority time.

Mr. LENROOT. Just one question.

Mr. ANDERSON. I will be glad to yield to the gentleman later.

Mr. SNOOK. Just one question.

Mr. ANDERSON. I yield to the gentleman for one question.

Mr. SNOOK. In describing the necessaries to be hoarded, paragraph A of that section uses this language:

(a) Held, contracted for, or arranged for by any person in a quantity in excess of his reasonable requirements for use or consumption by himself and dependents for a reasonable time.

And the same language is used in the section as to retailers. How is that question to be decided? Do you understand that if a person were indicted it would be a question for the jury to decide?

Mr. ANDERSON. I should think so.

Mr. SNOOK. It would be a question for the jury?

Mr. ANDERSON. I should think so; yes.

It is obvious that where food is actually hoarded within the purview of section 6 that the authority to prosecute the person offending against the law does not constitute a complete remedy. It is also necessary to provide a method of getting the food into the channels of trade and to make it available for consumption. The committee has therefore, in section 7, provided a legal method of getting the food out of the possession of the person who is hoarding it and placing it on the market. The language of the section is adapted from the language which is found in the pure-food law and proceeds upon the theory that where an article is used, produced, or held unlawfully the article is itself outlawed and subject to disposition by the Government under appropriate legal process. Indeed we might have gone much further than we did in this section. We could have provided for the actual confiscation of the goods without payment, as is provided in the pure-food law and also in the antitrust act.

Section 11 relates to the regulation of speculation and transactions upon exchanges, boards of trade, and similar institutions and places of business. The indispensability of the regulation of these institutions, which have directly to do with the control and distribution of food, can scarcely be questioned if the fundamental basis of the bill is accepted, but the necessity and appropriateness of this regulation to the purposes of the bill may be made even more apparent by an analysis of the effect of this trading upon the normal processes of exchange and distribution and the relation which these processes now bear to the new conditions which have resulted from the war. It may be admitted, for the purpose of argument, that speculation in its broad sense in normal times serves a useful purpose both in stabilizing the price and maintaining a fairly constant level of prices throughout the entire crop season, and that exchanges in general serve a useful purpose in broadening and extending the market for food products.

It is not necessary to deny the usefulness of either exchanges or speculative transactions in order to establish a basis for the regulation provided in this section. The large volume of purchases and sales upon exchange in times of normal production and consumption, and of normal relation between supply and demand, both as to cash and future trading, tend to neutralize each other, and therefore to keep the price at a comparatively stable level. But the conditions now with respect to supply and demand are abnormal. There is, as I have already stated, an actual world undersupply of food products. This undersupply, coupled with the imperative and compulsory need of foreign governments, and of manufacturers, results in a price tendency in only one direction; that is, upward. Foreign governments, both allies and neutrals, and domestic manufacturers as well, recognizing the fact of an undersupply, undertake to reduce the resulting uncertainty of a supply for their compelling requirements to a certainty by forward contracts. In making these forward contracts the price is of little importance compared with the assurance of a certain supply. It is therefore apparent that the price is not fixed as it would be in normal times by normal buying and selling but by the unprecedented and imperative necessity occasioned by the war. Our people can not compete with this necessity under the present condition of the supply. If there were no war, the price level might be left to the determination of normal operations, but under existing conditions, leaving the price level to the determination of the ordinary operations of trade will defeat the success of the war, either by draining the country dry of its food supply or by establishing a price which the public can not and will not pay without social and economic disturbances which will threaten the very existence of the Government.

Section 9 authorizes the President to purchase or otherwise provide for the production or manufacture of necessaries, to store them, and to procure storage facilities for them by construction, purchase, lease, or otherwise, to sell them, and also for the purposes of the act to requisition them. You will notice that this section contains two distinct processes of obtaining food on the account of the Government for effectuating the purposes of this act. One of them is by voluntary arrangement and the other is by requisition under the power of eminent domain. The latter process rests upon the theory that the articles and facilities mentioned in the section are in the purview of the conditions which now exist affected with a public interest. The same question is presented with reference to this section as is presented with respect to others. Is the means herein prescribed essential and appropriate to the general scheme of control which it is proposed to establish in order to provide an adequate supply of food for all of those governments and interests which must be served if the war is to be brought to a successful conclusion and in order to maintain the domestic tranquillity which is essential to its prosecution? The essentiality of the provision is again a matter of fact, either existing or probable in the future.

We have provided in the bill for a guaranty to the farmer of a minimum price for his product. We are under obligation to maintain for our own people during the war a supply of food in adequate quantities and at prices which they can pay. It is quite conceivable that to accomplish either of these purposes the Government might find it necessary to purchase large quantities of food in the open market, or provide for its manufacture, or actually to requisition it. Indeed, without these powers the whole scheme of control would fail absolutely; without them it would be impossible to establish the control at all.

This section contemplates that the Government may find it necessary to purchase, or manufacture, or requisition food for either one or all of three purposes: First, to make good the minimum guaranty; second, to regulate the price by controlling a substantial portion of the product; third, to provide against local shortage by governmental distribution at a fixed price.

It is provided in every instance where necessaries are requisitioned by the Government that adequate compensation shall

be paid, and with respect to the compensation to be paid we have followed the language with reference to requisitioning in the Army and Navy bills. The only question which might be raised in connection with this section is as to whether or not providing that just compensation may be recovered in an action against the Government constitutes due process of law. The adequacy of this provision as against the constitutional right of the individual for just compensation has been established by numerous decisions.

We have provided that the power of requisitioning shall not extend to necessaries held by individuals for consumption of themselves and dependents, thereby declaring that it is not the purpose of the Congress to allow the invasion of the home, and that the regulation of consumption by individuals through regulations for rationing is not considered essential by the Congress to the purposes of the act.

Section 10 authorizes the President, whenever he shall find it impossible by license or voluntary arrangement or agreement to assure an adequate and continuous supply of necessaries to requisition and take over, for use or operation by the Government, any factory, mine, or other plant, or any part thereof, in which any necessaries are or may be manufactured, produced, prepared, or mined. Compensation is provided for the taking over, use, or occupancy of any such factory, mine, or plant, in the same manner as in section 9.

That which I have already said in relation to section 9, and with regard to the general process of this bill, is applicable to this section, and seems to make unnecessary any discussion of it in detail. It is designed to meet such a situation as this: Suppose that one of the large mills in Minneapolis, manufacturing a substantial part of the flour supply of the country, should for any reason refuse to continue operation. The refusal would have an immediate effect upon the food supply of the country. This section is designed to take care of such a situation and to provide Government operation of a factory or mine where private operation for any reason fails.

Section 13 authorizes the President to limit or prohibit the use of other food products in the manufacture of alcohol or of alcoholic or nonalcoholic beverages. The relation of this prohibition to the conservation of the food supply is too apparent to need comment, explanation, or elucidation.

This bill is national in its scope. It is not designed to benefit any class as against any other class. To the producer it holds out that if he rises to the patriotic necessity of the situation and produces a large crop, he will not again have the experience of receiving for that crop a less amount in the aggregate than he would have received if he had produced a small one. It guarantees to the farmer the cost of production and a reasonable, even a liberal, profit, taking into consideration the cost of everything which he has to buy entering into the production. It gives him the assurance that he will get the benefit of every dollar paid for his product by the ultimate consumer less reasonable profits to the necessary middlemen in manufacturing and distributing it. It proposes to give him an open market, freed from the manipulations of the speculator and from the charges and burdens of the parasite.

Mr. GORDON. Will the gentleman yield there?

Mr. ANDERSON. I agreed not to yield, and I would prefer not to be interrupted until I finish.

To the consumer it gives the assurance that the price he has to pay will not represent a price inflated by hysterical or uneconomical purchases by foreign governments, by speculation or conspiracy, or by the imperative and compulsory demands of war, but on the contrary that the price he has to pay will be a reasonable price and will bear a reasonable relation to the price which the farmer received for the crop in the first instance. Neither the producer nor the consumer has a right to ask more.

To the business man this bill gives the assurance of relief from the awful uncertainty which now surrounds every trade relation and transaction, an assurance that he will be informed as to just what his Government expects from him, both in the manner of conducting his business and the service which he is expected to render.

Congress declares war; the President makes war. The President is responsible for the successful prosecution of the war, but responsibility contemplates and must be accompanied with power and authority. The President must have every power and every authority essential to meet his responsibilities, and these powers must not be hampered by restricting or limiting provisions which may prevent the doing of any necessary thing. For my part, I am willing to give the President that power and authority. But this power and authority will be worthless and ineffectual unless it is sustained by the cordial and unstinted support of a united and determined people.

Food in large quantities is absolutely indispensable to the success of the war. Nothing that can be done now will greatly increase the actual amount which will be available for the current year. We can only increase it by eliminating every preventable waste, every uneconomic practice, every unnecessary use. Laws or the enforcement of laws can not alone accomplish this elimination. It can be accomplished only by cheerful acquiescence in the methods and means adopted by the Government to effectuate it, by voluntary surrender and willing sacrifice of wonted privileges, rights, and customs to the common cause. [Applause.]

I can not comprehend the attitude of those who set themselves up as champions of individual rights, and cloaking themselves in this disguise oppose the measures designed to permit the administration to assert the full force and vigor of the Nation for the redress of its wrongs, the vindication of its rights, the maintenance of its place among the nations of the world, and the establishment of a peace so just and so permanent that war may be hereafter impossible. [Applause.]

Mr. Chairman, nations have been sustained because men have been willing to surrender every individual right and privilege to secure their preservation. We are requiring some of the men of the Nation to fight in foreign lands, to surrender everything, even unto death, in payment of their obligation of citizenship, that the Nation's rights may be vindicated and her wrongs redressed. Is it too much to ask that those who remain at home surrender somewhat of their accustomed rights, privileges, and practices that these men shall not sacrifice in vain? [Applause.]

Now I yield to the gentleman from Wisconsin [Mr. LENROOT], if he is in the Chamber, or to any other gentleman.

Mr. PLATT. I want to ask the gentleman one question.

Mr. ANDERSON. I yield to the gentleman from New York.

Mr. PLATT. I want to ask the gentleman if it is his opinion that the provisions of this bill, when carried into effect, are likely really to reduce present prices, and whether it is not true that present prices are what are most instrumental in effecting saving?

Mr. ANDERSON. Of course in the broad economic sense the price does bear a relation to the quantity of consumption.

Mr. PLATT. Unquestionably.

Mr. ANDERSON. But the gentleman realizes, of course, that it would be quite impossible at present for us to undertake to reach that situation by a system of rations; and, of course, while reduction in the price may to some extent encourage a greater use of food, it is expected that an appeal to the patriotism of the public will result in an actual reduction in the consumption. And I may say to the gentleman that I am told that the propaganda already made toward a smaller consumption of wheat has resulted in a reduction in the domestic demand equivalent very nearly to 30 per cent.

Mr. PLATT. I have not any doubt that is true; but the gentleman has not fully answered one thing. Does he think the carrying out of the provisions of this bill are likely to much reduce prices? Are not the people somewhat in danger of being deceived as to what the bill can do?

Mr. ANDERSON. I think there is, of course, a more or less well-defined limit as to the extent to which you can reduce prices, or to which it is desirable to reduce them. You have two ends to this problem. One is the production end, which you desire to stimulate. The other is the consumption end, which you desire to reduce as far as possible. There might be another end, and that is the price end. They are more or less inconsistent with each other. But it is a theory of Mr. Hoover, if I understand correctly, that there is a point at which you can fix the price which will stimulate the largest production and that the minimum price will be fixed at that point, which will not be unfair to the consumer.

Mr. TILSON. Will the gentleman yield?

Mr. ANDERSON. Yes.

Mr. TILSON. Is it not the intention to prevent further elevation of prices and relieve the uncertainty in the minds of the people as to the level to which prices may rise unless something is done?

Mr. ANDERSON. There is a great uncertainty, and the stabilization of prices is very desirable.

Mr. TILSON. And if the prices are not reduced, if there was a feeling that there would not be extremes in prices one way or the other, it would have a beneficial effect on the producer and the prospective consumer?

Mr. ANDERSON. Yes.

Mr. LENROOT. Will the gentleman yield?

Mr. ANDERSON. Yes.

Mr. LONGWORTH. I have not had the advantage of hearing all of the gentleman's excellent speech. I do not know whether he referred to the provisions in section 12 authorizing the

President to fix certain tariff rates; has he any doubt as to the constitutionality of that?

Mr. ANDERSON. If I have, I do not think I care to express them here. [Laughter and applause.]

Mr. LENROOT. I want to ask the gentleman a question as to section 21, which provides that this bill may remain in operation one year after the war is closed. Upon what theory does the committee contend that we have any right to enact this kind of legislation and let it remain in force after the war is over?

Mr. ANDERSON. That is a question which has not been raised by anyone, so far as I know. I have an impression, however, that I have read somewhere a decision which seems to justify the extension of this legislation beyond the point of the actual end of the war if the emergency resulting from it still continues.

Mr. LENROOT. Is the case the gentleman has in mind the cases arising in California, where the Mexican War legislation was sustained on the ground that we got territory by the conquest, and we had a right to legislate on that ground?

Mr. ANDERSON. I have read that case; I do not know whether that is the case I have in mind or not. My recollection of it is rather hazy.

Mr. HAUGEN. Mr. Chairman, I yield 30 minutes to the gentleman from Iowa [Mr. TOWNER].

Mr. TOWNER. Mr. Chairman, it is not my purpose in what I shall say to discuss either the necessity for nor the provisions of the bill. I shall not at this time even discuss the constitutionality of particular provisions of this bill. I intend to discuss the war powers of Congress under the Constitution, not only as applicable to this bill but as to all legislation enacted or proposed which invokes the war powers of the Constitution. The constitutionality of some of the legislation already passed by Congress during this war has been challenged, the powers sought to be given by this bill are now challenged, the exercise of the war powers by Congress in the passage of further legislation doubtless will be challenged. It may be that a discussion of these questions in a general way will be of value both now and in the future.

The major war powers conferred by the Constitution on Congress are found in Article I, section 8, paragraphs 11, 12, and 13. It is therein provided that Congress shall have power "to declare war," "to raise and support armies," "to provide and maintain a navy."

As directly interpretive of these, as well as other grants of power to Congress, it is provided—Article I, section 8, paragraph 18—that Congress shall have power "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers."

The nature and scope of these provisions have been under consideration and interpretation for more than a century. They have been discussed and passed upon by statesmen and jurists as able and worthy as any the world has ever seen. It will help us to clear views and sound judgment to review some of this comment and exposition.

These war powers of the Constitution were most persistently and bitterly assailed both in the convention which formulated the Constitution and in the discussion which preceded its adoption. It is a matter of history that no other powers of the Government were more strongly contested than were these. That the provisions were retained in such broad and practically unlimited form after such critical and careful consideration is ample vindication of their wisdom. With full understanding of their significance they were finally approved as necessary for the security and preservation of the Nation.

The discussions regarding these powers in the Federalist are among the ablest in that great work. Frankly and without qualification the matchless statesmen who wrote those papers contained in what we now know as the Federalist contended for the granting of the tremendous war powers as now written in the Constitution without restriction and in full plenitude.

In one of these papers written by Hamilton he said:

> The authorities essential to the common defense are these: To raise armies, to build and equip fleets, to prescribe rules for the government of both, to direct their operations, to provide for their support. These powers ought to exist without limitation, because it is impossible to foresee or define the extent and variety of national exigencies or the correspondent extent and variety of the means which may be necessary to satisfy them. The circumstances that endanger the safety of nations are infinite, and for this reason no constitutional shackles can wisely be imposed on the power to which the care of it is committed. This power ought to be coextensive with all the possible combinations of such circumstances.

Not less emphatic was Madison on the subject. In one of the papers written by him, he said:

> With what color of propriety could the force necessary for defense be limited by those who can not limit the force of offense? If a Federal constitution could chain the ambition or set bounds to the exertions of all other nations, then, indeed, might it prudently chain the discretion of its own Government, and set bounds to the exertions for its own safety. * * * The means of security can only be regulated by the means and the danger of attack. They will, in fact, be ever determined by these rules and by no others. It is in vain to oppose constitutional barriers to the impulse of self-preservation.

From these extracts it is evident that at the outset the framers of the Constitution clearly understood that it conferred practically unlimited power to prepare for and wage war, and that they justified such grant of power on the ground that because it was not possible to limit the character nor the extent of the attack it would be folly to limit the character or the extent of the defense, and that position was indorsed by the approval of the Constitution by the people. They had just passed through seven years of foreign war and they were not disposed to handicap the young Republic which had just won its independence by restrictions which might imperil its continued existence.

The same view has been held by jurists and the courts.

Willoughby, in his late work on Constitutional Law, volume 2, page 1212, says:

> The constitutional power given to the United States to declare and wage war, whether foreign or civil, carries with it the authority to use all means calculated to weaken the enemy and to bring the struggle to a successful conclusion. When dealing with the enemy all acts that are calculated to advance this end are legal.

In Ex parte Milligan (4 Wall., U. S., 2), a decision of the Supreme Court of the United States, it was said:

> Congress has the power not only to raise and support and govern armies, but to declare war. It has, therefore, the power to provide by law for carrying on war. This power necessarily extends to all legislation essential to the prosecution of war with vigor and success, except such as interferes with the command of forces and the conduct of campaigns. That power and duty belong to the President as Commander-in-Chief. * * *
>
> The power to make the necessary laws is in Congress, the power to execute in the President. Both powers imply many subordinate and auxiliary powers. Each includes all authority essential to its due exercise.

In delivering the opinion in the Legal Tender cases (12 Wall., U. S., 457), Mr. Justice Bradley said:

> It is absolutely essential to independent national existence that Government should have a firm hand on the two great sovereign instrumentalities of the sword and the purse, and the right to wield them without restriction on occasions of national peril. In certain emergencies government must have at its command, not only the personal services, the bodies and lives of its citizens, but the lesser, though not less essential, power of absolute control over the resources of the country. Its armies must be filled and its navies manned by the citizens in person. Its material of war, its munitions, equipment, and commissary stores must come from the industry of the country.

POWER TO DECLARE WAR.

John Randolph Tucker, in his able and exhaustive work, The Constitution of the United States, volume 2, page 577, says:

> The words "to declare" include the power to make war, with all the incidents of raising armies and navies which the Constitution has confided to Congress.

This language is not, however, so much intended as a delegation of power as a limitation of power of the Executive. Under a monarchical system the king held exclusive possession of the power to make war and declare peace. By granting the prerogative to declare war to Congress this great power is removed from Executive authority and conferred expressly on the representatives of the people.

The grant of power as particularly applying to the Army is conveyed in the words—

"TO RAISE AND SUPPORT ARMIES."

The clause as originally reported was "to raise armies." The addition of the word "support" was added in the report of the committee. Over this a spirited debate occurred in the convention. It was finally adopted with full understanding of its far-reaching significance.

It was held in Tarble's case (13 Wall., U. S., 408) that under this provision of the Constitution the control of Congress over the subject is—

> plenary and exclusive. It can determine without question from State authority how the armies shall be raised, whether by voluntary enlistment or forced draft, the age at which the soldier shall be received, the period for which he shall be taken, the compensation he shall be allowed, and the service to which he shall be assigned.

Mr. Tucker, in discussing the clause "to raise and support armies," says, volume 2, page 579:

> The question arose under the conscription act passed by the Confederate congress during the late war whether it was competent for that congress by conscription substantially to exhaust the material out of which the militia was composed. It was objected that this would make a standing army composed of the whole of the militia and would leave to the States no armed force to resist its power. The Court of Appeals of Virginia decided there was and could be in reason no limitation put upon the size of the army which was to be raised, and that the objection to the law was not good.

"TO PROVIDE AND MAINTAIN A NAVY."

This provision confers on Congress the same powers with regard to the Navy as that with regard to the Army.

The corresponding language in the confederation was "to build and equip a Navy." It will be noticed that the language adopted in the Constitution is broader and more comprehensive.

This provision was assailed as dangerous to the Republic. To attempt to rival European powers would only invoke war and probably conquest, it was said. The cost, too, of maintaining a navy would be enormous and much beyond our resources.

To these objections it was argued that the absolute necessity of a navy, both as a protection to our commerce and our coasts, was apparent. Blackstone's Commentaries was quoted, in which he said that the navy of England had ever been its greatest defense and ornament.

> It is its ancient and national strength; the floating bulwark of the island; an army, from which, however strong and powerful, no danger can be apprehended to liberty.

It was held in United States *v.* Rhodes (27 Federal Cases, No. 16, 151) that the clause of the Constitution which declares that Congress shall have power "to provide and maintain a navy," authorizes the Government to buy or build any number or character of ships, to man, arm, and otherwise prepare them for war, and to dispatch them to any accessible part of the globe.

CONGRESSIONAL DISCRETION.

Not less important than these direct grants of power, "to declare war," "to raise and support armies," and "to provide and maintain a navy" is the further express declaration of the Constitution that Congress shall have power also "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers." If any doubt could exist as to whether the grants enumerated were intended to carry with them the necessary power to select and adopt means to make them effective and to carry them to the utmost limit into execution that doubt is removed by this declaration.

Interpreting that provision in the great case of McCulloch against Maryland, Marshall, Chief Justice, said:

> The Government, which has a right to do an act and has imposed upon it the duty of performing that act, must, according to the dictates of reason, be allowed to select the means.
>
> The sound construction of the Constitution must allow to the national legislation that discretion with respect to the means by which the powers it confers are to be carried into execution which will enable that body to perform the high duties assigned to it in the manner most beneficial to the people. Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited but consist with the letter and spirit of the Constitution, are constitutional.

In the Legal Tender Case (110 U. S., 421) the Supreme Court still further emphasized the proposition, saying:

> Congress must possess the choice of means and must be empowered to use any means which are in fact conducive to the exercise of a power granted by the Constitution.

Immediately applicable to the interpretation of the war powers is the case of Stewart *v.* Kahn (11 Wall., U. S., 493). In that case it was held that the power to declare and wage war carries with it the authority not only to bring it to a full conclusion but, after the cessation of active military operations, to take measures to prevent its renewal. In so determining the court said:

> The measures to be taken in carrying on war and to suppress insurrection are not defined. The decision of all such questions rests wholly in the discretion of those to whom the substantial powers involved are confided by the Constitution. In the latter case the power is not limited to victories in the field and to the dispersion of the insurgent forces. It carries with it inherently the power to guard against the immediate renewal of the conflict and to remedy the evils which have arisen from its rise and progress.

An interesting and instructive case construing the grant of powers under consideration is United States *v.* Gettysburg Electric Railway Co. (160 U. S., 668). In that case a proceeding was brought by the Government to condemn land including the right of way of a railroad for the purpose of establishing a public park on the site of the battle field of Gettysburg.

In sustaining such action the Supreme Court said:

> Congress has power to declare war and to create and equip armies and navies. It has the great power of taxation to be exercised for the common defense and general welfare. Having such powers, it has such other and implied ones as are necessary and appropriate for carrying the powers expressly given into effect. Any act of Congress which plainly and directly tends to enhance the respect and love of the citizen for the institutions of his country and to quicken and strengthen his motives to defend them, and which is germane to and intimately connected with and appropriate to the exercise of some one or all of the powers granted by Congress must be valid.

The Constitution provides that Congress shall have power "to regulate commerce." We have seen how far-reaching that provision has been carried.

Congress is given power "to establish post offices and post roads." Under this simple grant of power we have established the most elaborate system of communication and transportation, both foreign and domestic, the world has ever seen.

Under the general power to raise revenue and carry on the fiscal operations of the Government Congress has incorporated a bank of the United States, has established a system of national banks, and now has put in operation the still more elaborate and powerful Federal Reserve System.

In view of these facts, who shall be able to set limits to the war powers conferred by the Constitution on Congress, which, as Hamilton, and Madison, and Marshall held, must be of necessity and in their very nature unlimited?

WAR POWERS CONSTITUTIONAL POWERS.

There is widely prevalent an opinion that in time of war the Constitution and the laws which govern in time of peace are not to be observed, because not adequate to meet the emergency. Inter armes silent leges. The view is that at such time the President is justified in assuming and using powers not conferred upon him by the Constitution, and that Congress may legislate without constitutional restraint to meet the emergency. This is the popular view of what are called "war powers."

Such a view is erroneous. The President has ample authority granted him by the Constitution to meet any emergency. Congress is expressly and by fair implication granted all the "war powers" needed to make and maintain war on land and sea. with a prescience no less than marvelous, with a wisdom which has won the admiration of the world, the statesmen who gave us our Constitution and instituted our Government met every demand of the present and the future.

It would, of course, be possible for the President to assume and exercise unauthorized power. It is possible for Congress to exceed its constitutional powers. It may attempt to do something not authorized, or to do something authorized in an unauthorized manner. But there is no necessity in either case for such unauthorized assumption of power. As was said by the Supreme Court in Ex parte Milligan (4 Wall., U. S., 118):

> The Government within the Constitution has all the powers granted to it which are necessary to preserve its existence.

It is certain that a state of war will call into exercise powers which do not exist in time of peace. Even in dealing with our own people the power to wage war enables the Government to override in many particulars private rights which in time of peace are inviolable.

But still that right is an authorized right, is a legal right, is a constitutional right. Just as in time of pestilence the Government may deprive the citizen of his liberty, just as in case of a great fire the authorities may destroy private property to stop the progress of a conflagration, so in time of war the Government may take away the liberty of the citizen and appropriate his property, if necessary, to carry on the war. It is imperative in such cases that the individual right yield to the general good; that the personal privilege, carefully guarded by law in time of peace, be given up in time of war for the preservation of the Government.

Mr. Justice Cooley, in his notes to Story on the Constitution, calls attention to the remarkable fact that during the Civil War but few questions respecting the war power were passed upon by the courts. Some extravagant claims were put forth on behalf of this power by theorists, as if where war existed Constitution and laws alike were to give way and the military authority to be supreme and unlimited. That is to presume that the Constitution does not contemplate that the Nation shall engage in war and makes no provision for the national defense, for raising and supporting armies and for providing and maintaining navies. We have seen that these contingencies are provided for in the Constitution and full authority given to Congress to provide for the national defense.

The war power is therefore a constitutional power. It is not a power outside or above the Constitution. It is within the Constitution—a part of it, a function of it. And this constitutional grant of power to Congress is given with all the fullness and comprehensive scope such a tremendous emergency demands.

War powers are greater than other powers because war is the supreme effort of a nation. It is its utmost endeavor. It is at the time its paramount duty. War powers are extraordinary powers because war is not ordinary; it is extraordinary. War is not the normal condition of a nation. It is abnormal. It is for these reasons the use of extraordinary powers in war seems above and beyond constitutional sanction. But that is only seeming. It is not real. To meet these extraordinary conditions extraordinary powers are granted, so that the exercise of those powers necessary to carry on war shall have constitutional sanction, to the end that even in time of war we shall continue to have a government of laws and not of men.

EXERCISE OF WAR POWERS.

To what do these principles of interpretation lead? Clearly to the unequivocal proposition that Congress may use such

means as in its judgment are necessary and appropriate to carry the war to a successful termination. It may raise and support armies. It may provide and maintain a navy. In raising an army it may volunteer or conscript any or every citizen of the United States. All the man power of the Nation is available for its preservation. Congress is given absolute power to say how many and who shall serve, for what period they shall serve, and under what conditions they shall serve. No man can question the necessity of service or its character or its duration. The citizen receiving the protection of the Government owes it unquestionable allegiance and must do his full duty in its support. [Applause.]

And to "support" the Army Congress has full power and complete discretion. It may provide arms and ammunition made in its own arsenals or it may purchase them at home or abroad. It may take over all the private manufactories making arms and ammunition in the country and operate them itself. It may requisition such arms and ammunition wherever found and by whomsoever owned if it so desires. The Constitution provides that private property shall not be taken for public use without just compensation. But that does not prohibit the taking; it merely provides that if taken by the Government private property must be paid for.

The same is true with regard to uniforms and supplies of all kinds for the Army and Navy. Ships may be built by the Government, shipyards purchased, materials of all kinds appropriated and condemned for the use of the Government if necessary.

The same is true with regard to the food supply. It is as essential as arms and ammunition. Food may be purchased or taken as may be necessary and regulations regarding the handling, disposition, and distribution enforced.

It would appear that it is within the power of Congress to fix prices on all the necessities of life in support of its armies and to maintain its navy. It requires the combined forces of all the people in a supreme struggle to maintain and support its fighting force. To do this efficiently it may be necessary to regulate transportation, to fix rates, or even to take over the railroads. It may be necessary to regulate the marketing of foodstuffs and other necessaries of life; to fix maximum or minimum prices or to itself purchase and distribute such necessaries. Such action may be necessary at any time, and Congress is the sole judge of the necessity. Because it may be unwise under the circumstances to exercise any of these powers does not imply that they can not be exercised. I am not now discussing the wisdom of such exercise. I am only contending for the existence of the power to exercise them.

It is also clearly within the power of Congress to limit, regulate, or entirely prohibit the manufacture and sale of intoxicating liquor as a war measure.

Its right rests on at least two grounds. It is within the power of Congress to fix rations and to establish a regimen for the soldiers and sailors in service. That may include or exclude intoxicating liquor. If it determines to prohibit the use, Congress may use any measures it may deem necessary to prevent soldiers and sailors in service from securing and using intoxicating liquor, whether on duty or not.

The prevention of grains which are food products being used for the manufacture of intoxicating liquor would be proper as a measure of conservation and for the prevention of waste. It is entirely within the power of Congress to take any measures necessary and appropriate to conserve the food products of the Nation. If in its judgment the taking of grain for the making of intoxicating liquor is harmful or useless, it may absolutely prohibit such manufacture.

In Parham *v.* The Justices (9 Georgia, 341) it was held that in cases of urgent necessity, such as pulling down houses and raising bulwarks to repel invasion, seizing supplies for the support of an army in the field, taking cotton bales, as Gen. Jackson did at New Orleans, to build ramparts against the enemy, property may be taken without process of law. Whether or not in such cases the Government will thereafter compensate the owner is a matter that may be afterwards determined, but there is no doubt of the power of the Government to make the seizure under such circumstances.

The true rule would appear to be that property used in any way for or in behalf of the enemy may be confiscated without compensation. Property may also be condemned and confiscated without compensation as a penalty for the violation of a law or a regulation. Otherwise, while the power of the Government is unlimited as to the right to appropriate any property necessary to assist in carrying on the war, the Government will nevertheless be liable for its value to the owner from whom it is taken.

I have endeavored to show that Congress has every power necessary to carry on the war and may exercise such power under constitutional sanction. The grant of such power is practically unlimited, commensurate with the extraordinary occasion of its exercise. But this grant of power is not a direction, it is merely an authorization for its use. If the power is great, so much the more should restraint be used in its exercise. If constitutional sanction is granted for the exercise of this extraordinary power as a necessary exception to the rule limiting in a free country the exercise of arbitrary power, we should see to it that we carry our exercise of such power no further than the occasion warrants.

No one who has read the history of nations but knows how often the possessions of unlimited power, whether by an individual or an assembly, leads to its harmful exercise. In no other way can we so well justify the grant of power conferred upon us by the Constitution as by the moderation and wisdom we shall show in its use. Indignation and resentment at the sordid grasping and the wicked conspiracies of food pirates and market manipulators who ought to be and must be restrained and punished should not lead us to impose burdens and inflict penalties on the innocent and deserving. Nor should we in the endeavor to protect the consumer sacrifice the interests or rights of the producer. Nor should we with purpose to further the cause of democracy throughout the world establish an autocracy at home and among our own people. [Applause.]

Mr. LEVER. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. HAMLIN, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 4961, and had directed him to report that that committee had come to no resolution thereon.

Mr. LEVER. Mr. Speaker, I ask unanimous consent that the House take a recess until 8 o'clock to-night, with the understanding that general debate shall proceed until not later than 10 o'clock and that no business shall be conducted except general debate. At the request of the gentleman from Tennessee I will yield to him.

Mr. SIMS. Mr. Speaker, I ask unanimous consent to address the House for two minutes.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

DEATH OF JUDSON C. CLEMENTS.

Mr. SIMS. Mr. Speaker, it appears from the afternoon papers that the Hon. Judson C. Clements, the senior member of the Interstate Commerce Commission, died rather suddenly in this city to-day. Mr. Clements served in this body during five Congresses. He was a Member of the Forty-seventh, Forty-eighth, Forty-ninth, Fiftieth, and Fifty-first Congresses.

He has served on the Interstate Commerce Commission more than 25 years, a longer period of time than any other member that has ever served on the commission. Since my services began in this House, more than 20 years ago, I can say with certainty that in all the amendments to the interstate commerce act that have been adopted in that time that Mr. Clements has been fully and freely consulted by the Committee of the House on Interstate and Foreign Commerce and that he has rendered able and wise assistance in all the amendatory measures that have been enacted and in this way has been of very great service to the Congress in framing of all such amendments.

The services that Mr. Clements has rendered on the Interstate Commerce Commission are well known throughout the United States. His services have been of national scope and benefit. On account of his long service on the Interstate Commerce Commission and the fact that he served so long and so ably in this body I felt that I ought to say a few words as to his character and services at this time. [Applause.]

Mr. Speaker, I hope that the vacancy thus so sadly created on the commission may be filled by some man who will render his country the great and enduring services that the lamented Mr. Clements has rendered.

LEAVE OF ABSENCE.

By unanimous consent the following leave of absence was granted:

To Mr. DENTON, indefinitely, on account of illness in his family.

To Mr. FOCHT, for one week, on account of illness.

To Mr. ALMON, indefinitely, on account of illness.

RECESS.

Mr. LEVER. Mr. Speaker, at the suggestion of the gentleman from Iowa [Mr. HAUGEN] I am going to change my request, and ask unanimous consent that the House stand in recess until 8 o'clock to-night, with the understanding that general debate shall proceed until 10.30 o'clock to-night, with no other intervening business, the understanding being that when the House adjourns it shall adjourn to meet at 12 o'clock to-morrow.

The SPEAKER. The gentleman from South Carolina asks unanimous consent that the House stand in recess until 8 o'clock to-night, at which time general debate shall be resumed upon the bill, to run not later than 10.30 o'clock, and that no other business be transacted, with the understanding that when the House adjourns it adjourn to meet at 12 o'clock to-morrow. Is there objection? [After a pause.] The Chair hears none and appoints the gentleman from Tennessee, Mr. SIMS, to preside as Speaker pro tempore.

Accordingly, at 5 o'clock and 36 minutes p. m., the House stood in recess until 8 o'clock p. m.

AFTER RECESS.

The recess having expired, the House at 8 o'clock p. m., was called to order by Mr. SIMS as Speaker pro tempore.

FOOD CONTROL.

Mr. RUBEY. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 4961, the food-control bill.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 4961, with Mr. HAMLIN in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 4961, which the Clerk will report by title.

The Clerk read as follows:

A bill (H. R. 4961) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I yield 20 minutes to the gentleman from Minnesota [Mr. KNUTSON]. [Applause.]

Mr. KNUTSON. Mr. Chairman, were I to express entire satisfaction with the measure now before this body for consideration I would be guilty of not speaking my true sentiments. At the outset I wish to state frankly that H. R. 4961 falls far below the expectations of those who have at all given careful study to present living conditions in this country. While the Lever bill contains several meritorious provisions, it does not go far enough. It exempts several important industries from supervision that need supervision equally with the food producers and speculators.

I am at a loss, Mr. Speaker, to understand why some of the very necessary and important provisions contained in the original bill prepared by the Agricultural Department have been eliminated. My understanding is that the measure submitted by the department provided for the inclusion of shoes, clothing, and other necessaries of life, as well as foodstuffs and fuel. Evidently the committee eliminator was on the job all the time, quite different from the one in the story I recently heard of two gentlemen on a trip who had occasion to go into the dining car for breakfast. One of them ordered, among other things, poached eggs on toast. The other gentleman in ordering said "give me the same order, but eliminate the eggs." "Yes, sah; yes, sah," exclaimed the darky. In a few minutes the waiter returned, saying, "Say, boss, how did you say you wanted dem eggs?" "I said I wanted them eliminated," replied the traveler. "Yes, sah; yes, sah," replied the darky, and off he again hurried to give the order. In a few minutes he again returned, saying, "Say, boss, you'll have to take dem eggs some other way, de 'liminator isn't wukin' dis mornin." I am at a loss to understand why the American farmer has been selected by the Agricultural Committee to be the goat, and I venture the prediction that the farmers will demand to know before this thing is finally settled why they have been selected for the sacrifice. Why were not the manufacturers of shoes, clothing, and other necessaries of life included in the bill? That is a question that will arise with growing frequency during the remainder of the war, and it will haunt those who are responsible for the omission.

Mr. Chairman, I am frank to say that the American farmer needs no such supervision as is provided for in this bill. It is the food speculators and pirates who need looking after. They are the ones who have been robbing and exploiting the producer and consumer alike, and I believe a majority of this House will agree with that statement. Why the Agricultural Committee should have seen fit to ignore the recommendations of the Agricultural Department that wearing apparel and farm implements also be included in the Lever bill is something that no doubt will be explained by members of the committee ere a final vote is taken.

Now, my friends, a very erroneous impression seems to prevail among many consumers. They aver that the American farmer was never more prosperous in his life. A more colossal mistake never was made. It may be news to many on the floor of this House, but it is nevertheless a fact, that the average price received by the wheat farmer for his crop last year was $1.30 per bushel. When one considers that only half a crop was harvested in many sections of the country last year that price is only equivalent to 65 cents per bushel with a normal crop. To-day wheat is more than $3 per bushel. Who has made the difference between $1.30 and $3? The food pirate, of course. He makes $1.70 per bushel, less the actual cost of handling, while the man who plowed, sowed, and reaped only receives $1.30. I ask, is that fair? Is it equitable? Is it any wonder that the farmer resents being made the goat?

Not long ago I read a report issued by the Department of Agriculture which I consider authentic. That report contained the statement that the average farmer only received $402 for his entire year's work, including that of his children. No wonder he complains. If the income of the average Member of Congress were $402 I imagine there would be some howling, and many would no doubt be compelled to live in their offices and dispense with many of the luxuries to which they are accustomed.

Many refer to the farmer as a prosperous individual, who rides about his estate in a limousine with a chauffeur and footman. Yes; his lot is an enviable one. He can lie abed until 4 or 4.30 in the morning. Then he arises, chores around for a couple of hours in order to create an appetite for breakfast, after which he spends 10 or 12 hours in the fields working like a beaver, after which he returns home and puts in a couple of hours at some physical-culture exercise, such as swinging a fork, milking cows, and other forms of true recreation. By 10 o'clock he is usually free to retire and sleep, if his aching bones will permit of his doing so.

Under this bill he will no longer have to worry about his marketing. A kindly Government, through the assistance of the Agricultural Committee and Department, will look after that for him. Under the Lever bill he will become a sort of a white ward of the Government. Uncle Sam will fix the price he is to receive for everything he raises and also fix the acreage to be planted. Providence will have nothing to do with it but to see that the furnace and sprinklers are working properly, while the farmer will only have the purely mechanical part to look after. Truly the Lever bill marks the dawning of a perfect day for the American farmer, and on his behalf do I most sincerely thank the Agricultural Committee for producing such a humane measure, which will lengthen immeasurably the life of the average agriculturist and at the same time permit him to retain his citizenship in this land of the free.

Let us for a moment scrutinize the increase in price of some of the necessities upon which the independent farmer depends:

Wire has increased 100 per cent; coal has advanced from 100 per cent to 200 per cent; wagons have advanced 30 per cent; harvesters have advanced $100; prepared feeds have advanced 100 per cent; binder twine has advanced from 8 cents per pound to 18 cents; plow shovels that cost $2.50 before the war are now going at $7; cultivators sold at $28, now $50; hired help has increased from 60 per cent to 80 per cent; steel sold at $30 before the war, now sells for $130; the steal on wheat has in cases increased by 400 per cent.

I appreciate that this measure contains several meritorious provisions. In fact, they would have been termed socialistic or anarchistic 20 years ago, and it merely goes to show that we are progressing. However, the bill does not go far enough, and I predict that when its scope becomes generally understood a wave of disappointment, if not of righteous indignation, will sweep over the rural and industrial sections of the country. The farmers will demand to know why manufacturers of farm implements were not placed under control; the laboring man with a large family of children will wish to know why those who deal in shoes and clothing were not taken in. It is inevitable that they will reach the conclusion that they were not properly dealt with. If the present administration is as sincerely the friend of the producer as it would have the masses think it is, it will bring all possible pressure to bear to secure the enact-

ment of legislation that will put exploiters of every variety and breed out of business, and if it fails to do this the American people will conclude that its promises in the past have been as sounding brass and tinkling cymbals. There is a widespread discontent among the toilers, who, by reason of the unprecedented high cost of living, are compelled to forego many actual necessaries and all luxuries. All about them they see men who are accumulating vast fortunes out of the miseries of the world. They see these fortunate ones rolling in wealth and luxury, and their resentment grows apace.

This Congress must take immediate steps to effectively stop all sorts of speculation in all the necessaries of life or the American people will arise in their righteous indignation and repeat the performance of the Russian people. A point may be reached in the affairs of the Nation where patience would cease to be a virtue. [Applause.]

The CHAIRMAN. The gentleman yields back 10 minutes.

Mr. RUBEY. Mr. Chairman, I yield 30 minutes to the gentleman from Ohio [Mr. OVERMYER]. [Applause.]

Mr. OVERMYER. Mr. Chairman, the thought that must be borne in mind continuously in connection with this bill is that it is strictly a war measure. This legislation would not be before us, nor would such legislation even be proposed, if we were not engaged in a world war requiring such conservation of food supplies and international handling of food problems as heretofore has been unnecessary. Yet, as a member of the Committee on Agriculture of this House, having heard all the testimony given our committee by the leading food experts of the country, and having given the matter some study and attention, I am of the opinion that many of the provisions of this bill would be salutary and proper, even in peace times. In war time, and especially a world war in which the food resources of our allies have been very much exhausted, I consider this legislation absolutely necessary.

Let us for a moment consider our situation and the situation of the world regarding food. The United States has become an unwilling party to a world war of unforeseeable duration and magnitude, and its enemy is the most powerful military nation on earth and is using the most effective weapon for the destruction of commerce ever invented—the submarine. Methods of warfare have been revolutionized and now involve instrumentalities whose cost and destructive effects tax and drain the financial and natural resources of the world to an extent hitherto unknown.

Two-thirds of the world's population and more than half of its area are involved. More than 25,000,000 men are now under arms. The warring powers have already spent more than $60,000,000,000 in the prosecution of the war. This country is creating an Army of 2,000,000 men and has authorized bond issues of $7,000,000,000. Millions of men throughout the world have been withdrawn from production and vast productive areas have been devastated by military operations and the populations scattered to the four winds. Submarines have destroyed millions of tons of shipping and are still active. Preference movements of troops and military supplies have monopolized transportation lines to the exclusion of other shipping. These and other incident extraordinary demands upon industry and commerce have caused a scarcity of labor, a scarcity of fertilizers, a demoralization of the entire producing machinery of the world and resulted in a subnormal food supply throughout the world. Our allies in this war comprise a population of about 130,000,000 souls. The food supply of these populations, outside of their local production, has hitherto come principally from sources outside of North America. Argentine, Australia, India, Russia, Roumania, Bulgaria, all these quarters have fed the populations of England, France, and Italy to a greater degree than we have. To-day practically the whole of these sources of food supply are cut off. Argentine has a crop failure and an embargo. Australia is so far away that it would require three times the tonnage to transport from there and would offer much greater liability to submarine attack.

The supply from India is cut off by way of the Mediterranean and would have to pass around Cape of Good Hope, an impractical trip. In addition, late frosts and lack of capable labor may reduce the production in our allied countries considerably below normal. It is estimated by those in position to know, that America will be called upon to furnish to our allies during the next year about 800,000,000 bushels of grain. This is not beyond the capacity of the United States and Canada, but is beyond our ordinary exports by four or five hundred million bushels. To allow for losses by submarines and feed our allies sufficiently to keep their military operations at successful high tide and the civil populations pacified we ought to export from America a billion bushels of grain, 60 per cent of which should be wheat. To do this will require extraordinary efforts in production in the United States and Canada, efficient handling of products, elimination of waste, and considerable individual self-denial on the part of our people.

Mr. MEEKER. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Ohio yield to the gentleman from Missouri?

Mr. OVERMYER. Yes.

Mr. MEEKER. I heard that same thing in the speech of the gentleman from South Carolina [Mr. LEVER] this afternoon. Is that on the authority of Mr. Hoover?

Mr. OVERMYER. These facts were stated in testimony given before our committee, not only by Mr. Hoover, but by Mr. Taylor, who spent most of last year in Europe studying the food situation for the United States Government.

The problem calls for centralized authority in efficient hands, to handle the entire transaction with a view to feeding our own people liberally, but economically and without waste, yielding to our producers a fair return and delivering to our allies as much food as possible at reasonable prices.

We have assumed the task of provisioning our allies in this war. It is a duty forced upon us by a chain of circumstances over which we had no control and which we now can not escape if we would. Whether we enjoy the prospect is beyond the point. We have undertaken the contract and must faithfully perform it. But when we undertake this stupendous task we find at the outset that our machinery of production and distribution, built up through a century without any particular organization and in haphazard fashion, is not adapted to meet the strain that will be put upon it by a war of such magnitude, a war in which the burden of feeding approximately 250,000,000 people falls upon us. The food situation in this country was bad enough before the war, with rising prices, faulty distribution, congested transportation lines, and general bad adjustment between producer and consumer. Its difficulties and weaknesses are many times multiplied by present conditions. The law of supply and demand has broken down as a controller of prices. Our allies are bidding against each other for our dwindling food reserves, forcing prices to fictitious heights and creating consternation and hysteria where confidence and calmness should reign.

The strong hand of the Federal Government is needed, and needed at once. Every hour's delay in enacting this legislation simply adds to our difficulties. There is food enough in the United States, in existence and in process of production, to supply everyone's needs and billions for export. But what the situation needs is centralized authority to regulate distribution and consumption. The very fact that such authority exists will operate powerfully to restore confidence, prevent panicky buying by consumers, and keep prices somewhere near a reasonable level.

The necessity for this legislation has been fully explained by the chairman of our committee, the very able, hard-working, and conscientious gentleman from South Carolina [Mr. LEVER]. Newspapers, statesmen, economists, labor organizations, manufacturers, chambers of commerce, farmers organizations, all have urged for some months the necessity for legislation providing food control, the elimination of speculation in foodstuffs, and the conservation of our food resources. The Committee on Agriculture spent many weeks on this measure, having had before us representatives of every phase of activity in connection with the production, conservation, and distribution of foods. Our task was indeed a difficult one, this being pioneer legislation of a character never before proposed in this country. The product of our labors is the measure under consideration, which we think will meet with the approval of the country and will accomplish the purposes sought to be accomplished.

That the provisions of this measure are drastic, we admit. They were purposely made so. No half-way measures ought to be considered for one moment in any legislation touching the war, for it is the part of wisdom to prepare for a long struggle, to prepare for the worst and hope for the best. Let us not deceive ourselves as to the importance of the struggle into which we have been forced against our desires. Let us not be misled by the peace talk periodically emanating from European sources. Let us not hug "the delusive phantom of hope" that the war will be over before we get into it, for peace is no more possible in Europe now than peace would have been possible in our own Civil War before the issues of slavery and secession were settled for all time. Out of this war must come more than a mere truce, more than a temporary and paper peace. There must come a new emancipation proclamation, striking from civilization forever the shackles of military autocracy. Either all the civilized world must come under the yoke of military despotism or all the world must be free, and the world can not be free until militarism is destroyed, until this fright-

ful monster is obliterated. Without this new birth of freedom all this suffering and sacrifice and bloodshed will have been in vain. [Applause.]

Mr. MEEKER. Will the gentleman yield for a question?

The CHAIRMAN. Does the gentleman from Ohio yield to the gentleman from Missouri?

Mr. OVERMYER. I will yield.

Mr. MEEKER. Let us take a specific case. Suppose this bill becomes a law, the wheat shortage is such as is prophesied, and practically now assured. Is there anything in this bill that will prevent that wheat from going to $3.50 or $4 a bushel, and flour made out of that wheat costing proportionately?

Mr. OVERMYER. Yes, sir.

Mr. MEEKER. Then there is a maximum regulation?

Mr. OVERMYER. There is no maximum regulation, but there is control provided in the bill, and in a few minutes I will explain——

Mr. MEEKER. How that price can be held down?

Mr. OVERMYER. And I will also explain, if the gentleman will permit and give me time without interruption, why wheat went to $3.25 in the last month.

The success of this war from this time forward will depend upon the United States. Our allies have nobly performed their part in holding the monster in check. It will remain for us, with their continued help, to complete the task which their bravery and sacrifice have thus far so nobly advanced. [Applause.] We will have to furnish troops, and many of them, but above all we must furnish the food that will win this war. We have in this country more than a billion acres of tillable land, only a fourth of which is under cultivation. We have more acres of tillable land than all of Europe, Russia included. The United States could produce food for one-half the population of the globe. We produced last year farm products of the value of thirteen and a half billion dollars, and had sufficient not only for our national consumption, but were able to export agricultural products valued at several billions. Reports from every part of the country indicate that the American people are fully conscious of their duty of bringing our agricultural production to a maximum this year and that there have been planted more acres of agricultural products than ever before in the history of the country, and with a fairly good season our production will exceed that of last year by a total of several billion dollars. The wheat crop will be under normal, but that deficiency will be met by a larger production of other foodstuffs, perhaps, however, of a more perishable nature, and by proper handling and conservation of what we do produce.

Common sense and prudence dictate that steps should be taken to keep this enormous production, when harvested, out of the hands of food speculators, to see that an efficient system of marketing and distribution is worked out, and that waste and extravagance be reduced to a minimum. The Secretary of Agriculture estimates that we waste $700,000,000 worth of food annually in this country. Germany found, after taking a food survey and taking control of her food situation, that her people were wasting 30 per cent of their food production annually. By a system of food control she has been able to reduce that waste to a minimum, though unable to increase her production for reasons that are self-evident. In this country we not only can reduce our waste by properly organized effort but we can enormously increase production. We have unlimited acres, we have all the necessary soil and climatic conditions, and only can be hindered by a lack of interest, a shortage of labor, or by discouragement on the part of our people if they should realize that no governmental effort will be made to control the food supply when produced and keep it out of the hands of food speculators, and also to prevent the indiscriminate competitive buying of food products in our markets by representatives of our allies, a practice which was almost wholly responsible for the unheard of prices of wheat and other staples within the past few months, yielding no benefit to the producer, but untold hardship to the consumers.

The opposition to this measure comes from those who are afraid to place the broad powers authorized in the bill into the hands of the Executive, and those self-constituted guardians of the American farmer who express the fear, fancied or real, that this bill may work a hardship on their ward. We may expect also, of course, the opposition to this bill of those of our people who do not want to see Germany defeated in this war. Arguments have been advanced by opponents of this measure that it is aimed at the American farmer; that it has only been within the past few years that the farmer has really been securing good prices for his products and making money, and that now we propose to bridle him and regulate the prices of his products and throw about him a guard of inspectors and Government agents to harass and annoy. Nothing of the kind is contemplated or will be done under this bill. The whole measure is drafted with a view to protecting the interests of the farmer as well as those of the consumer, and the only section directly affecting the farmer is the guaranteed price-fixing section. No one will contend that the farmer ever did have the power to fix, at least never did fix, the prices of his own products. They always have been fixed by some one else, and that some one else was usually the speculator and market gambler of the stock exchange, supplemented in normal times by the influence of the law of supply and demand. I am sure the interests of the American farmer will be safer in the hands of the United States Government than they possibly could be in the hands of those who heretofore have exercised the function of price fixing on farm products. [Applause.]

And the only price regulation provided in the bill is authority to fix a guaranteed minimum to the producer, and this will be fixed only in case of an emergency which, in the judgment of the President and his experts, makes it necessary, and must be fixed seasonably and in advance of seeding time. Surely no farmer can be harmed by knowing in advance what the lowest price will be that he will secure for his crop. No one will contend that the price of three and a quarter dollars per bushel for wheat, paid in the Chicago market a few weeks ago, inured to the benefit of the American farmer. That price was probably $2 per bushel above the average price received by the producer of that grain through last fall, winter, and early spring. That fact alone ought to make all of us blush. There is a limited supply of wheat in sight, it is true, a supply inadequate to the demand. A world at war must have the supply, no matter what the cost. So one man bids a dollar and a half; another bids two dollars; another bids two and a half; and another three; and so it could go on to five dollars as well as three and a quarter, for hungry purchasers were at the door with unlimited means and orders to buy at any cost. So it was not the wheat situation but a war situation that made prices what they were, and the American farmer did not profit by it, but the American consumer was hit a blow that staggered.

Mr. BORLAND. Will the gentleman yield?

Mr. OVERMYER. Yes.

Mr. BORLAND. Does not the artificial rise in price frequently occur by duplication of the same demand? For instance, the allies would be in the market for 100,000 bushels of wheat, and A, B, and C would be in the market bidding for 100,000 bushels, optioning to get the opportunity to sell it to the allies? In other words, it would appear on the surface that there would be a demand for 300,000 bushels when there was only a demand for 100,000 bushels?

Mr. OVERMYER. Yes; and under governmental control those things can be eliminated and these fictitious prices can not occur.

Mr. BORLAND. I wanted the gentleman to bring that out, because that is one of the common mistakes by not knowing how the price can be run on a grain exchange. This bill can do a good deal toward equalizing prices.

Mr. OVERMYER. I agree with the gentleman absolutely, and one of the purposes of this measure is to place centralized authority and control of that situation in the hands of the Government, where it can prevent a manipulation of those things and create a central buying authority for our allies and our own Government in this war.

Mr. SMITH of Michigan. Can not that be remedied now by the allies purchasing through one agency?

Mr. OVERMYER. I understand they have undertaken a voluntary arrangement of that kind, but without legislative authority in this country we would have no right to participate in that except as a voluntary arrangement, and there is the danger too that our country would be the loser in an arrangement of that kind to which we were not a party.

Mr. MORGAN. Will the gentleman yield?

The CHAIRMAN. Will the gentleman from Ohio yield to the gentleman from Oklahoma?

Mr. OVERMYER. I should be pleased if I could be permitted to finish my statement now, Mr. Chairman, after which I will yield if I have time.

It is senseless that the Government should sit by and let individual competition, almost all on the bull side, boost prices to any figure. War has thrown everything out of gear, and it is time the Government stepped in with a controlling hand. If the farmer is guaranteed a minimum price for his product by the Government, and the Government controls the food during its journey from the producer to the consumer, by preventing hoarding, by eliminating waste, by controlling stock exchanges,

by licensing packing, storage, and ware houses, and manufacturing plants and facilitating marketing and distribution, then there will be little danger of an excessive price when that food reaches the consumer.

Some gentlemen express almost hysterical fear that by legislation of this character, broad and sweeping in its scope, we are establishing an autocracy here while legislating to carry the banner of democracy to Europe. These gentlemen can have but little faith in their Republic. There are entirely too many checks and safeguards in our form of government to permit the existence of dangerous autocratic power here. Autocratic power is not harmful when exercised for the public good and the welfare of civilization. We are giving autocratic power in this bill, to be exercised and administered for the public good. Around that exercise and administration are thrown a thousand restraints which will manifest themselves quickly if the power is abused. In the first place, the bill provides for its own death at the close of the war. Then, too, public sentiment and opinion, expressed through a practically uncensored press, will wield its influence. And Congress will be in almost continuous session during this war and can and will exercise its power if this measure is not being properly administered. And our courts, the bulwark of individual liberty, are always open to the aggrieved.

With all these safeguards and restraints thrown about it, living as we do under a republican form of government, where the supreme control depends upon the opinions of the people, and those opinions enlightened, I for one am not afraid to grant these broad powers to our President, and I should not be afraid to do so if my highest confidence did not repose in him as it now does. [Applause.]

I had intended to discuss at some length the constitutional questions involved in this measure, but to do so would consume more time than I care to occupy, and besides we already have had a very able presentation of these questions by my colleague [Mr. ANDERSON], and also have available for our use a very exhaustive opinion and brief on the constitutional features of the bill by the Solicitor of the Department of Agriculture, Mr. Caffey. I do not claim the ability to improve on this brief, and it would be presumptuous in me to attempt it. This brief was filed in connection with the bill before the Committees on Agriculture of both Houses, and is printed as part 10 of the hearings on the bill before the House committee. I shall ask at this time unanimous consent to insert this brief as a part of my remarks.

The CHAIRMAN. The gentleman from Ohio asks unanimous consent to extend his remarks in the RECORD by printing the matter indicated. Is there objection?

There was no objection.

Mr. OVERMYER. I respectfully direct the attention of those gentlemen interested in this feature of the bill to this very able and convincing opinion, with a reminder that the brief was prepared in support of the bill as originally introduced, and that some of the sections of the bill were afterwards eliminated.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. OVERMYER. Will the gentleman from Missouri in charge of the time give me two minutes more?

Mr. RUBEY. Yes; I yield two minutes more to the gentleman.

The CHAIRMAN. The gentleman is recognized for two minutes more. The gentleman will proceed.

Mr. OVERMYER. The purposes and provisions of this measure will be found to be so well supported by long-recognized judicial decisions that its constitutionality can not, in my judgment, be questioned. It is a war measure. Its constitutionality rests upon the war powers of Congress granted in the war clauses of the Constitution. These war clauses have been judicially defined, as have the powers of Congress to legislate under them, in dozen of cases by the highest courts of the country.

At this time I desired only to make these general observations as to the necessity for this legislation, its purposes and objects, and the constitutionality of the powers we are seeking to exercise under it. Perhaps under the reading of the bill I may want to take up particular features of the bill and discuss them in greater detail. But let me urge upon this House the supreme necessity for enacting this legislation at the earliest possible moment. Time is more important, in my judgment, than the exact wording of the measure itself.

If we do not act speedily and pass this legislation in some form, I fear we will suffer consequences to ourselves and our allies that I do not care to contemplate, consequences so serious, possibly, as to jeopardize our national interests and success in this war. [Prolonged applause.]

Following is the brief of Mr. Caffey, which was filed to the original bill, some sections of which have been eliminated:

MEMORANDUM ON THE CONSTITUTIONALITY OF BILL H. R. 4630 (NOW 4961), ENTITLED "A BILL TO PROVIDE FURTHER FOR THE NATIONAL SECURITY AND DEFENSE BY ENCOURAGING AGRICULTURE AND REGULATING THE MARKETING AND DISTRIBUTION OF FOODS AND OTHER NECESSARIES OF LIFE."

OUTLINE OF THE BILL.

Sections 1, 3, and 4 lay the general legal basis for the bill; each of the sections numbered 5 to 16 deals specifically with one or more matters embraced in sections 3 and 4; sections 2 and 17 to 22 provide for definitions, rules of construction, administrative details, the protection of employees, and the appropriation; and section 23 prescribes the period of the duration of the act.

Section 1 provides that, by reason of the existence of a state of war, it is essential to the national security and defense, for the successful prosecution of the war, and for the support and maintenance of the Army and Navy, to assure an adequate supply and equitable distribution and to facilitate the movement of foods, feeds, shoes, clothing, fuel, and other necessaries of life, and articles required for their production, thereafter in the act called necessaries; to prevent, locally or generally, scarcity, monopolization, hoarding, injurious speculation, manipulations, and private controls affecting such supply, distribution, and movement, and to establish and maintain governmental control of necessaries during such war.

Section 3 establishes a governmental control of necessaries and declares, in substance, that all processes, methods, and activities employed in connection with necessaries are affected with a public interest.

Section 4 makes it unlawful for any person to commit or permit preventable waste or deterioration of any necessaries in or in connection with their manufacture or distribution; to hoard any necessaries; to monopolize or attempt to monopolize, either locally or generally, any necessaries; to engage in any discriminatory and unfair, or any deceptive practice or device in handling or dealing in or with any necessaries; to enter into any contract, arrangement, or conspiracy to restrict the supply or, except as permitted by law for preventing gluts and for effecting equitable apportionment of perishable products among markets, to restrict distribution, or to enhance the prices of any necessaries; to exact excessive prices for any necessaries; or to aid or abet the doing of any act made unlawful by this section.

Section 5 provides that when the President shall find it essential, in order to facilitate distribution or to carry out any other section of the act, he is authorized to establish standards for foods, feeds, and seeds, and, for the purpose of preventing deception, to subject the labeling of such commodities to regulation. Whenever a standard is established its use is compulsory unless the commodity be marked so as to indicate that it is ungraded or unclassified. Penalties are provided for willful violations.

Section 6 provides that when the President shall find it essential to license the manufacture, storage, or distribution of any food, food material, or feed in order to prevent uneconomical manufacture or inequitable distribution thereof, no person shall, after a date specified in a public announcement of such finding, engage in or carry on a business specified in such announcement without a license. The President is authorized to prescribe regulations governing the conduct of the business of licensees, including the making of reports by them and entry and inspection of their places of business by authorized agents of the President, and, when found necessary, to require licensees to dispose of hoarded stocks and to refrain from unfair practices and charges. Penalties are provided for knowingly carrying on any business for which a license is required without such license and for willful violations.

Section 7 provides that when the President or his duly authorized agent finds that any food in storage, in transit, or held for sale is in such condition that unless promptly disposed of it will become unfit for food purposes, the person having the possession or control of such food may be required to dispose of it so as to preserve its food value, and also, when found necessary to prevent gluts or to effect equitable apportionment of perishable products among markets, the market movement or distribution of such products may be directed. Penalties are provided for willful violations.

Section 8 provides that when the President shall find that it is essential in order to prevent the hoarding of necessaries, any person hoarding such necessaries may be required to offer them for sale and to sell them within a reasonable time if he finds a purchaser. Penalties are provided for willful violations.

Section 9 authorizes the President, when he finds it essential in order to assure equitable distribution or to prevent hoarding, monopolization, exacting excessive prices, or injurious speculation, to procure necessaries, to store them, to dispose of them at cost, to requisition any such necessaries and storage space therefor from any person having them at his disposal in excess of his reasonable individual needs for a reasonable period, and to fix a reasonable price to be paid for the same, subject to review by the courts.

Section 10 authorizes the President, when he finds it essential in order to assure an adequate and continuous supply of food or fuels, to requisition, take over, and operate any factory, mine, or plant in which food or fuel is or may be produced or mined, and to make just compensation therefor, subject to review by the courts.

Section 11 authorizes the President, when he finds it essential in order to prevent undue enhancement or fluctuation of prices, or injurious speculation, or unjust market manipulation, or unfair and misleading market quotations of prices, to prescribe regulations governing, or either wholly or partly to prohibit, operations, practices, or transactions on exchanges on which necessaries are dealt in, in order to eliminate such evil practices. Penalties are provided for willful violations.

Section 12 authorizes the President, when he finds that an emergency exists requiring stimulation of production, to fix, from time to time, a reasonable, guaranteed price for any necessaries, in order to assure the producer a reasonable profit. The Government guarantees the receipt of the price by domestic producers who rely upon the guaranty and comply with the President's regulations. Whenever the President shall find that the importation of necessaries produced outside of the United States seriously interferes or is likely seriously to interfere with the practical operation of the guaranteed price plan, or materially enhances or is likely materially to enhance the liabilities of the United States under any price guaranty, there is levied a duty upon importations of such necessaries at a rate to be ascertained and proclaimed by the President, which, when added to the value of the article at the time of entry, will be sufficient to bring its price up to the guaranteed price. In no case shall such rate be less than the rate fixed by existing tariffs.

Section 13 authorizes the President, when he finds that an extreme emergency exists requiring such action in order to prevent or break corners or to prevent extortion, to fix, from time to time, the highest price at which it is reasonable to deal in any necessaries. In fixing such price, he is directed to consider the costs of production, manufacture, and distribution, and a reasonable profit thereon, and, so far as practicable, to safeguard the equities and bona fide investments of all legitimate interests concerned. It is made unlawful for any person to deal in necessaries at a price higher than that fixed and in force. Penalties are provided for willful violations.

Section 14 provides that, when the President shall find that limitation, regulation, or prohibition of the use of foods, food materials, or feeds in the production of alcohol or of alcoholic and nonalcoholic beverages, or that reduction of the alcoholic content of any beverage, is essential in order to assure an adequate and continuous supply of food, he is authorized, from time to time, to prescribe the extent of the limitation, regulation, prohibition, or reduction so necessitated, and to give notice thereof. It is made unlawful to use any such foods, food materials, or feeds in such production except in accordance with such notice, or to produce any beverage having an alcoholic content in excess of that prescribed in the notice. Penalties are provided for willful violations.

Section 15 provides that the President may prescribe the pencentages of flour to be derived from wheat in milling in order to yield the maximum economical percentage of flour for human food, and the methods to be used, and to give notice thereof. It is made unlawful to manufacture such flour except in accordance with the notice. If found essential in order to prevent deception, labeling may be required plainly showing the percentage of flour derived from the wheat. Penalties are provided for willful violations.

Section 16 provides that when the President shall ascertain that any specified mixture of wheat, wheat flour, or other wheat product with any other material of vegetable origin is wholesome and economically fit for food and that the right freely to produce the same is essential to conserve the food supply, such mixture, if marked so as to disclose the ingredients, shall not be subject to the mixed-flour law of 1898, nor to any conflicting State or local law. Whenever the President shall find that the maintenance of an adequate supply of foodstuffs necessitates such action and shall give public notice thereof, the manufacture and use of any mixture permitted by this section may be required, and it is made unlawful to manufacture any mixture of any wheat, wheat flour, or other wheat product, or any wheat, wheat flour, or other wheat product required for such mixture, except in accordance with the notice. Penalties are provided for willful violations.

Section 23 provides that the act shall cease to be in effect when the national emergency resulting from the existing state of war shall have passed, but not later than one year after the termination as ascertained by the President of the present war between the United States and Germany. Nothing in this section shall be construed to prevent the fulfillment of any price guaranty made pursuant to the act which shall be in force when the act ceases to be in effect.

With respect to the products of lands cultivated by them, farmers, gardeners, and others are exempted from the hoarding and highest price limitation provisions of the bill.

Any moneys received by the Government under sections 9, 10, or 12 may be used as a revolving fund for further carrying out the purposes of the particular section.

CONSTITUTIONAL BASIS OF THE BILL.

The bill is a war measure. Its constitutionality rests primarily upon the following clauses of the Constitution of the United States, which will be hereafter referred to as the war clauses of the Constitution, or as the war powers of Congress:

"The Congress shall have power * * *

"To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water;

"To raise and support armies, but no appropriation of money to that use shall be for a longer term than two years;

"To provide and maintain a navy;

"To make rules for the government and regulation of the land and naval forces;

"To provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions;

"To provide for organizing, arming, and disciplining the militia, * * *; and

"To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.

"Section 8, Article I, clauses 1, 11, 12, 13, 14, 15, 16, and 18."

It is not herein contended that the power of Congress to legislate for war purposes is derived from any source other than the Constitution, or that the Constitution is suspended or abrogated during the existence of a state of war.

"When Congress declares war, by that declaration it puts in force the laws of war, and the war powers of the Government, which are not to be exercised, under the Constitution, in time of peace, now come into full force by virtue of the Constitution, and are to be exerted by the President and Congress. After the declaration of war every act done in carrying on the war is an act done by virtue of the Constitution, which authorizes the war to be commenced. Every measure of Congress and every executive act performed by the President intended and calculated to carry the war to a successful issue are acts done under the Constitution, whether the act or the measure be for the raising of money to support armies, or a declaration of freedom to fill their ranks and weaken the enemy; whether it be the organization of military tribunals to try traitors, or the destruction of their property by the advancing army, without due process of law, and the validity of such acts must be determined by the Constitution." (McCormick et al. *v.* Humphrey, 27 Ind., 144, 154.)

Every act of Congress passed during war times must square with the Constitution.

"The Constitution of the United States is a law for rulers and people, equally in war and in peace, and covers with the shield of its protection all classes of men, at all times, and under all circumstances." (Ex parte Milligan, 4 Wall., 2, 120.)

CONSTRUCTION OF THE CONSTITUTION.

The full extent of the powers granted by the Constitution is not to be found in a literal reading of its express terms. As said by the Supreme Court in Juilliard *v.* Greenman (110 U. S., 421, 439):

"A constitution, establishing a frame of government, declaring fundamental principles, and creating a national sovereignty, and intended to endure for ages and to be adopted to the various crises of human affairs, is not to be interpreted with the strictness of a private contract. The Constitution of the United States, by apt words of designation or general description, marks the outlines of the powers granted to the national legislature, but it does not undertake, with the precision and detail by which they may be carried into execution."

Any legislation which is appropriate and conducive to the execution of any or all code of laws, to enumerate the subdivisions of those powers, or to specify all the means of the expressly enumerated powers of Congress and which is not prohibited by, or inconsistent with the Constitution, is authorized by the Constitution.

Undoubtedly this would be so even in the absence of the clause which confers upon Congress power "to make all laws which shall be necessary and proper for carrying into execution" the expressly enumerated powers, but that clause incorporates the rule in the Constitution. The words "all laws which shall be necessary and proper" mean laws which are conducive or convenient and calculated to produce or appropriate to the end. Congress may exercise its judgment in the selection of means, and is not limited to those only which are indispensable or absolutely necessary, or without which the end could not be attained.

These fundamental principles of constitutional construction were announced and applied in 1819 by Chief Justice Marshall, in a unanimous opinion in McCulloch *v.* Maryland (4 Wheat., 316), in which it was said (p. 421):

"But we think the sound construction of the Constitution must allow to the national legislature that discretion, with respect to the means by which the powers it confers are to be carried into execution, which will enable that body to perform the high duties assigned to it, in the manner most beneficial to the people. Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consist with the letter and spirit of the Constitution, are constitutional."

This opinion has been frequently followed and cited by the Supreme Court. It is to-day the fixed and settled law of the land.

Even in the case in which the Supreme Court held unconstitutional an act of Congress making paper money of the United States legal tender, these principles were affirmatively approved. (Hepburn *v.* Griswold (first Legal Tender case), 8 Wall., 603, 617.)

In Knox *v.* Lee (the second Legal Tender case), 12 Wall., 457, upholding the same statute, the court said (p. 539):

"Even in Hepburn *v.* Griswold both the majority and minority of the court concurred in accepting the doctrine of McCulloch *v.* Maryland as sound expositions of the Constitution, though disagreeing in their application.

"With these rules of constitutional construction before us, settled at an early period in the history of the Government, hitherto universally accepted, and not even doubted, we have a safe guide to a right decision of the questions before us."

WAR POWERS NOT RESTRICTED BY STATE LINES.

With the exception of the commerce clause, which is self-limiting, all of the enumerated powers of Congress and those which properly arise by implication, operate directly throughout the United States without regard to State lines.

"The Government of the United States, within the scope of its powers, operates upon every foot of territory under its jurisdiction. It legislates for the whole Nation and is not embarrassed by State lines." (Pensacola Telegraph Co. *v.* Western Union Telegraph Co., 6 Otto, 1, 10.)

Congress, within its sphere, is supreme and may enforce and protect the operation or execution of its powers against any interference or obstruction by an State or its inhabitants.

The Constitution of the United States, article 6, clause 2, provides:

"This Constitution and the laws of the United States which shall be made in pursuance thereof, and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land, and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding."

In Veazie Bank *v.* Fenno (8 Wall., 533, 549), upholding an act of Congress imposing a tax on the circulation of State bank notes, the court said:

"Having thus, in the exercise of undisputed constitutional powers, undertaken to provide a currency for the whole country, it can not be questioned that Congress may, constitutionally, secure the benefit of it to the people by appropriate legislation. To this end, Congress has denied the quality of legal tender to foreign coins and has provided by law against the imposition of counterfeit and base coin on the community. To the same end Congress may restrain, by suitable enactments, the circulation as money of any notes not issued under its own authority. Without this power, indeed, its attempts to secure a sound and uniform currency for the country must be futile."

EXTENT OF THE WAR POWERS.

The Constitution expressly grants to the Congress the powers to declare war, to raise and support armies, to provide and maintain a Navy. These are the important war powers of Congress. The power to declare war, by necessary implication, includes the power to carry on the war. (Knox *v.* Lee, 12 Wall., 457, 546.)

Both Hamilton and Madison appreciated the necessity for sweeping powers for these purposes, and in the Federalist, urged their adoption. Hamilton said:

"The authorities essential to the common defense are these: To raise armies; to build and equip fleets; to prescribe rules for the government of both; to direct their operations; to provide for their support. These powers ought to exist without limitation, because it is impossible to foresee or define the extent and variety of national exigencies, or the correspondent extent and variety of the means which may be necessary to satisfy them. The circumstances that endanger the safety of nations are infinite, and for this reason no constitutional shackles can wisely be imposed on the power to which the care of it is committed. This power ought to be coextensive with all the possible combinations of such circumstances; and ought to be under the direction of the same councils which are appointed to preside over the common defense.

"This is one of those truths which, to a correct and unprejudiced mind, carries its own evidence along with it; and may be obscured, but can not be made plainer by argument or reasoning. It rests upon axioms as simple as they are universal; the means ought to be proportioned to the end; the persons, from whose agency the attainment of any end is expected, ought to possess the means by which it is to be attained.

"Whether there ought to be a Federal Government intrusted with the care of the common defense, is a question in the first instance, open for discussion; but the moment it is decided in the affirmative, it will

follow that the Government ought to be clothed with all the powers requisite to complete execution of its trust. And unless it can be shown that the circumstances which may affect the public safety are reducible within certain determinate limits; unless the contrary of this position can be fairly and rationally disputed, it must be admitted, as a necessary consequence, that there can be no limitation of that authority which is to provide for the defense and protection of the community, in any matter essential to its efficacy—that is, in any matter essential to the formation, direction, or support of the national forces." (The Federalist No. 23, pp. 152, 153, edition of Central Law Journal Co., 1914.)

Madison said:

"Is the power of declaring war necessary? No man will answer this question in the negative. It would be superfluous, therefore, to enter into a proof of the affirmative. The existing confederation establishes this power in the most ample form.

"Is the power of raising armies and equipping fleets necessary? This is involved in the foregoing power. It is involved in the power of self-defense.

"But was it necessary to give an indefinite power of raising troops, as well as providing fleets, and of maintaining both in peace as well as in war?

"The answer to these questions has been too far anticipated in another place to admit an extensive discussion of them in this place. The answer indeed seems to be so obvious and conclusive as scarcely to justify such a discussion in any place. With what color of propriety could the force necessary for defense be limited by those who can not limit the force of offense? If a Federal Constitution could chain the ambition or set bounds to the exertions of all other nations, then indeed might it prudently chain the discretion of its own Government and set bounds to the exertions for its own safety.

"How could a readiness for war in time of peace be safely prohibited unless we could prohibit in like manner the preparations and establishments of every hostile nation? The means of security can only be regulated by the means and the danger of attack. They will, in fact, be ever determined by these rules, and by no others. It is in vain to oppose constitutional barriers to the impulse of self-preservation." (The Federalist, No. 41, pp. 275, 276, edition of Central Law Journal Co., 1914.)

In Knox *v.* Lee (12 Wall., 457) the Supreme Court had under consideration the extent of the war powers and said (p. 540):

"It is not to be denied that acts may be adapted to the exercise of lawful power and appropriate to it, in seasons of exigency, which would be inappropriate at other times."

It has been contended that Ex parte Milligan (4 Wall., 2), is not in harmony with the foregoing views as to the extent of the war powers of Congress. In fact the decision in that case is not inconsistent with those views. Any expression therein to the contrary is pure dictum. The only issue was the power and authority of the Executive. The question of the power of Congress to legislate for war purposes was not involved. This clearly appears from the argument of counsel and was recognized by the court. David Dudley Field, of counsel for Milligan, said (p. 22):

"It is not a question how far the legislative department of the Government can deal with the question of martial rule. Whatever has been done in these cases has been done by the executive department alone."

The court said (p. 121): "It is not pretended that the commission" before which Milligan was tried "was a court ordained and established by Congress."

Four members of the court dissented from the dictum in the majority opinion as to the power of Congress, although concurring in its decision on the real issue involved as to the power and authority of the Executive, saying (p. 142):

"And we are unwilling to give our assent by silence to expressions of opinion which seem to us calculated, though not intended, to cripple the constitutional powers of the Government and to augment the public dangers in times of invasion and rebellion."

CONSTITUTIONALITY DEPENDENT ON THE FACTS.

In determining the constitutionality of bill H. R. 4630 the first inquiry is whether its provisions are appropriate and conducive to the exercise of the war powers of Congress. This is primarily a question of fact, and, in the first instance, must be determined by the legislature. However, the legislative determination is subject to review by the courts to ascertain whether or not the facts behind the legislation are sufficient to bring it within the doctrine of McCulloch *v.* Maryland. This is strikingly illustrated in the first and second Legal Tender cases.

In Hepburn *v.* Griswold (first Legal Tender case, 8 Wall., 603) five out of the eight judges held that the legal-tender statutes were not appropriate and conducive to the carrying out of the war powers or any other power enumerated in the Constitution, and therefore were not within the doctrine. In the following year, with a slight change in the personnel of the court, five out of nine judges, in Knox *v.* Lee (second Legal Tender case), held that the facts behind the statutes did bring them within the operation of this doctrine and that the statutes were appropriate and conducive to the execution of the war powers of Congress.

It is interesting, as an evidence of the evolution of the judicial mind, to note that in Juilliard *v.* Greenman (110 U. S., 421, the third Legal Tender case) the court, with only a single dissenting voice, held statutes making notes of the United States legal tender to be constitutional, on the ground that they were measures appropriate, conducive, and plainly adapted to the execution of the power of Congress, expressly granted, to borrow money on the credit of the United States.

The following cases further illustrate the extent to which the Supreme Court has gone in holding acts of Congress appropriate and conducive to the exercise of its expressly enumerated powers:

In United States *v.* Fisher (2 Cr., 358), the Supreme Court held an act of Congress giving priority to debts due the United States over those of other creditors of insolvent or bankrupts conducive to the exercise of the power to pay the debts of the United States.

In McCulloch *v.* Maryland (4 Wheat., 316), the court held that an act of Congress establishing a bank was plainly adapted to the exercise of its enumerated powers.

In Stewart *v.* Kahn (11 Wall., 493), an act of Congress which had the effect of extending the period of the statutes of limitations prescribed by State law for civil and criminal proceedings was upheld by the Supreme Court of the United on the ground that it was a necessary and proper exercise of the war power.

In United States *v.* Gettysburg Electric Railway Co. (160 U. S., 668), the court held that an act providing for the condemnation of land to commemorate the Battle of Gettysburg was germane to or intimately connected with and appropriate to the exercise of the war powers of Congress.

A SURVEY OF THE GENERAL FACTS.

The bill carries on its face a declaration by Congress, in the first section that, by reason of the existence of a state of war, the things required or forbidden are essential to the national security and defense, for the successful prosecution of the war, and for the support and maintenance of the Army and Navy; and, in the third section, that processes, methods, and activities concerning necessaries are affected with a public interest. Is this legislative declaration well founded?

The United States has become a party to a war of unforeseeable duration and magnitude with a formidable enemy of vast and indefinite ability and resources. Methods of warfare have been revolutionized and now involve instrumentalities whose cost and destructive effects tax and drain the financial and natural resources not only of the countries engaged but of the world, to an extent hitherto unknown. At least two-thirds of the world's population and more than one-half of its land area are involved. More than 25,000,000 men are now under arms and battle lines encircle half of a continent. The governments of the warring powers have already spent more than $60,000,000,000 in the prosecution of the war. Our own Government has authorized the issuance of bonds for war purposes to the extent of $7,000,000,000. We now have over half a million men in the military service, and provision has been made for adding more than 2,000,000 others. Military necessities have withdrawn millions of workmen from the fields of production, and wide, productive areas have been devastated by military operations. Submarines have destroyed millions of tons of shipping and supplies and have deflected commerce from its wonted channels. Preference movements of troops, war supplies, and munitions have partially monopolized transportation facilities, to the detriment of other shipping. These and other sudden and extraordinary demands upon industry and commerce have cause a scarcity of labor and fertilizer in the great producing areas which, with contributing natural causes, have resulted in a subnormal food supply throughout the world. Great Britain and France have been unable, notwithstanding supreme effort and drastic laws for the purpose, adequately to provide themselves with the necessities of life, and are making increasingly heavy drafts upon this country We are now cooperating with these countries. The United States is the principal foreign source of their supplies, and is under obligation and necessity to meet their needs.

The foregoing facts demonstrate that some control or regulation by Congress of production, conservation, and distribution of the necessaries of life is appropriate and conducive, even essential, to the support and maintenance of the Army and Navy, and to the successful prosecution of the war. The question then is, whether the particular means proposed in the bill are appropriate and conducive. This depends upon their nature and scope.

DISCUSSION OF THE FACTS APPLICABLE TO THE VARIOUS SECTIONS OF THE BILL.

The chief aims of the bill are to eliminate waste, to conserve the supply of human food, to stimulate production, to prevent hoarding, to restrain injurious speculation, to prevent corners and extortion, and to prevent deceptive practices and effect equitable distribution.

The accomplishment of these aims is within the public policies of both our National and State governments. Many statutes with closely related objects in view have been enacted and have been upheld by the courts. See the following decisions: Manufacturers' Light & Heat Co. *v.* Ott (215 Fed., 940); Munn *v.* Illinois (94 U. S., 113); Spring Valley Water Works *v.* Schottler (110 U. S., 347); Budd *v.* New York (143 U. S., 517); Brass *v.* Stresser (153 U. S., 391); German Alliance Ins. Co. *v.* Kansas (233 U. S., 389); Seven Cases *v.* United States (239 U. S., 510); Wilson *v.* New (U. S. Sup. Ct.), decided March 19, 1917

While the bill is a war measure, none of the powers conferred by it can be employed until after the President shall find a specifically described condition or emergency which justifies its exercise. These powers are really designed to take care of acute situations which may arise during the progress of the war.

Section 12 of the bill: By reason of the fact that there is a subnormal supply of food in the world and an abnormal demand for military supplies, increased production is essential for the successful prosecution of the war. It is impossible to forecast weather conditions and crop yields. In many directions farmers may be faced with increased costs of labor, of fertilizers, of farm machinery, and of capital. In respect to one or more staple crops the Nation may find it desirable directly to stimulate production by giving producers a guaranty of a reasonable price. In such an emergency the guaranty would be a direct and plainly adapted means of bringing about prompt and continuous increase in production.

Section 10: It may be found that certain mines, factories, or plants are idle and that their owners are not able or willing to operate them; that some are engaged in producing foods or fuels when other foods or fuels are more desirable in the light of war needs; or that others are engaged in producing foods or fuels which are essential for ourselves and the countries with which we are cooperating, but are disposing of them in neutral countries. Obviously, in such cases, the exercise of the power to take over and operate is plainly adapted to stimulating production and to assuring an adequate and continuous supply of food or fuel for ourselves and the countries relying upon us for assistance.

Section 7: Experience has shown that blind market movements of perishable products have frequently resulted in congested terminals and disastrous losses. Some markets have been glutted while others were suffering from scarcity. The nature of these products often makes transfers from market to market impossible, and when such conditions arise vast losses result from spoilage. Court and other official records show that perishable products frequently have been withheld from sale to the point of decomposition, and at times edible products have been dumped or destroyed in order to maintain prices. Great losses are suffered from careless methods of manufacture, packing, transportation, and handling. Even in times of peace and plenty, waste is deplorable. In the face of war and a real necessity, waste becomes dangerous. Having declared waste unlawful, the bill provides for directing the disposition of foods going out of condition and the market movement of perishable products. If the prevention of food waste is a legitimate end, clearly the means proposed for coping with the problem are appropriate and plainly adapted

Sections 14, 15, and 16: The substantial shortage in our wheat crops of last year and the estimated shortage for this year point to the possible necessity of resorting to certain expedients in order to increase the flour supply. The provisions of these sections would make it possible, if the emergency required, to increase the percentage of flour

derived from wheat in order to bring about an increase in the amount of flour; to permit or require wholesome mixtures of wheat, wheat flour, and other wheat products with other cereals or materials of vegetable origin, in order to increase the flour supply; and to restrict or prohibit the manufacture of alcohol, and alcoholic or other oeverages, in order to conserve for food purposes the materials which enter into these articles. It has been asserted that in the case of alcohol 60 per cent of the food value of the food products entering into its production is lost. It has been estimated that from seventy to eighty million bushels of cereals could be saved for food purposes through the exercise of the power to curtail the use of foodstuffs in the manufacture of alcohol and beverages. If this amount of grain were taken for human food, the distillers' and brewers' grains would be withdrawn from cattle feed and would have to be replaced. Surveys in the Department of Agriculture indicate that other protein substitutes can be supplied for the dairymen, without difficulty, through proper organization for the handling of the problem. If an emergency should require action along these lines, these powers are manifestly appropriate and plainly adapted to the conservation of the food supply. Whether they would be exercised would depend upon the emergency.

Sections 6 and 8: In times of alleged or real shortage there is a disposition amongst consumers, based upon the fear of actual need or the apprehension of higher prices, to buy up and store quantities of necessaries in excess of their ordinary requirements. Such practices frequently result in spoilage and abnormally tend to increase prices. The fear or apprehension on the part of the consumer is commercialized, and inspires hoarding, by speculators, for the purpose of making unusual profits. There are indications that hoarding is being practiced throughout the country by both consumers and speculators. If hoarding be not restrained by Congress, it is likely to result that, while there were sufficient necessaries in the country to supply all the needs of the Government and the people, the Government and many of the people could not get sufficient for their needs unless at excessive prices. Therefore hoarding is defined and declared to be unlawful, and machinery is provided for compelling the placing of hoarded necessaries on the market.

Section 11: In order to restrain injurious speculation the exchanges on which necessaries are dealt in may, if the emergency requires, be subordinated to control by the President. While exchanges undoubtedly render many useful services to legitimate business, nevertheless it is a fact that at time some of them may be employed for purely speculative purposes and they are susceptible to use for manipulation. The privilege of dealing on small margins through exchanges may enable market manipulators, upon the investment of relatively small capital, to depress or enhance prices as their interests may appear, without regard to the law of supply and demand. This privilege may be exercised against the producer and the consumer alternately. War conditions have a tendency to inflame cupidity and create uncertainties which breed destructive speculation Unjustifiable price fluctuations may take place overnight. These demoralize and disturb legitimate business interests and the processes of production and distribution. The exchanges afford facilities for speculative trading in forward contracts for necessaries by citizens and aliens, which under readily conceivable circumstances might be inimical to the best interests of this country and seriously hamper the Government in provisioning its Army and Navy.

Section 13: In case of extreme emergency, in order to prevent or break corners or to prevent extortion, the President is vested with power to fix the highest price at which any necessaries shall be dealt in. This provision goes hand in hand with the guaranteed price to the producer, and is primarily for the protection of the Government and consumers generally. The mere existence of the power in the President should have a marked tendency to prevent hoarding, monopolization, and other speculation, as it will be generally understood that it will be exercised if it becomes necessary to curb greed. Experience demonstrates that in the excitements and uncertainties of war local and general monopolies, manipulations, and other speculative schemes are unusually prevalent, tending to drive prices alternately to abnormally low or high levels. In the face of such legislation it is thought that selfish men would not dare to commercialize war conditions to exploit the Government and the people.

Section 6: Licensing is recognized as a convenient and necessary means by which any business may be brought under direct supervision and control, and therefore has been proposed for the purpose, if the emergency requires, of eliminating waste, preventing hoarding, regulating rates and charges, conserving the food supply, preventing discriminatory and unfair practices, and procuring from time to time valuable information concerning supply and demand. Among other things, licensing affords a means through which to protect the producer in his business transactions with the classes of middlemen with whom he comes in contact, and thereby ipdirectly to encourage production. The preservation of foods through storage from season to season, especially in the case of perishables, is of the highest importance. However, the system itself in some instances has been abused and employed by speculators for selfish purposes. Bringing these valuable and indispensable instrumentalities for food preservation under Federal supervision may become highly essential to their proper utilization.

Section 5: Should a guaranteed price to producers or the highest price for dealing in any necessaries be fixed, uniform grades for such necessaries would be helpful as a basis for the application of the prices. In the regulation of exchanges it may become desirable to prescribe grades in order to promote commercial convenience and prevent fraud. Such grades might also be needed by the Government in the large purchases which are essential for conducting the war. War, with its consequent high prices, brings about an increased tendency on the part of some dealers to misrepresent. The consumer is at a relative disadvantage in buying, and the distributor is enabled more easily to practice deception. Federal action would be necessary to bring about the general use of such uniform grades and proper labeling in order to prevent deception.

Section 9: Supplementing the specific powers for carrying out the chief aims of the bill, a general power to purchase, requisition, store, and sell necessaries is vested in the President. In extreme cases this power would be available to bring such products immediately under the ownership and control of the Government. In war times the Government should be in a position to procure needed supplies at reasonable prices for itself and for its people.

No government competent to declare and carry on war can afford to leave itself or its people at the mercy of grasping interests in the matter of the prices for military supplies and the necessaries of life. Artificial enhancement of prices diminishes the purchasing power of the Government and hence its ability to finance and sustain itself during the war. Such prices directly tend to lessen the ability of the people to respond to taxation. They also tend to prevent the masses from obtaining the proper amount of necessaries, inflame popular passions, bring about strikes, lockouts, and boycotts, and otherwise disturb the normal course of industry and trade, thus resulting in impaired efficiency for industrial and military purposes. Undoubtedly industrial efficiency is equally as necessary to the successful prosecution of the war as military efficiency.

ARE ANY LIMITATIONS OF THE CONSTITUTION VIOLATED?

The second inquiry in determining the constitutionality of House bill 4630 is whether, in any respect, it is prohibited by or inconsistent with the Constitution.

There is a strong belief that in the exercise of its war powers Congress is free from the necessity of observing any constitutional limitations as to personal guaranties which would obtain in times of peace.

It has been held, on the principle of the necessity for self-preservation, that the power to tax is not limited by the personal guaranties in the Constitution. In Billings *v.* United States (232 U. S., 261, 282), the Supreme Court said:

"It is also settled beyond dispute that the Constitution is not self-destructive. In other words, that the powers which it confers on the one hand it does not immediately take away on the other; that is to say, that the authority to tax which is given in express terms is not limited or restricted by the subsequent provisions of the Constitution or the amendments thereto, especially by the due process clause of the fifth amendment. McCray *v.* United States (195 U. S., 27) and authorities there cited."

If, in the opinion of the Supreme Court, it is necessary that the taxing power be free from constitutional limitations, surely that court, if occasion should arise, would not hesitate to hold that the war powers of Congress are fully as comprehensive as the power to tax and as free from restriction. Mr. Justice Bradley, in his concurring opinion in the second legal tender case, Knox *v.* Lee (12 Wall., 457, 563), said:

"It is absolutely essential to independent national existence that government should have a firm hold on the two great sovereign instrumentalities of the sword and the purse, and the right to wield them without restriction on occasions of national peril."

In this connection see also the opinion of the Supreme Court in the case of Miller *v.* United States (11 Wall., 268, 305).

If the framers of the Constitution did not intend to make the war powers the most comprehensive conferred by that instrument, then why did they in express terms recognize the power of Congress, by appropriate legislation, to quarter troops in any house without the consent of the owner, and the power to suspend the great writ of liberty, the habeas corpus, without which all the personal-liberty guaranties in the Constitution lose their efficacy? If, in the exercise of the war powers, soldiers may be thus quartered and the writ of habeas corpus suspended, it follows that the lesser property rights need not be observed.

However, it is not necessary, in order to accomplish the aims of this bill, to invade any constitutional guaranty as to personal-liberty or property rights. Even if those guaranties are limitations on the war powers, the bill as framed is not in conflict with them. It is thought that the only objections which opponents could raise in connection with the limitations in the Constitution are the following:

1. That it deprives the person of property without due process of law and takes private property for public use without just compensation, contrary to the fifth amendment.

2. That it compels self-incrimination, contrary to the fifth amendment.

3. That it authorizes unreasonable searches and seizures, contrary to the fourth amendment.

4. That it provides for taking money out of the Treasury, otherwise than in consequence of appropriations made by law, contrary to article 1, section 9, clause 7.

5. That it provides for the expenditure of public funds for private purposes, contrary to article 1, section 8, clause 1.

6. That it delegates legislative power to the Executive, contrary to article 1, section 1.

DUE PROCESS.

The question whether property may be taken without due process of law arises in connection with section 6 of the bill, relating to fixing rates and charges and the disposition of hoarded stocks of licenses; section 7, relating to the disposition of food to avoid spoilage and to the direction of market movements of perishable products; section 8, relating to the sale of hoarded necessaries; and section 13, relating to the fixing of the highest sale price of necessaries.

This bill, in specific terms, in substance declares all processes, methods, and activities concerning necessaries to be affected with a public interest. As previously shown in this brief, any business affected with a public interest is in a higher degree subject to governmental regulation and control than mere private enterprise.

In every instance, save one, in which the above-mentioned sections authorize the President to take any action affecting the property rights of any person, the property involved must be in an unlawful status, or it must be an unlawful rate, charge, or practice.

The only way in which the operation of the hoarding section may be said to have invaded property rights is that when any person is found to have hoarded any necessaries, he must, if ordered by the President, put them on the market. It is to be noted, however, that the section does not require any person to dispose of property which it is lawful for him to possess; it merely requires him to expose for sale at reasonable prices property which is being held by him contrary to law. Practically the same rules apply to the disposition of property about to go out of condition under the spoilage provision, which requires the person merely to dispose of the food so as to preserve its food value. The highest price section interferes with property rights only to the extent that it provides for a general limitation upon the price at which all persons may sell any necessaries, and merely prohibits the exercise of the privilege of sale at an unlawful price. This might curtail possible profits and result in actual loss to particular individuals. The power over rates and charges of licensees operates upon the same theory as the power of the Interstate Commerce Commission over railroads. The direction of market movement and distribution may take away from a person the privilege of selecting the market to which he may send perishable products, and is just another instance in which private property rights must yield to the public interest. This power is sustainable, and the other powers are also sustainable, on the ground that all dealings in necessaries are specifically declared to be affected with a public interest, as being appropriate and conducive to the exercise of the war powers of Congress. The incidental interference with property rights involved in the exercise of these powers is mild, compared with the treatment of property held or handled in violation of other statutes.

Section 6 of the Sherman antitrust law of 1890 authorizes the forfeiture to the United States and the seizure and condemnation of any

property in the course of transportation from one State to another or to a foreign country which is owned under any contract or combination or pursuant to any conspiracy declared illegal by section 1 of that statute. Furthermore, under that statute the dissolution of illegal combinations frequently has been required and the offending members have been forced to dispose, as best they could, of shares of stock illegally held by them. On numerous occasions the constitutionality of this statute has been attacked and has been upheld by the Supreme Court. Addyston Pipe & Steel Co. *v.* United States (175 U. S., 211); Standard Oil Co. *v.* United States (221 U. S., 79); United States *v.* American Tobacco Co. (221 U. S., 168); Northern Securities Co. *v.* United States (193 U. S., 197).

Again, Congress has authorized the seizure and condemnation of goods imported in violation of the customs laws, and also of property employed in aiding or abetting the evasion of the payment of duty. Similar provisions are embodied in the internal-revenue statutes.

Property shipped in interstate or foreign commerce contrary to the provisions of the food and drugs act of June 30, 1906, is also subjected to forfeiture, seizure, condemnation, and sale, and the net proceeds from such sales go to the United States. In addition to forfeiture and condemnation of offending property, this statute prescribes personal punishment for violations. This statute has been upheld by the Supreme Court. Hipolite Egg Co. *v.* United States (220 U. S., 45); Seven Cases *v.* United States (239 U. S., 510).

The fact that the value of any property held by a particular person is affected or impaired is a mere incident to the lawful exercise of a constitutional power and does not offend the due process clause of the Constitution.

As stated by the Supreme Court of the United States in Knox *v.* Lee (12 Wall., 457, 551, the second legal-tender case):

"Closely allied to the objection we have just been considering is the argument pressed upon us that the legal-tender acts were prohibited by the spirit of the fifth amendment, which forbids taking private property for public use without just compensation or due process of law. That provision has always been understood as referring only to a direct appropriation, and not to consequential injuries resulting from the exercise of lawful power. It has never been supposed to have any bearing upon, or to inhibit laws that indirectly work harm and loss to individuals. A new tariff, an embargo, a draft, or a war may inevitably bring upon individuals great losses; may, indeed, render valuable property almost valueless. They may destroy the worth of contracts; but whoever supposed that because of this a tariff could not be changed, or a nonintercourse act or an embargo be enacted, or a war be declared?"

See also Dent *v.* West Virginia (129 U. S., 114); Louisville & Nashville R. R. *v.* Mottley (219 U. S., 467, 482).

These and other cases to like effect authoritatively dispose of any question of due process of law which may arise out of the operation of any provision of the bill.

As a matter of fact, there is no compulsory process provided by which any person can be, in any respect, actually deprived of his property. By refusing to comply with any notice, order, regulation, or requirement made under the law any person may create a justiciable controversy with the Government and have his day in court. No order, notice, requirement, or regulation directed against any person is final or conclusive as to either the facts or the law. The accused may successfully defend upon a showing that the order, notice, requirement, or regulation was not justified by the facts or was unauthorized or contrary to law.

EXEMPTION OF FARMERS.

It may be argued that the exemption of farmers, gardeners, and others, with respect to products of lands cultivated by them, constitutes an unreasonable or arbitrary classification, and is therefore unconstitutional. There is, however, a differentiating equity in favor of such persons. Statutory precedent for such an exemption is found in section 6 of the Clayton amendment to the antitrust laws, and in many of the State statutes. Manifestly, the exemption is within the rule with respect to classification laid down in German Alliance Insurance Co. *v.* Kansas (233 U. S., 389), in which the court said (p. 418):

"A citation of cases is not necessary, nor for the general principle, that a discrimination is valid if not arbitrary, and arbitrary in the legislative sense—that is, outside of that wide discretion which a legislature may exercise. A legislative classification may rest on narrow distinctions. Legislation is addressed to evils as they may appear, and even degrees of evil may determine its exercise." (Ozan Lumber Co. *v.* Union County Bank, 207, U. S., 251.)

PROPERTY TAKEN FOR PUBLIC USE.

Although in every case provision is made for just compensation when it is proposed to take private property, for the United States, it may be argued that such taking is not for a public use. It will not be denied that Congress has the power to authorize the taking of necessaries whenever needed for the Army and Navy or for the Government itself, upon the payment of just compensation. To that extent, the constitutionality of this bill can not be questioned. Nor will it be seriously contended that Congress may not provide for the taking of such necessaries and furnishing them to the Governments of countries with which we are or may be cooperating in the prosecution of the war, because their interests and ours in the successful prosecution of the war are common. The objection, if any, arises because property taken by the United States may be disposed of to private purchasers.

The purposes for which the power of requisitioning necessaries may be exercised are to assure equitable distribution and to prevent hoarding, manipulation, the exaction of excessive prices, and injurious speculation. These are broad public purposes, principally aimed at the correction of practices elsewhere in the bill declared to be unlawful. As previously stated, the power granted in this section is purely supplementary for the accomplishment of the chief aims of the bill. Resale of such requisitioned supplies is not limited to a particular person or class of persons, and is merely incidental to the carrying out of the public purposes specified. Likewise the requisitioning and governmental use or operation of factories, mines, and plants is authorized only for the broad public purpose of assuring an adequate and continuous supply of necessaries; and the later possible disposition of products to private purchasers is incidental and subordinate to the carrying out of the principal purposes for which the power is exercised.

SELF-INCRIMINATION.

The second objection, that the bill compels self-incrimination, contrary to the fifth amendment, might be made only under section 6 of the bill, which authorizes the President to require the submission of reports by licensees. The fifth amendment to the Constitution provides, in part, "nor shall (any person) be compelled in any criminal case to be a witness against himself."

This constitutional guaranty applies only to natural persons. Corporations, and their officers as such, may be compelled to furnish any information relating to the corporate business, whether self-incriminatory or not, which is required by Congress. Wilson *v.* United States (221 U. S., 361).

The constitutional protection of natural persons against self-incrimination is not an absolute right, but a privilege which operates in favor of the person only when claimed by him at the time of an attempted deprivation or invasion thereof; otherwise it is waived. Brown *v.* Walker (161 U. S., 591, 597).

As stated with reference to the corresponding provision in the Massachusetts constitution by the Supreme Judicial Court of Massachusetts in Commonwealh *v.* Farmers and Mechanics' Bank (21 Pick (Mass.), 542, 555):

"The immunity given to all the citizens of the Commonwealth by which they are exempted from the obligation to criminate themselves is a privilege which each individual may claim for himself, or may waive, as he pleases. The act authorizes the commissioners to examine under oath all directors, officers, and agents of banks. It may be presumed that in most cases such officers and agents would prefer to waive their privilege and make a full disclosure of all the facts within their knowledge, rather than lie under the suspicion, which their declining to answer would imply; and in such case there is no reason why the commissioners, and through them the public, should not avail themselves of information which such answers voluntarily given would afford."

Any natural person, notwithstanding the constitutional provision, may be compelled to give self-incriminating evidence, if there has been granted to him immunity from prosecution, on account of such evidence, as broad as the constitutional protection. Counselman *v.* Hitchcock (142 U. S., 547); Brown *v.* Walker (161 U. S., 591).

Thus, in an attempt to secure the information desired, Congress may adopt either of two methods. If it supplant the constitutional barrier with respect to self-incriminating evidence with an immunity as broad as the privilege which may be claimed by the person from whom the information is sought, such person may be compelled to disclose the information, whether it is self-incriminating or not. On the other hand, if it let the barrier remain undisturbed, the person may be compelled to disclose only information with respect to which he does not claim the privilege conferred by the Constitution to withhold self-incriminating evidence. In drafting section 6 the latter course was followed, because the real inconvenience to arise from the introduction of the immunity clause is that it would hamper the Department of Justice by making the President the unwitting instrument for stopping prosecutions by the Department of Justice. Not only does the section under consideration contain no immunity clause, but it also contains no provision requiring any person to furnish self-incriminating evidence and penalizes only through regular criminal proceedings willful violation of the regulation under which such information may be required.

The question for determination is whether the section as framed, without any immunity clause, is in conflict with the constitutional provision regarding self-incrimination. Unless the language otherwise affirmatively require, the section should be construed with the implied exception, which exists by virtue of the Constitution, that no one shall be obliged to incriminate himself. Under the provision of the Massachusetts constitution similar to that of the United States Constitution the Massachusetts Supreme Judicial Court, upholding a statute, requiring the giving of information, which contained no immunity clause, said:

"The specific objection is that by the Constitution no person is bound to furnish evidence which may render him liable to a criminal prosecution; but by the act all directors and other officers are liable to be put to interrogatories, which may thus oblige them to criminate themselves.

"To this there are several answers. First, taking the Constitution to be as supposed, then it will be presumed that the provision was to be taken with the implied exception that no one shall be obliged to criminate himself." (Commonwealth *v.* Farmers and Mechanics Bank, 21 Pick. (Mass), 542, 554.)

The only form of compulsion directed against the person who may be called upon to make reports pursuant to this section is his liability to criminal punishment for willful violation of the regulation requiring such reports. He has full opportunity when called upon to comply with the regulation, and again when prosecuted in the criminal courts for failure or refusal to give the information, to claim and assert his constitutional privilege against giving self-incriminating evidence. Furthermore, it is the duty of the court in which any such prosecution is brought to recognize the right, if claimed by the person from whom the information was sought. This was asserted by the Supreme Court of the United States in the following language:

"Suffice it in the present case to say that as the Interstate Commerce Commission, by petition in a circuit court of the United States, seeks, upon grounds distinctly set forth, an order to compel appellees to answer particular questions and to produce certain books, papers, etc., in their possession, it was open to each of them to contend before that court that he was protected by the Constitution from making answer to the questions propounded to him; or that he was not legally bound to produce the books, papers, etc., ordered to be produced; or that neither the questions propounded, nor the books, papers, etc., called for relate to the particular matter under investigation, nor to any matter which the commission is entitled under the Constitution or laws to investigate. These issues being determined in their favor by the court below, the petition of the commission could have been dismissed upon its merits." (Interstate Commerce Commission *v.* Brimson, 154, U. S., 447, 479.)

The penalties imposed by the section do not apply to all failures or refusals to furnish reports, but only to such failures or refusals as are "willful." The word "willful" has been held to be synonymous with the words "intentional," "designedly," "without lawful excuse." It implies that the act is done knowingly and of stubborn purpose. It means with "evil intent" or with "legal malice." It is frequently understood as signifying evil intent without justifiable excuse. (Bouvier, vol. 3, p. 3454.)

In the statute upheld in the Massachusetts case above cited the words "without justifiable cause" were used, and it was held by the court in that case that to decline answering, when it is provided by the Constitution that the person shall not be held to answer, would plainly be a justifiable cause. Therefore it would seem that proof that the information was self-incriminatory would be a complete defense to a charge of "willfully" violating the regulation requiring the submission of the reports.

SEARCHES AND SEIZURES.

The third objection is that section 6 of the bill authorizes unreasonable searches and seizures, contrary to the fourth amendment of the Constitution, in that it provides for entry and inspection by the Presi-

dent's duly authorized agents of the places of business of licensees. It is believed that the section in question does not authorize an unreasonable search and seizure within the meaning of the Constitution. It authorizes entry only by the President's duly authorized agents for the purposes of the section. It should be observed that it does not authorize entries into dwelling houses, but relates only to the places of business of licensees. It does not authorize any search of the person. There is no machinery provided for entry over the protest or resistance of any person. The only penalty is for willful violation of the regulation, or, under section 20 of the bill, for willfully obstructing or hindering the President's duly authorized agents in the performance of their duties under the section. The question whether an entry under this section would constitute an unreasonable search and seizure would arise only in case the person had, in the place to which entry was sought, information which, if obtained through such entry, would be self-incriminatory. It is believed that this question is settled by the fact that the section does not deprive the person of his right to prevent an entry of his place of business when such entry would lead to the disclosure of self-incriminatory information. If the entry be effected over his protest and claim of the protection of the constitutional guaranty, any self-incriminatory evidence obtained by such entry, upon timely objection, could not be used against him in any proceeding to subject him to punishment for a crime or to a penalty or forfeiture. (Weeks *v.* United States, 232 U. S., 383.)

In case he has protested against an entry and has claimed the protection of the constitutional guaranty and thereupon is brought to trial upon a charge of willfully violating the regulation, or willfully obstructing or hindering the President's duly authorized agents, he may plead his constitutional guaranty by way of defense to the charge. There is nothing in the section which deprives him of such a defense.

These conclusions are supported by exactly the same line of reasoning hereinbefore used with respect to the self-incrimination clause of the Constitution.

REVOLVING FUND.

The fourth objection that the bill provides for taking money out of the Treasury otherwise than in consequence of appropriations made by law, may arise in connection with the revolving-fund features of sections 9, 10, and 12, which provide that moneys received in carrying out the purposes of the respective sections may, in the discretion of the President, be used over and over in further carrying out those purposes, without being immediately deposited in the Treasury. Only balances not used as part of such revolving funds are required to be covered into the Treasury. The original fund for carrying out these purposes is provided for in a direct appropriation made by section 21 of this bill from moneys in the Treasury.

It is apparent from this analysis of the section that the only moneys which may actually be taken from the Treasury are drawn in consequence of an appropriation made by law. The constitutional prohibition applies only to moneys which are actually in the Treasury, and not to moneys which remain under the control of the President. (Knote *v.* United States, 95 U. S., 149.)

There is nothing novel in the application of the revolving-fund principle in this bill, as there are statutory precedents for the practice. For example, see the act of March 4, 1913 (37 Stat., 828), relating to the Forest Service; the act of March 4, 1915 (38 Stat., 1145), relating to the Alaskan railway; the acts of February 21, 1911 (36 Stat., 926), and March 31, 1905 (33 Stat., 1032), relating to the United States Reclamation Service; and the act of July 1, 1898 (30 Stat., 604), relating to the United States Revenue-Cutter Service.

PUBLIC FUNDS FOR PRIVATE PURPOSES.

The fifth objection, that the bill provides for the expenditure of public funds for private purposes, arises with reference to section 12, providing for a guaranteed price.

The sole purpose of this section is the stimulation of production and the assurance of an adequate and continuous supply of necessaries during the war. It is national in its scope. It is not confined to any particular geographical area, and is operative only when the President shall find that an emergency exists. Whatever benefit may accrue to the producer under its operation would be merely incidental to the carrying out of its declared purpose. The objectors may cite the cases arising out of the sugar-bounties provisions of the act of October 1, 1890 (26 Stat., 567). The provisions of this bill are fundamentally different from those of the sugar-bounties act. That act was intended to indemnify the growers of sugar in the United States for actual or theoretical losses which they might have sustained by reason of the removal of the tariff duty upon the importation of sugar into this country, and was, in effect, a mere bounty or gratuity. The sugar-bounties act was intended as permanent legislation and in no way related to any war or to the assurance of an adequate and continuous supply of sugar.

Section 12 of this bill is directly related and limited to the emergency which may arise out of the progress of the war and is directly connected with the assurance of an adequate and continuous supply of necessaries during the war. Its duration is expressly limited. Therefore it is inseparably connected with providing for the common defense and promotion of the general welfare and is clearly within the principles laid down by Story in his work on the Constitution, volume 1, section 978, in which, quoting Hamilton, he said:

"It is therefore of necessity left to the discretion of the National Legislature to pronounce upon the objects which concern the general welfare and for which under that description an appropriation of money is requisite and proper. And there seems no room for doubt that whatever concerns the general interests of learning, of agriculture, of manufactures, and of commerce are within the sphere of the national councils so far as regards an application of money. The only qualification of the generality of the phrase in question which seems to be admissible is this, that the object to which an appropriation of money is to be made must be general and not local—its operation extending in fact or by possibility throughout the Union and not being confined to a particular spot."

The Supreme Court of the United States refused to pass upon the constitutionality of the sugar-bounties provisions, but did authorize the payment of earned bounties thereunder. (United States *v.* Realty Co., 163 U. S., 427.)

DELEGATION OF LEGISLATIVE POWER.

The sixth objection which may be made to the bill is that it delegates legislative power to the Executive. This may arise in connection with any of the regulatory sections from 5 to 16, inclusive. A discussion of this objection requires a clear understanding of the legal theories upon which the bill is based. In the first place, the bill declares the legislation to be essential by reason of the existence of a state of war. Thereupon, specific acts and practices are denounced as unlawful. It also declares all processes, methods, and activities concerning necessaries to be affected with a public interest. In each of the regulatory sections it lays down a primary rule or standard to govern and guide the President. The President is confined within the field of action prescribed by Congress. The penalties apply and the machinery provided in the regulatory sections operates only after the President shall have found the existence of specifically described facts or emergencies and shall have promulgated a notice or regulation or made an order or requirement intended to effect the legislative will. In every case the offending party, even if found guilty of any of the acts or practices denounced as unlawful in section 4, may escape criminal punishment by compliance with the notice, regulation, order, or requirement. Having prescribed the rule of conduct for both the Executive and the citizen, the bill confers upon the President merely administrative functions. Congress does not authorize the President to create any crime nor to apply or withhold punishment for any crime. The crime and the punishment therefor are to be determined by facts, circumstances, and conditions described in the bill, as they, respectively, arise.

The bill as drawn is obviously within the rules laid down by the Supreme Court, as shown in the following quotation from United States *v.* Grimaud (220 U. S., 506, 517, 518).

"Thus it is unlawful to charge unreasonable rates or to discriminate between shippers, and the Interstate Commerce Commission has been given authority to make reasonable rates and to administer the law against discrimination. Interstate Commerce Commission *v.* Chicago, Rock Island, etc., Railroad (218 U. S., 88). Congress provided that after a given date only cars with drawbars of uniform height should be used in interstate commerce, and then constitutionally left to the commission the administrative duty of fixing a uniform standard. St. Louis & Iron Mountain Railroad *v.* Taylor (210 U. S., 281, 287). In Union Bridge Co. *v.* United States (204 U. S., 364); In re Kollock (165 U. S., 526); Butterfield *v.* Stranahan (192 U. S., 470), it appeared from the statutes involved that Congress had either expressly or by necessary implication made it unlawful, if not criminal, to obstruct navigable streams; to sell unbranded oleomargarine; or to import unwholesome teas. With this unlawfulness as a predicate the executive officers were authorized to make rules and regulations appropriate to the several matters covered by the various acts. A violation of these rules was then made an offense punishable as prescribed by Congress. But in making these regulations the officers did not legislate. They did not go outside of the circle of that which the act itself had affirmatively required to be done, or treated as unlawful if done. But confining themselves within the field covered by the statute they could adopt regulations of the nature they had thus been generally authorized to make, in order to administer the law and carry the statute in effect."

See also Red "C" Oil Manufacturing Co. *v.* North Carolina Board of Agriculture (222 U. S., 380; Field *v.* Clark, 143 U. S., 649).

BILL COULD HAVE BEEN BASED ON TAX POWER.

While the bill is thus undoubtedly constitutional as a direct exercise of war powers, it was not necessary, with respect to practically all of its provisions, to employ these powers. Repeatedly in the past, Congress, when it conceived that acts and practices within State lines were inimical to the public interests, has reached, regulated, or eliminated such acts and practices by laying prohibitory taxes upon them. This was done in the matter of the regulation of State-bank notes, act of July 13, 1866 (14 Stat., 146); oleomargarine colored in imitation of butter, act of August 2, 1886 (24 Stat., 209), as amended by the act of May 9, 1902 (32 Stat., 193); the antinarcotic act of December 17, 1914 (38 Stat., 785); the United States cotton-futures acts of August 18, 1914 (38 Stat., 693), and August 11, 1916 (39 Stat., 476); and the phosphorous-match act of April 9, 1912 (37 Stat., 81). Only two of these statutes have ever been challenged before the United States Supreme Court. The tax on the circulation of State-bank notes and that on oleomargarine were both upheld by the court as a valid exercise of the taxing power of Congress. Veazie Bank *v.* Fenno (8 Wall., 533); McCray *v.* United States (195 U. S., 27).

In this connection Quong Wing *v.* Kirkendall (223 U. S., 59) is illuminating as to the possible uses of the taxing power for the accomplishment of purposes other than that of obtaining revenue.

What Congress may do at any time indirectly through the taxing power, surely, in time of war to meet war emergencies, it may accomplish directly in the exercise of its war powers.

In this the greatest crisis of this country, and of the world, can the legislative department of the Government, directly charged with providing for the common defense and general welfare, including the support and maintenance of its Army and Navy, afford to leave the great issues of production, conservation, and distribution of the necessaries of life to unorganized action by State, municipal, and private agencies? Is it not clearly within the constitutional powers of Congress to subject them to orderly Federal control?

FRANCIS G. CAFFEY,
Solicitor.
CHESTER MORRILL,
JNO. M. BURNS,
EDMUND B. QUIGGLE,
Assistants to the Solicitor.

The CHAIRMAN. The time of the gentleman from Ohio has again expired.

Mr. RUBEY. Mr. Chairman, I yield one minute to the gentleman from Oklahoma [Mr. HASTINGS].

The CHAIRMAN. The gentleman from Oklahoma is recognized.

Mr. HASTINGS. Mr. Chairman, I want to submit some observations prepared by Hon. F. M. Gault, president of the Oklahoma State Board of Agriculture, commenting upon the difference in market prices of certain products, particularly wheat, between what is received by the producer and what is paid by the consumer.

The CHAIRMAN. The gentleman from Oklahoma asks unanimous consent to extend his remarks in the RECORD as indicated. Is there objection?

There was no objection.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I yield 15 minutes to the gentleman from Indiana [Mr. WOOD].

The CHAIRMAN. The gentleman from Indiana is recognized for 15 minutes.

Mr. WOOD of Indiana. Mr. Chairman, this so-called food-control measure is made up of a queer admixture of good and evil. I fear, however, that the evil it contains is far in excess of the good it will provide should it become a law.

The purposes announced for the measure, namely, to encourage the production and conservation of sufficient food for all of our people at a fair price, and to assist in feeding our allies, are admirable, but the machinery employed to bring about this result is so drastic that it will defeat the very purpose for which it is intended. In my opinion this measure is unconstitutional, and if not unconstitutional it is inimical to the fundamental principles upon which this Government was founded.

After reading this bill and analyzing it a person can readily see how the gentleman from South Carolina [Mr. LEVER] was prompted in a newspaper interview to say of it, "If I should meet the world leader of the Socialists I would say to him, 'Take off your hat to me, for I have given you a measure which is more socialistic than any you ever dreamed of.' If I were to meet the Kaiser I would say to him, 'I take off my hat to you, for this bill would make our President more of an autocrat than you ever dared to be.'" This very estimate of this bill should be sufficient to condemn it.

We are told that it is a war measure, in aid of a war to establish a world democracy and to destroy European autocracy. Yet its provisions are more autocratic than were ever dreamed of by any czar in the history of all time.

The provisions of this bill are aimed primarily at the farmer and the products of the farm, and at those who are dealing in the products of the farm. Why the farmer should be singled out and made the object of this autocratic authority without making any provision for the control of the prices of the things that are necessary for the proper conduct of a farm has not as yet been explained by the friends of this measure, and that this is an unfair discrimination the recital of a few facts will readily demonstrate.

There is nothing in this measure giving authority to the President to fix the prices of plows, cultivators, binders, binder twine, fertilizer, tankage, fencing wire, wagons, harness, coal, gasoline, oil, or the many other necessities used upon the farm, all of which have gone up in price within the last three years from 25 to 200 per cent. Steel, used so largely in the manufacture of farm implements, before the war was quoted at $30; now it is selling at $130. Coal has advanced from 100 to 200 per cent. Fencing wire has advanced from 35 to 40 per cent. Prepared foods have advanced more than a hundred per cent. Tankage is over a hundred per cent higher than it was at the beginning of the war. Fertilizers have advanced from 50 to 60 per cent. Potash, one of the principal ingredients used in the manufacture of fertilizer, has advanced between 600 and 700 per cent. Binder twine has advanced from 8 cents to 18 cents. Plow shovels from $2.50 to $7. Cultivators from $28 to $50. Farm harness from $25 to $50. Farm labor from $25 to $40, and it is hard to obtain at any price. Before the administration undertakes to fix the price of the products of the farm it should fix the price of these essentials in the conduct of the farm.

In addition to this the administration, before it could with any degree of justice or fairness fix the price of the products of the farm, would have to be able to control the weather, the foot-and-mouth disease, hog cholera, glanders, roup, chinch bugs, black rust in wheat, smut in oats, and all the other pests and conditions with which the farmer has to contend.

Everybody is interested in a plentiful food supply, and it is absolutely necessary that the price to be paid for such supply shall be reasonably within the reach of every citizen. But the method provided in this measure will not produce these much to be desired results. On the other hand, in my opinion, they will serve to diminish the supply and to increase the price. The food dictator to be appointed under this proposed law can not add one grain of wheat, corn, or oats more to the visible supply by any fiat that he may issue, but he may easily be the means of preventing the raising of millions of bushels of each of these cereals by reason of foolish and impractical requirements exacted under the authority of this law. Unless the farmer is reasonably sure that he is going to have a fair return for the products of his soil, he will not go to any extraordinary pains to produce big crops, and he must know in advance that in the event of a shortage of crops he will receive an increased price in proportion to that shortage for what he does actually raise. This is the only insurance that a farmer has, and is the only encouragement that he receives to make the effort that he does each year.

Mr. MEEKER. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. MEEKER. I am going to keep right on until somebody will answer the question I asked of the gentleman from Ohio [Mr. OVERMYER], and which he did not answer, as to what would happen if there is a shortage of wheat. Is there anything in the world that would keep that shortage of wheat from increasing the price?

Mr. WOOD of Indiana. Absolutely the law of supply and demand would take care of that proposition.

Mr. MEEKER. There is nothing in this bill that would keep the price of that wheat down?

Mr. WOOD of Indiana. No; and in my opinion there is nothing that can be put into it that would.

Mr. AYRES. Mr. Chairman, if the gentleman will yield, does not the gentleman contend that it is the law of supply and demand that is making the high prices of wheat?

Mr. WOOD of Indiana. No. It is responsible to a certain degree for the high prices, but it is not entirely the reason. I hope to point that out before I get through. I hope to point out what is the cause.

Mr. AYRES. Well, what is the cause?

Mr. WOOD of Indiana. I will refer to it in a few minutes.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, will the gentleman yield there?

Mr. WOOD of Indiana. Yes.

Mr. McLAUGHLIN of Michigan. The gentleman says that there is nothing in the bill that will prevent wheat going very high and flour going very high. The authority is given in this bill to control the different kinds of business through which the wheat and flour would pass; and without mentioning names, I will tell you that some of these gentleman who are interesting themselves in this matter and who will have something to do with it told us this only last week that they had followed the wheat from the producer to the consumer through all its stages of holding and production into bread, and in their opinion the price of flour could be reduced by eliminating unnecessary movements and unnecessary charges and costs to $6 a barrel. Under this bill the authority is given to them to regulate and control and eliminate unnecessary costs and charges.

Mr. WOOD of Indiana. Then the remedy should be against those who are guilty of these evil practices, and not against the men who are primarily responsible for the raising of the cereals. That is what I am complaining about.

Mr. McLAUGHLIN of Michigan. Why do you say this is a burden upon the farmer? He is the only one who is protected by this bill.

Mr. WOOD of Indiana. He is not protected by it, because his business is the only business that is made the object of this special legislation. He is the only business man of any consequence who is discriminated against, and as to all others the discrimination goes in their favor. There is nothing, as has been repeated here from time to time, to fix the price of a single thing that he buys.

Mr. McLAUGHLIN of Michigan. There is no price fixing in this bill.

Mr. WOOD of Indiana. But there is.

Mr. McLAUGHLIN of Michigan. I beg the gentleman's pardon.

Mr. WOOD of Indiana. I think that is one of the principal things in it.

Mr. McLAUGHLIN of Michigan. There is a section in this bill which says to the farmer, regardless of what may happen in the direction of reducing the cost of the product, "We will not permit you to take less than a certain amount." He can take anything else he can get, up to the sky, but we stand behind him and say, "We will not let our price go below a certain figure." There is no price fixing at all.

Mr. NORTON. Mr. Chairman, will the gentleman yield?

Mr. McLAUGHLIN of Michigan. The gentleman from Indiana has the time.

Mr. WOOD of Indiana. The gentleman from North Dakota can ask a question of the gentleman from Michigan if he wants to.

Mr. NORTON. Does the gentleman know that there is a gentleman's agreement at this time between this Government and the entente allies whereby they agree to take all the surplus wheat of the United States for the year 1917 at whatever price this Government will sell it to them for?

Mr. McLAUGHLIN of Michigan. I did not know whether there was such an agreement or not, Mr. Chairman.

Mr. MEEKER. Mr. Chairman, will the gentleman yield? I want to ask him a question.

Mr. WOOD of Indiana. I would like to answer, but my time is going.

Mr. MEEKER. The gentleman from Michigan has just now said that so far as this House is concerned the sky is the limit. Now, if we are going to the farmers and telling them that the sky is the limit, how are we going to convince the consumers that they are to be protected?

Mr. McLAUGHLIN of Michigan. There are things in this bill that will prevent prices from going sky-high. But if they do go there the farmers will get the price. But we do not let the price to the farmers go below a certain amount. I repeat, there is no price fixing in this bill.

Mr. MEEKER. But there is nothing to keep the farm prices from going just as high as they choose to go.

Mr. McLAUGHLIN of Michigan. Yes; there is the power, if it is exercised.

Mr. OVERMYER. Mr. Chairman, will the gentleman yield?

Mr. WOOD of Indiana. Yes.

Mr. OVERMYER. I fear that the misunderstanding on the part of the gentleman from St. Louis [Mr. MEEKER] is not the fault of those who are undertaking to enlighten him. [Laughter.]

The CHAIRMAN. The time of the gentleman from Indiana has expired.

Mr. MEEKER. Mr. Chairman, I ask that the gentleman from Indiana have five minutes more time.

Mr. McLAUGHLIN of Michigan. I yield 10 minutes more to the gentleman from Indiana, but I yield it to him. [Laughter.] He has been interrupted frequently.

Mr. MEEKER. I would like to ask the gentleman from Ohio [Mr. OVERMYER] a question.

Mr. WOOD of Indiana. I hope the gentleman from Michigan will not be one of the offenders.

Mr. MEEKER. Did the gentleman from Ohio answer the question I put to him and which he said he would answer?

Mr. OVERMYER. I did, by explaining exactly what happened on the Chicago stock market to increase the price of wheat, and how it happened.

Mr. MEEKER. But the gentleman did not explain all that happened there, and he knows he did not.

Mr. OVERMYER. I will say to the gentleman that I do not know everything that happened there. I was not present, but I know what did regulate the price of wheat, and I explained it.

Mr. WOOD of Indiana. The trouble in this whole matter does not lie with the farmer. There is no farmers' trust or combination that sends the price of farm products sky-high when there is no reason for it so ascending, and all that he asks is a fair return for his produce and he is willing to take his chances with prices actually fixed by the law of supply and demand and this he is entitled to. The trouble arises after the corn, the wheat, and the oats leave the farm and after it is hoarded in warehouses and in the hands of speculators. True, occasionally some farmer who is able to hold on to his grain gets the advantage of these speculative prices, but he is the exception and is not one in a thousand as compared with those who dispose of their grain at normal prices.

If this bill or some other bill in its stead provided the means for the prevention of speculative prices in food products, the problem would be solved, for if it was not possible to exact and receive speculative prices there would be no undue hoarding of these commodities, and their equitable distribution would be easily made, provided adequate transportation is afforded. I am in favor of the most drastic laws for the punishment of those found guilty of hoarding necessaries of any kind for speculative purposes. [Applause.]

One of the greatest misfortunes that has occurred in the past year, to my mind, was the sending out from this Capitol the scarecrow notices of the shortage of foodstuffs and of the necessity for conservation to avoid a threatened famine. The result of all this was a tendency to produce the very condition that was sought to be avoided. From every section of the country the report comes that farmers and business men have been laying in supplies of flour, of meat, of sugar, and of other necessities sufficient to last them for a year. This has caused prices to go higher, and has also caused a scarcity of these necessities, when there was absolutely no immediate reason for this precaution. This hysteria has produced another condition far more damaging and far-reaching in its injurious effect than this. For some time past farmers have been selling cattle weighing from 500 to 700 pounds that should have been kept through the summer and fed next fall and marketed at 1,100 or 1,200 pounds. Readily may it be seen how this thing is cutting the meat supply nearly in two. For the last several weeks you could have picked up any newspaper and by consulting the market page discovered that the Chicago, Kansas City, Omaha, and other large stock markets are receiving thousands of pigs weighing from 60 to 100 pounds, and market writers in stock-journals say that this condition is brought about because farmers feel that these pigs are worth more now than they would be after this food-fixing law goes into effect.

In passing I want to call attention to another astounding fact for which there should be and must be sooner or later supplied a remedy. It is estimated that there are slaughtered in this country every year 6,000,000 calves between 6 and 8 weeks old. It is fair to assume that half of these calves are heifers. If we had a law to prohibit their sale, it is said that within 10 years, with their natural increase, there would be a beef animal for every man, woman, and child in the United States. It is also reported that we have 6,000,000 fewer cows in this country to-day than we had 10 years ago, notwithstanding our population has increased more than 20,000,000. Some law for the conservation of the beef supply of this country would be of far more benefit to the future than any bill that we might enact to fix the prices of the products of the farm.

The point that I wish to emphasize in these remarks is that it is unjust to discriminate against the farm and fix the prices for the products of the soil and not fix the prices of the products of the manufacturing industries throughout the country. This attempt is class legislation pure and simple, and in discriminating against the farmer as this measure does I fear that the very reverse of the result that we would have to obtain will follow. [Applause.]

The CHAIRMAN. The gentleman yields back 10 minutes.

Mr. RUBEY. I yield 15 minutes to the gentleman from Missouri [Mr. BORLAND].

Mr. BORLAND. Mr. Chairman, the bill under consideration at this time is one of the most important measures that Congress will be called upon to enact for the successful prosecution of this world-wide war. It belongs to the great triumvirate of measures which have distinguished the present special session, to wit, the conscription act, the liberty-loan bill, and the food-conservation bill. By the conscription act our country has mobilized its full force of man power. By the liberty-loan bill we have reached our reserves of wealth and capital, and by the food-conservation bill we shall conserve our supply of the necessities of life which will make victory possible. In the present crisis of the world's history one of the greatest factors of success is the wise use of the food products of this Nation.

The correct solution of this problem—the curbing of extortion and the elimination of food hoarding—is of tremendous importance to our allies and of equal importance to ourselves. It means not only our power to maintain successfully an effective army in the field, but it means the power to sustain the great army of industrial workers who must supply that army and who must maintain the normal production of our country. Bread is equally important with bullets in this great struggle of democracy. The wageworkers of this country are united in their demand for the passage of this bill. They have a right to be protected from the food criminal who would seek to take advantage of the distress of the people and force extortionate prices for the necessities of life.

The farmers of the Nation realize that an adequate control of the food products and elimination of all speculation and cornering of the market will result in a wholesome stimulation of production and will benefit greatly the agricultural population by assuring them a just price and a free market to reach the consumer. The business men of the cities are ready to concede that a control of this vital subject is necessary and can not in any way affect injuriously legitimate business.

The method by which it is sought to control this subject is one of the lessons which has been taught us by the three years' experience of our allies. It is the only sane and effective way of reaching the evil, and consists of putting a large measure of control into the hands of nonpolitical executive officers under the President, who will have power to marshal all of the assets and resources of the country, stimulate our productive energy to the highest point, and secure a uniform and free distribution of the products to the great centers of population. All of this must be worked in harmony and cooperation with the movement of our troops and with the production and shipment of munitions and other supplies for the Army. In other words, the subject is too vast to be left to private enterprise or to the manipulation of private greed. The people are entitled to know where the food supplies are, their character and quality, and how they can best be gotten to market at a price within the reach of the ordinary worker.

For the performance of this great task the President has secured the aid of Herbert C. Hoover, whose work for the relief of Belgium has reflected glory upon the country which he is proud to call his own. [Applause.]

Statesmen of all lands have united in praise of the highly efficient, thorough, and successful way in which the feeding of

the homeless Belgian population was carried on. We are proud to claim that at the head of this great work was a plain American business man. The task was one which seemed hopeless. Chaos reigned. Millions of Belgians were homeless, without employment, and without the possibility of helping themselves or renewing the activities of their lives. The avenues of commerce were demoralized by war, and such means of transportation as could be kept up were imperatively needed to supply the fighting men locked in a death grip upon the plains of France. It seemed that the helpless civilian population, the aged, the women, and children, must sink back with a despairing cry into the bloody dust. The cry of humanity was answered from the land of democracy, and the millions who have suffered and been saved are a testimony to-day of the efficiency of the plain American business man who applied business methods to humane objects.

But apparently neither the purpose of this beneficent measure nor the high character and proved efficiency of the man who will be appointed to administer it meet with the approval of certain politicians in our own land whose chief ability consists in tearing down and destroying rather than in building up and saving. Probably no greater compliment could be paid Mr. Hoover than the abusive attack which has been made upon him in certain quarters. It comes from a source which was never known to produce constructively anything humane, anything in the interest of the people. It comes from an element which has always been at the service, secretly or openly, of the special interests, and who regard Government as a mere game of politics to be played for the prizes at stake.

The real source of this criticism should be unmasked so that it will be thoroughly understood by the American people. Fortunately, the opposition thus created represents a minority today in the great legislative gathering of the American people. It is more vociferous than virile. It is the kind of opposition which dreads the man of direct action. It hates the man who gets results. It is opposed, therefore, to the direct and open method of the President's administration; to his frank and confident appeal to the heart and mind of the American people. It prefers that he should seek some devious and underground passage to accomplish his purpose—a course which it loves to denominate "regular." Anything like frankness, straightforwardness, or efficiency in political action is regarded by this element as decidedly irregular. It much prefers that the man who should be put in control of this great authority should first be compelled to kneel before a selected group of political masters and have his hands tied to see that he shall not harm favored interests; be properly held down to the appointment only of such assistants as have the approval of particular organizations, and take a binding oath that he will distribute the patronage as patronage in the regular and customary way. Under this method it is assumed that a much more honest and efficient man can be secured than by the very unpolitical method chosen by the President of securing a man who had made a conspicuous success in exactly the kind of work which was needed. [Applause.]

There is a type of politician in this country, apparently successful, unfortunately, in insinuating himself into office, who is always ready to give the people at any great crisis an unlimited supply of wind. Do the people cry for national defense? Give them wind! Do they demand a strong financial system? Give them wind! Do they ask for the freedom of the seas, the protection of international law, and the rights of humanity? That is a splendid chance to expend wind. Do they rise in their might and seek for the safety and perpetuity of democratic institutions in the world? Nothing is needed to pacify them but a little wind. Is it necessary to raise taxes to support the Government in its struggle? How much safer and cheaper it is to expend only wind. And now, when the people cry for bread, they are to be offered wind. Wind is a current commodity in times of peace. When the business men, the farmers, and the wage earners are all busy with their own affairs, and when politics is but a minor consideration to most of them, a fair wind will get many a man far upon his course, but in times of great national storm it is entirely possible to have too much wind. What is needed then are stanch craft and stout hearts. I am glad to believe that Mr. Hoover is a food merchant and not a wind merchant. [Applause.]

I am glad to believe that he will give the people food in sufficient quantities on fair terms and without waste, but that he will not expend upon them any unwelcome oratory. Oratory will fill very few empty stomachs. The American workers can not subsist on glittering phrases. Though we speak with the tongues of men and angels, and have not charity, it is as sounding brass and tinkling cymbals. Let those whose stock in trade consists of wind take a back seat at once behind the real leaders of the hour—the men who can accomplish and have accomplished results. For one I am willing to trust the President with what I know to be a tremendous and far-reaching power. I am more willing to trust him than I am to trust the best of private enterprises, or possibly the worst of human greed, in its efforts to supply the vital needs of the people. [Applause.]

I am willing to trust his appointee; first, because he appointed him, and second, because his record and his achievements justify the confidence thus expressed. I am willing to see the President and his associates carry on this great work in the white light of American public opinion rather than in the subterranean passages of politics. I have confidence in the American people that they will be able with the light which their intelligence will give to correct speedily any false or dangerous tendencies.

It may be that the opposition is confined entirely to wind. I hope so. I am willing at the present time to believe so. I should hate to feel that there was a class of men in our own ranks willing to shoot their own officers in the back. One of the most dreaded terms in war is that of "snipers"—men who conceal themselves upon the roofs of houses and shoot down soldiers in the streets. It may be at least said in extenuation of the snipers that they are showing a devotion to some cause and are fighting in their own way against their country's foe. I do not know that any term hateful enough has been invented for the soldier in the ranks who shoots down his own officer when a charge has been ordered into victory. Apparently, no term of reproach has been found which will adequately describe such a man.

Let us hope that we are not combating such an element in official life. It throws such a dark shadow against the picture that every true and loyal American will be repelled with horror from it. These men may not realize that they are giving aid and comfort to the enemy; that their words are being eagerly quoted in Germany, expanded, amplified, and construed to put America in the worst light. They may not realize that the destructive criticism which degenerates into mere abuse, which points no way to a better method, which promises no solution of great problems, which holds out no promise of protection from impending peril, is hardly the part of enthusiastic loyalty. They may not realize that the American people demand results, constructive work, honest effort, and courageous leadership. The man who does anything is always liable to attack and can always be criticised with more or less success. But the heart of the American people rings true after all. The man who does things is the man who secures their confidence, retains their respect, and is cherished in their memory. Let us give the American people food and not wind! [Applause.]

Mr. McLAUGHLIN of Michigan. I yield 20 minutes to the gentleman from Michigan [Mr. JAMES].

Mr. JAMES. Mr. Chairman, the men who are going to do our fighting for us must be well fed. The men who are going to keep them supplied with the munitions of war must be well fed, and the men who are to furnish the material for the manufacture of the munitions of war must be well fed, as must the men who are going to raise our crops, and so forth. The families of all of these men must be well fed as well. We can not expect men to give their lives for liberty and justice and expect them to leave the daily bread of their families to the whims of food gamblers.

The man who poisons the food of the men fighting for his country is a traitor and a murderer, but he is no worse than the man who makes fictitious profits out of the food sold his countrymen, especially in time of war. We would shoot the man who betrayed his country, and the same fate is none too good for the "food pirate" or the "fuel pirate" who is willing to rob his countrymen so that he can make still more exorbitant profits.

The man who to-day charges an exorbitant price on the necessaries of life puts himself into the class of Benedict Arnold, of unsavory fame and reputation.

Every patriotic American can have nothing but loathing for those enemies of our country—the food gamblers and the food speculators who are willing in these days of war to rob our American citizens. By such actions they ally themselves with the enemies of their country.

There is only one way to stop these vultures in human form from preying on our people, and that is to place the control of food in the Government, the same as this Lever bill will do.

We must decide now whether we are going to allow these unscrupulous sharks to keep on fattening themselves at the expense of the American people, or whether we shall pass a bill now that will either put them out of business or regulate them so that they can not charge any unreasonable prices. I can not see how anyone can oppose a fair bill of this kind.

If we have Government control, or the right to exercise Government control in case of necessity, then, and not until then, can we have food conservation; then, and not until then, can we put the food speculator out of business when he commences to rob the American people right and left.

I am not afraid of a food famine, but until we have a food-control law we are going to be charged outrageous prices not only for necessaries of life but for fuel as well.

We need middlemen, and we need merchants, but we do not need food speculators and food gamblers. Food speculation and exploitation and outrageous prices for fuel must be stopped. The new food controller must have power to regulate the prices of all of these things, if necessary.

Not only must prices to our people be reasonable, but the food furnished our soldiers must be good. There must be no more "embalmed beef" outrages. There must be no more outrages of the kind of 1898, when the men doing the fighting were being fed on the refuse of the land. I do not know whether this bill is broad enough to punish the people of this kind or not, but if it is not broad enough I shall offer an amendment of this kind if it is in order on a bill of this kind. A man who would sell embalmed beef to the Government, knowing it was to be sent to feed the men who are fighting to save the freedom of the land, is committing an act of treason and should be shot for treason.

No bill will be fought harder than this bill will be fought. We will hear much about the "violation of the Constitution," much about "food dictator," much about a mining man running the Government, much about autocracy, and much about centralized power.

Those who talk about the Constitution should bear in mind that, if we do not win this war, not only will the Constitution be the same as treaties—a mere "scrap of paper," but "every principle upon which this Nation was founded will be ground under the iron heel of foreign militarism."

Those who talk about "food dictator" might better spend some time in considering the kind of a "dictator" we will have if we lose this fight for liberty. Better to have a "food dictator" than a "foreign dictator." What an awful thing a food dictator is to some people—a man who only sees that our people shall not be robbed, that our people shall be able to purchase the necessaries of life at a reasonable price. Personally I would have no objection to a food controller—or a food dictator, as the enemies of the bill call it—stating how much food I can eat each day during the duration of this war. Better that we shall be put on "short rations" now and exist than to let things drift, allow ourselves to be robbed right and left, not earn enough to secure the necessaries of life, and have food riots, and so forth, later. But this bill does not go that far, it does not attempt to say how much food each person shall eat, it only provides that people can secure the food that they need at a reasonable price; and yet some people get up here and denounce the bill as providing for an "autocracy" and other things of the kind.

Other people criticize the bill because they want to know, "What does a mining engineer know about food control?" Mr. Hoover has had considerable experience in that best of all schools, "the school of experience"—real experience, not book knowledge.

Some of the strongest critics of Mr. Hoover have never had any military experience, but they profess to know more about raising an army than men who have grown up in the service.

Having no knowledge of the mining business, the banking business, the insurance business, the shipping business, the building business, does not prevent some of these same gentlemen from passing laws regulating the business of banking, insurance, mining, and so forth. They would be offended if one were to insinuate that their having no knowledge of the mining business, the insurance business, and so forth, should prevent them from legislating on matters of this kind. I have heard learned (?) discourses from gentlemen on insurance who know absolutely nothing about the business, and many speeches on the farming business by gentlemen who have no knowledge of the business. Yet, these same gentlemen want to know what a man who has had experience, real experience, in Belgium, knows about food and food control.

To those who talk about "autocracy," might I suggest that the American Federation of Labor has never been accused of favoring "autocracy," and neither have the great railroad brotherhoods. I presume that there is no one in the country who does not know how organized labor, standing side by side with unorganized labor in this fight, stands on this bill for food control.

If the people of the United States were ever aroused in favor of a bill, it is this matter of food control. A man who opposes a bill of this kind to secure reasonable prices will have to give the people back home some better reason than "food dictator," "autocracy," when he is asked why he voted against a bill providing for the regulation of reasonable prices for the necessaries of life.

One reason for the high price of food is that neutral countries have entered our markets and have bid high for our food supplies. Part of this food has gone to the central powers. The passage of the espionage bill—with the clauses in it regarding Government control of food exports—will prevent our food supplies going to that people that we are now fighting. Neutrals will now receive only enough to supply their own needs, and when it is used for any other purpose exports to them will be stopped entirely.

Another reason for the high prices was given, among others, by Senator SHERMAN the other day. He stated in part that "a fiscal representative of Germany, operating from New York City, has been engaged in similar manipulations with hostile intent, and that he has even bought up large supplies of foodstuffs and caused them to be emptied into the sea." Nothing of this kind could happen in any European country, and nothing of the kind should be allowed to happen here. This bill will take care of things of that kind as it should.

Another good reason for the passage of this bill is that the producer, who patriotically cultivates every foot of ground to its utmost capacity, is toiling for the consumers of America and Europe. He is not working in order that exorbitant profits shall be made by food pirates and food gamblers. It would not be a square deal if the fruits of his hard labor should fall into the hands of men who will manipulate prices on these extra food supplies to rob our people and the suffering people of Europe.

Another cause of high prices are the grain exchanges, and this bill takes care of them as well as other things. According to reliable authorities, the American farmer received something over an average of $1.30 the past year for his wheat. The ultimate consumer paid more than twice this amount. Who received the difference? Not the retailer; not the elevator man who stored it. Most of the difference, amounting to millions and millions of dollars, went to nonproducers—wheat speculators.

The wheat speculators have been aptly described as "human leeches." They feed upon the fruits of others' toil. They give nothing into the hopper of production, yet they take out millions of dollars.

What is the average board of trade? The board of trade has become a hall of chance, where daily convene a horde of gamblers, compared to whom the twirler of the roulette wheel and the faro dealer are pikers. It is as if the pit were a giant poker joint, with the Nation's wheat supply a jack pot and the possible future supply the upturned cards in the more uncertain game of stud poker.

The less the wheat supply of the country, then the greater demand for it; then the more brisk and the more energetic becomes the gambling at the boards of trade.

"Gaunt babes and starving mothers are a far cry from the moneyed atmosphere of the pit, yet fate chains them unhappily together. Excessive prices breed poverty, and speculators in wheat breed excessive profits."

As a matter of sound economics, there is no legitimate place, and there never has been, for the wheat gambler and people of his kind. Gamblers who live off of the earnings they make in this way are as useful in economics as men who live off of their earnings from poker, but no more so.

This bill will, I hope, take care of these gentry.

It is bad enough to speculate in foodstuffs in time of peace, but a man who speculates in grain and foodstuffs of any kind in time of war is putting himself in the class of the enemies of his country.

The man who to-day juggles with food prices, the man who forces poverty on our people, and the man who impoverishes the Treasury of the United States by making us pay fancy prices for the food furnished our sailors and soldiers is committing as wicked and as vicious a sin as that for which the name of Arnold will ever be branded.

The other day the Federal jury in Boston indicted 88 corporations and individuals on the charge that they had conspired to monopolize commerce in onions. The evidence showed that the last annual crop of onions amounted to 200,000,000 pounds, and that the defendants had gobbled up 75 per cent of this crop. Then they hoarded the supply, raised the prices, and then in order to eliminate competition so that they could better rob the people they had divided the country. Fining people of this kind is too mild a punishment.

In a few weeks several hundred thousand of the most effective workers in the country will be leaving their positions to learn

the art of war. There is greater demand for labor than can be supplied. The withdrawing of these men for our Army will make the demand still stronger, and will most likely make for higher wages. We must bear in mind that while the munition factories, many of our mines, and many other factories are making more money than they were before, there are industries that are earning less than they were before the war. If some of these industries have to pay a very marked increase in wages they will be compelled to go out of business.

The following statement from President Wilson some time ago well shows the necessity for this legislation. He said, in part:

> The objects sought to be served by the legislation asked for are:
> Full inquiry into the existing available stocks of foodstuffs and into the costs and practices of the various food producing and distributing trades; the prevention of all unwarranted hoarding of every kind and of the control of foodstuffs by persons who are not in any legitimate sense producers, dealers, or traders; the requisitioning when necessary for the public use of food supplies and of the equipment necessary for handling them properly; the licensing of wholesome and legitimate mixtures and milling percentages and the prohibition of the unnecessary or wasteful use of food.
> Authority is asked also to establish prices, not in order to limit the profits of the farmers, but only to guarantee to them when necessary a minimum price which will insure them a profit where they are asked to attempt new crops and to secure the consumer against extortion by breaking up corners and attempts at speculation when they occurred by fixing temporarily a fair price at which middlemen must sell.
> Although it is absolutely necessary that unquestionable powers shall be placed in my hands in order to insure the success of this administration of the food supplies of the country, I am confident that the exercise of those powers will be necessary only in the few cases where a small and selfish minority proves unwilling to put the Nation's interests above personal advantage. * * *
> The proposed food administration is intended, of course, only to meet a manifest emergency and to continue only while the war lasts. Since it will be composed for the most part of volunteers there need be no fear of the possibility of a permanent bureaucracy arising out of it. All control of consumption will disappear when the emergency has passed.

Congress should not adjourn until it has passed a law prohibiting the making of any but legitimate profits on the necessities of life. Many of the greatest fortunes of America were founded by cowardly scoundrels who remained at home speculating and robbing while their betters were fighting so that this Nation might live. The past two generations have had to pay grudging homage to these men and their descendants. Let us see that what happened in 1861 and 1898 will not happen in this war. The best way to see that it does not happen would be for Congress to pass the so-called food-survey bill and this food-control bill.

As has been well said: "The country is confronted with the alternative of submitting to private control of food by conspirators, with the risk of crippling the allies and thus losing the war, or asserting control of all food by the Government. Talk of 'paternalism' and 'centralization' and 'Government usurpation' becomes idle when the dire alternative is thoroughly understood. The Government must act for all the people in the food question just as it acts for the people in military and naval operations. Bread and bullets are weapons of war which must be controlled exclusively by the Government."

Who fights the bill? Farmers, planters, and gardeners are not opposed to this bill, because it assists them to increase their output, and it also guarantees them a good profit on their crops.

The consumer does not oppose this bill, because he knows that unless a bill of this kind is passed he will be at the mercy of the food speculator, the food gambler, and the fuel pirate.

The legitimate jobbers, middlemen of all kinds, and merchants do not oppose this bill, as they will not oppose Government supervision.

Who, then, oppose the bill? Only those who take unreasonable profits, those who "take undue toll between producer and consumer," those who corner markets, those who reap but do not sow, those who would destroy part of produce so as to get an unreasonable price for the balance, and the grain speculators—these are the men who naturally oppose a food control of this kind.

In voting there is no hesitation on my part that it is my duty to vote for the man who will be "robbed" if this bill does not pass, and do what little I can to put the "robber" out of business, and I shall so vote. [Applause.]

The CHAIRMAN. The gentleman from Michigan yields back five minutes.

Mr. RUBEY. I yield 20 minutes to the gentleman from Pennsylvania [Mr. CAMPBELL].

Mr. CAMPBELL of Pennsylvania. Mr. Chairman and gentlemen of the committee, it is with distinct diffidence that I ask your indulgence. As a new Member of the House of Representatives, I naturally feel hesitant to intrude my voice and views in these historic halls. For weeks past I have sat at the feet of wisdom, enraptured by the eloquence and learning of my distinguished colleagues. And were it not that I am deeply mindful of my duty, and in the words of a renowned colonel and ex-President of the United States, feel "called upon to testify," I should not now presume to address this body. But this is a crucial period in our history. Precedents are being shattered daily as the records and ideas of the past are swept into the discard of a new era, or poured into the crucible of a new thought and tested in the fires of a new patriotism. Therefore, I trust I may not be held guilty of presumption in proclaiming my convictions on a subject that closely touches my consciousness.

Famine or food? Which? The hour has struck. We must make our decision. We have come to the parting of the ways.

To the left is a road with whose windings we are all familiar. It is broad, well traveled, easy of grade, bordered by the landmarks of past experience. But it leads surely and certainly into a jungle of juggled prices, a wilderness of want, a swamp of speculation, a morass of misery.

To the right we enter upon another road. Of landmarks there are few. Its progress is steep. Its ruts are rocky. But its foundation is sure and its end our reward. It leads ever upward, and following it we emerge finally and triumphantly upon the plains of plenty, the paths of peace.

That there is paramount necessity for food control or food regulation during the war none can gainsay. The necessity is neither past nor potential. It is present. It is demonstrated daily in the extortionate prices we pay for foodstuffs. As the war goes on—and do not flatter yourself that it will soon stop, or that we shall not feel it—the necessity for governmental regulation and safeguards will become increasingly manifest. The retail prices of many staples and commodities in the United States, which is self-sustaining in all its foodstuffs with the possible exception of sugar, are more excessive to-day than they are in warring nations of Europe, which have never been self-sustaining. Certainly they are higher than in any European capital at the beginning of the war. And there is not a Member of the House, or a thinking man anywhere, who honestly believes that prices will drop in the absence of control during the war's progress. Why, then, should there be any hesitancy in applying the remedy of regulation? Why procrastinate? Why longer delay?

In this emergency Congress unquestionably has the power to act. The country expects it to act. Each day of delay increases the disgust of those whose representatives we are. The people have had their fill of investigations which investigate but do not correct. They have had enough of commissions whose sins are sins of omission and never of commission. They are convinced that there are enough departments, bureaus, divisions, sections, commissions, committees, experts, special assistants, assistant-assistants and clerks in Washington to fill all the trenches in France. Yet with all our governmental machinery, and in defiance of the pledge of party leaders and party platforms to reduce the cost of living, prices continue to mount higher and higher. What the people demand now is action. They are clamoring for action. And they are going to get action. This is no time for theorizing. If the Government fails to act, the people themselves will act, and it should be self-evident that acquiescence in a just demand is better than popular anarchy.

In considering the necessity for food-control measures, one fact stands forth above all others: The Nation must have food to fight. The men in the trenches—your boys, my boys, our boys—must have it. Those in the homes of the country must have it. We have placed upon this country enormous tax burdens, to bear which there must be a margin between income and outgo sufficient to enable the people to pay the assessments which have been and will be levied. Otherwise the war must fail, the Nation be stripped of its honor, and prospective victory degenerate into disastrous defeat. To win the war we must have closest cooperation in every avenue of activity, and that implies cooperation between the constituted government and the people who constitute it, as well as cooperation between industries and individuals. Thus far, we have dealt successfully with problems of war organization. We have dealt successfully, or will deal successfully, with problems of war finance. We have succeeded in stimulating food production. The Government is conducting a nation-wide propaganda in the interest of greater economy and efficiency in the utilization of the products of the soil. We now face the task of insuring adequate distributing facilities for these products at prices which will protect both the producer and the consumer. To accomplish this we must first eliminate speculation and exterminate the speculator, and that is one of the chief objects and purposes of this measure. [Applause.]

From Chicago the other day came a story to the effect that a certain individual had made a net profit of between two and

three million dollars on the recent rise in the price of grains. From the same city come other reports that speculators are storing up vast quantities of foodstuffs against the day when the Nation shall require them. We must feed our armies. We must feed our allies. We may yet have to feed the world. This means that we must call upon our reserves of food no less than our reserves of men, and the speculator knows it.

As a scintillating example of the speculator's lofty patriotism we have the testimony of reputable wholesalers that these highwaymen have been buying canned corn at 62½ cents a dozen, canned tomatoes at 90 cents, and canned peas at 75 cents, and selling them at from $1.50 to $2.10. They are doing this in the face of the fact that the coming year promises to produce the greatest crops of garden products in the country's history. They know that the waste of war will consume all available supplies, and that in this situation they will reap their unjust and unearned reward. Their slimy talons have reached out and clutched greedily at the market for eggs. Their claws are smeared with butter. Reports of the Department of Agriculture from various parts of the country indicate an increase of from 50 to 5,000 per cent in the volume of cold-storage poultry on hand as compared with a year ago. This can only mean that the speculator has already discounted a war shortage in meats and that he is preparing a campaign to mulct millions from the masses. This creature is to be found in independent operations, operating through associations and organizations of various kinds, and dealing in futures on boards of trade. He is omnipresent, and the threat of prison bars and the fare to which he has reduced many of his victims is the only language he understands. [Applause.]

Some of our enemy aliens we have interned. Others we have permitted to run at large. Government investigations have shown that the latter are in part responsible for the stench of speculation, and there is a well-grounded suspicion that inflated prices of some commodities are due to an organized conspiracy directed from the Wilhelmstrasse. But while no punishment is too severe for these treacherous enemies who have come here to abuse the hospitality offered by our shores, it is not the enemy alien who need worry us, nor is it he for whom we should have the greatest contempt. His activities we can understand, and he will be cared for in due season. It is the enemy American, the traitor who wears a made-in-America label, who is mainly responsible for the sufferings which prevail, and who even now is tightening the screws on the man whose earnings are never more than a few cents above his necessary expenditures. This is the villain of the plot. It is he whom we must catch. [Applause.]

We can account for the enemy alien. The exponents of ruthlessness could not be expected to do otherwise than to spread wreck, ruin, and disaster in whatever direction their murderous maraudings may take them. But the Kaiser, who boasts that he has blotted the words "humanity" and "pity" from his dictionary, only murders the women and children of the peoples he has enslaved. In all his bloodthirsty brutality, even he does not countenance the slaughter of innocents among his own people. Yet in our midst, in what we are pleased to call civilized, enlightened America, there has risen up this prophet-flushed fiend who preys upon stranger and friend alike, and whose wealth is born of the blood and toil and weariness of those whom he expects to fight his battles. He is a producer of nothing but unrest and unhappiness. He toils not, and spins only yarns about bad crops. If the truth were known, I doubt whether a single food gambler would be found among the subscribers to the Liberty Loan. He is neither patriot nor producer. Seemingly secure in his depredations, he bellows defiance at government, authority, and law exactly as the leader of the Huns, self-righteous in his partnership "mit Gott," flaunts his blood-flecked fingers in the face of humanity and civilization.

The food pirate of our own country is a lower creature than the slinking pirate of the seven seas. The commander of the *U–47*, slipping quietly and unseen from behind Helgoland Bight, to prey upon Red Cross and relief ships in the name of "kultur," is a respectable member of society compared to him who, likewise below the level of visibility, deliberately conspires to starve the men who are battling in the trenches to preserve the world's liberty and the fair name of democracy and their loved ones who are battling no less at home. Capt. Kidd was a fugitive from society. The food pirate, generally, is a social favorite. The pirate of Berlin is an outlaw. The pirate of Chicago quite likely belongs to one of our first families.

We say of some men that they would "steal sheep." The gentle speculator would not only steal sheep, but would slaughter them and then sell them to the public at double prices.

This new Dr. Jekyl and Mr. Hyde, this Machiavellian monster—and I refer to no individual, but to all those who make up this piratical and murderous system—would tear babes from their mothers' breasts, steal pennies from the baby's bank, snatch the housewife's purse, pick the pockets of a blind man, send his own brother away hungry. He is the epitome of greed. He is a new personification of the meanest man. Beside him, the grave-robbing ghoul is a gentleman, for the ghoul robs only the dead. This voracious vulture, more shameful than Shylock, not only demands, but collects, his pound of flesh. [Applause.]

Let me cite some of the chief features of this bill:

1. Creation of a food dictatorship to be vested by the President in Herbert C. Hoover. Although Mr. Hoover is not specifically named, he is already acting in this capacity. And why not? Has he not demonstrated beyond the shadow of a doubt his ability to handle just such conditions as confront us? He has no other ends to serve than to see that the American people are properly fed and are permitted to purchase their foodstuffs at fair and equitable prices, thus aiding in winning the war.

2. It authorizes the President to license and regulate business, to prevent uneconomical manufacture and inequitable distribution. Why not give this power to the President? Have not the people of this country twice elected him as the Chief Executive of the Nation, and has not this Congress repeatedly placed greater powers in his hands?

3. It provides drastic powers and penalties to prevent cornering of foodstuffs. Why not? The man or men who would profit through extortionate prices at such a time as this deserve neither consideration nor compassion.

4. The bill gives authority to the President to purchase or provide for the production or manufacture of necessities and to store and sell them. How better can the situation be handled than for the Chief Executive to have supervision over the manufacture of necessities and their storage at strategic places?

5. It gives power to the President to requisition necessities, and plants, factories, and mines which produce them. Does not this necessarily follow, and is it not prerequisite to the carrying out of the other purposes of the bill?

6. It empowers the President to close exchanges to prevent speculation. No legitimate exchange will be affected by this measure, and it is right and proper that the people's chosen representatives should be in authority to restrict these operations.

7. It provides for minimum price fixing to guarantee producers a reasonable profit and thus stimulate production. A minimum price is essential to the successful execution of this measure, and I believe it will be carefully safeguarded in the hands of the Chief Executive.

8. The bill authorizes an appropriation of $152,500,000 to carry out its purposes. We have appropriated billions for the destruction of mankind. Why not the smaller sum to conserve the food supply of our civil population, so necessary to the success of our Army?

Mr. BLANTON. Mr. Chairman, will the gentleman yield?

Mr. CAMPBELL of Pennsylvania. Yes.

Mr. BLANTON. The gentleman seems to think this bill does not propose to authorize the fixing of a maximum price.

Mr. CAMPBELL of Pennsylvania. It does not so state.

Mr. BLANTON. What about section 5? Does not that authorize the fixing of a maximum price indirectly?

Mr. CAMPBELL of Pennsylvania. I should say that, if it does not, it should; and I say why not? We have trusted many things to our Chief Executive, including the lives of our fellow countrymen, and I am willing to allow him to fix food prices. I think he is capable of doing it.

Mr. BLANTON. Have not the members of the committee indicated that they did not believe in fixing maximum prices?

Mr. CAMPBELL of Pennsylvania. I do not think all of them have.

This bill is a war measure, as distinctly directed at the defeat of Germany as is the mustering of the new army. Food control is made imperatively necessary by existing conditions in the United States and by the situation into which our allies have been plunged as a result of unrestricted submarine warfare. We are not merely fighting the German army and navy. We are fighting an immeasurably well-organized system—the acme of organization; a nation prepared to live on black bread and water before it will admit defeat in its ambition for world conquest. If we place our food strategy on a plane with our military strategy, we can deal a death blow to Germany. If we fail, we may soon find German bombs crashing through the dome of this Capitol, German batteries bombarding our coasts, German ruthlessness swaggering down our streets.

Critics of this measure may oppose it because food control in the United States is a novelty. So also were aeroplanes and

submarines a few years ago. To-day the war may be decided in the air and under the sea. What if its success is not absolutely assured? Neither was the success of the Liberty Loan 10 days ago. Revolutionary? So was the Declaration of Independence, and what is this but a declaration of independence from a speculative autocracy? Interference with private rights? So was the Emancipation Proclamation, and what is this but a measure proclaiming and insuring our emancipation from speculative slavery? All talk of paternalism, centralization of power, Government usurpation, and dictatorships becomes the merest cant when the alternative is considered. Just as the Government must act for all the people in military and naval operations, so it must, in time of war, act for them in problems of food supply. In any war, and particularly in this war, bread shares importance with bullets, food and fuel with artillery and ammunition.

I quote from the report of the conference of agricultural representatives from 32 States with the Secretary of the Department of Agriculture:

The very low food reserves of the world, due to last year's short crops, the increased demands due to the consumption and waste of war and the disappointing condition of the winter grain crop give ample assurance of profitable prices to producers this year. Therefore the fixing of maximum or minimum prices need not be undertaken at this time, but the fact that such a course may become necessary in the future advises the creation of agencies which will enable the Government to act wisely when the necessity may arise. To this end it would be well for the Congress of the United States to authorize the Council of National Defense, if deemed necessary, to purchase, store, and subsequently distribute food products, or to fix prices in any national emergency caused by a temporary or local overproduction, or by a sudden ending of the war, or by restraints of trade, manipulations or uneconomic speculation, in order that producers may not be required to suffer loss on account of the extraordinary efforts they are now asked to make, and in order that consumers may not be required to pay oppressive prices in case of disorganized or inadequate transportation.

This measure is in absolute alignment with the recommendations of that conference. Instead of the Council of National Defense, it has been deemed advisable to intrust the responsibility for the carrying out of this program to the President of the United States. If he desires, he may delegate the details to others.

We are the most wasteful people in the world. Our tastes and desires have been educated and tempted beyond our incomes. Now we have reached the point where there must be an accounting. We are plunged from peace-time extravagance into the necessity for war-time economy. We must not only increase production and conserve consumption, but must take steps to protect producer and consumer alike from the machinations of the middleman who attempts to extort an unrighteous profit. We must protect the people against the manipulations and fluctuations of a war-worried market. Gigantic conspiracies, criminally conceived and executed, are operating to defeat America. The conspirators are as much the enemies of this Government and this people as are the crimsoned overlords of central Europe. Both must be curbed, chained, and chastised before we can have peace and plenty. [Applause.]

We have taken the sword of the just, and, with high resolve and our faces to the sun, have started out, like the knights of old, to restore chivalry and righteousness upon the earth. If liberty, justice, and freedom are not also to be wiped from life's lexicon, we must band ourselves together in a single holy purpose for the perpetuation of the principles on which this Nation was founded and for which our forefathers fought. [Applause].

We have come to the parting of the ways. Shall we take the road to the left, that "leadeth but to destruction"? Or shall we take the road to the right to the heights of human happiness? We are given a choice. For me there can be only one answer. I choose the ascent—the road to the heights. I shall take the road to the right. [Applause.]

Mr. McLAUGHLIN of Michigan. I yield 10 minutes to the gentleman from Maine [Mr. HERSEY].

Mr. HERSEY. Mr. Chairman, after a careful consideration of the evidence before this committee, and the attention that I have given every moment to the discussion of it in this House, I am heartily in favor of this bill. [Applause.] Its constitutionality seems to be admitted. The great bill we passed to investigate and have a census of the food production of this country has grandly paved the way for this legislation. It seems to me that this bill is a fitting climax to the recent bill just passed by us for a census and the conservation of the food resources of this country. Many things that guided us in the past can not be our guide to-day. We are in a war different from any other war. It is calling upon us for resources never called for before, and it seems to me that we must conserve every food resource of our great country.

I am in favor of this bill, Mr. Chairman, because the President has been frank with us and named beforehand the "dictator," so to speak, who will have charge of this food bill, and I have faith in Mr. Hoover.

Further than that, I am in favor of this measure because it is a bill that stands by the farmer, the agriculturist. Some have expressed fear upon this floor to-day that this bill is against the farmer. I come from a district where nearly every man is a farmer. Agriculture is the principal occupation.

I know these men, nearly every one of them, and I know their wishes and their desires. I know their hopes and their fears, and I know that everyone trusts Mr. Hoover. I know that every one of them is in favor of this bill. I know, further, that the farmer has never profited in the past by combinations; he has fought them, and is to-day fighting the food gamblers. They have been his enemies in the past and they will be his enemies in the future, unless we give the President power to destroy them.

It has been well said that it is the farmer who raises the food, but it is the speculator who raises the prices. The farmer does not fix the prices; he is at the mercy of the food gamblers, who are driven by the sole motive of avarice to raise the price of food, that great gains may come to the middleman and the food speculator. I feel that the President, through Mr. Hoover, will destroy the power of these food gamblers, and under this bill he would give the farmers a chance to market their crops, free from unlawful combinations.

I feel, further, Mr. Chairman, that whatever has been said on the floor here to-day in regard to politics has no place in this discussion nor in this bill. [Applause.] Hitherto I have stood with the President. I have trusted him in his great work. I have voted for the billions given him. I will continue to trust him as the Commander in Chief of the Army and Navy. Into his hands I am willing to put this great power which is called autocratic, and it is. I want him to exercise it, and I feel that the whole country is in favor of the project, outside of the food gamblers and speculators, and outside of the few men who want to give the country beer instead of bread. [Applause.]

I am willing to give him this great power to look after and protect the food and producers of the country, and I feel that the law-abiding people of the Nation everywhere, regardless of party, stand for this great food bill. Outside this Congress no one except the gamblers and the brewers are against this bill, and I believe the Congress of the United States should unanimously stand in favor of the bill on its final passage. Republicans, Democrats, Independents, everybody, should stand together and support the President in this great war for humanity.

There was a time, Mr. Chairman, in the old days when Rome was at the height and zenith of its great world power when she had a patriotic and united people. Afterwards she fell, through her vices, when there were slaves on the one hand and great power in a few gamblers and criminals upon the other. Macauley, the poet-historian, writing of the days of Roman greatness, said:

For Romans in Rome's quarrel
Spared neither land nor gold,
Nor son nor wife, nor limb nor life,
In the brave days of old.

Then none was for a party;
Then all were for the State;
Then the great man helped the poor,
And the poor man loved the great.

Then lands were fairly 'portioned;
The spoils were fairly sold;
The Romans were like brothers
In the brave days of old.

I hope the passage of this great food bill will show to the country and to the world that, like the Romans of old, Americans are like brothers in the brave days of to-day. [Applause.]

Mr. RUBEY. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and Mr. SIMS having taken the chair as Speaker pro tempore, Mr. HAMLIN, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 4961) for the conservation of food and fuel and had directed him to report that they had come to no resolution thereon.

EXTENSION OF REMARKS.

Mr. DYER. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the Cement Trust.

The SPEAKER pro tempore. The gentleman from Missouri asks unanimous consent to extend his remaks in the RECORD on the Cement Trust. Is there objection?

There was no objection.

ADJOURNMENT.

Mr. RUBEY. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 10 o'clock p. m.) the House adjourned until to-morrow, Tuesday, June 19, 1917, at 12 o'clock noon.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills were introduced and severally referred as follows:

By Mr. KEATING: A bill (H. R. 5077) to provide for the retirement of superannuated employees in the classified civil service of the United States of America; to the Committee on Reform in the Civil Service.

By Mr. OSBORNE: A bill (H. R. 5078) providing an indestructible medal of identification for each soldier in the United States Army who may be designated for foreign service; to the Committee on Military Affairs.

By Mr. TAYLOR of Colorado: A bill (H. R. 5079) to expatriate citizens who leave the United States to evade registration or selective draft; to the Committee on Immigration and Naturalization.

By Mr. JOHNSON of Washington: A bill (H. R. 5080) to provide for the abandonment of parts of Thirty-eighth Street and Bellevue Terrace NW., and the public alley between said streets, in block 1812, in the District of Columbia; to the Committee on the District of Columbia.

By Mr. TAYLOR of Colorado: A bill (H. R. 5081) to suspend the requirements of annual assessment work on mining claims during the year 1917; to the Committee on Mines and Mining.

By Mr. TIMBERLAKE: A bill (H. R. 5082) providing for an amendment to section 2293 of the Revised Statutes, allowing homestead and other public-land affidavits to be taken before the military commander of any person engaged in military or naval service of the United States; to the Committee on the Public Lands.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. DAVIDSON: A bill (H. R. 5083) granting a pension to Dudley G. Allen; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5084) granting a pension to Bessie Hanson; to the Committee on Pensions.

Also, a bill (H. R. 5085) granting an increase of pension to Albert Pride; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5086) granting an increase of pension to Mathew Kerwin; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5087) granting an increase of pension to George F. Sabin; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5088) granting an increase of pension to Bertha Fenz; to the Committee on Invalid Pensions.

By Mr. HAYDEN: A bill (H. R. 5089) granting a pension to Samuel A. Demarest; to the Committee on Pensions.

By Mr. JOHNSON of Washington: A bill H. R. 5090) granting an increase of pension to Aaron L. Stevens; to the Committee on Invalid Pensions.

By Mr. KEATING: A bill (H. R. 5091) granting a pension to Sarah A. Dirlam; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5092) granting a pension to John G. Williams; to the Committee on Pensions.

Also, a bill (H. R. 5093) granting a pension to William F. O'Neill; to the Committee on Pensions.

My Mr. KIESS of Pennsylvania: A bill (H. R. 5094) granting an increase of pension to Lewis R. Montague; to the Committee on Pensions.

My Mr. McKENZIE: A bill (H. R. 5095) granting an increase of pension to James C. Goldthorp; to the Committee on Invalid Pensions.

By Mr. OSBORNE: A bill (H. R. 5096) granting an increase of pension to George Young; to the Committee on Invalid Pensions.

By Mr. SNELL: A bill (H. R. 5097) granting a pension to Angeline Brand; to the Committee on Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. ALEXANDER: Petition of 90 representative citizens of Harrison County, Mo., favoring the prohibition of the liquor business as a war measure; to the Committee on the Judiciary.

By Mr. ASHBROOK: Papers to accompany House bill 4008, granting a pension to Lemuel S. Darr; to the Committee on Pensions.

By Mr. BRUMBAUGH: Petition of Mrs. C. W. Clark and other citizens of Columbus, Ohio, in behalf of national prohibition and protesting against the increase of tax on liquors; to the Committee on the Judiciary.

By Mr. BURROUGHS: Petition of Rev. Lyman D. Bragg and other residents of Epping, N. H., praying for national prohibition; to the Committee on the Judiciary.

By Mr. CURRIE of Michigan: Petition of Rev. L. G. Beacock and other citizens of Bay City, Mich., requesting immediate enactment of a measure providing for national prohibition; to the Committee on the Judiciary.

Also, petition of Samuel J. Throp and other citizens of Big Rapids, Mich., and vicinity, requesting the immediate enactment of a measure providing for national prohibition; to the Committee on the Judiciary.

Also, petition of J. C. Jenkins and other citizens of Big Rapids, Mich., and vicinity, requesting the immediate enactment of a measure providing for national prohibition; to the Committee on the Judiciary.

Also, petition of the members of the Young People's Union of Bay County, Mich., requesting the immediate enactment of a measure providing for national prohibition; to the Committee on the Judiciary.

Also, petition of Mrs. E. A. Armstrong and other citizens of Big Rapids, Mich., and vicinity, requesting the immediate enactment of a measure providing for national prohibition; to the Committee on the Judiciary.

By Mr. DYER: Petition of the Wheeler & Motter Mercantile Co., of St. Joseph, Mo., and the Missouri Bankers' Association, protesting against any increase in letter postage without a liberal advance in the second-class mail rate; to the Committee on Ways and Means.

By Mr. DALE of New York: Petition of the Merchants' Association, of New York, relative to deepening of the channel at Hell Gate and other improvements; to the Committee on Rivers and Harbors.

By Mr. DUNN: Petition of sundry citizens of Rochester, N. Y., asking for national prohibition during the period of the war; to the Committee on the Judiciary.

By Mr. EAGAN: Petition of American Manufacturing Association of Products from Corn, against prohibition as a war measure; to the Committee on the Judiciary.

Also, petition of New Jersey Osteopathic Society, relative to osteopath's plea for services in Army; to the Committee on Military Affairs.

Also, petition of the National Retail Hardware Association, Argos, Ind., against Hardwick amendment to the Federal reserve act; to the Committee on Banking and Currency.

Also, petition of Bryden Horse Shoe Co., New Brunswick, N. J., relative to duty on horseshoes; to the Committee on Ways and Means.

Also, petition of the Chicago Association of Commerce, relative to appropriation allotted to the Bureau of Naturalization; to the Committee on Appropriations.

Also, memorial of Chamber of Commerce of the State of New York, relative to objections to war-revenue bill; to the Committee on Ways and Means.

Also, memorial of Chamber of Commerce of the State of New York, favoring the daylight-saving bill; to the Committee on Interstate and Foreign Commerce.

By Mr. FOSTER: Petition of citizens of New Baden, Ill., urging favorable consideration of national prohibition; to the Committee on the Judiciary.

By Mr. FREEMAN: Memorial of Connecticut State Association of Letter Carriers, opposing the contributory pension plan for letter carriers; to the Committee on the Post Office and Post Roads.

By Mr. FULLER of Illinois: Petition of the Chicago Historical Society, advocating the exemption of legacies and bequests for educational, philanthropic, and religious societies or purposes from Federal estate taxation; to the Committee on Ways and Means.

Also, petition of citizens of Rockford, Waterman, and Genoa, Ill., favoring legislation for prohibition of the liquor traffic as a war measure; to the Committee on the Judiciary.

Also, petition of the Free Sewing Machine Co. and employees thereof, of Rockford, Ill., and of Charles Elyeam, Axel Anderson, and W. A. Riding, of Morris, Ill., in re national prohibition as a war measure; to the Committee on the Judiciary.

By Mr. FULLER of Massachusetts: Memorial of the New England Newspaper Alliance, protesting against a tax on newspaper advertising; to the Committee on Ways and Means.

By Mr. HAMILTON of New York: Petitions of sundry citizens of Lakewood and Jamestown, N. Y., favoring national prohibition as a war measure; to the Committee on the Judiciary.

Also, petition of sundry residents of the city of Jamestown, in the county of Chautauqua, N. Y., favoring the prohibition of the liquor business as a war measure; to the Committee on the Judiciary.

By Mr. HILLIARD: Memorial of St. Paul's Methodist Episcopal Church South, of Denver, Colo., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. HOUSTON: Petition of sundry citizens of Petersburg, Tenn., urging the conservation of food products in making liquor, etc.; to the Committee on the Judiciary.

By Mr. JOHNSON of Washington: Petition of 21 citizens of Raymond, Wash., favoring Federal amendment for woman suffrage; to the Committee on the Judiciary.

By Mr. KENNEDY of Rhode Island: Resolution of Providence (R. I.) Wholesale Drug Co., protesting against proposed tax on alcohol for pharmaceutical and prescription purposes and on proprietary preparations; to the Committee on Ways and Means.

By Mr. LINTHICUM: Petition of American Association of Masters, Mates, and Pilots, Rescue Harbor No. 14, Baltimore, Md., against increase of postage rates on second-class matter; to the Committee on Ways and Means.

Also, petition of J. F. Wilson, Washington, D. C., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. LONERGAN: Memorial of Union Grange, of Southington, Conn., favoring prohibition during the war; to the Committee on the Judiciary.

By Mr. LUNN: Petition of Charles H. Bennett and 53 men of Broadalbin, N. Y., praying for enactment of prohibition of manufacture of all alcoholic liquors as a measure of food conservation and prohibition of sale of liquors for beverage purposes to conserve the health, wealth, labor, transport facilities, and military efficiency of the people; to the Committee on the Judiciary.

Also, petition of John Thomas, secretary to the social service committee of the Episcopal diocese of Long Island, praying for enactment of a law which will prevent grain, which is needed to feed the hungry of the world, from being turned into alcoholic drink during the war; to the Committee on the Judiciary.

By Mr. MAGEE: Petition of E. D. Roe, jr., and others, of the city of Syracuse, N. Y., favoring full national prohibition; to the Committee on the Judiciary.

Also, petition of Charles L. Nye and others, of the city of Syracuse, N. Y., favoring full national prohibition; to the Committee on the Judiciary.

Also, petition of Ray M. Hudson and others, of the city of Syracuse, N. Y., favoring full national prohibition; to the Committee on the Judiciary.

Also, petition of John G. Giles and others, of the city of Syracuse, N. Y., favoring full national prohibition; to the Committee on the Judiciary.

Also, petition of W. L. Gardner and other residents of the town of Onondaga, Onondaga County, N. Y., favoring full national prohibition; to the Committee on the Judiciary.

By Mr. MEEKER: Memorial of Prosperous Lodge, No. 706, International Association of Machinists, St. Louis, Mo., protesting against prohibition; to the Committee on the Judiciary.

Also, memorial of Car and Coach Painters' Union, Local No. 304, St. Louis, Mo., favoring investigation by Congress into controversy between Chamber of Commerce of San Francisco, Cal., and organized labor; to the Committee on the Judiciary.

Also, petition of Woman's Christian Temperance Union, of St. Louis, Mo., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. MORIN: Petition of J. M. Baldy, of the Bureau of Medical Education and Licensure of Philadelphia, Pa., urging the abrogation of the patents on salvarsan and also on all other drugs held by Germans; to the Committee on Patents.

By Mr. NOLAN: Petition of United Brotherhood of Carpenters and Joiners of America, Local No. 1296, San Diego, Cal., protesting against any amendment of the Chinese exclusion act to permit of the importation of Chinese into the United States; to the Committee on Immigration.

By Mr. OSBORNE: Petition of the members of the Methodist Episcopal Church of Redondo Beach, Cal., for the immediate enactment of prohibition of the manufacture of alcoholic liquors as a measure of food conservation and for the immediate prohibition of the sale of liquors for beverage purposes in order to conserve the health, wealth, labor, transport facilities, and military efficiency of the people; to the Committee on the Judiciary.

Also, petition of Methodist preachers of southern California, in the First Methodist Episcopal Church of Los Angeles, June 11, 1917, urging Representatives in Congress to see that each soldier shall be provided with an indestructible medal so inscribed that in case of death under circumstances where he might not be cared for by those who know him his body might be identified; to the Committee on Military Affairs.

By Mr. POLK: Petition of Wilmington Lodge, No. 184, International Machinists, relative to food-control legislation; to the Committee on Agriculture.

By Mr. RAKER: Petition of State Board of Agriculture of California, favoring bill exempting from tax nonprofiting agricultural fairs; to the Committee on Ways and Means.

By Mr. ROBBINS: Petition of First Presbyterian Church of Vandergrift and Grace Reformed Congregation of Jeannette, Pa., favoring prohibition as a war measure; to the Committee of the Judiciary.

By Mr. SCULLY: Petition from members New Jersey Osteopathic Society, offering their professional services to the United States Government and favoring the establishment of the osteopathic school of practice as a separate department of the service; to the Committee on Military Affairs.

By Mr. SNELL: Resolution of Black River and St. Lawrence Association of Congregational Ministers and Churches, at a meeting held at Norwood, N. Y., heartily approving of the prohibition of the manufacture and sale of all intoxicating beverages during the time of the war; to the Committee on the Judiciary.

Also, petitions of citizens of Saranac Lake, Wadhams, North Elba, and Moira, N. Y., for full prohibition of the manufacture, sale, and transportation of intoxicating beverages for the period of the war in conservation of the man power, military, and industrial efficiency, and the food supply of the Nation, and urging that all liquors now in bonded warehouses and elsewhere be commandeered by the Government and redistilled for undrinkable alcohol, to be purchased by the Government for war purposes, and opposing an increase in the tax on intoxicating liquors as a means of raising a revenue to prosecute the war; to the Committee on the Judiciary.

By Mr. TAYLOR of Colorado: Memorial of city council of Denver, Colo., urging legislation to fix food prices; to the Committee on Agriculture.

Also, memorial of Colorado Branch of the National Congress of Mothers of Denver, Colo., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. TIMBERALKE: Memorial of Business Woman's Club of Colorado Springs relative to protecting morals of those in training camps; to the Committee on Military Affairs.

Also, memorial of Rankin Presbyterian Church, of Brush, Colo., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. VARE: Memorial of 14 churches in the Kensington district, Philadelphia, favoring prohibition as a war measure; to the Committee on the Judiciary.

SENATE.

TUESDAY, *June 19, 1917.*

The Chaplain, Rev. Forrest J. Prettyman, D. D., offered the following prayer:

Almighty God, we lift our hearts reverently to Thee with Thy name upon our lips, the name of the God of our fathers, the holy one of Israel, our guide and our God in this our day. We thank Thee for the patriotism, for the wisdom, for the patience with which Thy servants who have been called into leadership have committed themselves to the task of ordering the affairs of this Nation to meet conditions that are new and untried. We bless Thee that throughout the country there is a spirit of divine optimism, believing that Thou who hast guided us from the beginning will still lead us on to the consummation of the divine purpose as a Nation. We ask Thy blessings upon us, with the forgiveness of our sins and the inspiration of Thy Spirit. For Christ's sake. Amen.

The Journal of yesterday's proceedings was read and approved.

SUNDRY CIVIL APPROPRIATION ACT.

A message from the House of Representatives, by G. F. Turner, one of its clerks, announced that the House had passed a joint resolution (H. J. Res. 105) to correct an error in the sundry civil appropriation act for the fiscal year 1918, in which it requested the concurrence of the Senate.

Mr. MARTIN. I ask that the joint resolution which has just been received from the other House be laid before the Senate.

The joint resolution (H. J. Res. 105) to correct an error in the sundry civil appropriation act for the fiscal year 1918 was read twice by its title.

Mr. MARTIN. I ask unanimous consent for the present consideration of the joint resolution.

There being no objection, the joint resolution was considered as in Committee of the Whole, and it was read, as follows:

Resolved, etc., That that portion of the act entitled "An act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1918, and for other purposes," which reads: "For maintenance and operation of the Panama Canal, salary of the governor, $100,000;" is amended to read as follows: "For maintenance and operation of the Panama Canal, salary of the governor, $10,000."

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

CALLING OF THE ROLL.

Mr. SMOOT. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Johnson, S. Dak.	Page	Smith, S. C.
Calder	Jones, N. Mex.	Penrose	Smoot
Chamberlain	Kirby	Pittman	Sterling
Colt	La Follette	Poindexter	Stone
Culberson	McKellar	Pomerene	Sutherland
Cummins	McLean	Robinson	Trammell
Fernald	McNary	Shafroth	Vardaman
Frelinghuysen	Martin	Sheppard	Warren
Gallinger	Nelson	Sherman	Watson
Gerry	New	Smith, Ariz.	
Hitchcock	Norris	Smith, Md.	
James	Overman	Smith, Mich.	

Mr. SHAFROTH. I desire to announce the absence of my colleague [Mr. THOMAS] on account of illness.

Mr. GALLINGER. I have been requested to announce the unavoidable absence of the junior Senator from Maryland [Mr. FRANCE] on account of illness. This announcement may stand for the day.

Mr. SUTHERLAND. I wish to announce the absence of my colleague, the senior Senator from West Virginia [Mr. GOFF], on account of illness. I will let this announcement stand for the day.

Mr. McKELLAR. I desire to state that the senior Senator from Tennessee [Mr. SHIELDS] is absent on account of illness.

The VICE PRESIDENT. Forty-five Senators have answered to the roll call. There is not a quorum present. The Secretary will call the roll of the absentees.

The Secretary called the names of the absent Senators, and Mr. KENDRICK, Mr. REED, Mr. SIMMONS, and Mr. WALSH answered to their names when called.

Mr. HOLLIS, Mr. FLETCHER, Mr. BRADY, Mr. RANSDELL, Mr. GORE, and Mr. SAULSBURY entered the Chamber and answered to their names.

Mr. SMITH of Michigan. My colleague [Mr. TOWNSEND] is detained from the Chamber on account of official business with a committee of the Senate. That accounts for his absence.

Mr. GERRY. I desire to announce that the junior Senator from Kentucky [Mr. BECKHAM] and the junior Senator from Utah [Mr. KING] are detained necessarily from the Senate on public business.

The VICE PRESIDENT. Fifty-five Senators have answered to the roll call. There is a quorum present.

COMMITTEE SERVICE.

Mr. SHEPPARD. Mr. President, if I may resume the analysis of the bill which is the unfinished business——

Mr. WARREN. I ask the Senator from Texas if he will yield to me on a matter of committees.

Mr. SHEPPARD. Certainly.

Mr. WARREN. I was requested by the Senator from Washington [Mr. JONES] to announce his resignation as member and chairman of the Committee on the Disposition of Useless Papers in the Executive Departments. I ask that his resignation be accepted.

The VICE PRESIDENT. Without objection, it is accepted.

Mr. WARREN. On behalf of the junior Senator from Ohio [Mr. HARDING] I ask that he be excused from further service on the Committee to Investigate Trespassers upon Indian Lands.

The VICE PRESIDENT. It is so ordered.

Mr. WARREN. I ask for the adoption of the following order:

Ordered: That Senator JONES, of Washington, be appointed chairman of the Committee to Investigate Trespassers upon Indian Lands; that Senator BRADY, of Idaho, be appointed chairman of the Committee on Disposition of Useless Papers in the Executive Departments.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. STONE. I observe that the Senator from Texas has taken the floor to continue his speech on the bill pending before the Senate as the unfinished business. Am I correct about that?

Mr. SHEPPARD. The Senator is correct.

Mr. STONE. The Senate adjourned yesterday until 12 o'clock to-day, and I had supposed that there would be a morning hour under the rule.

Mr. GALLINGER. I will say to the Senator I rose to ask that the regular order be followed and that the morning hour be observed.

Mr. STONE. I ask for the regular order.

Mr. SHEPPARD. I have no desire to begin until the morning business has been concluded.

PETITIONS AND MEMORIALS.

The VICE PRESIDENT. The Chair lays before the Senate a concurrent resolution passed by the Legislature of the Territory of Hawaii, which will be incorporated in the RECORD and referred to the Committee on Pacific Islands and Porto Rico.

The concurrent resolution is as follows:

Concurrent resolution.

Whereas certain persons entered into homestead agreements with the commissioner of public lands of the Territory of Hawaii, and are in process of proving up their claims; and

Whereas certain other persons have entered into homestead agreements with the commissioner of public lands of the Territory of Hawaii, and have faithfully performed all the terms of their agreements and are awaiting their land patents; and

Whereas certain other persons entered into homestead agreements with the commissioner of public lands of the Territory of Hawaii, and have faithfully performed all the terms of their agreements and have received their land patents; and

Whereas all the persons above referred to took up, occupied, and transferred their homesteads under the advice and concurrence of, and made their agreements with, a former commissioner of public lands of the Territory of Hawaii, who had a misconception of the law; and

Whereas the said homesteaders either transferred or surrendered their original homesteads and under the advice of and concurrence and agreement with the then commissioner of public lands of the Territory of Hawaii entered into homestead agreements a second time; and

Whereas section 73 of the act of Congress of August 12, 1898, as amended August 1, 1910, provides that—

"No person shall hereafter be entitled to receive any certificate of occupation, right of purchase lease, cash freehold agreement, or special homestead agreement who or whose husband or wife shall have previously taken or held any land under any such certificate, lease, or agreement hereafter made, or issued, or under any homestead lease or patent based thereon": Therefore be it

Resolved by the Senate of the Territory of Hawaii (the House of Representatives concurring), That the Congress of the United States is hereby memorialized to authorize the governor of Hawaii to ratify the agreements of the following-named persons made with the commissioner of public lands of the Territory of Hawaii, and to issue land patents to those who are living up to the terms of the agreements when the same have been completed, and to issue land patents to those who have already complied with all of the terms of their agreements, and to ratify the land patents already issued.

The following are the agreements of homesteaders who are in process of proving up:

Name.	Lot taken.	Tract.	Island.
Sarah E. Harris	30	Kuiaha-Kaupakalua	Maui.
Dollie Henning	45	do	Do.
Hugh Howell	51	do	Do.
D. Venhuizen	56	do	Do.
Maniole Malule	156	Kalaheo	Kauai.
Joaquin Vieira	92	do	Do.
Augustine Caraballo	3	Omao	Do.
Eulojio Martin	42	Lawai	Do.
Nicholas Vegas	39	do	Do.
Elmer M. Cheatham	133, 134, 135	Kapaa	Do.
Robert D. Israel	138, 139, 146	Kapaa	Kauai.
George Brandt	24	Omao	Do.
Emily M. Hoopii	18	do	Do.
Libbie K. Kula	56	Lawai	Do.
John Souza	19	do	Do.
Frank Souza	49	do	Do.
Louisa Hellum	58	do	Do.
John Awa	198	Lualualei	Oahu.

The following are the agreements of homesteaders who have proved up and are awaiting patents:

Name.	Lot taken.	Tract.	Island.
Mrs. Leila Ontai	36, 37	Pahoa, Waianae	Oahu.
Silva Costa Ayres	34	Lawai	Kauai.

The following are homesteaders who have already been granted land patents:

Name.	Lot taken.	Tract.	Island.
Joseph Bento	47A	Lawai (grant 6777)	Kauai.
Mary Ikua Harper	21	Lawai (grant 6749)	Do.
John Silva	48A, 48B	Lawai (grant 6765)	Do.
Kioshi Tamamoto	55	Lawai (grant 6778)	Do.
Manuel Nunes	30	Lawai (grant 6414)	Do.
Mrs. E. K. Kanehiwa	11A, 11B	Lawai (grant 6633)	Do.

THE SENATE OF THE TERRITORY OF HAWAII,
Honolulu, Hawaii, April 21, 1917.

We hereby certify that the foregoing resolution was this day adopted in the Senate of the Territory of Hawaii.

CHAS. T. CHILLINGWORTH,
President of the Senate.
O. SOARES,
Clerk of the Senate.

THE HOUSE OF REPRESENTATIVES
OF THE TERRITORY OF HAWAII,
Honolulu, Hawaii, April 26, 1917.

We hereby certify that the foregoing resolution was this day adopted in the House of Representatives of the Territory of Hawaii.

H. L. HOLSTEIN,
Speaker House of Representatives.
EDWARD WOODWARD,
Clerk House of Representatives.

The VICE PRESIDENT presented a petition of the City Council of Los Angeles, Cal., praying that freedom be granted to Ireland, which was referred to the Committee on Foreign Relations.

He also presented a memorial of sundry citizens of Pittsfield, Mass., remonstrating against the imposition of a tax on proprietary medicines, which was referred to the Committee on Finance.

He also presented a petition of the Northwest Suburban Citizens' Association of the District of Columbia, praying for the enactment of legislation providing for the erection of a national convention hall in the city of Washington, which was referred to the Committee on Public Buildings and Grounds.

Mr. CHAMBERLAIN presented a petition of the Congregation of the Methodist Episcopal Church South, of Corvallis, Oreg., praying for national prohibition as a war measure, which was ordered to lie on the table.

Mr. PHELAN presented a petition of sundry citizens of San Luis Obispo, Cal., praying for national prohibition, which was ordered to lie on the table.

Mr. SMITH of Maryland presented a petition of the Calvary Methodist Episcopal Sunday School, of Mount Airy, Md., praying for the prohibition of the manufacture and sale of alcoholic liquors during the war, which was ordered to lie on the table.

He also presented a petition of the Woman's Christian Temperance Union, of Washington County, Md., praying for the prohibition of the manufacture and sale of liquors as a war measure, and remonstrating against the placing of an increased tax upon intoxicating liquors, which was ordered to lie on the table.

He also presented a petition of sundry citizens of Kent County and Baltimore, in the State of Maryland, and of the Red Cross Auxiliary, of Pocomoke, Md., praying for the conservation of food products and for national prohibition as a war measure, which were ordered to lie on the table.

Mr. FRELINGHUYSEN presented a petition of sundry citizens of Wallington, N. J., praying that an appropriation be made for the improvement of the Passaic River in that State, which was referred to the Committee on Commerce.

He also presented a petition of Typographical Union No. 103, of Newark, N. J., praying for Federal control of foodstuffs, which was ordered to lie on the table.

He also presented memorials of Palisade Brotherhood of Railroad Trainmen No. 592; of Trunk Makers' Union No. 2, of Newark; of Barbers' Union No. 381, of Hoboken; of Beer Bottlers' Union No. 268, of Newark; of Journeymen Barbers' Local Union, of Plate Printers and Assistants Local Union No. 99, of Elizabeth; of Embroidery Workers' Union No. 5, of Cigar Makers' Local Union No. 146, of New Brunswick; of Journeymen Barbers' Union No. 315, of Plainfield; and of Painters' Union No. 814, of Englewood, all in the State of New Jersey, remonstrating against the enactment of legislation to prohibit manufacture of beer and light wines, which was referred to the Committee on Finance.

He also presented petitions of sundry citizens of Newark, Passaic, Orange, East Orange, Maplewood, and Trenton, all in the State of New Jersey, praying for national prohibition as a war measure, which were ordered to lie on the table.

Mr. WEEKS presented a petition signed by sundry manufacturers of Holyoke, Mass., praying for the enactment of legislation to prohibit the manufacture and sale of intoxicating liquors during the period of the war, which was ordered to lie on the table.

Mr. SMITH of Michigan. I have a telegram from the Patriotic League of Lenawee County, Mich., which I ask to have inserted in the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

ADRIAN, MICH., *June 18, 1917.*

Hon. WILLIAM ALDEN SMITH,
Senate, Washington, D. C.:

Patriotic League of Lenawee County, embracing all patriotic activities in county, most earnestly urges immediate passage of Lever food-control bill without material change. In our opinion there is absolutely no danger from lack thereof. Control should not be vested in commission but in a single administrator who must be given radical and plenary powers. Our laboring men, business men, and farmers are thoroughly aroused upon this question.

PATRIOTIC LEAGUE OF LENAWEE COUNTY,
ROBERT DARNTON, *President,*
W. H. BURNHAM, *Vice President,*
R. C. ROTHFUSS, *Secretary.*

EFFICIENCY OF THE PRESS.

Mr. SHERMAN. I present a communication from the Illinois State Journal, of Springfield, Ill., which I ask to have inserted in the RECORD.

There being no objection, the communication was ordered to be printed in the RECORD, as follows:

THE ILLINOIS STATE JOURNAL,
Springfield, Ill., June 14, 1917.

Hon. LAWRENCE Y. SHERMAN,
Senate Office Building, Washington, D. C.

DEAR SENATOR: With this country's fate trembling in the balance, its future offering unlimited possibilities conditioned upon the stability of democracy, or threatened with all the horrors of ruthless autocratic domination if it fails to make certain the defeat of those who would oppress, upon what one great widespread and dominating influence does the Nation depend to-day to uphold and win support to the war program of the administration?

How many persons would be influenced to respond to the call for subscriptions to the liberty-bond issue; how many would respond to the appeal of the Red Cross and the dozens of other patriotic organizations that are swamping the newspapers with requests for free space; how could universal registration for conscription be quickly brought about without serious social disorder but for the voluntary, prompt, and enthusiastic support of the patriotic press of the United States?

To what can the Nation look for such service hereafter if the power of the press is devitalized or destroyed by oppressive and destructive taxation?

To be efficient, the newspapers of this land must be prosperous.

To be prosperous they must be relieved of injustice and inequitable taxation.

Is it reasonable, right, or good business at this time of all others to permit individual personal animosities to dominate the course of this Nation in discriminating against the Nation's most powerful ally, the untrammeled press, while specially favoring other and more prosperous industries that possess no means of influencing the course of public sentiment?

For days and weeks the wires and mails have been burdened with news of plans proposed for exacting undue tribute from the daily press, already staggering under the load of increased expenses due to advancing cost of paper, ink, metals, machinery, and wages, and crippled by the loss of trained workers.

Add to this the prospective exactions of further heavy increases in all overhead expenses, including many varieties of taxation, and still further deprivation of experienced workers, and you can picture what confronts a publisher threatened by Congress with additional oppressive special taxation beyond the ability of many to meet.

Contrast with this picture the view, easily obtained, of many flourishing industries whose greater comparative prosperity is enhanced instead of burdened by the prospect of war taxation.

In the mails to-day comes to the State Journal this unsolicited expression from one of the builders of automobiles, rejoicing over the benefit to be derived by such manufacturers from equitable consideration shown to the trade by Congress.

This is what the general manager of one such concern is sending to newspapers:

"No greater impetus to the automobile industry could have been given than that which has resulted from the voting by Congress of the war tax on motors, for it definitely settles the status of car ownership. With the knowledge that only a reasonable and moderate fee is to be assessed on the automobile, the general public is flooding dealers all over the country with orders and compelling factories to work full time to meet them.

"Telegraphic reports from 35 State managers of one large eastern factory, the Metz Co., of Waltham, Mass., show an increase of 100 per cent in sales in the six days following the passing of the tax. Other car makers report increases also."

No such reports are to be heard from newspaper publishers.

Every mail brings a new crop of appeals to the press to donate additional space free of all expense to the Government for pressure to be brought in its behalf; some to urge prompt registration, others to point the finger of shame at the slacker; one after another to help induce the indifferent to subscribe for bonds, all to invite the press to turn loose its best thought, its most earnest effort and space, ad libitum, to influence public sentiment in the direction of liberty and freedom. Does the press hesitate? Is it backward or niggardly in responding to the call of its Government for free service and free space in this great extremity?

A thousand times, No!

Without hesitation, or murmur, and without limitation; with no suggestion or thought of reward or recompense, the American press welcomes the call, gives of its best without limit and asks what more can it do.

We, of the press, volunteer to render our service ahead of all others and without regard to what others may do. We recognize no command greater than the needs of the Nation, and our resources are subject to the suggestions of our Commander in Chief, the ruler of the Nation, whenever he may call upon us.

Is any other industry more prompt, more patriotic, more liberal, or more potent?

Is any other industry so harassed and threatened?

I submit, with all respect, the much-used but appropriate fable of the murder of the goose that laid the eggs of gold.

To what source will Congress turn for aid, if it cripples or kills the newspapers that have shown such loyalty to their country?

Why not help make the press prosperous so that it may be more potent, instead of harassing and crippling it so that its influence shall be weakened or destroyed?

America's advancement is largely due to its enlightened, patriotic press.

To help win the war and to promote the reconstruction of the Nation after the war, if we win, this country will need the greatest possible efficiency in its public press.

Is it not plainly the part of judgment and wisdom to free the press from oppression and give it opportunity to make itself more efficient?

The weaker the press the weaker the Government! The less prosperous the press the weaker it must be.

Give the newspapers a chance to do their share in the best possible manner.

Sincerely and respectfully, yours, LEWIS H. MINER.

FOOD PRODUCTS.

Mr. PHELAN, from the Committee on Irrigation and Reclamation of Arid Lands, to which was referred the bill (S. 1725) to stimulate the production of food upon private and public lands within reclamation projects, and for other purposes, reported it with amendments and submitted a report (No. 68) thereon.

BOTANIC GARDEN.

Mr. GALLINGER. I am directed by the Committee on the Library to report back favorably without amendment the bill (S. 346) to increase the area of the United States Botanic Garden in the city of Washington, D. C., and I submit a report (No. 67) thereon. At the last session a similar bill was passed without dissent, and I ask unanimous consent for the present consideration of the bill.

The VICE PRESIDENT. Is there objection?

There being no objection, the bill was considered as in Committee of the Whole, and it was read, as follows:

Be it enacted, etc., That the United States Botanic Garden, situated in the city of Washington, D. C., be, and the same is hereby, increased and enlarged by attaching thereto those two certain parcels of land situated, lying, and being between Third Street on the east and Sixth Street on the west, and Missouri Avenue on the north and Maine Avenue on the south, which said parcels are known as East Seaton Park and West Seaton Park.

SEC. 2. That said two described parcels shall, upon the passage of this act, become part and parcel of the said United States Botanic Garden and immediately available for the purposes thereof: *Provided*, That the location of conservatories and other improvements of a permanent character which may be built within said parcels shall be confined to areas not intended as the sites for future public buildings and driveways in the plan for that vicinity prepared by the park commission.

SEC. 3. That all laws and parts of laws inconsistent with any of the provisions of this act be, and the same are hereby, repealed.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SMOOT:

A bill (S. 2479) for the protection of the owners of mining claims in time of war; to the Committee on Mines and Mining.

By Mr. McKELLAR:

A bill (S. 2480) to amend section 11 of the act approved December 23, 1913, known as the Federal reserve act, as amended by the act of September 7, 1916; to the Committee on Banking and Currency.

NATIONAL DEFENSE.

Mr. WATSON submitted an amendment intended to be proposed by him to the bill (S. 1786) to amend certain sections of the act entitled "An act for making further and more effectual provision for the national defense, and for other purposes," approved June 3, 1916, and for other purposes, which was referred to the Committee on Military Affairs and ordered to be printed.

AMENDMENT TO PENDING BILL.

Mr. BORAH submitted an amendment intended to be proposed by him to the bill (S. 2463) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel, which was ordered to lie on the table and be printed.

WITHDRAWAL OF PAPERS—ELIZABETH GATES PERRY.

On motion of Mr. SMITH of Maryland, it was

Ordered, That the papers accompanying the bill (S. 6976) granting a pension to Elizabeth Gates Perry, Sixty-fourth Congress, be withdrawn from the files of the Senate, no adverse report having been made thereon.

PRESIDENTIAL APPROVALS.

A message from the President of the United States, by Mr. Sharkey, one of his secretaries, announced that the President had approved and signed the following act and joint resolution:

On June 15, 1917:

S. J. Res. 70. Joint resolution relating to the service of certain retired officers of the Army.

On June 14, 1917:

S. 995. An act to authorize the issue to States and Territories and the District of Columbia of rifles and other property for the equipment of organizations of home guards.

PRICE OF STEEL.

The VICE PRESIDENT. Concurrent and other resolutions are in order.

Mr. STONE. Mr. President, I do not rise to offer a resolution of any kind, but I suppose, under this head as well as any other, I might place in the RECORD matters which may seem to be, and are, of special interest at this juncture in our affairs. We are appropriating enormous sums for various purposes and are organizing a multitude of ways and means of expending the money thus appropriated in the public interest and for the public good. We know about the appropriations, but it is of vital interest to know how the money we appropriated is expended.

Among other things Congress has done for the prosecution of the war has been to pass a bill appropriating $500,000,000 to construct merchant ships to convey the products of this country to Europe and also to other parts of the world, but especially to that part of Europe occupied by our allies in the war in which we are now engaged.

Only the other day—June 17—I read an article in the Washington Post, which I desire now to read to the Senate for the purpose of calling special attention to what it says. It relates to the work to which I have particularly referred—of building merchant ships to meet the demand upon us in the conduct of the war. The article is headed, "Ship steel prices to U. S. pushed up—Corporation asks $95 a ton—Navy has been paying only $65." And then the following:

That the United States Steel Corporation is attempting to charge the Government $95 a ton for steel for the proposed commercial fleet, as compared with $65 a ton for steel for the Navy, was the remarkable disclosure made here yesterday. The difference, shipbuilders estimate, represents $40,000,000 profit.

Gen. George Goethals said the price submitted was not satisfactory. He had been compelled, however, to fix that as a basic price—

That is, $95 per ton—

upon which shipbuilders have been told to make their estimates. Later, in case of a revision, the shipbuilders will be protected.

The price fixed by the Steel Corporation is considered here to be all the more remarkable in view of the investigation of steel prices by Congress when the tariff was being considered. At that time—

That was only a short time ago—

the Bureau of Corporations, after an exhaustive inquiry, determined that at $31 a ton the Steel Corporation was able to pay a dividend of 10 per cent on its entire stock issue.

The majority of that stock, as the world knows, was what in Wall Street parlance, and in what is now universal parlance, is called "watered stock."

Experts who have been making an inquiry into the subject for the United States Shipping Commission, declare that the increase is not justified.

Mr. SMITH of Michigan. That is, Mr. President, the increase from $35 to $95 a ton?

Mr. STONE. The increase from $31 per ton.

Mr. SMITH of Michigan. That the increase from $31 to $95 is not justified?

Mr. STONE. Is not justified. However, I think, though I do not speak with certainty, that the experts referred to condemn the increase from $31 per ton, under which price a 10 per cent dividend was declared on the entire stock issue of the steel company, even to $65 per ton, which the Navy Department is paying. The increase to $95 per ton certainly was condemned as not justified.

Mr. SMITH of Michigan. Mr. President, will it bother the Senator if I interrupt him?

Mr. STONE. It will not.

Mr. SMITH of Michigan. I should like to say to the Senator, for I know he wants to be accurate, and will be accurate, in what he says——

Mr. STONE. I will so far as I can be; that is my desire.

Mr. SMITH of Michigan. That the truth is that no contract has been let at $95 per ton, nor is it proposed to let any contracts at $95. The contracts let were let at a price to be fixed by the Council of National Defense, which was to be the measure of cost and the sole measure of cost. Both parties agreed on that. If they should agree on $40, that will be the price; and if they should agree on $31, that will be the price; but there is no proposition in any contract that Gen. Goethals has executed which holds the Government to any such cost as $95 per ton. In each of the contracts he put a clause that the price of the steel in the contracts shall be that agreed upon by the Council of National Defense. Everyone knows, as the Senator has intimated, that the Navy Department is buying steel at about $65, and it is hoped, both by Gen. Goethals and by the other members of the Shipping Board, that the price of the steel for these vessels will not exceed $45 or $55 per ton.

Mr. STONE. Well, nevertheless, while it is stated that Gen. George Goethals says the price of $95 per ton is not satisfactory,

he has been compelled to fix that as the basic price—compelled to fix that basic price.

Mr. SMITH of Michigan. That is correct only in this, Mr. President, that the offer of the Los Angeles Shipbuilding Co. was at that figure, but Gen. Goethals refused to sign a contract until there was inserted in it a clause that the price to be paid should be the price agreed upon by the Council of National Defense, thus protecting the Government entirely and at every point as completely as though the price had been fixed at $50, because, on the statement of the Senator, if our steel plants were commandeered and operated by the Government 10 per cent could be made at $31 a ton.

Mr. STONE. But the remarkable thing to me is that Gen. Goethals, however his name may be pronounced——

Mr. SMITH of Michigan. The country knows how to pronounce his name.

Mr. STONE. I do not know whether the country can pronounce it or not.

Mr. SMITH of Michigan. No matter whether they can pronounce it or not, history will take care of him. There is no doubt about that, is there?

Mr. STONE. I think it will; but just how it will take care of him I do not know.

Mr. SMITH of Michigan. Many other innocent men have been assailed, many men not very far from me have been criticized very severely, perhaps unjustly.

Mr. STONE. I am not assailing anybody. The Senator is unduly precipitate——

Mr. SMITH of Michigan. No; I am not.

Mr. STONE. In rising in defense. When a man's friends defend him too quickly, they lay him open to suspicion.

Mr. SMITH of Michigan. Yes; and one who assails too quickly lays himself open to criticism, and that is what the Senator has done.

Mr. STONE. I have not assailed; I may do so, but I have not done so as yet. The Senator had better wait until the indictment is preferred or presented before he rises to plead.

Mr. SMITH of Michigan. Mr. President, the Senator gave me the privilege.

Mr. STONE. Oh, I yielded to the Senator.

Mr. SMITH of Michigan. Yes.

Mr. STONE. Of course; and I will yield again whenever he desires.

Mr. SMITH of Michigan. I will not bother the Senator; I will use my own time.

Mr. STONE. That is all right; the Senator can do as he pleases as to that.

Mr. SMITH of Michigan. The Senator from Missouri usually does as he pleases, and I think he ought to accord that privilege to his colleagues.

Mr. STONE. I could not help doing that if I desired to do otherwise, and I have no wish to do otherwise.

The point I make, Mr. President, is that there was, according to what I have read, a tentative agreement made at $95 a ton. It may have been subject, as the Senator says, to review by some one else, as it was subject to the review of some one else; but what I complain about is this—that any contract should be made, even tentatively, which had too much upon it the coloring of graft.

Mr. SMOOT. Mr. President——

Mr. STONE. I am not accusing Gen. Goethals of graft; I exonerate Gen. Goethals of that; but I will accuse the people with whom he was dealing with an attempt, a deliberate, cold-blooded attempt, to rob the Treasury of the United States, and the general must have known that.

Mr. SMOOT. Mr. President——

The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Utah?

Mr. STONE. Yes.

Mr. SMOOT. I desire to suggest to the Senator that I think the newspaper has made a mistake as to the price of the steel to go into these ships. I have the confidential statement made——

Mr. STONE. Confidential statement?

Mr. SMOOT. The testimony given before the Committee on Appropriations where the price of plates and sheets was mentioned by Gen. Goethals. I wish also to say that Gen. Goethals expected to get even a lower price than that mentioned here. In his testimony he says:

I have a proposition this morning in the office to build some steel ships at Seattle at $155 a ton, on the basis of 4¼ cents for plate—

That is, $85 for plates—

and 3⅜ cents for sheets—

Which would be $75 for sheets. He thought, even then, that the price for the sheets and plates was too high, and said also that he could make the contract at a lower price than that with eastern firms. I simply call the Senator's attention to that, thinking perhaps that the newspaper report was an error, because I have quoted absolutely what he did say.

Mr. STONE. I nevertheless complain that an officer of this Government, put into a great and responsible position, whether civil or military, should consent even to a tentative proposition that involved mulcting the Treasury of the United States of from $40,000,000 to $50,000,000. It was, at least, very poor judgment and contributed naught to his administrative ability. That criticism I do make. There I leave that part of what I have to say, which is the first half.

This morning I find in the same paper, the Washington Post, another very interesting article relating to the same subject, which I wish to read that it may go into the RECORD:

WOODEN SHIP VICTORY—DENMAN TO CARRY OUT THE PLAN DESPITE GOETHALS'S OPPOSITION—CUTS GENERAL'S STEEL PRICE—MILLS AGREE TO $56 TENTATIVELY INSTEAD OF $95, ORIGINAL COST—DENMAN CONFERS WITH WILSON, AND GOETHALS WILL SEE HIM TO-DAY—U-BOAT TOLL GROWS AND ENGLAND URGES SHIPS—DENMAN FEARS FOR UNITED STATES TRANSPORTS—CONGRESS CRITICAL OF "WAR ADMINISTRATION."

Though contracts were signed for 10 ships with steel tentatively at $56 by Chairman Denman, of the Shipping Board, yesterday, as against $95, agreed to by Col. Goethals and the steel makers recently, the controversy between the two on the shipbuilding program apparently has not been ended. Chairman Denman called at the White House yesterday and had a long conference with President Wilson. Gen. Goethals also called, but the list of appointments proved to be filled until Friday. Meantime the controversy was discussed in Congress.

After his conference with the President, Chairman Denman said U-boat sinkings for the past week would average a total of 9,000,000 tons loss annually. Every ship possible, and of every kind, must be built by the United States.

PLAN FOR UNITED STATES TROOP SHIPS.

"The most serious thing," said Denman, "and the most important, is the mounting of figures on sinkings of British ships. The decrease in the sinkings the last two weeks in May evidently showed Germany had recalled her submarines to prepare them for expected sailings of American troop ships. Sinkings are again on the increase.

"Our conference had nothing to do with the reported differences between myself and Gen. Goethals," Mr. Denman continued. "There is no real difference in our views. There never has been anything but a smile between us. We talked about U boats and need of merchant ships."

The increased submarine sinkings last week indicate that Germany has her entire submarine fleet in action. There was evidence that the German Government called in its undersea boats for repairs during the month of May, so that they would be ready to lie in wait for the American transports when they began carrying our troops to France. Germany is now sinking merchant shipping faster than it can be replaced unless the present shipbuilding plans of the United States are greatly extended.

CHAIRMAN DENMAN'S STATEMENT.

The contracts yesterday went to the Downey Construction Co., of New York, for 10 vessels, and were signed by Chairman Denman after he had refused to approve them when they first came to him from Gen. Goethals naming a price of $95. The price of $56 will stand, Mr. Denman announced, until a final figure is set by the President or by some agency he may designate.

"Since the Government now has the power to force a lower price," said Mr. Denman, "I should not go on approving contracts at $95. If the price of $56 is raised finally, the steel plants will be refunded; if it is lowered, the Government will benefit by the reduction."

ACCEPTED BY THE PLANTS.

A base price of $95 was agreed on between Gen. Goethals and the steel plants some weeks ago. It was to stand until a final price was arranged, but Chairman Denman said yesterday he had declined to sign more contracts at that figure because he did not care to set a precedent that would embarrass the board when final negotiations for a price basis were begun. The Navy is obtaining steel at about $65.

The country's steel plants, it was said yesterday, accepted the price of $56 on condition that its acceptance would not determine the final price to be paid. Steel men, it is said, estimate the cost of production now at around $45, but they have been able to sell all the plates they could produce at from $95 to $125. The commercial demand, however, will cease with the Government's requisitioning of ships building and shipyard facilities.

COMMITTEE MAKING ESTIMATES.

The committee on war supplies of the Council of National Defense is making estimates for the fleet corporation now on steel prices. Gen. Goethals has said he is ready to leave the whole matter of prices to the committee. But Mr. Denman said the committee would not fix prices, although it would advise.

As to the controversy between Chairman Denman and Gen. Goethals, Congress in voting a $500,000,000 appropriation for shipbuilding authorized the President to exercise powers granted in the act through any agency he might designate. But both Mr. Denman and Gen. Goethals, it is said, are anxious that the other should not be designated to carry out the act's provisions. Gen. Goethals, it is understood, feels he can not accomplish half as much as he might if hampered by the Shipping Board with powers to direct his efforts. Mr. Denman, it is said, believes the Shipping Board should be given full powers.

DENMAN HOLDS THE STOCK.

As Denman holds 95 per cent of the capital stock of the shipping corporation for the Government, such designation, it is said, means he will remain in power, and that the wooden-ship program will go through, possibly with all steel ships that can be constructed under Gen. Goethal's plan.

I merely read this and leave it for your reflection without comment.

And now, Mr. President, a word and I am done. There is an issue, it seems, between Mr. Denman and Gen. Goethals. Gen. Goethals desires plenary power to proceed with shipbuild-

ing as he pleases. Mr. Denman, the chairman of the Shipping Board, desires supervisory powers. That seems to be the issue between them. Gen. Goethals did make tentative contracts, subject, of course, to approval by others, Denman among them, at $95 per ton for steel. Mr. Denman, chairman of the board, turned down those contracts, would not even countenance them, and made contracts proposing tentatively $56 per ton. That is the difference between the one man, who contends for supremacy in the exercise of power, and the other man, who contends for the exercise of a supervisory power in the construction of this commercial fleet for the war emergency.

I am bound to say, Mr. President, that I rejoice that such a man as Denman is in this emergency at the head of the Shipping Board.

Mr. VARDAMAN. Mr. President, it is not my desire to do anybody an injustice.

I called attention on last evening to the matter which the Senator from Missouri [Mr. STONE] has just discussed.

I did not undertake to determine Gen. Goethals's authority in the transaction mentioned but contented myself with simply calling attention to the transaction.

Evidently there is a purpose somewhere of somebody to do something that ought not to be done.

A Senator came to me this morning with a message from Gen. Goethals, saying that the general had nothing to do with the fixing of the price of steel; that that was a matter for the board to determine. I can not recall just now which board, but it was one of the many boards appointed by the administration to work for the Government for nothing, I presume.

There is no question in my mind but that the matter of the price of steel to be furnished the Government for shipbuilding had been under consideration for some time by the altruistic patriots who control the enterprises which manufacture that very essential material.

It was the purpose of the steel manufacturers to force the United States Government to pay $95 a ton for steel. The mere suggestion is an outrage, an exasperating thought, but nevertheless I believe it is true.

They were going to take advantage of this emergency to rob and plunder the taxpayers—coin this dire and desperate necessity into dollars and fill their capacious coffers with blood money.

Sustaining my own judgment in the matter, I am going to ask permission to read an editorial published in the New Republic, of Saturday, June 9, which throws a flood of light on this dark, damnable conspiracy, and is a straw which shows where and which way the wind is blowing. It puts the American people on guard and should call the Congress to arms to defend the taxpayers against such shameless conduct.

I take it that no one will charge the New Republic with viewing the question from a partisan standpoint. I have read this publication for some time and find it inclined to be ultra-conservative.

The subject of the editorial is "The price of steel for ships." I shall read it in full:

The foundation of the Shipping Board's new program of ship construction is steel. It was the apparent inability of the steel interests to promise deliveries within a reasonable period that at first made it seem necessary to rely on inferior wood construction. It was a change of front on the part of the steel manufacturers, and explicit promises of enough steel to build 3,000,000 tons of shipping within a year and a half, that induced the recent change from wood to steel. Henceforth, if we may judge from statements of Gen. Goethals, and of Members of Congress, our main hopes are to be staked on steel; wood is to be merely a side issue, to be pushed as vigorously as may be without interfering with the steel program.

The responsibility for this change is a staggering one, and it may be assumed that it was not made without the most searching consideration. If there has been a miscalculation, if the enthusiasm of the steel manufacturers has outstripped their judgment, if deliveries are delayed and the output of ships falls far short of the promise, the triumph of the central powers may be the price of the mistake. It is to be assumed that Mr. Farrell and Mr. Gary and Mr. Schwab have weighed the possibilities earnestly and anxiously, and that their promise rests on a genuine belief in their ability to perform.

Nevertheless complete confidence in the soundness of their decision can rest only on a conviction that it was rigorously impartial, that it was based exclusively on an estimate of the measure of disinterested service which the steel industry is capable of rendering. Unfortunately there have been disquieting rumors as to the price which the steel industry expects to exact for its services; and the soaring stock-market quotations of United States Steel, since these rumors have made their appearance, lend to them an air of plausibility. It can hardly be a mere coincidence that steel common has advanced 20 points since the middle of May. In 1910 the Steel Corporation was selling steel plates at an average of about $31 a ton. A thorough investigation of costs in steel production by the Commissioner of Corporations led to the conclusion that this price brought a return of 10½ per cent on the invest ment. Since then, of course, costs have risen considerably, and to-day an impartial investigation would call for some revision of these figures, even as to steel made for the Government, which it may be assumed is entitled in time of war to the best that its citizens can do. In practice, the Government is now paying more than double the price which was in 1910 bringing such abundant returns. The figure fixed upon by Secretary Daniels for steel plate for the Navy is $65 a ton, and, though this figure is attacked by steel manufacturers, it errs on the side of liberality.

The disquieting rumor which has apparently gained credence in Wall Street is that the Shipping Board will be expected to pay 4¼ cents a pound for the steel plates to be used in its gigantic merchant fleet—a price that figures at more than $95 a ton, more than three times the price in 1910, and nearly 50 per cent more than the present price for Navy construction. No confirmation of this figure has been published, but its accuracy seems to be generally accepted. The Wall Street Journal, a publication known to have unusually good sources of information, stated definitely in a leading article last Monday that the price will be in round numbers $100 a ton.

It is hardly credible that far-sighted steel manufacturers of the type of Messrs. Gary, Schwab, and Farrell should lend themselves to anything of this sort. At a time when the men of the country are being drafted into service, perhaps to be maimed or killed, for a paltry $30 a month, it is inconceivable that the wealthiest industry in the United States should be willing thus to coin more riches out of the Nation's peril. It would have a most sinister aspect. Socialists and radical labor leaders have for years preached to their followers that war was an institution designed by the capitalist class to enable it to extort more profits out of the sweat of labor.

And I will say just at this point that this is not an exception to the rule.

Unrest among workingmen the world over has been predicated on the supposition that while human beings were drafted for war at nominal compensation, property was allowed to exact what the market would bring. Would not hundred-dollar steel look like a startling confirmation of this charge? Politically, such a thing would be suicidal. It would supply deadly ammunition to the western Senators, such as LA FOLLETTE, who have maintained that the President plunged us into the war at the behest of the Wall Street interests.

The United States Steel Corporation and the other steel manufacturers have an opportunity, which will perhaps never return, of demonstrating that they place solicitude for the national safety and welfare above the desire for profit. They should be content to furnish steel to the Government at the price already determined upon for Navy work—at $65 a ton. That is a fair, indeed a liberal, price. Anything more savors of extortion. Under the new shipping legislation, the President has drastic and extensive commandeering power; he has a club which can make itself felt. But he should not be forced to use it. Ships can not be rapidly built in an atmosphere of suspicion and antagonism. The offer of steel at $65 a ton should come from the steel interests, and it should be a voluntary one, made from a sense of public obligation. Let it be their contribution toward the prosecution of the war.

Mr. President, the Senate will judge for itself as to whether or not there is a conspiracy among the Garys, Schwabs, and Farrells to profit pecuniarily by this war. Personally I do not expect patriotism from that source. Money is conscienceless, and the man whose life is devoted to money-making is usually incapable of patriotic motives.

I would as soon expect to find virtue in the realm of the lost as altruism in the soul of a man whose life is devoted to the accumulation of wealth.

There may not be anything wrong in this incident which the Senator from Missouri and myself have called to the attention of the Senate, but the sunlight of publicity will not do any harm. It is a matter that the Congress ought to understand, so that if anything should happen to go wrong, Congress could block the game of the conspirators and protect the American people from plunder.

Mr. SMITH of Michigan. Mr. President, I do not know that I am called upon to say anything in reply to the statement made by the Senator from Missouri [Mr. STONE]. I asked him a question or two, and he made reply in the same good humor which has always characterized our relations. But the only reason I interrupted the Senator was because I did not desire any false impression to grow out of the statement, which perhaps without elucidation might be the case.

The truth about that shipbuilding contract is simply this, and nothing more, that a shipbuilding company offered to build certain ships for the United States Government, fixing the price. Their contracts were accepted, but a clause was written in each contract that the price fixed for the steel was purely tentative and must be finally fixed by the National Council of Defense. It made no difference whether that contract read $100 a ton or whether it read $500 a ton, neither one was binding upon the Government. The price was left to the National Council of Defense. The fact that we were buying our steel for our naval vessels at practically $65 indicates that there is a very wide discrepancy between what would actually be paid and what was asked.

This Los Angeles Shipbuilding Co. I know nothing about. They made this proposition. The Government wanted the ships, no time was to be lost, and it was useless to haggle over the price. So the matter was left entirely to the Government. If Gen. Goethals had said the price would be $95 a ton he would have made a great error, justly open to criticism. If he had said $65 a ton the Senator from Missouri might have risen with great propriety to criticize his course; therefore no price was fixed.

Mr. WEEKS. Mr. President——

The PRESIDING OFFICER (Mr. MCLEAN in the chair). Does the Senator from Michigan yield to the Senator from Massachusetts?

Mr. SMITH of Michigan. I do.

Mr. WEEKS. I wish to ask the Senator if he knows anything about the Los Angeles Shipbuilding Co.?

Mr. SMITH of Michigan. I do not.

Mr. WEEKS. I was given some information not long ago, which I think I put in the RECORD—I am not quite sure—to the effect that the Los Angeles Shipbuilding Co. was a company on paper——

Mr. SMITH of Michigan. I think the Senator has made a mistake, which he rarely does.

Mr. WEEKS. That it had no shipbuilding plant constructed; that a corporation had been formed with a very reputable man as president; that a little money had been paid in, but that it will take at least a year for the Los Angeles Shipbuilding Co. to construct its plant to get ready to lay down ships. The purpose, I understood, of the Shipping Board is to have ships delivered within that time and practically the entire contract delivered within 18 months.

Mr. SMITH of Michigan. I think, in reply to the Senator from Massachusetts, that as far as the responsibility of the Los Angeles Shipbuilding Co. was concerned, the Shipping Board and Gen. Goethals satisfied themselves about it. A man who has expended $350,000,000 of our Government money without a breath of criticism from any source, receiving the praise of the entire civilized world, does not change his course of conduct overnight.

I know nothing about this company. I see the Senator from California [Mr. PHELAN] in his seat. Perhaps he would care to say whether the Los Angeles Shipbuilding Co. is a responsible company. I know nothing about it. Mr. Denman evidently thinks it is or he would not have made the contract; he is a resident of San Francisco himself.

Mr. PHELAN. Mr. President, I have not any very definite information about the Los Angeles or California Shipbuilding Co. apart from the fact that it was awarded a contract by the Navy Department, and hence the presumption is that it is an established plant. It is a comparatively new concern. I have in my hand a letter from the Long Beach Chamber of Commerce, in which it speaks of the two yards—Craig's and California—as proposing to lay keels immediately for four large merchant vessels for the Shipping Board and to rush them to completion. It indicates that there are companies springing up in every part of the country for the purpose of meeting the extraordinary demands of the Navy and the Shipping Board. I do not know that a company requires anything more than capital and the ordinary equipment, which are easily obtained, in order to be a shipbuilding plant. I do not know that it is a reproach upon a company that it has not already turned out ships. We are in an era of progressive construction.

Mr. SMITH of Michigan. Mr. President, as I said, I know nothing about the Los Angeles Shipbuilding Co., but I do know that they have no contract with the Government which binds the Government to pay any set price for steel, and they have no contract with the Government to pay $95 a ton for steel. It is the cheapest kind of notoriety to give currency to such a proposition as that, and to give it at the expense of a man who has proven himself both capable and honest in the discharge of his public duty. I hold no commission from Gen. Goethals; what I say is purely voluntary; but I know his reputation. It belongs to the Nation and should be protected from slander, and I know that no contract has been made by him and no contract was refused by Mr. Denman which would tend in the slightest degree to discredit either gentleman.

I ought not to say it again, but there has been so much misinformation about this teapot tempest that I do want to say once more that the price according to the article read by the Senator from Missouri was merely tentative and is now only tentative. When it went over to Mr. Denman he said, "I would rather have it at $50." So would Gen. Goethals, and the way was provided for $50 steel not by the chairman of the Shipping Board but by their agent and manager; but if the testimony read by the Senator from Missouri is correct, $50 would be exorbitant. If idle gossip and tin-pan publicity is to open the flood gates of criticism at the very beginning of this war our domestic problems will be more serious than our foreign.

In this matter the Government was entirely protected. Surely that ought not to be the subject of criticism, and would not have been if it had not been for the advertised controversy between Mr. Denman and Mr. Goethals, and how recent that controversy is. As I turn to his testimony, which I hold in my hand, I find Mr. Denman says: "We selected Gen. Goethals because of his well-known reputation. He sought no responsibility. We dragooned him into the service of his Government." I read the language of Mr. Denman in this report: "We dragooned him into the service of the Government." Why did they dragoon him? Because he had performed the most gigantic task ever undertaken by the American Government, honestly, fearlessly, and expeditiously.

I do not often criticize people. Sometimes it is unwarranted, and in my opinion this controversy never should have been precipitated, especially when its motive was cheap notoriety.

I have heard honest and fearless and patriotic men sharply criticized and villified; I have seen them wounded in their spirit and in their hearts; but I do not deal in that kind of subterfuge.

Mr. Denman is undoubtedly an active, enterprising, forceful man. What I said of him the other day I now repeat—that if he is a great man or has unusual abilities for his present work he has yet to demonstrate them—but the mere fact that he took his pencil and rubbed it through "$95" and wrote "$50" in its place in a contract to be absolutely controlled by the Government will not give him a very high place in history. If the statement of my honored friend from Missouri can be relied upon, even $50 or $55 is too high. What is to be said if the National Council of Defense write $31 where $50 now is? They can write anything they please in the contract, because in the wisdom of this great Army officer and those associated with him the right is reserved to the Government.

If every department of the American Government in times like this is run with as much concern for the welfare of their Government as these men show, I do not think we will have any occasion for criticism.

I perhaps ought not to have said even this. I apologize to my friend from Missouri if I seemed to fly too quickly to the support of Gen. Goethals. I only did it because of my sense of fairness and justness and my jealousy for a reputation that ought not to become the football of little souls hungering for glory.

Mr. STONE. Mr. President, my chief object in calling attention to this matter was to emphasize the danger the country is in of having the vast sums we are appropriating unwisely—I will merely say unwisely—expended. It is a fact, as I understand the truth to be, that the Shipping Board, of which Mr. Denman is the head, had developed a plan for the building of wooden vessels to meet the emergency confronting the country, which vessels could be built far more speedily and with far less expense than steel vessels. Gen. Goethals, at the head of the construction arm of this business, adopted, I will say, a plan, after more or less contention, of building steel vessels in preference to wooden vessels.

Without desiring unduly or unfairly to reflect upon anybody, it struck me as being strange, and the eloquent defense of my friend from Michigan has not removed that thought from my mind, that the head of this construction arm, after his insistence for steel vessels, should make even a tentative contract with a ship-building corporation at $95 for steel, thereby setting, tentatively at least, the price of steel, which meant a concession to that extent to the grafting demands of those who had steel to sell instead of turning it down peremptorily. It struck me that it was a rather remarkable performance.

I do not assail Gen. Goethal's integrity. I do not assail the integrity of any man, but I speak of a fact which the Senate and the country should keep in mind when we are expending not millions but billions of dollars and when every sort of effort will be made by all kinds of people to thrust their greedy claws into the Treasury to plunder it. Men who permit things to be done even tentatively that lead to such results seem to me to lack an administrative ability at least that does them no credit.

I have never been, I am frank to say, a very enthusiastic admirer of Gen. Goethals. I barely know him. I do not recall ever meeting him more than once, but I am somewhat familiar with his career, and for one I venture to say, which I would not have done except in the immediate circumstances, that he is rather a pampered hero, whose reputation, such as it is, has been built largely upon the genius of other men. I go further and say that with the combined genius of them all, with the genius and intelligence of them all, the Panama Canal lacks a vast deal of being a great engineering success. I regard it rather as a failure. I express that as my opinion.

But, Mr. President, the eyes of those who are appropriating these vast sums of money as well as the eyes of those who are expending them should be keenly fixed upon what is done, and all of us—we here and those of the executive departments—should be very watchful of what is done.

Mr. SMITH of Michigan. Mr. President, I will only take a moment. The Senator from Missouri [Mr. STONE] says he is not a very enthusiastic admirer of Gen. Goethals. Of course, that was quite evident from what he said in the fore part of his address. He says that Gen. Goethals's fame results largely from the work of others. I want to say to the Senator that Gen. Goethals is big enough and generous enough to concede

that fact. When honors from his countrymen were being bestowed upon him and when he was being highly praised for the great work he did, he had the greatness, the courtesy, and the consideration to say that all of the men engaged in the work of building the Panama Canal had enabled it to be an accomplished fact, and that he claimed only to be one of the sixty thousand. I think the fame of almost any man who outlives his own generation, perhaps, may be attributed to the action of his fellows and those who are associated with him. Generally, if they are big enough such men are willing to divide the glory, and if they are small men, fearful that others may get a little glory, their names do not long endure in history. This man is big enough to concede that he is only one of the thousands of men who did an important work, and his fame is imperishable.

Mr. WEEKS. Mr. President, it seems to me that it is particularly unfortunate that the name of a great public servant, a great engineer, should be dragged into this kind of a controversy. I have not any brief to say anything for Gen. Goethals, but it will surprise the country and will surprise the engineering profession when they read what the Senator from Missouri has just said, that the Panama Canal is not an engineering success. I have never heard it suggested that it was not an engineering success so far as engineering capacity could perform the work. It is true that nature has played some peculiar freaks with the territory through which the Panama Canal passes, but no engineering skill could have prevented the slides and other conditions which have prevented the canal from being a complete success.

I did not rise, however, to discuss the Panama Canal, or even to discuss Gen. Goethals, but to say that it is well known to everyone in the Capitol that there has been friction, and very pronounced friction, between Gen. Goethals and the chairman of the Shipping Board ever since Gen. Goethals's connection with the enterprise. I do not know anything about the merits of the case; I do not know anything about the merits of the contention about the prices of steel. It would seem that $95, $90, or even $85 was a very high price for steel. I do not know how many strings there are on that; I do not know what the conditions of its supply are; nobody seems to know about it; but to try the case like this, and in some degree to jeopardize the well-established reputation of a great engineer in a cursory discussion of this sort seems to me to be entirely unjustifiable.

That brings me to the suggestion which I think should be brought to the attention of the Senate at every opportunity—and I think I shall offer it as an amendment to this bill—of a committee to really investigate such reports as this and to give the public the information. My judgment is that 95 per cent of the ills which the body politic thinks exist would be cured by publicity. You can not cure them by this kind of discussion based on reports in the public press, with no more investigation probably than we are giving it here; but it can be cured and the information can be given to the public if a properly constituted committee investigates such matters as this, involving the expenditure of tens and hundreds of millions of dollars; and the public is entitled to the information.

Mr. President, not long ago I introduced a joint resolution providing for a committee on the conduct of the war. One of the functions of that committee would be to investigate just such a case as this and to give to Congress and to the public the real facts relating to it. We are, in my judgment, going to have any number of such controversies as this growing out of the great power which we are giving to certain men and the unusual amounts of money authorized to be expended and the unusal conditions which surround the expenditure. Somebody should have the power immediately to determine any question of this character as to which the public is entitled to information. This very contract ought to be before the Senate and ought to be referred to a committee of the kind which I have described. Then, in a very short time the Senate would have the exact facts.

The joint resolution to which I refer has been resting quietly in the committee to which it was referred for now something like six weeks, perhaps two months. I do not know that it is ever going to be reported. I have been told that the President is opposed to its being adopted because it might embarrass the administration in some respects. I want to say that there is no intention on the part of the proposer of the resolution or of anybody interested in it to embarrass the administration in the slightest degree; but there is an intent to furnish Congress and the public with the information which they should have. If I were in the position of responsibility, I should want to have such a committee organized and in operation for the purpose of investigating these questions and for the purpose of protecting the men who are involved in making these contracts and expending these appropriations.

I am going to see that the Senate has an opportunity to vote on the joint resolution. I do not know just exactly how I am going to do it; perhaps I shall propose it as an amendment to this bill; but I am going to have it determined by the Senate whether it wishes to have real information furnished it when it wishes to pass on these questions involving the expenditure of hundreds of millions of dollars, or whether it is willing to take newspaper reports as the basis for acting on great questions, and especially those affecting and, perhaps, destroying the reputations of men.

The PRESIDING OFFICER (Mr. McKELLAR in the chair). Concurrent and other resolutions are in order.

Mr. VARDAMAN. I suggest the absence of a quorum.

The PRESIDING OFFICER. The Senator from Mississippi suggests the absence of a quorum. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Borah	Jones, N. Mex.	Phelan	Smoot
Broussard	La Follette	Pittman	Stone
Calder	McKellar	Poindexter	Sutherland
Chamberlain	McLean	Pomerene	Swanson
Colt	McNary	Shafroth	Vardaman
Fernald	Martin	Sheppard	Warren
Frelinghuysen	New	Sherman	Watson
Gerry	Norris	Simmons	Wolcott
Husting	Overman	Smith, Md.	
James	Page	Smith, Mich.	
Johnson, S. Dak.	Penrose	Smith, S. C.	

Mr. GERRY. I desire to announce that the junior Senator from Kentucky [Mr. BECKHAM] and the junior Senator from Utah [Mr. KING] are detained necessarily from the Senate on public business.

Mr. SHAFROTH. I desire to announce the absence of my colleague [Mr. THOMAS] on account of illness.

Mr. WOLCOTT. I wish to announce the absence of my colleague [Mr. SAULSBURY], who is detained on account of public business.

The PRESIDING OFFICER. Forty-two Senators have answered to their names. There is not a quorum present.

Mr. CHAMBERLAIN. I ask that the names of the absentees be called.

The PRESIDING OFFICER. The Secretary will call the names of the absent Senators.

The Secretary called the names of absent Senators, and Mr. HOLLIS, Mr. KENDRICK, Mr. KENYON, Mr. NELSON, Mr. NEWLANDS, Mr. RANSDELL, Mr. STERLING, Mr. THOMPSON, Mr. TOWNSEND, and Mr. WALSH answered to their names when called.

Mr. FLETCHER, Mr. HITCHCOCK, Mr. BRADY, Mr. GORE, Mr. MCCUMBER, Mr. WEEKS, Mr. ASHURST, and Mr. SMITH of Arizona entered the Chamber and answered to their names.

The PRESIDING OFFICER. Sixty Senators have answered to their names. A quorum is present. The morning business is closed.

CONSERVATION OF FOOD AND FUEL.

Mr. CHAMBERLAIN. Mr. President, I ask that the unfinished business be laid before the Senate.

There being no objection, the Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 2463) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel.

Mr. SHEPPARD. Mr. President, taking up again the analysis of the bill before the Senate, I desire to say that it further provides that whenever the President shall find it impossible, by license or by voluntary arrangement, to assure an adequate supply of necessaries, he is authorized to requisition and take over, for use or operation by the Government, any factory, mine, or other plant, or any part thereof, in which any necessaries are or may be manufactured, produced, prepared, or mined; said factory, mine, plant, or any part thereof, to be returned to the owner when use by the Government is no longer required. Just compensation is to be made for such use; and if the amount determined by the President is unsatisfactory, recourse may be had to the courts.

The bill provides that whenever the President finds it essential, in order to prevent undue enhancement, fluctuation, or manipulation of prices of necessaries, or injurious speculation therein, he is authorized to regulate or close any exchange, board of trade, or similar institution or place of business. He may require clearing houses, clearing associations, or similar institutions which clear, settle, or adjust transactions of such exchanges, boards of trade, etc., to keep such records as he may

require. The penalty for violation of the provisions regarding such exchanges, boards of trade, etc., is a fine not exceeding $10,000, or imprisonment for not more than four years, or both.

The bill provides that when the President finds stimulation of production necessary, and that producers of any nonperishable agricultural products produced within the United States should have a guaranteed price in order to bring about such stimulation, he is authorized seasonably, and as far in advance of seeding time as practicable, to determine and fix and give public notice of what, under specified conditions, is a reasonable guaranteed price for any such products to assure producers a reasonable profit. The United States thereupon guarantees to the producer complying with the President's regulations within the period prescribed by him, not exceeding three years, a price not less than said guaranteed price. The President may levy an import duty necessary to prevent interference with the guaranteed price, which duty shall be sufficient to make the import price equal to the guaranteed price. In no case shall any existing duty be reduced. In order to make the guaranteed price effective, or in order to protect the Government against materially increased liabilities by virtue of the guaranty of price, the President may purchase all products for which a price has been guaranteed, hold, transport, or store them, or sell and deliver them to any person or to our allies, or use them for our Government.

The bill provides that the President may make such regulation or prohibition of the use of foods, food material, or feeds in the production of alcoholic or nonalcoholic beverages or such reduction of the alcoholic content of any beverage as he may deem essential to an adequate and continuous supply of food. The penalty on conviction for violation of this provision is a fine not exceeding $5,000 or imprisonment for not more than two years, or both.

The bill provides that every person who willfully assaults, resists, impedes, or interferes with any officer, employee, or agent of the United States in the execution of any duty prescribed by the act shall, on conviction, be fined not exceeding $1,000 or be imprisoned for not more than one year, or both.

The sum of $2,500,000 is made immediately available for the payment of such rent, the expense of such printing and publication, the purchase of such material and equipment, and the employment of such persons and means in the city of Washington and elsewhere as the President may deem essential.

The sum of $150,000,000 is made available immediately for the purposes of the act. No part of this sum is to be expended for rent, publication, printing, material and equipment, or the employment of clerical forces.

Judgment by the courts that any part of the act is invalid shall not impair any other part.

The act shall cease to be in effect when the national emergency resulting from the existing state of war shall have passed, the date of which shall be ascertained and proclaimed by the President. In no event shall the act continue in effect longer than one year after the termination, as ascertained by the President, of the present war. All legal obligations, however, incurred by the United States pursuant to the act shall continue in force until fulfilled.

The measure may now be summarized as follows:

First. It penalizes the willful destruction of necessaries for the purpose of enhancing the price or restricting the supply.

Second. It penalizes hoarding, which is carefully defined. This does not apply to any farmer, gardener, or other person who accumulates or withholds the products of any farm, garden, or other land under lease or cultivated by him.

Third. It enables the President, under effective penalties, to license and regulate importation, exportation, manufacture, storage, or distribution of any necessaries, whether he finds such steps essential to economical manufacture and equitable distribution. The licensee is first given an opportunity to conform charges, rates, and practices to the President's direction. This section does not apply to any farmer, gardener, or other person with respect to the products of any farm, garden, or other land owned, leased, or cultivated by him, nor to any retailer with respect to the retail business actually conducted by him, nor to any common carrier.

Fourth. It authorizes the President, when he deems it necessary to the purposes of the act, to purchase, produce, manufacture, store, or sell any necessaries. He may commandeer any necessaries, as well as storage space therefor, paying for what he takes; and if the party entitled to payment is not satisfied, he may have recourse to the courts.

Mr. KENYON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Texas yield to the Senator from Iowa?

Mr. SHEPPARD. I yield to the Senator from Iowa.

Mr. KENYON. I should like to ask the Senator a question—in no controversial spirit, because I agree with him in nearly everything—in regard to the section he now refers to—section 9. Does he think that under that section the President could fix the price of farm products; or has the Senator discussed that phase of the matter? I have not been here. It seems to me that there should be an amendment to section 9 making it clear that farm products are not included, the same as the proviso to section 6, or similar to that, and the section dealing with the licensing system.

Mr. SHEPPARD. I was about to call attention to the proviso in this section, which is to the effect that no natural person is required to furnish any necessaries held by him and reasonably required for consumption by himself and dependents for a reasonable time.

Mr. BRADY. What section is that?

Mr. SHEPPARD. The section referred to by the Senator from Iowa.

Mr. KENYON. Section 9. That is true as to necessaries held by him and reasonably required for consumption; but, now, suppose the farmer is holding something he has produced—and I do not think we ought to injure the farmer or the producer in any way; we must take care of production. If he is holding that beyond the mere purposes which the proviso covers—that is, the amount reasonably required for consumption by himself and his immediate relatives—under this section, could not the President take the farmer's product and fix the price? That is the question that is worrying me.

Mr. SHEPPARD. Under this section the President may determine the price which he considers just, but if the party entitled to payment is not satisfied he may have recourse to the courts.

Mr. KENYON. Does the Senator think we ought to give any power to fix the price of what the farmer may produce? Now, this is outside of the minimum guaranty. I do not refer to that. That is to stimulate production. But if the President can take the products of the farm by fixing a price, or take them as this section provides, I am afraid we are going to injure production very much. That is a troublesome question in section 9.

Mr. SHEPPARD. I do not believe that the President would ever find it necessary to go to that extent.

Mr. KENYON. I do not think so, either.

Mr. SHEPPARD. This section becomes effective only when the President finds an emergency sufficiently acute to justify action under its terms.

Mr. KENYON. I do not think the President would, either; but I do think that the thought going out to the country, to the farmer and to the producer, that some power is given to fix this price absolutely will be a deterrent to production.

Mr. SHEPPARD. I think it well to discuss that point a little further along in the debate.

Mr. KENYON. Does not the Senator believe that some such proviso as has been inserted in the other sections—that it shall not apply to the farmer or the producer as to what he himself produces on his own land or land leased by him—would make the matter clear?

Mr. SHEPPARD. Very probably. I shall be glad to hear the Senator on that point at a later stage in the debate, and also to give it careful consideration myself.

Mr. KENYON. I wish the Senator would. I have prepared an amendment on that line which I believe is rather essential.

Mr. SHEPPARD. Fifth. The bill empowers the President, if he deems it necessary to an adequate and continuous supply of necessaries, to requisition and take over, for use or operation by the Government, any factory, mine, or other plant, or part thereof. He must make what he considers just compensation to the party entitled to payment, who has an appeal to the courts if dissatisfied.

Sixth. It authorizes the President to regulate or close exchanges, boards of trade, and similar institutions when he finds such action necessary in order to prevent undue enhancement or fluctuation of prices of necessaries, injurious speculation, unjust market manipulation, or unfair and misleading market quotations. Violation of this provision is punished by fine not exceeding $10,000 or by imprisonment for not more than four years, or both.

Seventh. It authorizes the President to fix a guaranteed minimum price for any nonperishable agricultural products produced within the United States whenever he finds stimulation of production essential and such action needed to effect such stimulation. To sustain said price he may, if he finds it advisable, impose import duties, or purchase the products for which a price has been guaranteed for storage, for sale to any person, or to our allies, or for use by our Government.

Eighth. It authorizes the President to regulate or prohibit the use of foodstuffs in making alcoholic or nonalcoholic beverages or to reduce the alcoholic content of any beverage, if he considers such action necessary to assure an adequate and continuous supply of food. The penalty for violation of this provision is a fine not exceeding $5,000, or imprisonment for not more than two years, or both.

It will be observed, Mr. President, that the powers conferred by this measure are to be exercised only when the President finds the exercise necessary in order to carry out the purposes of the legislation; that is, in order to safeguard and assure the proper production, conservation, and distribution of food, to prosecute the war successfully, and to save the people from the Saturnalia of speculation, corruption, and extortion attending emergencies like the present one, if it should be left unguarded.

These powers are war powers, therefore, of the first magnitude and the first necessity. Food is life. The transfer of millions of men from the farms in the European countries with which we are allied to the battle front, increasing the drain on our food resources as well as theirs, and the approach of a similar condition here will undoubtedly disorganize the usual processes of food production, imperil the usual food supplies, and create a situation of extraordinary danger—a situation requiring extraordinary, prompt, and vigorous treatment. The strain upon our food supply has only begun. The enormous demand already in existence creates opportunities and temptations for speculators which many men can not resist, and which many will eagerly embrace. In the wake of great disasters men are always found who would rifle the pockets of a corpse and gamble on the bosoms of the dead.

Mr. McLEAN. Mr. President——

The PRESIDING OFFICER (Mr. SHAFROTH in the chair). Does the Senator from Texas yield to the Senator from Connecticut?

Mr. SHEPPARD. I yield.

Mr. McLEAN. Right on the point of the exaction of excessive prices, we find it prohibited in section 4, which I think is a very important section. I should like to ask the Senator if it is the intention of the committee not to provide penalties for the offenses described in section 4?

Mr. SHEPPARD. There is a general penalty clause in the bill.

Mr. McLEAN. Does the Senator refer to section 17?

Mr. SHEPPARD. I do.

Mr. McLEAN. That does not seem to me to provide any penalty for violations of the provisions of section 4. That section applies to persons who shall willfully assault, impede, or interfere with an officer or employee, and so forth.

Mr. SHEPPARD. That is the only clause which purports to provide a general penalty, Mr. President.

Mr. McLEAN. It does not seem to me that it provides any penalty for violations of the provisions of section 4. If the Senator will turn to section 4 he will see that for the unlawful destruction of any necessaries a penalty is provided in section 8.

Mr. SHEPPARD. Exactly. I have referred to that fact.

Mr. McLEAN. That section only provides a penalty for destruction of necessaries.

Mr. SHEPPARD. Hoarding is prohibited, also.

Mr. McLEAN. The penalty for hoarding is provided for in section 6.

Mr. SHEPPARD. Exactly.

Mr. McLEAN. But I find no other penalties provided for violation of the other provisions of section 4, which are very important.

Mr. SHEPPARD. Except in so far as section 17 may be applicable.

Mr. McLEAN. Yes; but was it the understanding of the committee, or is it the belief of the Senator, that section 17 does provide penalties for exacting excessive prices?

Mr. SHEPPARD. I think that is a debatable question, I will say to the Senator. He makes a point that should be cleared up in the course of the debate.

Mr. McLEAN. It does not seem to me that it does; and the section is a very important one. I call the attention of the committee to it; and there is one other question I would like to ask.

On line 21, page 3, it is provided that no one shall make any unjust or unreasonable rate or charge in handling or dealing in or with any necessaries. Does the Senator understand that the words "rate or charge" for handling apply to retail dealers?

Mr. SHEPPARD. I so take it. There is a subsequent section which deals more particularly with that proposition.

Mr. McLEAN. I think that should be made very clear. Otherwise, the Senator will observe that the prohibition against an excessive price applies only to a conspiracy, which is provided for in the latter part of that section.

Mr. SHEPPARD. Section 5 deals with that question in detail, with rates and charges.

Mr. McLEAN. Yes, it does; but I think section 4 ought to be drawn so as to carry out the purpose of the committee. The Senator will see that unless it is made clear that there is a prohibition against exacting excessive prices on the part of the individual, any retailer who is exempted from the provision requiring a license may control supply or distribution and exact excessive prices without penalty.

Mr. SHEPPARD. I thank the Senator for the suggestion. I shall endeavor to bring it to the attention of the committee.

Mr. President, the assurance of an adequate food supply for the people at home and the soldiers at the front, the repression of infamous men who would coin the people's needs into personal gain, are as vital a war operation as the assembling of artillery, the construction of a trench, or a charge on the battle field.

This measure is more than justified by the war clauses of the Constitution; nay, it is, in my judgment, demanded by them. The war clauses of the Constitution are as follows:

> The Congress shall have power * * *
> To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water;
> To raise and support armies, but no appropriation of money to that use shall be for a longer period than two years;
> To provide and maintain a Navy;
> To make rules for the government and regulation of the land and naval forces;
> To provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions;
> To provide for organizing, arming, and disciplining the militia, * * *; and
> To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.
> (Section 8, Article I, clauses 1, 11, 12, 13, 14, 15, 16, and 18.)

It will be observed that it is not necessary to invoke unspecified war powers in order to justify this measure. It is specifically authorized in the sections of the Constitution which empower Congress to provide, support, and maintain an Army and a Navy. Certainly the provision of a food supply is essential to the support and maintenance of the armed forces of the country both on land and sea. Even if it were necessary to invoke unspecified powers, Mr. President, they would be ample under the circumstances.

I wish to call attention to a quotation from Madison, one of the greatest of the commentators on the American Constitution. He says:

> With what color of propriety could the force necessary for defense be limited by those who can not limit the force of offense? If a Federal Constitution could chain the ambition or set bounds to the exertions of all other nations, then indeed might it prudently chain the discretion of its own government, and set bounds to the exertions for its own safety.
> How could a readiness for war in time of peace be safely prohibited, unless we could prohibit, in like manner, the preparations and establishments of every hostile nation? The means of security can only be regulated by the means and the danger of attack. They will, in fact, be ever determined by these rules, and by no others. It is in vain to oppose constitutional barriers to the impulse of self-preservation. (The Federalist No. 41, pp. 275, 276, edition of Central Law Journal Co., 1914.)

I wish to say again, Mr. President, that it is not necessary to go beyond the plain provisions of the Constitution in so far as this measure is concerned.

Mr. President, it is the solemn duty of the American Congress to enact this legislation. We have embarked upon as noble a mission as has ever engaged the activities of men. The forces of autocracy and democracy are in a death lock for the domination of mankind, and the side that wins will govern the destinies of the earth for centuries to come. Millions of American young men are preparing to enter the contest for liberty, for brotherhood, and for humanity. If they should suffer for lack of food, or from improper food, due to our failure to adjust production, or facilitate distribution, or if famine and extortion should walk hand in hand through this Republic while the people are striving with every energy to sustain the men in the trench and the sky, it would be a crime whose shame would never fade, a crime the blame for which would lie at the door of the American Congress. Let denunciations cease. Let recrimination end. Let bitterness die. Let the sounds which reach the enemy from this Chamber be not the sounds of discord and altercation, but of a harmonious patriotism, typical of a common determination to press every resource and every power into the service of liberty, notes of unity and devotion that shall bring terror to the despotism whose ambitions have converted the fairest valleys of the earth into flaming hells,

encouragement and hope to the heroes who are offering their lives that the rights of men may be preserved.

Mr. CHAMBERLAIN. Mr. President, the bill has not yet been read.

The PRESIDING OFFICER. The Secretary will read the bill.

The Secretary read the bill, as follows:

Be it enacted, etc., That by reason of the existence of a state of war, it is essential to the national security and defense, for the successful prosecution of the war, and for the support and maintenance of the Army and Navy, to assure an adequate supply and equitable distribution, and to facilitate the movement, of foods, feeds, fuel, and articles required for their production, hereafter in this act called necessaries; to prevent, locally or generally, scarcity, monopolization, hoarding, injurious speculation, manipulations, and private controls affecting such supply, distribution, and movement; and to establish and maintain governmental control of such necessaries during the war. For such purposes the instrumentalities, means, methods, powers, authorities, duties, obligations, and prohibitions hereinafter set forth are created, established, conferred, and prescribed.

SEC. 2. That words used in this act shall be construed to import the plural or the singular, as the case demands. The word "person," wherever used in this act, shall include individuals, partnerships, associations, and corporations. When construing and enforcing the provisions of this act, the act, omission, or failure of any official, agent, or other person acting for or employed by any partnership, association, or corporation within the scope of his employment or office shall, in every case, also be deemed the act, omission, or failure of such partnership, association, or corporation as well as that of the person.

SEC. 3. That there is hereby established a governmental control of necessaries which shall extend to and include all the processes, methods, activities of, and for the production, manufacture, procurement, storage, distribution, sale, marketing, pledging, financing, and consumption of necessaries, which shall be exercised and administered by the President for the purposes of this act; and all such necessaries, processes, methods, and activities are hereby declared to be affected with a public interest. And in carrying out the purposes of this section the President is authorized to enter into any voluntary arrangements or agreements, to use any agency or agencies, to accept the services of any person without compensation, to cooperate with any agency or person, to utilize any department or agency of the Government, and to coordinate their activities so as to avoid any preventable loss or duplication of effort or funds: *Provided*, That none of the penalties of this act shall apply to this section.

SEC. 4. That it is hereby made unlawful for any person willfully to destroy any necessaries for the purpose of enhancing the price or restricting the supply thereof; knowingly to commit waste or willfully to permit preventable deterioration of any necessaries in or in connection with their production, manufacture, or distribution; to hoard, as defined in section 6 of this act, any necessaries; to monopolize or attempt to monopolize, either locally or generally, any necessaries; to engage in any discriminatory and unfair, or any deceptive or wasteful practice or device, or to make any unjust or unreasonable rate or charge in handling or dealing in or with any necessaries; to conspire, combine, agree, or arrange with any other person, (a) to limit the facilities for transporting, producing, manufacturing, supplying, storing, or dealing in any necessaries; (b) to restrict the supply of any necessaries; (c) to restrict distribution of any necessaries; (d) to prevent, limit, or lessen the manufacture or production of any necessaries, or to enhance the price thereof; or (e) to exact excessive prices for any necessaries; or to aid or abet the doing of any act made unlawful by this section.

SEC. 5. That, from time to time, whenever the President shall find it essential to license the importation, exportation, manufacture, storage, or distribution of any necessaries in order to carry into effect any of the purposes of this act, and shall publicly so announce, no person shall, after a date fixed in the announcement, engage in or carry on any such business specified in the announcement of importation, exportation, manufacture, storage, or distribution of any necessaries as set forth in such announcement, unless he shall secure and hold a license issued pursuant to this section. The President is authorized to prescribe such regulations governing the conduct of the business of licensees as may be essential to prevent uneconomical manufacture and inequitable distribution of necessaries and otherwise to carry out the purposes of this act. Such regulations may also include requirements for the issuance of licenses and requirements for systems of accounts and auditing of accounts to be kept by licensees, submission of reports by them, with or without oath or affirmation, and the entry and inspection by the President's duly authorized agents of the places of business of licensees. Whenever the President shall find that any rate, charge, or practice of any licensee is unjust, or unreasonable, or discriminatory and unfair, or wasteful, and shall order such licensee, within a reasonable time fixed in the order to discontinue any such unjust, unreasonable, discriminatory and unfair, or wasteful rate, charge, or practice, thereafter, unless such order is revoked or suspended, such licensee shall, within the time prescribed in the order, discontinue such unjust, unreasonable, discriminatory and unfair, or wasteful rate, charge, or practice. The President may, in lieu of any such unjust, unreasonable, discriminatory and unfair, or wasteful rate, charge, or practice, find what is a just, reasonable, nondiscriminatory and fair, or economical rate, charge, or practice; and in any suit in any Federal or State court of competent jurisdiction such finding of the President shall be prima facie evidence. Any person who, without a license issued pursuant to this section, knowingly engages in or carries on any business for which a license is required under this section, or willfully fails or refuses to discontinue any unjust, unreasonable, discriminatory and unfair, or wasteful rate, charge, or practice, in accordance with the requirement of an order issued under this section, or willfully violates any provision of this section or any regulation prescribed under this section shall, upon conviction thereof, be punished by a fine not exceeding $5,000 or by imprisonment for not more than two years, or both: *Provided*, That this section shall not apply to any farmer, gardener, or other person with respect to the products of any farm, garden, or other land owned, leased, or cultivated by him, nor to any retailer with respect to the retail business actually conducted by him, nor to any common carrier, nor shall anything in this section be construed to authorize the fixing or imposition of a duty or tax upon any article imported into or exported from the United States or any State, Territory, or the District of Columbia.

SEC. 6. That any person who willfully hoards any necessaries shall, upon conviction thereof, be fined not exceeding $5,000 or be imprisoned for not more than two years, or both. Necessaries shall be deemed to be hoarded within the meaning of this act when either (a) held, contracted for, or arranged for by any person in a quantity in excess of his reasonable requirements for use or consumption by himself and dependents for a reasonable time; (b) held, contracted for, or arranged for by any manufacturer, wholesaler, retailer, or other dealer in a quantity in excess of the reasonable requirements of his business for use or sale by him for a reasonable time, or reasonably required to furnish necessaries produced in surplus quantities seasonally throughout the period of scant or no production; or (c) withheld, whether by possession or under any contract or arrangement, from the market by any person for the purpose of unreasonably increasing or diminishing the price: *Provided, however*, That any accumulating or withholding by any farmer, gardener, or any other person, of the products of any farm, garden, or other land owned, leased, or cultivated by him shall not be deemed to be hoarding within the meaning of this act.

SEC. 7. That whenever any necessaries shall be hoarded as defined in section 6 they shall be liable to be proceeded against in any district court of the United States within the district where the same are found and seized by a process of libel for condemnation, and if such necessaries shall be adjudged to be hoarded they shall be disposed of by sale in such manner as to provide the most equitable distribution thereof as the court may direct, and the proceeds thereof, less the legal costs and charges, shall be paid to the party entitled thereto. The proceedings of such libel cases shall conform as near as may be to the proceedings in admiralty, except that either party may demand trial by jury of any issue of fact joined in any such case, and all such proceedings shall be at the suit of and in the name of the United States. It shall be the duty of the United States attorney for the proper district to institute and prosecute any such action upon presentation to him of satisfactory evidence to sustain the same.

SEC. 8. That any person who willfully destroys any necessaries for the purpose of enhancing the price or restricting the supply thereof shall, upon conviction thereof, be fined not exceeding $5,000 or imprisoned for not more than two years, or both.

SEC. 9. That to carry into effect the purposes of this act the President is authorized to purchase, provide for the production or manufacture of necessaries; to store them and to provide storage facilities for them by construction, purchase, lease, or otherwise; to sell them; and to require any person having the control of any necessaries, or any storage space suitable for the storing of necessaries, to furnish the whole or any part of such necessaries or storage space to the Government in such quantities, at such times, and at such prices as shall be determined by the President to be reasonable. Upon failure of the person to comply with such requirement, the President is authorized to requisition and take possession of any such necessaries or storage space and to pay for them at the price so determined. If the price so determined be not satisfactory to the person entitled to receive the same, such person shall be paid the amount prescribed by the President and shall be entitled to sue the United States to recover such further sum as, added to the amount so paid, will be just compensation for such necessaries or storage space, and jurisdiction is hereby conferred on the United States district courts to hear and determine all such controversies: *Provided*, That nothing in this section shall be construed to require any natural person to furnish to the Government any necessaries held by him and reasonably required for consumption by himself and dependents for a reasonable time. Any moneys received by the United States from or in connection with the disposal by the United States of necessaries under this section may, in the discretion of the President, be used as a revolving fund for further carrying out the purposes of this section. Any balance of such moneys not used as part of such revolving fund shall be covered into the Treasury as miscellaneous receipts.

SEC. 10. That whenever the President shall find that it is impossible by license or by voluntary arrangement or agreement to assure an adequate and continuous supply of necessaries, he is authorized to requisition and take over, for use or operation by the Government, any factory, mine, or other plant, or any part thereof, in which any necessaries are or may be manufactured, produced, prepared, or mined. Whenever the President shall determine that the further use or operation by the Government of any such factory, mine, or plant, or part thereof, is not essential for the national security or defense, the same shall be restored to the person entitled to the possession thereof. The United States shall make just compensation, to be determined by the President, for the taking over, use, occupation, and operation by the Government of any such factory, mine, or plant, or part thereof. If the amount so determined be unsatisfactory to the person entitled to receive the same, such person shall be paid the amount prescribed by the President and shall be entitled to sue the United States to recover such further sum as, added to the amount paid, will be just compensation, in the manner provided by section 24, paragraph 20, and section 145 of the Judicial Code. The President is authorized to prescribe such regulations as he may deem essential for carrying out the purposes of this section, including the operation of any such factory, mine, or plant, or part thereof, the purchase, sale, or other disposition of articles used, manufactured, produced, prepared, or mined therein, and the employment, control, and compensation of employees. Any moneys received by the United States from or in connection with the use or operation of any such factory, mine, or plant, or part thereof, may, in the discretion of the President, be used as a revolving fund for the purpose of the continued use or operation of any such factory, mine, or plant, or part thereof, and the accounts of each such factory, mine, plant, or part thereof, shall be kept separate and distinct. Any balance of such moneys not used as part of such revolving fund shall be paid into the Treasury as miscellaneous receipts.

SEC. 11. That whenever the President finds it essential in order to prevent undue enhancement or fluctuation of prices of, or in order to prevent injurious speculation in, or in order to prevent unjust market manipulation or unfair and misleading market quotations of the prices of necessaries, hereafter in this section called evil practices, he is authorized to prescribe such regulations governing, or may either wholly or partly prohibit, operations, practices, and transactions at, on, in, or under the rules of any exchange, board of trade, or similar institution or place of business as he may find essential in order to prevent, correct, or remove such evil practices. Further, for the purpose of this section, the President may require all persons coming within its provisions to keep such records and statements of account, and may require such persons to make such returns, verified under oath or otherwise, as will fully and correctly disclose all transactions at, in, or on, or under the rules of any such exchange, board of trade, or similar institution or place of business, including the making, execution, settlement, and fulfillment thereof. He may also require all persons acting in the capacity of a clearing house, clearing association, or similar institution, for the purpose of clearing, settling, or adjusting transactions at, in, or on, or under the rules of any such exchange, board of trade, or similar in-

stitution or place of business, to keep such records, and to make such returns as will fully and correctly disclose all facts in their possession relating to such transactions, and he may appoint agents to conduct the investigations necessary to enforce the provisions of this section and all rules and regulations made by him in pursuance thereof, and may fix and pay the compensation of such agents. Any person who willfully violates any regulation made pursuant to this section, or who knowingly engages in any operation, practice, or transaction prohibited pursuant to this section, or who willfully aids or abets any such violation or any such prohibited operation, practice, or transaction, shall, upon conviction thereof, be punished by a fine not exceeding $10,000 or by imprisonment for not more than four years, or both.

SEC. 12. That whenever the President shall find that an emergency exists requiring stimulation of production and that it is essential that the producers of any nonperishable agricultural products produced within the United States shall have the benefits of the guaranty provided for in this section in order to stimulate production of such products, he is authorized, from time to time, seasonably and as far in advance of seeding time as practicable, to determine and fix and to give public notice of what, under specified conditions, is a reasonable guaranteed price for any such products, in order to assure such producers a reasonable profit. Thereupon the Government of the United States hereby guarantees every producer of any merchantable nonperishable agricultural products produced within the United States, for which a guaranteed price shall be fixed by notice in accordance with this section, that, upon compliance by him with the regulations prescribed by the President, he will receive for any such products produced in reliance upon this guaranty within the period, not exceeding three years, prescribed in the notice, a price not less than the guaranteed price therefor as fixed pursuant to this section. In such regulations the President shall prescribe the terms and conditions upon which any such producer shall be entitled to the benefits of such guaranty. When the President finds that the importation into the United States of any such products produced outside of the United States seriously interferes or is likely seriously to interfere with the practical operation of any guaranteed price therefor fixed pursuant to this section, or materially enhances or is likely materially to ennance the liabilities of the United States under guaranties of prices therefor made pursuant to this section, and shall so proclaim, there shall be levied, collected, and paid a rate of duty upon the products so imported, the amount of which rate of duty shall be ascertained and proclaimed by the President, which amount shall, when added to the value of the product at the time it is offered for entry, be sufficient to bring the price thereof at which imported up to the price which shall have been fixed therefor pursuant to this section; but in no case shall any such rate of duty be fixed at an amount which will effect a reduction of the rate of duty upon any such products under any then existing tariff law of the United States. For the purpose of making any guaranteed price effective under this section, or whenever he deems it essential in order to protect the Government of the United States against material enhancement of its liabilities arising out of any guaranty under this section, the President is authorized also, in his discretion, to purchase any such products for which a guaranteed price shall be fixed under this section, and to hold, transport, or store them, or to sell, dispose of, and deliver the same to any person or to any government engaged in war with any country with which the Government of the United States is or may be at war or to use the same as supplies for any department or agency of the Government of the United States. Any moneys received by the United States from or in connection with the sale or disposal of any products under this section may, in the discretion of the President, be used as a revolving fund for further carrying out the purposes of this section. Any balance of such moneys not used as part of such revolving fund shall be covered into the Treasury as miscellaneous receipts.

SEC. 13. That whenever the President shall find that limitation, regulation, or prohibition of the use of foods, food materials, or feeds in the production of alcohol or of alcoholic or nonalcoholic beverages, or such nonalcoholic beverages as he shall determine, or that reduction of the alcoholic content of any beverage, is essential, in order to assure an adequate and continuous supply of food, he is authorized, from time to time, to prescribe, and give public notice of, the extent of the limitation, regulation, prohibition, or reduction so necessitated. Whenever such notice shall have been given and shall remain unrevoked, no person shall, after a reasonable time, which shall be prescribed in the notice, use any foods, food materials, or feeds in the production of alcohol or of alcoholic or nonalcoholic beverages, except in accordance with the limitations, regulations, and prohibitions prescribed in such notice, or produce any beverage having an alcoholic content in excess of the amount prescribed therefor in such notice. Any person who willfully violates this section shall, upon conviction thereof, be punished by a fine not exceeding $5,000, or by imprisonment for not more than two years, or both.

SEC. 14. That in carrying out the purposes of this act the President is authorized to create an agency or agencies, to accept the services of any person without compensation, to cooperate with any agency or person, to utilize any department or agency of the Government, and to coordinate their activities so as to avoid any preventable loss of funds or duplication of work.

SEC. 15. That under regulations to be prescribed by the President the use of the mails of the United States free of charge for postage for exclusively official business in carrying out the purposes of this act shall be extended to any agency or person designated by the President.

SEC. 16. That the President is authorized to make such regulations and to issue such orders as are essential effectively to carry out the provisions of this act.

SEC. 17. That every person who willfully assaults, resists, impedes, or interferes with any officer, employee, or agent of the United States in the execution of any duty authorized to be performed by or pursuant to this act shall upon conviction thereof be fined not exceeding $1,000 or be imprisoned for not more than one year, or both.

SEC. 18. That the sum of $2,500,000 is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, to be available immediately and until expended, for the payment of such rent, the expense of such printing and publications, the purchase of such material and equipment, and the employment of such persons and means, in the city of Washington and elsewhere, as the President may deem essential.

SEC. 19. That for the purposes of this act the sum of $150,000,000 is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, to be available immediately and until expended: *Provided*, That no part of this appropriation shall be expended for the purposes described in section 18.

SEC. 20. That if any clause, sentence, paragraph, or part of this act shall for any reason be adjudged by any court of competent jurisdiction to be invalid, such judgment shall not affect, impair, or invalidate the remainder thereof, but shall be confined in its operation to the clause, sentence, paragraph, or part thereof, directly involved in the controversy in which such judgment shall have been rendered.

SEC. 21. That the provisions of this act shall cease to be in effect when the national emergency resulting from the existing state of war shall have passed, the date of which shall be ascertained and proclaimed by the President; but the date when this act shall cease to be in effect shall not be later than one year after the termination, as ascertained by the President, of the present war between the United States and Germany. Nothing in this section shall be construed to prevent the fulfillment by the United States of any legal obligation incurred pursuant to this act which shall be in force when this act ceases to be in effect.

Mr. STERLING. I ask leave to introduce a bill.

The bill (S. 2481) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel was read twice by its title.

Mr. STERLING. I ask that the bill may lie on the table and be printed.

The PRESIDING OFFICER. It will be so ordered.

Mr. CHAMBERLAIN. Mr. President, quite a number of Senators were anxious to hear the statement of Mr. Hoover this morning, and the hearings were continued in the afternoon. They were very anxious to be present at those hearings, and it was supposed that they would be continued all the afternoon. There was a general understanding, in order to give Senators an opportunity to be present, that the Senate would take a recess until to-morrow at 12. I shall make that motion, but I wish first to make the statement that when the Senate convenes to-morrow at 12 o'clock it will be my purpose to keep this bill before the Senate until it is finally disposed of. I hope Senators who intend to speak upon it will be prepared to commence to-morrow at 12 o'clock to speak either upon the bill or on amendments to it. I now move that the Senate take a recess until to-morrow at 12 o'clock.

The motion was agreed to; and (at 2 o'clock and 20 minutes p. m.) the Senate took a recess until to-morrow, Wednesday, June 20, 1917, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

TUESDAY, *June 19, 1917.*

The House met at 12 o'clock noon, and was called to order by Mr. FITZGERALD, as Speaker pro tempore.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

We come to Thee, O God, our Heavenly Father, fountain of life and light and love, before entering upon the duties of the hour. Pour down upon us Thy spiritual gifts and quicken all that is purest, noblest, best in us, that we may be one with Thee, working in Thee, through Thee, for Thee, for the best interests of our Republic and of mankind; that we may hasten the coming of Thy kingdom; that wars and rumors of wars may cease to be, and all the earth rejoice together in peace and good will, in the spirit of the Lord Christ. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Waldorf, its enrolling clerk, announced that the Senate had passed joint resolutions of the following titles, in which the concurrence of the House of Representatives was requested:

S. J. Res. 67. Joint resolution to fix the status and rights of the officers of the Public Health Service when serving with the Coast Guard, the Army, or the Navy; and

S. J. Res. 63. Joint resolution to establish a reserve of the Public Health Service.

The message also announced that the Senate had passed without amendment joint resolution of the following title:

H. J. Res. 105. Joint resolution to correct an error in the sundry civil appropriation act for the fiscal year 1918.

FOOD CONTROL.

Mr. LEVER. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 4961) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel. Pending that, I desire to ask unanimous consent that all Members who desire to discuss this bill may be permitted to extend their remarks in the RECORD for five legislative days after the passage of the bill.

Mr. CAMPBELL of Kansas. Mr. Speaker, reserving the right to object, does that refer to Members who have addressed the House?

Mr. LEVER. Oh, no; all Members—those who have addressed the House and those who have not.

Mr. CAMPBELL of Kansas. Are these extensions to be confined to the bill?

Mr. LEVER. To the bill.

The SPEAKER pro tempore. The gentleman from South Carolina moves that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 4961, and pending that motion asks unanimous consent that Members have five legislative days after the passage of the bill to extend their remarks in the RECORD on the bill. Is there objection?

There was no objection.

Mr. LEVER. Mr. Speaker, one moment further. I desire to state that the demand for time on both the gentleman from Iowa and myself is very, very heavy, and it is going to be almost impossible to gratify the wishes of all gentlemen with as much time as they desire; but as far as this side of the House is concerned I wish to say to Members that I shall undertake to see to it that at least some time is yielded to those to whom I have made promises, and I presume that statement will be concurred in by the gentleman from Iowa, so far as his side is concerned?

Mr. HAUGEN. So far as possible.

The SPEAKER pro tempore. The question is on the motion of the gentleman from South Carolina that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 4961.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 4961, with Mr. HAMLIN in the chair.

Mr. LEVER. Mr. Chairman, I yield 30 minutes to the gentleman from Alabama [Mr. HEFLIN]. [Applause.]

Mr. HEFLIN. Mr. Chairman, and gentlemen of the committee, it seems that it is hard for some gentlemen here, as well as in another body that I know of, to realize that we are in war. Some of the speeches that have been made have proceeded, it seems to me, upon the theory that we are legislating about conditions that obtain in time of peace. I wonder what it will take to arouse these gentlemen to a realization of the fact that we are engaged in war? Some of our boys are out at the training camps with their aeroplanes, learning to perform their duties in the war. Some of them have been crippled and some of them have been killed. Some of our munition plants are being blown up by German spies. Spies are roaming around the country with poison and explosives in their possession. They are stirring up all the trouble that they can for us. They are begging our laborers to strike and they are urging our citizens in some sections to resist the selective-draft law, and yet some gentlemen here, a very few I am glad to say, do not seem to realize that we are called upon by the Commander in Chief of our Army and Navy to give him legislation that he says is absolutely necessary for the successful conduct of the war. The sooner we realize the fact that we are engaged in war against the most brutal, the most skillful, and the most dangerous tyrant that ever appeared upon the earth, the better it will be for us and our country. [Applause.] Alexander the Great longed to be a ruler of the world and now the most colossal of all those who have sought world power rages like a mad man in the Old World, and for 40 years he has been making war preparations and lying in wait for the nations of the earth. [Applause.] He has not been preaching peace on earth, good will toward men. He has failed to attend the peace conferences of the nations. When arbitration for the settlement of international questions was suggested and disarmament was the expressed desire of more than 20 nations, the Kaiser remained away. All the while he was lying in wait, making war preparations, laying money aside, laying aside provisions, building war equipment day and night, making ready to dash upon an unsuspecting and an undefended world. That is the man we are fighting and yet a few gentlemen stand here and quibble and parley and dally about things that our Commander in Chief says are necessary for him to successfully fight this mad monster of the Old World. [Applause.]

Gentlemen are willing to trust the President with power over the man force of the country and over the purse of the country. You are willing to put the boys, the bravest spirits that ever marshaled beneath a flag, at the command of the Chief of our Army and Navy, but when he manifests concern about the food supply for the Army and the people some gentlemen become exceedingly nervous, and in their anxiety and concern for the farmer they put him in the attitude of being willing for his boy to go to war, but demanding that his hay and corn be let alone. [Laughter.]

My friend from Texas, Mr. YOUNG, a member of the Committee on Agriculture, is the friend of the farmer, but he is not the only friend that the farmer has here. He realizes that there are other men here who are the sincere friends of the farmer. Gentlemen, the farmer is asking for fair and just treatment, and he is willing to do his part in every respect. He realizes that war produces conditions that call for legislation that would not be thought of in time of peace. The President has the power now to commandeer or take over the produce of the farmer. If he needs it for the use of the Army and Navy, he can take it and pay whatever he thinks is right; but the President does not want to do that. He prefers to take the farmer into his confidence and to have an understanding about just what is to be done. The President realizes what an important part that food supplies are to play in this war, and he realizes how dependent the Army and the people are upon the farmer, and knowing the patriotism of the farmer and appreciating his willingness to do all in his power to serve the country by his efforts to increase the food supply the President has determined to extend to the farmers of the country the measure of assurance and certainty that this bill affords in the guaranty of a reasonable profit on the food supplies that they produce. [Applause.] The farmer in these hazardous times, times full of uncertainty and risk, had rather be sure of a reasonable profit than to be left to the mercy of a band of food speculators and gamblers. [Applause.] The President realizes, as the farmer does, that the speculators and gamblers rob the producers and prevent them from receiving a fair price and a reasonable profit. They misrepresent the facts as to the demand and supply while the produce is in the hands of the farmer, and they tell a story of small supply and great demand when the food supply is in their hands and out of the control of the farmer. [Applause.] It is a skin game, pure and simple. They pillage the producer with one hand and rob the consumer with the other. So in removing the food speculator and gambler we benefit producer and consumer alike, and at the same time we safeguard the farmer with the guaranty for a reasonable profit while he farms on such a large scale to produce food supplies for us and our allies. [Applause.]

The President, the Commander in Chief of our Army and Navy, has called upon the farmers all over the country to plant more grain than ever, and to produce more food products of every kind. He realizes that thousands of farmers are changing their crops entirely; that the cotton farmers, many of them, are trying for the first time to produce food products on a large scale, and in order that there shall be no doubt about a sufficient food supply he is willing to do the extraordinary thing and back the farmer at this critical time and see to it that he does not lose, but that he shall receive a reasonable profit. [Applause.] The farmers of my State have cut their cotton acreage 50 per cent, and they have planted more grain than ever before. This last statement is true of every other Southern State. The farmers of other States are striving for large grain crops, and the prospects for a bumper crop are exceedingly good. Now, then, suppose we do make a tremendous crop of food products and when we are ready to market them the submarine operations are so successful that we can not reach the allies with these products. What would happen if we did not have back of the farmer then the guaranty for a reasonable profit? Why, gentlemen, the bottom would drop out of prices and the cry of big crop and oversupply would greet the farmer as his produce sold below the cost of production. [Applause.]

But the President is taking no chances in the matter of producing adequate food supplies, and he favors legislation that will safeguard and protect the farmer who is to produce this food against hazards and uncertainties that war conditions might produce. As a war measure this Government is now insuring certain American ships and cargoes against loss upon the high seas. If it is wise and just to guarantee the shipowner that he shall not lose anything while carrying on a certain kind of necessary work in connection with the war, why is it not wise and just to protect the farmer against loss while he is engaged in producing the things without which we can not win the war? [Applause.] The President sees the justice of giving to the farmer this guarantee and assurance of a reasonable profit. The President is saying to the farmer, You are a very important man, Mr. Farmer. Our success in this war depends upon you, and we do not propose to urge you to go into the work of producing food supplies on a large scale for the use and benefit of the Government in time of war and then leave you to the uncertainties of speculation and chance. And the President says to the farmer, In the name of a hundred millions of people, I

beg you to go forth and use your industry and enterprise in producing a bumper crop of food supplies. In doing this you are helping to win the war, and we are going to guarantee to you a reasonable profit on your produce. [Applause.] Why, gentlemen, are you afraid to trust the President? Has he not repeatedly shown that he is the friend of the farmer? Look at the good-roads measure that we put through Congress under his leadership, the building of highways through the country out into the rural districts to the homes and firesides of the farmers. [Applause.] Take the Federal reserve act. It contains the first recognition of the farmers' land for loan purposes by national banks. You could not borrow money at a national bank on your land until President Wilson signed the bill that gave you that right. [Applause.] The farmer could not borrow money on his staple products until that bill became a law. The farmers of this land begged for an opportunity to buy homes and farms for themselves and families, and President Wilson urged us to pass the rural-credits bill to give to the farmers long-time loans at a cheap rate of interest. [Applause.] All this Woodrow Wilson has done for the farmers of the country. [Applause.] Now, some gentlemen express fear as to the farmers' interest being taken care of by President Wilson, the farmers' friend. He has shown his friendship for the farmer, and surely he can be trusted to do the just and fair thing by the farmer when in the outset he demands in these hazardous times a reasonable profit for his produce. Nobody knows what is going to happen. If prices of food products were low now, these same gentlemen would say, give us the guaranty of a reasonable profit. The war and speculators who rob the farmer and hoard food supplies have made legislation necessary. The Kaiser would rejoice to see us fail to take charge of the food situation. It would make him happy to see that the American Congress had thrown its food-supply legislation to the four winds and was stumbling along in the dark with no knowledge as to what would be produced or how it would be handled. But suppose we should make a big crop and we had no guaranty of a reasonable profit and the prices should go down and down? Suppose we could not reach our allies beyond the sea with our products? Why then the farmers would say to you gentlemen that the President's plan was the safest and best, and if you had followed his suggestion we would have had no losses. [Applause.] The farmer is a very intelligent citizen and he is pretty hard to fool. In my section he remembers well his experience of 1914, when cotton fell from 14 to 6 cents per pound. I, with others from the South, begged Congress to give him the guaranty of a minimum price which would give him a reasonable profit, because the war had caused that condition and prevented us from getting cotton across the sea. What will happen to our grain if we can not get it to the other side of the ocean. Why the bottom will drop out of the price and some Members will then be saying, "I wish now that I had voted to protect the farmer against this situation." The farmer sees the food speculator, the food hoarder, and gambler obtaining his produce at unprofitable prices, and then holding them for higher prices, until he pinches with hunger millions of our people. [Applause.] The farmer is a sensible man and he is as good a patriot as ever drew the breath of life, and all that he wants is to be treated fairly and squarely.

But the effort has been made here right recently to mistreat and impose upon the southern farmer. Just a few days ago the gentleman from Pennsylvania [Mr. MOORE] tried to place a tax of $2.50 a bale on cotton. I opposed his amendment then and contributed as best I could to its defeat, and I want to say to him and to all others concerned that his amendment should never have been offered. It was inexcusable and indefensible, for cotton has to do with nearly every phase of the life of the individual and the life of the Nation. [Applause.]

Mr. Chairman, cotton is the most serviceable product in the kingdom of agriculture. No other one product contains the three essential necessities of life—food, clothing, and shelter. [Applause.] It is the most useful product in time of peace, and on account of its vast and various properties, it is indispensable in time of war. It is now playing the most important part in the greatest war that the world has ever known. [Applause.] Cotton has treasured in its fiber the heat of the sun, and imprisoned in its snowy locks the secret of the lightning's power. When touched with nitric acid it hurls implements of destruction more powerful than the thunderbolts of Jove. [Applause.] Our gunpowder and explosive shells derive their tremendous power from cotton. In this boll of cotton is the substance to which our soldiers must look for their uniforms and shelter. Cotton furnishes wings for the aeroplanes and sails for our ships at sea. [Applause.] It flies in the flag above the soldier. It goes with him in his uniform and it spreads its white wings above him when he sleeps on the tented field. [Applause.] Cotton is the power behind the bullet, and it is the healing balm in the bandages of the Red Cross and Hospital Corps. It soothes and comforts the wounded soldier and wraps its mantle about him in his long, last sleep.]Applause.[The oil of the cotton seed is a wholesome food and contains a substitute for glycerin, large quantities of which are used in the manufacture of powerful explosives. The seed contains food for man and beast, and it has in it choice elements of plant food, which when applied to the soil makes the earth to blossom as a rose. [Applause.] Cotton is the poor man's friend. It clothes the naked and its seed feeds the hungry. It blesses and serves the people in many ways. The Government as never before is dependent upon cotton. It is a national necessity and an international factor in the struggle now going on in Europe. In this world struggle in which we have been compelled to fight to preserve our own rights and liberties, cotton is to perform the most signal service [applause], and any man who would burden it with a tax and handicap and injure those who produce it, in his shortsightedness and recklessness, is weakening the arm of this Government in the prosecution of a war in which our very existence as a free country is at stake. [Applause.] The rust, the cotton worm, and the boll weevil are doing enough to decrease the cotton production and to cause the cotton producer to turn to other crops and to abandon his efforts to produce cotton on a large scale. Gentlemen, the cotton producer needs your help and your encouragement, and not your persecution in the form of unjust taxation. [Applause.] He is producing cotton now under great difficulty and at tremendous cost. Do not add to the burden that he is already carrying. During the trials through which he is passing in his efforts to produce cotton, a product so necessary to the successful conduct of this war, if you can not give him your sympathy and good will, be just and patriotic enough to let him alone. [Applause.]

Now, let me get back to the bill under consideration. You have not had any protest from the farmer against this bill. The trouble is that my friend YOUNG started out against this bill when it had in it the maximum price. I have always been opposed to the maximum price. We struck that out. And when we did so we left our friend without anything to talk about. The gentleman from Texas answered his own speech when he said that the speculator had paid the farmer upon the average $1.30 per bushel for his wheat and had then put the price of flour up to $17.50 per barrel.

If I should speak until sundown, I could not make a more convincing argument as to why some sort of legislation should be had on this subject. [Applause.] Not only that, gentlemen, but I know and the gentleman from Texas [Mr. YOUNG] knows that there is going to be legislation on this subject; and, in view of that fact, I feel it my duty to help to pass the very best measure possible, and that is what I am trying to do. I am tired of these iconoclasts and marplots who never construct anything themselves but are ready at all times to break down and destroy. We want constructive statesmanship at a time like this. [Applause.] The man on either side who is always complaining about measures brought in here but who has nothing to offer in its place is rendering service to no one here or elsewhere. If this bill needs to be improved, offer your amendments. When I voted to report it out of the committee I reserved the right to support amendments that would improve it. The gentleman from Texas complains that the chairman made changes in the bill, and, as redrafted, introduced it three times. Well, he improved it, and the last bill is the best of all.

Mr. SWITZER. What amendment would the gentleman propose to the bill?

Mr. HEFLIN. We did about the best that we could with the bill when we reported it out of the committee. I would like to see your amendments, if you have any, and if they meet with my approval I will vote for them. But you know and I know that there are a few fellows in here—not many—who have not been in sympathy with the administration at any time about anything. Even when Germany challenged our independence and shot down our flag and murdered our citizens some of them growled and whined because we struck back in self-defense. We were drawn into war, and no nation with any self-respect, no nation with an ounce of courage, no nation with a particle of national honor, would have endured longer the insults of the murderous Kaiser. [Applause.] Mr. Chairman, the fact is some of these gentlemen have been at cross purposes with the administration ever since the McLemore resolution was up for consideration in this House. Some of the gentlemen who supported that resolution are standing loyally by the President now, and I have no quarrel with them about a stand taken in the early stages of Germany's brutal treatment of us, but now it is the duty of every true American to stand with his country against the Germany autocracy. [Applause.] Let me say here in passing that in the beginning I

thought that the volunteer plan of raising an army was wisest and best, but when I studied the situation with regard to this war and considered the obligation and responsibility to serve, I was convinced that the selective-draft plan was fairest and best. Other gentlemen here favored the volunteer plan. I did not fall out with them for that, but I do want to say that when the President put his signature to that law it became the solemn act of Congress speaking for the people of the United States, and when it became the law of the land it was entitled to the support of every citizen in the country [applause], and no man in either House of Congress or elsewhere in our country can now be a true American and repudiate that law and advise men to ignore or disregard it. [Applause.]

It is all right for the Member of Congress to tell his people at home how he voted on that question and then it is his duty to say that the question is settled and that it is now the duty of all true Americans to stand by the law. When the question is discussed and the matter is settled by Congress, it is the duty of all honest men to do all that they can to see that the law is obeyed. [Applause.] Any other course means sedition and disloyalty. The man who now stands in the way of that solemn act of Congress and tries to prevent its successful operation is injuring his own country and giving aid and comfort to Germany. I do not care on which side of the aisle he sits, or whether he is in this or another body near by, he is not the right kind of an American. [Applause.] Gentlemen, I witnessed a very touching scene last Sunday. I saw the brave mission from martyred Belgium in solemn procession pass in front of this Capitol. I saw our boys on their spirited cavalry chargers riding in front and in the rear, fitting escorts to the brave mission in their charge. I saw our honored guests from Belgium lift their eyes to the dome of the Capitol, where flies the banner of constitutional liberty, and I could see new hope springing up in their hearts, and a look of new determination came into their eyes as they thought of the aid and friendship of the oldest Republic in the world. [Applause.] I thought of the outraged women of prostrate Belgium, the victims of the brutality of the German soldier. I thought of the once proud freemen of Belgium carried away and now working as slaves in the Empire of Germany, and I thought of the starving children and the little Belgian boys whose right hands had been cut off by German soldiers, and I said in my heart, Hope on, trust on, fight on, brave Belgians. The day of your deliverance is near at hand. [Applause.] The German autocracy, your enemy, is our enemy. It is the enemy of mankind. It regards neither God nor humanity. [Applause.] Through brute force and murder its Kaiser is trying to conquer the world. He has made war upon this, the oldest Republic upon the earth, and would make this fair land a part of the German Empire. But, thank God, we have the courage and the disposition, the man force, and the wealth to strike with the allied armies until this blood-bespattered monarch is destroyed and happy peace shall come again to a world now cursed by war. [Loud applause.]

Mr. HAUGEN. I yield 30 minutes to the gentleman from Illinois [Mr. MASON]. [Applause.]

Mr. MASON. Mr. Chairman and members of the committee, I expect in the roll call to vote with the gentleman from Alabama, my colleague who just preceded me. He said so many good things. Of course, I agree with him that President Wilson was the man of destiny and not of chance, and we think it was a mighty good thing for destiny that Hughes went to California on that particular trip. [Laughter and applause.] Having agreed with my friend and expecting to vote with him, I know you will pardon me for imitating him by talking for 30 minutes without mentioning the bill under consideration. [Laughter.]

We who think we are just as patriotic as anyone, who voted against the declaration of war when the Congress of the United States having the war-making power declared war, we consider that incident closed, and everyone of us, so far as I know, has rendered the very best assistance in his power in making that war a success. We who voted against conscription believed that we were right and are confirmed in it every day as we hear from the people, but not one of us who sits in the Chamber has directly or indirectly, in this forum or out of it, discouraged the enforcement of the law, because we believe that the safety of this Republic lies only in obedience to the law of this land. [Applause.]

But I can not go quite as far as my colleague from Alabama and insist that a man who wishes to amend the law is therefore guilty of treason. When you passed a law for conscription it became the law, but it became the right and prerogative of every Member of Congress at any time under the Constitution to offer an amendment to that law or a repeal of that law. That is our constitutional right that I purpose to indulge myself in, believing I represent the people of the State of Illinois. [Applause.]

Therefore I intend, unless someone in the majority very soon offers an amendment to the law directing the President to accept volunteers, to offer that amendment myself, believing, with all due respect to the Executive, that the lawmaking power is here. The right under the Constitution to make laws governing the "land and naval forces" of the Government is here and not in the executive department of the Government. When the people passed that law, known as section 7, which gave the President of the United States "authority" to call for volunteers it was just as binding upon the Executive as the other sections which gave him "authority" to call for conscription of the people of this country. And believing that it is the duty of Congress to pass laws in accordance with the Constitution of the United States governing the land and naval forces, I intend to offer an amendment, complying with the Constitution, that the militia of the United States can not and may not be sent out of the country into foreign service.

Mr. DYER. Mr. Chairman——

The CHAIRMAN. Does the gentleman from Illinois yield to the gentleman from Missouri?

Mr. MASON. I only have a limited amount of time, and as I stated at the beginning I will be glad to yield after I get through.

Mr. DYER. Mr. Chairman, I make the point of order that the gentleman from Illinois is not discussing the bill.

Mr. LONGWORTH. That point of order does not lie.

The CHAIRMAN. The gentleman from Illinois is not confined to the bill.

Mr. DYER. My understanding was from the gentleman of South Carolina [Mr. LEVER] and others, that the debate was to be limited to the bill.

The CHAIRMAN. The Chair did not so understand it; that was the request, but it was not granted. The point of order is overruled.

Mr. MASON. I do not expect this to be popular with the press or to receive your immediate approval, but I hope that after we have had a chance to visit our constituents, and during this Congress, that action will be taken by the Congress of the United States. I am aware of the feeling that has grown up in this country among the Congress and the people, that the President, being the Commander in Chief of the Army and Navy, is the sole power to regulate the military branch of our Government.

Such is not the law. By the Constitution of the United States the Congress not only is empowered to raise the Army and the Navy, but section 8, paragraph 14, provides that the Congress shall have power "to make rules and regulations governing the land and naval forces of the United States." Under our oath this is our constitutional duty. To-day the thing most disturbing the American people is whether it is just or wise to order our militia—our conscripted men—into the trenches of Europe. While I believe 90 per cent of the American people are opposed to forcing our soldiers into the trenches of Europe unless they volunteer for that purpose, Congress has been so busy determining whether there shall be a tax on cigarettes, automobiles, and snuff that not a single rule governing the action of American forces has been offered in Congress upon that subject or recommended by the Executive to Congress. Since the days of the Constitution legislative powers have been gradually diminished and Executive powers increased. This is not more the fault of the Executive than it is of the legislative branch.

At the time of the passage of the conscription bill I had never, so far as my recollection goes, had my attention called to the question of the power of Congress to use the militia of the United States outside of the United States. Upon reading, however, a pamphlet addressed to Congress by Mr. Hannis Taylor, a distinguished member of the Washington bar, I have made an investigation on my own account, with what time and strength I have had, and I state now to my colleagues that under our Constitution Congress has no power to call the militia of the United States or the militia of the several States, by conscription or otherwise, and order them into service outside of the United States; that, therefore, the conscripted men can not be sent to the aid of our allies by order of the Congress of the United States or by the Commander in Chief, and if attempted it will be a plain and clear violation of the organic law of our Nation. Having reached this conclusion, it is clearly my duty to call the attention of my colleagues to that fact—that law—and let them decide whether they would attempt to violate the Constitution or attempt to authorize the Executive to do so.

Section 8, paragraph 15, of the Constitution provides that Congress shall have power to provide for calling forth the militia

"to execute the law of the Union, suppress insurrections, and repel invasions."

When this clause was originally presented to the Constitutional Convention it gave Congress an added power, which was to "enforce treaties," and for reasons which will be approved by students in examining this question it was unanimously agreed to strike out the power of Congress to use the militia to "enforce treaties," as that might give Congress the power to order the militia into foreign service, and while none of the authorities which I quote call attention to that fact, it is a most significant thing, as you will see.

In other words, "the right to enforce treaties" by the militia of the United States having been stricken out, then under the elementary rule of construction the law writes into the Constitution an affirmative prohibition against using the militia to enforce treaties. Besides, the familiar rule of construction of the Constitution what is not permitted is prohibited. It is perfectly clear that when the framers of the Constitution used the word "militia" they used it in the sense "which had been affixed to it by those from whom we borrowed it," and those from whom we borrowed it, namely, Great Britain, for centuries held that the militia "is a force for national defense that could never be taken out of the realm for service in foreign countries."

Mr. Speaker, may I be permitted here to cite in full the opinion of George W. Wickersham, Attorney General of the United States, who was called upon February 17, 1912, by the Secretary of War to answer the very question which I am herein discussing. May I read the conclusion of that opinion:

I think that constitutional provision here considered not only affords no warrant for the use of the militia by the General Government except to suppress insurrection, repel invasions, or to execute the laws of the Union, but by its careful enumeration of the three occasions or purposes for which the militia may be used it forbids such use for any other purpose, and your question is answered in the negative.

Gentlemen may say that we may send our militia to Europe to enforce "the laws of the Union." That question is completely answered by Attorney General Wickersham, and he says:

As no law of the Union can exist and be enforced in any foreign country, the militia can not be called out to enforce any such law there.

Gentlemen may claim that we may send them there to "repel invasion." That question is completely answered by Attorney General Wickersham, and he appeals to the common-sense rule of reason. He says:

If an armed force were assembled on our border, so near and under circumstances which plainly indicated hostility and an intended invasion, this Government might attack and capture or defeat such forces, using either the Regular Army or the militia for that purpose. This also would be but one of the ways of repelling an invasion.

Gentlemen may say that we may send them under the clause which allows us to use the militia to "subdue insurrection." The Attorney General answers that completely by saying:

As "insurrection" is necessarily internal and domestic, within the territorial limits of the Nation, this portion of the sentence can afford no warrant for sending the militia to suppress it elsewhere.

This is the opinion of the Attorney General of the United States. It is, by that custom which makes law binding on the executive departments of the United States, binding to-day, unless reversed by some other Attorney General or by the courts of our country.

That opinion I insert here in full:

AUTHORITY OF PRESIDENT TO SEND MILITIA INTO A FOREIGN COUNTRY.

The Constitution, which enumerates the exclusive purposes for which the militia may be called into the service of the United States, affords no warrant for the use of the militia by the General Government, except to suppress insurrection, repel invasions, or to execute the laws of the Union, and hence the President has no authority to call forth the Organized Militia of the States and send it into a foreign country with the Regular Army as a part of an army of occupation.

DEPARTMENT OF JUSTICE,
February 17, 1912.

SIR: I have the honor to respond to your note of the 8th instant, in which you ask my opinion upon the following question:

"Whether or not, under existing laws, the President has authority to call forth the Organized Militia of the States and send it into a foreign country with the Regular Army as a part of an army of occupation, especially should the United States intervene in the affairs of such country under conditions short of actual warfare?"

From very early times, in both England and this country, the militia has always been considered and treated as a military body quite distinct and different from the Regular or Standing Army, governed by different laws and rules, and equally different as to the time, place, or occasion of its service. One of the most notable points of difference is this: While the latter was in the continued service of the Government and might be called into active service at all times and in all places where armed force is required for any purpose, the militia could be called into the actual service of the Government only in the few special cases provided for by law. Their service has always been considered as of a rather domestic character, for the protection and defense of their own country, and the enforcement of its laws.

This has always been the English doctrine, and in some instances acts of Parliament have expressly forbidden the use of the militia outside of the Kingdom.

Our ancestors, who framed and adopted our Constitution and early laws, got their ideas of a militia, its nature, and purposes from this, and must be taken to have intended substantially the same military body, with the same limitations of the occasion and nature of their service. If they had intended to enlarge this they would have said so, just as they have when they intended to further limit or restrict the occasion or nature of their service.

When the Constitution gives to Congress the power "to raise and support armies," and to provide "for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions," and makes the President "the Commander in Chief of the Army and Navy of the United States, and the militia of the several States when called into the actual service of the United States," it is speaking of two different bodies—the one the Regular Army, in the continuous service of the Government, and liable to be called into active service at any time, or in any place where armed force is required; and the other a body for domestic service, and liable to be called into the service of the Government only upon the particular occasions named in the Constitution. And acts of Congress relating to the Army and the militia must have the same construction.

It is certain that it is only upon one or more of these three occasions—when it is necessary to suppress insurrections, repel invasions, or to execute the laws of the United States—that even Congress can call this militia into the service of the United States, or authorize it to be done.

As "insurrection" is necessarily internal and domestic, within the territorial limits of the Nation, this portion of the sentence can afford no warrant for sending the militia to suppress it elsewhere. And even if an insurrection of our own citizens were set on foot and threateningly maintained in a foreign jurisdiction and upon our border, to send an armed force there to suppress it would be an act of war which the President can not rightfully do.

The term "to repel invasion" may be, in some respects, more elastic in its meaning. Thus, if the militia were called into the service of the General Government to repel an invasion, it would not be necessary to discontinue their use at the boundary line, but they might (within certain limits, at least) pursue and capture the invading force, even beyond that line, and just as the Regular Army might be used for that purpose. This may well be held to be within the meaning of the term "to repel invasion."

Then, too, "if an armed force were assembled upon our border, so near and under circumstances which plainly indicated hostility and an intended invasion, this Government might attack and capture or defeat such forces, using either the Regular Army or the militia for that purpose. This, also, would be but one of the ways of repelling an invasion."

But this is quite different from and affords no warrant for sending the militia into a foreign country in time of peace and when no invasion is made or threatened.

The only remaining occasion for calling out the militia is "to execute the laws of the Union." But this certainly means to execute such laws where, and only where, they are in force and can be executed or enforced. The Constitution or laws of the United States have no extra-territorial force and can not be compulsorily executed beyond or outside of the territorial limits of the United States.

It is true that treaties made in pursuance of the Constitution are, equally with acts of Congress, the supreme law of the land; but their observance, outside of our own jurisdiction, can not be enforced in the same way. The observance and performance, outside of our own jurisdiction, of treaty stipulations and obligations are left much to the honor, good faith, and comity of the other contracting party, reenforced, at times, by a regard for the consequences of a breach. We can not send either the Regular Army or the militia into a foreign country to execute such treaties or our laws. Such an invasion of a foreign country would be an act of war.

Outside of our own limits "the laws of the Union" are not executed by armed force, either Regular or militia.

The Constitution had already given to Congress the unlimited power to declare war, at any time and for whatever cause it chose. It did not, in this provision, attempt the useless thing of giving to Congress an additional power to declare war, or to afford an additional ground for doing so.

What is certainly meant by this provision is, that Congress shall have power to call out the militia in aid of the civil power, for the peaceful execution of the laws of the Union, wherever such laws are in force and may be compulsory executed, much as a sheriff may call upon the posse comitatus to peacefully disperse a riot or execute the laws.

Under our Constitution, as it has been uniformly construed from the first, the military is subordinate and subservient to the civil power, and it can be called upon to execute the laws of the Union only in aid of the civil power and where the civil power has jurisdiction of such enforcement. Even the Regular Army can be thus called upon only on such occasions; and, certainly, the militia can not be thus called upon at any other.

Then, as the civil power is without force in a foreign country, and as even the Regular Army can not be sent into another country to there execute the laws of the Union, it follows that the Constitution confers no power to send the militia into a foreign country for the purpose stated in the question here considered. On the contrary, by its specific enumeration of the only occasions for calling out the militia, it clearly forbids this.

In all this I am not unmindful that nations sometimes do make hostile demonstrations and use armed force to compel the observance by another nation of its treaty obligations, and sometimes send armed forces into another country to protect the lives and rights of its own citizens there.

I shall briefly notice these in their application to our own country, its Constitution and laws. It will be observed, and as controlling and conclusive of the present question, that in case of a hostile demonstration against or a forcible attack upon another nation to enforce its treaty obligations, or to punish their infraction, there is no question involved of executing the laws of the invading nation, for such laws have no force or existence there.

While the Constitution makes itself and the laws and treaties, in pursuance thereof, the supreme law of the land, it is only in our own land where such laws are supreme or of any force. As to the other contracting party, a treaty is a mere compact, depending for its observance upon the good faith, comity, or other moral considerations. The Constitution can not make itself or the treaties or laws made under it the supreme law of any other nation or give to either any force or existence beyond our own borders. So that when an armed force is used to compel the observance of treaty obligations or to punish or obtain compensation for their violation there is no question of executing any

law of the Union, for there is no such law there. It is but the forcible compelling of the observance of an agreement or compensation for its breach. The provision referred to does not warrant the use of the militia for this purpose.

Just so it is when in troublous times an army of occupation, large or small, is sent into a foreign country to protect the lives and the rights of our own citizens. Here, too, no law of the Union is being executed by such invasion, for no law of the Union exists or can be enforced there.

While it is the duty of every nation to afford proper protection to foreigners who are lawfully within its borders, yet this is not because of any law of the nation of which such foreigners are subjects, for no such laws exist or have any force there. No one can say in such a case that we are executing or enforcing any law of the Union. We are but aiding or compelling the foreign Government to execute its own laws and to perform its own duty. As no law of the Union is being executed by such invasion, the militia can not be called out, under this provision, to take part in it. "As no law of the Union can exist or be in force in any foreign country, the militia can not be called out to enforce any such law there."

The plain and certain meaning and effect of this constitutional provision is to confer upon Congress the power to call out the militia "to execute the laws of the Union" within our own borders where, and where only, they exist, have any force, or can be executed by any one. This confers no power to send the militia into a foreign country to execute our laws which have no existence or force there and can not be there executed.

If authority is needed for the conclusion here reached, the following may suffice:

In Ordronaux, Constitution Legislation, page 501, it is said:

"The Constitution distinctly enumerates the three exclusive purposes for which the militia may be called into the service of the United States. These purposes are: First, to execute the laws of the Union; second, to suppress insurrection; and, third, to repel invasions.

"These three occasions, representing necessities of a strictly domestic character, plainly indicate that the services required of the militia can be rendered only upon the soil of the United States or of its Territories. * * * In the history of this provision of the Constitution there is nothing indicating that it was even contemplated that such troops should be employed for purposes of offensive warfare outside the limits of the United States. And it is but just to infer that the enumeration of the specific occasions on which alone the militia can be called into the service of the General Government was intended as a distinct limitation upon their employment.

"Being the ministers of the law to enforce its commands, they can only be summoned by the law-making power to act within the extent of its jurisdiction and in the manner prescribed by the Constitution. They can not, consequently, be used to invade the territory of a neighboring country or to enforce any public rights abroad. * * *

"The militia of the States, restricted to domestic purposes alone, are to be distinguished therefore from the Army proper of the United States, which, whether in the form of regular troops or volunteers, may be used to invade a foreign country as well as to repel the attack of foreign enemies."

And Von Holtz, Constitutional Law, page 170, it is said, "the militia can not be taken out of the country."

In Kneedler *v.* Lane (45 Pa. St., 238, 276), Judge Strong, speaking for the court, said:

"Apart from the obligations assumed by treaty, it was well known that there are many cases where the rights of a nation and of its citizens can not be protected or vindicated within its own boundaries. But the power conferred upon Congress over the militia is insufficient to enable the fulfillment of the demands of such treaties or to protect the rights of the Government or its citizens in those cases in which protection must be sought beyond the territorial limits of the country."

And see Houston *v.* Moore (5 Wheat., 1) and Martin *v.* Mott (12 Wheat., 19, 27).

It is true that the act of January 21, 1903, as amended by the act of March 27, 1908 (35 Stat., 399), provides:

"That whenever the President calls forth the organized militia of any State, Territory, or of the District of Columbia to be employed in the service of the United States he may specify in his call the period for which such service is required, and the militia so called shall continue to serve during the term so specified, either within or without the territory of the United States, unless sooner relieved by order of the President."

But this must be read in view of the constitutional power of Congress to call forth the militia only to suppress insurrection, repel invasions, or to execute the laws of the Union. Congress can not by its own enactment enlarge the power conferred upon it by the Constitution; and if this provision were construed to authorize Congress to use the Organized Militia for any other than the three purposes specified, it would be unconstitutional. This provision applies only to cases where under the Constitution said militia may be used outside of our own borders, and was doubtless inserted as a matter of precaution and to prevent the possible recurrence of what took place in our last war with Great Britain, when portions of the militia refused to obey orders to cross the Canadian frontier.

I think that the constitutional provision here considered not only affords no warrant for the use of the militia by the General Government, except to suppress insurrection, repel invasions, or to execute the laws of the Union, but, by its careful enumeration of the three occasions or purposes for which the militia may be used, it forbids such use for any other purpose; and your question is answered in the negative.

Respectfully, GEORGE W. WICKERSHAM.

To the SECRETARY OF WAR.

Upon the question of the power of Congress to order the militia into a foreign territory has been fully discussed in the case of Kneedler *v.* Lane (Pa. State Reports 45, p. 238), and I desire to recommend it to any student in the investigation of this question. The syllabus of the case gives but a faint idea of the questions discussed. It sustains the constitutionality of the conscription act of March 3, 1863, and each of the five members of the court rendering opinions in the case. It is sufficient to say that while they disagree as to the constitutionality of that conscription to subdue an insurrection, repel invasion, or enforce the law every one of the judges clearly indicated the law in absolute harmony with the opinion of Attorney General Wickersham, which I have heretofore read. I beg leave to insert an extract from the opinion of Justice Strong, who held that act was constitutional and who called attention to the fact that our Government was given the power to make treaties with other nations which power was denied to the States. He says, further:

This unstricted power of making treaties involved the possibilities of offensive and defensive alliances. Under such treaties the new Government might be required to send armies beyond the limits of its territorial jurisdiction, and in fact at the time when the constitution was formed, treaty of alliance, offensive and defensive, was in existence between the old Confederacy and the Government of France. Yet more. Apart from the obligations assumed by the treaty, it was well known that there are many cases where the rights of a nation and of its citizens can not be protected or vindicated within its own boundaries. But the power conferred upon Congress over the militia is insufficient to enable the fulfillment of the demands of such treaties, or to protect the rights of the Government, or its citizens in those cases in which protection must be sought beyond the territorial limits of the country. The power to call the militia into the service of the Federal Government is limited by express terms. It reaches only three cases. The call may be made "to execute the laws of the Union, to suppress insurrections, and to repel invasions," and for no other uses. The militia can not be called for the invasion of a country without the limits of the United States. They can not be employed, therefore, to execute treaties of offensive alliance, nor in any case where military power is needed abroad to enforce rights in foreign lands.

The United States Supreme Court says:

Every act of Congress passed during war times must square with the Constitution.

The Constitution of the United States is a law for rulers and people, equally in war and in peace, and covers with the shield of its protection all classes of men, at all times, and under all circumstances. (Ex parte Milligan, 4 Wall., 2, 120.)

Gentlemen may claim that the proposed conscription act does not purpose to use the militia. But they say that our purpose is to draft from the great body of American citizens who do not compose the militia.

Unfortunately for that contention, Congress has itself, so far as is in its power, placed every man between the ages of 18 and 45 in the military department of our Government. Under the act of June 3, 1916, as I have stated, first it described the Army of the United States and says it shall consist of the Regular Army, the Volunteer Army, the Officers' Reserve Corps, the Enlisted Reserve Corps, the National Guard while in the service of the United States, and such other land forces as are now or may hereinafter be authorized by law. Section 2 of that act provides that the Regular Army shall consist—it does not include any branch of the militia thereinafter described—as follows:

SEC. 2. Composition of the Regular Army: The Regular Army of the United States, including the existing organizations, shall consist of 64 regiments of Infantry, 25 regiments of Cavalry, 21 regiments of Field Artillery, a Coast Artillery Corps, the brigade, division, Army corps, and Army headquarters, with their detachments of troops, a General Staff Corps, an Adjutant General's Department, an Inspector General's Department, a Judge Advocate General's Department, a Quartermaster Corps, a Medical Department, a Corps of Engineers, an Ordnance Department, a Signal Corps, the officers of the Bureau of Insular Affairs, the Militia Bureau, the detached officers, the detached noncommissioned officers, the chaplains, the Regular Army Reserve, all organized as hereinafter provided, and the following as now authorized by law: The officers and enlisted men on the retired list; the additional officers, the professors, the Corps of Cadets, the general Army service detachment, the detachments of Cavalry, Field Artillery, and Engineers, and the band of the United States Military Academy; the post noncommissioned staff officers; the recruiting parties, the recruit depot detachments, the unassigned recruits; the service school detachments; the disciplinary guards; the disciplinary organizations; the Indian Scouts; and such other officers and enlisted men as are now or may be hereafter provided for: *Provided*, That hereafter the enlisted personnel of all organizations of the Regular Army shall at all times be maintained at a strength not below the minimum strength fixed by law: *Provided further*, That the total enlisted force of the line of the Regular Army, excluding the Philippine Scouts and the enlisted men of the Quartermaster Corps, of the Medical Department, and of the Signal Corps and the unassigned recruits shall not at any one time, except in the event of actual or threatened war or similar emergency in which the public safety demands it, exceed 175,000 men: *Provided further*, That the unassigned recruits at depots or elsewhere shall at no time, except in time of war, exceed by more than 7 per cent the total authorized enlisted strength.

Every able-bodied male citizen outside the Regular Army, as here described, is by this act of the last Congress placed in the militia.

It will be noticed that in section 57 it is called "the militia of the United States." Of course, the United States has no militia and can not have. The following from Van Holts' Federal Constitution, section 49, page 169, which I beg leave here to insert:

There is no militia of the United States. The Constitution recognizes only a militia of the several States, and the authority of the Federal Government as to them is precisely defined. It is nowhere made the express duty of the several States to have a militia. But not only does the Constitution take the existence of the State militia for granted, but the States can be compelled to maintain one by Federal legislation, for Congress is authorized "to provide for organizing, arming, and disciplining the militia."

Section 57 of act of June 3, 1916, is as follows:

Composition of the militia: The militia of the United States shall consist of all able-bodied male citizens of the United States and all other able-bodied males who have or shall have declared their intention to become citizens of the United States who shall be more than 18 years of age, except as hereinafter provided, not more than 45 years of age, and said militia shall be divided into three classes, the National Guard, the Naval Militia, and the unorganized militia.

It will be noticed that every able-bodied male citizen between the ages of 18 and 45, except those in the Regular Army, are in the militia, and the militia is by section 57 divided into three classes, "the National Guard, the Organized Militia, and the unorganized militia." As this act of the last Congress of June, 1916, authorizes Congress to draft the National Guard, which is the State militia, gentlemen may claim that because Congress has authorized Congress to draft the National Guard that it relieves the present Congress from the constitutional limitations.

The absurdity of this proposition is so apparent that it answers itself, for if we should allow Congress to authorize some future Congress to pass a law and thereby relieve that law from its constitutional limitations, then there is no provision of the Constitution which could not be avoided and be classified as "a scrap of paper," if one Congress could permit some future Congress to violate the Constitution of the United States.

No better illustration of this can be found than the fact that Attorney General Wickersham was asked the question whether the militia could be taken out of the country. Congress had before that time and under the act of March 8, 1908, attempted to avoid constitutional limitations by providing that whenever the President calls the militia of any State that that militia should continue to serve "either within or without the territory of the United States," but the Attorney General very properly says, "This statute must be read in view of the constitutional power of Congress"; and further, "Congress can not by its own enactment enlarge the power conferred upon it by the Constitution."

Will you permit me to call attention to another most flagrant violation of the Constitution in this effort to draft the State militia into the Government service, with the claim that they may be used for service in a foreign country? Section 15 further provides that "Congress may call the militia to enforce the laws of the Union, suppress insurrection, and repel invasion." Then proceeds in section 16 to provide for the organizing of that militia, "reserving to the States respectively the appointment of officers." The act of the last Congress, June, 1916, provides that the officers shall be appointed by the President up to and including the colonel, and above the office of colonel to be appointed by the President with the consent of the Senate. It is true that the officers by that act are to be appointed from among the members by the President. But the Constitution reserves the appointing of all officers of the States respectively even after they are employed in the service of the United States, and the present act, known as the conscription act, which we passed last month, provides in the second section that the President may draft the National Guard, which is the State militia, into the military service of the United States and further, "and to organize and officer in accordance with the provision in section 111 of said national defense act," which act, as I have shown you, clearly violates the Constitution by permitting the President to select the officers when the Constitution says it should be left to the States.

As we did not attempt to draft the Naval Militia, and the Government never has, so far as my knowledge goes, I will not discuss that branch of what the Congress has declared to be the militia of the United States, which is designated as the "Naval Militia." The remaining question is whether or not the Congress of the United States under the Constitution has power to call into service the unorganized militia for foreign service. The act of the last Congress, June, 1916, declares, as I have shown you, that all able-bodied males between the ages of 18 and 45 are placed by act of Congress into the unorganized militia, excepting those who are in the National Guard, the Naval Militia, and the Regular Army. It will be observed that this attempt on the part of Congress to make the "militia of the several States" the militia of the United States, which takes in the ages between 18 and 45, as above quoted, and on that subject I desire to quote briefly from the opinion of Chief Justice Lowrie, of the Supreme Court of Pennsylvania, in the case before cited, in referring to the conscription act then under consideration:

It seems to me that this is an unauthorized substitute for the militia of the States. If valid, it completely annuls for the time being the remedy for insurrection provided by the Constitution and substitutes a new and unprovided one. Or rather it takes that rather free force, strips it of its officers, despoils it of its organization, and reconstructs its elements under a different authority, though under somewhat similar forms. If this act is law, it is supreme law, and the States can have no militia out of the class usually called to militia duty, for the whole class is appropriated as a national force under this law, and no State can make any law that is inconsistent with it. The State militia is wiped out if this act is valid except so far as may be permitted by the Federal Government. If Congress may thus, under its power to "raise armies," constitute all the State militiamen into "national forces" as part of the Regular Army and make them "liable to perform duty in the service of the United States when called out by the President," I can not see that it may not require from them all a constant military training under Federal officers as a preparation for the greatest efficiency when they shall be so called out, and then all the State militia and civil officers may be put into the ranks and subject to the command of such officers as the President may appoint, and everyone would then see that the constitutional State militia becomes a mere name. The Constitution makes it and the men in it a national force in a given contingency and in a prescribed form, but this act makes them so irrespective of the constitutional form and contingency. This is the substantial fact, and I am not able to refine it away.

In the case we are now discussing the last Congress attempted to put in all between the ages of 18 and 45, which exactly covers the ages above provided for in the State militia, and exhausts the State militia entirely.

Every male citizen of the several States between the ages of 18 and 45 is subject to State militia duty, and by act of Congress is made a part of the militia, and the attempt now to take them bodily, or man by man, out of the State militia and compel them to serve in a foreign land would, in my humble opinion, be a clear violation of the Constitution.

Please remember I am not raising the question of the power of the State to demand military service by the conscription act; that is uniform in its application; but, on the contrary, I am pleading that the Congress of the United States, which has the sole power to make the laws and rules for the regulation of the armed forces of the United States, to amend the present law, so that we may have an Army under the Constitution which might be sent anywhere in the world in the interest of the country as Congress may decide. Please remember that the present act gives to the President authority to draft those men, and by section 7, using exactly the same language, the President was authorized to raise and maintain by voluntary enlistment four divisions known as the Roosevelt Volunteers.

Gentlemen will not forget the roll calls and the struggle made in Congress to secure the services of these men of experience above the age of 25 years who were ready and willing to go, and when that act was passed the people of the United States supposed that section 7 was just as binding on the Executive of the United States as was the other section, providing for conscription. I have no desire to criticize the President, who has enforced the conscript part of that act and refused to use the power given him by Congress to accept volunteers in section 7. The language used giving him power is exactly the same—"authorized" to conscript and "authorized" to raise volunteers—and whatever may have been whispered by those in conference with the General Staff and the administration that the Executive would not take advantage for this country of the volunteers, yet to every man on this floor and in the minds of the plain people section 7 authorizing volunteers was just as binding upon the President of the United States as were the other sections authorizing conscription. The desire to receive the volunteers was in the hearts of the American people; it became the will of the Congress of the United States; and if Congress will have the courage to enforce the will of the people and the will of Congress itself, it can amend section 7 by inserting the words "authorized and directed" to accept the volunteers.

But gentlemen seem to be timid for fear it may be an offense to the executive department of this Government. Gentlemen, it is no time for timidity. We are not questioning the honor or sincerity of the Chief Executive. That department has no power to make laws and rules governing the land and naval forces of the United States. That power was given to you—to Congress—and every power that the Executive may exercise as Commander in Chief is subject to the power given to the Congress of the United States. There is an honest difference of opinion between the Congress and the Executive as to the use of volunteers for foreign service. Congress says, and so expresses the sentiments of the people, that at least four divisions of volunteers should be accepted. The Executive declines to accept them for the present. No one doubts for a moment that if we would insert the word and "direct" the Executive to accept these volunteers, those four divisions would be made up of men who believe in assisting our allies in the trenches.

Why do we pursue the unconstitutional method of attempting to draft the militia into the service. Why not pursue the constitutional methods and raise your army by volunteers, and then, if your volunteers who are willing to go abroad fail, meet and solve that question when the time comes, under the Constitution we have sworn to uphold. Please understand I do not

contend that the Congress of the United States can not call the militia of the States, organized or unorganized, into the service of the United States, but I do insist that if the militia is so called into the service of the United States it can only be used for the three purposes which I have repeatedly set out in this argument.

Mr. Wilson is just as much my President as yours. I want him to be right. If I believe that his failure to enforce section 7 has done injury to the cause in this war with the Imperial Government of Germany, it is my duty to say so here and now. There is plenty of time to get a constitutional army; and while gentlemen have differed with me upon questions of war and conscription and taxation, I have never found it in my heart to believe that any gentleman on this floor had anything but one desire, namely, that when our country was in war it should be a successful war, and that we would fight to the end for the preservation of American ideals and ideas; but you can not shift your responsibility as a part of the law-making power by imitating Pontius Pilate and washing your hands and saying, let your Executive do it. [Applause.] I know we are talking about food control. Let us talk for a moment about food for thought and thought control and the right of the Executive to control legislative thought. There has been a constant letting up of legislative authority and a constant growth of executive authority. It is just as much the fault of the legislative branch as it is of the executive, and it is not more the fault of this present President than it was of those before him, who for years past have constantly encroached upon the legislative power, and today when we are in the midst of a war, when we offer you the very best thing that we thought we could, we are met with the cry of treason simply because we want to give you men who will fight instead of violating the Constitution by taking the State militia because some past Congress has authorized us to violate the clear provisions of the Constitution of the United States.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. MASON. Mr. Chairman, I would ask the gentleman for five minutes, because I have lost about five minutes of time.

Mr. HAUGEN. Mr. Chairman, I yield the gentleman five minutes.

Mr. MASON. When the conscription bill of 1814 was before the Congress of the United States Daniel Webster, the great student defender of our Constitution, gave as one of his reasons for opposing conscription the fact that the bill then before Congress, just exactly like the present law, did not prohibit the Congress or the President from sending the militia out of the United States. But let me quote the language of Mr. Webster upon that point so there may be no misunderstanding:

> But, sir, there is another consideration. The services of the men to be raised under *this act* are not limited to those cases in which alone this Government is entitled to the aid of the militia of the States. These cases are particularly stated in the Constitution, "To repel invasion, suppress insurrection, or execute the laws." But this bill has no limitation in this respect. The usual mode of legislating on the subject is abandoned. The only section which would have confined the service of the militia proposed to be raised within the United States has been stricken out; and if the President should not march them into the provinces of England on the north or of Spain at the south it will not be because he is prohibited by any provision of this act.

The law which we have passed for conscription has the same defect. It has no limitation as to what the Commander in Chief may do with the militia when drafted into the service of the United States, and, to paraphrase the statement of Mr. Webster, if he does not send them into England, France, or Italy "it will not be because he is prohibited by any provision of this act."

That fact alone should have caused the defeat of the present conscription act; and while we do not as a Congress limit the use to which this conscripted army could be employed, our great Constitution writes into every statute the living principles of human liberty, and, whether we like it or not, it writes into our last conscription act in words of fire that can not be extinguished, "The militia herein conscripted or drafted can not be sent out of the territory of the United States and can only be used to repel invasions, suppress insurrections, and enforce the laws of the Union." Mr. Webster, in the same speech, in replying to the Secretary of War, now known as the Geperal Staff, said:

> If the Secretary of War has proved the right of Congress to enact a law enforcing a draft of men out of the militia into the Regular Army, he will at any time be able to prove quite as clearly that Congress has power to create a dictator. The arguments which have helped him in one case will equally aid him in the other.

What becomes, gentlemen, of our constitutional requirements as construed by the court that our laws must be uniform? Under the law every man between the ages of 18 and 45 belongs to the Military Establishment of the United States; this is the unorganized militia you propose for selective draft, which means drawing by chance. Out of these millions of men you have protected yourself as Members of Congress, and while we have been hearing talk about slackers by your law you provide that three-fifths of the slackers may not even be exposed to the chances of your slacker's draft and hold that two-fifths, those between the ages of 21 and 31, must take their chance. It would be just as much within the keeping of the spirit of the Constitution to say that all black men or all yellow men or that all men belonging to certain schools or religion should be selected by the draft. I can not find words to express the abhorrence I have for this conscript law, especially when the spirit of the Constitution is so wantonly and ruthlessly violated by class legislation of this sort. But gentlemen say, suppose they do not volunteer? My answer is they are volunteering, but—please read Mr. Webster's answer:

> But it is said that it might happen that an army could not be raised by volunteer enlistment, in which case the power to raise armies would be granted in vain unless they might be raised by compulsion. If this reasoning could prove anything it would equally show that whenever the legitimate power of the Constitution should be so badly administered as to cease to answer the great ends intended by them, such new powers may be assumed or usurped as any existing administration may deem expedient.

Will you allow me to insert the speech—or a part—of this same Daniel Webster as to one reason why he voted against conscription?

He was speaking in this House, December 9, in 1814, where free thought and free speech is guaranteed, and the American people have never believed him to be a traitor:

> If this war should continue there will be no escape, and every man's fate and every man's life will come to depend on the issue of the draft. Who shall describe to you the horror which your orders of conscription shall create in the once happy villages of this country? Who shall describe the distress and anguish which they will spread over those hills and valleys where men have heretofore been accustomed to labor and to rest in security and happiness? Anticipate the scene, sir, when the class shall assemble to stand its draft and to throw the dice for blood. What a group of wives and sisters and mothers, of helpless age and helpless infancy, shall gather around the theater of this horrible lottery as if the stroke of death were to fall from heaven before their eyes on a father, a brother, a son, or a husband And in a majority of cases, sir, it will be a stroke of death. Under present prospects of the continuance of the war not one-half of them on whom the conscription shall fall will ever return to tell the tale of their sufferings. They will perish of disease and pestilence, or they will leave their bones to whiten in fields beyond the frontier. Does the lot fall on the father of a family? His children, already orphans, shall see his face no more. When they behold him for the last time they shall see him lashed and fettered and dragged away from his own threshold, like a felon and an outlaw. Does it fall on a son, the hope and staff of aged parents? That hope shall fail them. On that staff they shall lean no longer. They shall not enjoy the happiness of dying before their children. They shall totter to their grave, bereft of their offspring and unwept by any who inherit their blood. Does it fall on a husband? The eyes which watch his parting steps may swim in tears forever. She is a wife no longer. There is no relation so sacred or so tender that by these accursed measures you do not propose to violate it. There is no happiness so perfect but that you propose to destroy it. In the paradise of domestic life you enter, not, indeed, by temptations and sorceries, but by open force and violence.

Mr. Speaker, I wish to be understood and I make the statement of my intentions in order that there may be a fair discussion as to the powers of Congress, and as far as possible free from malice or excitement. Unless there is shortly offered an amendment to the present conscript law which will insert the word "direct" in section 7, so that the President will be induced to call for and accept the volunteers for foreign service, I intend to present that amendment myself.

Second, unless the present conscript law is amended or suggested by some gentleman in the majority upon this question so that the law may comply with the Constitution, and provide that the conscripts shall not be forced against their consent into foreign countries, I intend respectfully to offer that amendment myself. Failing in that I intend to offer a bill which will repeal the entire conscription law and leave this or the next Congress to carry out the will of the people.

Mr. Chairman, I have made this statement so that we may have a fair discussion upon our constitutional rights. I have no pride of opinion. If Attorney General Wickersham is wrong, if we have that right, I have nothing further to say. I felt it my duty, after examining the constitutional debates, after having read the opinions of the Attorneys General of the United States, to call the attention of my colleagues to the fact that volunteers were ready to go, they offered to go, but by the action of Congress and the Executive, one is just as much to blame as the other, these men who are ready to go and give encouragement to the allies, these men over 25 years are told, "You can not go," and those men who do not want to go are told, "You must go." Our duty, gentlemen of this Congress, seems to be plain. It is to fight the enemy and at the same time keep our eyes upon our allies. My distinguished friend, the chairman of the committee, whose bill we were discussing yesterday, called attention to the

fact that the allies had been purchasing in this country, and he called attention to the fact, which is true, that you can buy American wheat and American bread and potatoes cheaper in Great Britain than you can in New York or Chicago, and when we see our people hungry and realize that the allies, through their agents, have been speculating on the boards of trade, it is not treason to call attention to the fact. We want our allies to do their "bit," but when we see American flour cheaper in London than it is in Chicago we feel that they are not only "doing their bit," but they are "doing us quite a bit." [Applause.] And I say it is not treason to call attention to a provision against sending State militia abroad when there are others ready to go; it is not treason to call attention to the fact that our allies, God bless them and help them in every way and let them do their share, with nearly 2,000,000 men in Great Britain, are insisting and pleading for us to send our boys to the trenches of France, and you know it is a good deal nearer from Dover to Calais than it is from San Francisco to Paris, and travel is a good deal safer for those people. It is only 55 minutes across the English Channel, when it may be two or three weeks or months, aye, it may be eternity, in crossing the Atlantic Ocean.

Gentlemen, we have plenty of time. Again I say, why pursue unconstitutional methods when there are constitutional methods open before us? Why should we violate the Constitution, the clear law and the spirit of the Constitution, by saying that we are going to draft the militia of the United States in violation of the opinion of the Supreme Court of the United States, of the supreme courts of the several States, in violation of the opinion of the Attorney General of the United States. Now, Mr. Chairman, in conclusion, I have had long experience in matters of this kind, and in all these years I have never found a man, either in the House or in the Senate, but that he wanted to do right as God gave him the light to see the right, and he wanted to do the best he could for his country. This is a friction point where gentlemen disagree, and I thank God upon this floor—in this forum—the right of free speech still exists. [Applause.] I remember once in riding to Mount Vernon I met a Confederate soldier and a Union soldier, who told me that at the tomb of Washington, even during war times, they met and left their guns upon the outside, and I thank God that there was one spot, the tomb of Washington, where the blue and gray could meet and fraternize, and that small piece of ground "leavened the whole lump" and made a united country. So, I thank God, upon this floor, in my association with you, gentlemen, most of whom are younger than I, you have been willing to grant me that right of free thought and free speech which you demand for yourselves, and in that freedom lies the safety of our Nation. [Applause.]

Mr. LEVER. Mr. Chairman, I yield 30 minutes to my colleague on the committee [Mr. DOOLITTLE]. [Applause.]

Mr. DOOLITTLE. Mr. Chairman and gentlemen of the committee, I shall not consume the 30 minutes, and before I speak the few words I am about to do I want to say a word concerning the action of the committee—the Committee on Agriculture—while we were considering this bill and the final action of the committee. While we were considering this bill we had no chart to follow, we had no blazed trail to go upon; we had to branch out and cover the best we could an unknown field and to meet emergencies which are confronting the country now by reason of the war in the way we have done, and which I hope and believe will meet with your approval. It has been my pleasure during the two and part of three terms that I have been a Member of this House to serve on the Committee on Agriculture under the chairmanship of the distinguished gentleman from South Carolina [Mr. LEVER].

I believe I state the exact fact when I say that not in the legislative history of this country has there gone forth to the country at large more big laws for the good of all the people bearing the name of a single man than of the laws bearing the name of "LEVER." I have in mind four in particular. We all know of the advantages of the Lever Extension Act and the warehouse act which also bears his name, and that great boon to the cotton farmer and to the cotton operatives of the country known as the Lever Cotton Futures Act; and then we have the Lever Bureau of Markets Act, which law is just now getting into full operation.

Gentlemen of the committee, the bill which we are now considering is a war measure pure and simple. It is a bill which will solidify and conserve and bring together in the most compact form that we know how all the food, feed, and fuel resources of our country in our endeavors to win a permanent and speedy victory against the common enemy. I am not going to discuss the details of the bill, because they have already been discussed here much better and more eloquently than I can discuss them. I simply want to call your attention for a moment to a few words that were spoken yesterday by my good friend from Texas [Mr. YOUNG], my colleague on the committee, who put himself in the attitude of defending the farmer. And, Mr. Chairman and gentlemen, I can not conceive that when it comes to a question of a war measure, and if this measure is one for the use of our country in winning the war, why any further argument should be necessary in behalf of it, why anyone should attempt or feel it incumbent upon him to defend a part of the country if the whole country requires this legislation. [Applause.] But just for a moment, gentlemen, I take sharp issue with my friend in his theory and in his statement regarding the welfare and the desire of that part of our country, that noble part, that part which we could not get along without, the farming communities and the farmers of the country.

The farmers have been anxious in past years in times of peace, and they are anxious in times of war, to get rid of the speculator who has been preying upon them. He has complained about the treatment that he has received at the packing houses, and he has complained about the injurious speculation and the machinations upon the boards of trade of the country. In this bill, H. R. 4961, we eliminate in this war measure all of those things which he has complained about so bitterly, and we give to the American farmer something which he has never yet asked before, namely, we give him a guaranteed profit for the things which he produces, but do not limit his profit to that guaranty. [Applause.] I simply mention that in passing.

As a matter of fact, I suspect, if it has not already been done, that when Representatives of manufacturing constituencies here take the floor, either to oppose or to speak in behalf of this bill, they will tell us we have favored the farmer and shown undue favor to him to the disadvantage of the manufacturing interests of the country. The bill is a fair bill to every legitimate business, calling, occupation, and enterprise. It is a bill which, in my opinion, will do what it is expected it shall do, and that is to help win a glorious victory for our armies and our country for the cause of human liberty and mankind.

Now, about prices; and I submit this to my friends from agricultural districts. It has been said that flour sold for $17.50 a barrel, and that the farmer received only $1.30 a bushel on the average for his wheat, showing that the spread in profit by the time that the wheat finally reached the consumer in the nature of flour had increased tremendously, and that some intermediary between the producer and the consumer made the enormous profit.

I want to give you a specific example, a small item, an incident which happened here in the city of Washington Sunday of this week—just two days ago. Although it is a small item, perhaps, it shows exactly one of the reasons why a bill of this kind should go into operation now. It is the matter of a roast chicken. If you will go to a delicatessen shop—and I am not talking about the highflying and expensive kind but the little modest delicatessen shop; and this was one out on Fourteenth Street—and buy a chicken, they will not price it to you by the pound. It will cost you 15 cents an ounce. That is the way they price it to you.

Mr. JACOWAY. Will the gentleman yield there?

Mr. DOOLITTLE. Yes.

Mr. JACOWAY. I want to ask him if it is not his idea, as well as the idea of the entire personnel of the Committee on Agriculture, that in passing this bill as drawn and as presented to this House it will bring about two results, namely, it will bring about a condition which on its face would seem like an anomaly within anomaly; that is, that it would give a higher and more generous price to the producer of foodstuffs and at the same time, by eliminating the unnecessary middleman, put that stuff before the consumer's table at a less cost than he has had before?

Mr. DOOLITTLE. That was the point I was about to make on this little item. The poultry man or farmer who sold that chicken probably received for it, live weight, something about 18 or 20 cents a pound, and it does not take a mathematician or an expert in the culinary art to know that we could not increase legitimately the price of it to the consumer to $2.40 a pound as a cooked chicken ready for the table. Just as my friend from Arkansas said, one of the advantages of this bill is to eliminate the lost motion between the producer and the consumer. If the consumers of the country have to pay $2.40 a pound for chicken, then somebody besides the middleman and the speculator ought to get the price.

Now, my friend from Texas also stated that in European countries the food dictatorship had been a failure, as he called it. In other words, insinuating that the food administration in this country would also be a failure. He cited Germany as an instance. It is true. But where the German dictator was

unsuccessful and where the German food dictatorship fell down, was in trying to set the price on the producer, which could not be done.

Mr. Hoover testified before our committee that the producer, if the price would not satisfy him, would look into other and additional channels and make his private contracts. But this bill in express words does not touch the producer. It recognizes the right of the producer on the farm of the necessities of life, the man who toils from early morn to late at night, to hold the fruits of his toil, but it denies to any middleman the right to hold that to the detriment of the consuming classes of the country. [Applause.]

My friend from Texas said something about the increased cost of implements and everything that the farmer uses on his farm or in raising cattle and other live stock. He is absolutely correct about that. They have increased enormously in price, but if it should become necessary to fix a minimum price in order to stimulate production, as is provided in this bill, there would be taken into consideration, as was testified to by Mr. Hoover—a very intelligent and patriotic citizen—that increase in the cost of production. The increase in the cost of farm implements and everything that the farmer uses in the production of those products would be taken into consideration and added to his cost of production, and a profit added onto that in fixing such minimum price.

So much for the argument of our friend from Texas, that because the cost of implements, etc., was not specifically mentioned in this bill it would not be taken care of. It is taken care of, and everything else is taken care of that goes into the production of a crop.

Now, gentlemen, I want to say in closing that the country is at war. That may seem like an unnecessary statement. But I am led to believe that there are some people who do not fully realize the fact that the United States is probably at this moment engaged in the most collossal war, even so far as our own country is concerned, that we have ever yet engaged in.

The thing for us to do is to win the war, and this bill is drawn on the theory of the war power of the Constitution, and that the winning of this war is an absolute necessity, and that all other things should stand aside and work toward the winning of the war as speedily as possible. [Applause.]

Whatever the criticism of the bill may be, it will not be said that the measure is not drastic enough. The bill is all teeth, and intentionally so, as a typical war measure. There are two sources of objections to this measure becoming a law. One is a misunderstanding of the provisions of the bill, or what the effect will be. The other source of opposition lies with the food speculators, and they are the ones who will get hit and smashed hard by this bill. Still other subtle forces working against this bill are pro-German influences. Producers the country over favor the bill, and the approval of the American consumer is universal. I have received not a single word of protest against this measure from any source. The producers of the country are for it unanimously, so far as I know, and the consumers are the same way. This is one time when the producers and the consumers are working together, hand in hand.

Mr. DENISON. Mr. Chairman, will the gentleman yield for a question?

Mr. DOOLITTLE. I will.

Mr. DENISON. Is there anything in this bill to prohibit farmers or groups of farmers by agreement among themselves from holding wheat until they get a satisfactory price?

Mr. DOOLITTLE. Nothing whatever, so far as the individual farmer is concerned. If the wheat passes out of the farmer's hands into the hands of a third party, then it comes within the provisions of the bill.

Mr. DENISON. Then the question whether or not it will give the consumers cheaper foodstuffs is a matter of conjecture, largely, is it not?

Mr. DOOLITTLE. I do not think so. It does away with speculators and manipulators of the market, and that is one of the chief causes of high prices to-day.

Mr. JACOWAY. Mr. Chairman, will the gentleman yield there?

Mr. DOOLITTLE. Yes.

Mr. JACOWAY. I will ask the gentleman if the testimony does not show this fact, that it will cut off the middleman in most of the food products if this bill becomes a law?

Mr. DOOLITTLE. That is the purport of our testimony; yes.

Two-thirds of the price of food—and I want to say that especially to my friend from Illinois [Mr. DENISON]—to the consumer is added after the food leaves the hands of the producer.

In other words, there is an increase of about 200 per cent. This measure will reduce very materially that spread in prices between the man who produces and the man who consumes; the lost motion and added cost now directly attributable to the too numerous middlemen and the oppressive speculator is eliminated. The speculator and food gambler become impotent. Exchanges and boards of trade are properly regulated or become closed. The hoarder is required to disgorge; the meat packer and the distributor submit to Government regulation; fuel companies can not extort excessive prices; uneconomical manufacture of necessaries is prohibited; foodstuffs may not be wasted in the manufacture of alcoholic or nonalcoholic beverages; manipulation of price and distribution is stopped; cold-storage concerns perform their proper functions.

One of the things that the cattle producers of this country have wanted for a long time is some sort of light on the operations of the great meat packers. This bill calls for that light, and it even goes further and gives them Government regulation.

Mr. CAMPBELL of Kansas. Mr. Chairman, will the gentleman yield?

Mr. DOOLITTLE. Yes; I yield.

Mr. CAMPBELL of Kansas. The gentleman has stated that this bill would reduce the margin between the producer and the consumer. Will the gentleman state what section of the bill he expects will bring about that result?

Mr. DOOLITTLE. Under the licensing section and also under the section giving the President the power to regulate and control boards of trade, the antihoarding section, and section 4.

Mr. CAMPBELL of Kansas. Now, in what way by granting license to a man to do business would that bring about the reduction so desirable between the producer and the consumer?

Mr. DOOLITTLE. If the licensee engages in practices prohibited by this bill, the fact will be known by reason of the supervision and the right of inspection given the President.

Mr. CAMPBELL of Kansas. Can not that man or concern now be prosecuted under the antitrust law for practices in restraint of trade if guilty of such practices?

Mr. DOOLITTLE. We might do that; but we are trying to avoid the condition that will make the prosecution necessary, because a prosecution presupposes that the evil already existed. We want to avoid that in order to save the producer and also the consumer.

Mr. CAMPBELL of Kansas. But you provide for prosecutions under this bill in each instance.

Mr. JACOWAY. Mr. Chairman, will the gentleman yield?

Mr. DOOLITTLE. Yes.

Mr. JACOWAY. If I remember the testimony of Mr. Anderson, who is district attorney for the district in which Boston is located, and who has had peculiar knowledge of these affairs, and who has prosecuted the parties under existing law, he said before the committee that the provisions of the antitrust law will not fulfill in detail the requirements of the situation.

Mr. CAMPBELL of Kansas. If men conspire in restraint of trade——

Mr. JACOWAY. That, looking at it in its entirety, the provisions of the antitrust law will not meet the situation.

Mr. CAMPBELL of Kansas. I venture to differ, then, with the district attorney.

Mr. NOLAN. How long does the gentleman think it would take to restrain the speculators and secure relief for the country from these tremendously high prices along the line suggested by the gentleman?

Mr. DOOLITTLE. I was going to answer that a little more fully, and I will answer it now. A prosecution presupposes that there has been an evil practice, a breach of law. You have got to wait until it happens before you can prosecute. We want to prevent its happening. It would probably take two years to bring a prosecution to a successful conclusion.

Mr. NOLAN. Does the gentleman remember that in the District of Columbia here a number of commission merchants were indicted and convicted in the United States court, but practically admitted to probation and fined only $25 apiece after they had been found guilty of unfair practices in holding their products and conspiring to control food prices? We have waited a great many years to get relief under the Sherman antitrust law. This war will be over before any prosecution will be successfully concluded.

Mr. AYRES. Is it not a fact that the Sherman antitrust law will not reach an individual speculator?

Mr. DOOLITTLE. Of course it does not apply to farmers' organizations.

Mr. AYRES. The Sherman antitrust law will not apply to the individual at all.

Mr. DOOLITTLE. Not at all.

Mr. CAMPBELL of Kansas. Not if he conspires with others in restraint of trade?

Mr. AYRES. Can one individual conspire?

Mr. DOOLITTLE. He can not conspire with himself.

Mr. CAMPBELL of Kansas. He can conspire with others.

Mr. AYRES. Certainly it will reach him then, if he conspires with others, but it will not reach the individual speculator or gambler.

Mr. CAMPBELL of Kansas. I am not talking about the individual speculator or gambler. I am talking about what provisions of this bill will reduce the margin of cost between the producer and the consumer.

Mr. AYRES. I understood the gentleman to say that, in his opinion, the Sherman antitrust law would afford a remedy for the situation.

Mr. CAMPBELL of Kansas. Yes.

Mr. NOLAN. The gentleman probably recollects that a year or so ago a commission merchant in Chicago admitted that he had a million dozen eggs or so in storage. He was not conspiring with any other individual in doing that, because he was holding them off the market for a high price. Could he be prosecuted under the Sherman antitrust law for that?

Mr. DOOLITTLE. Not at all.

Mr. CAMPBELL of Kansas. Could he not be reached under the licensing clause of this bill?

Mr. DOOLITTLE. Absolutely; and there is another clause of the bill which provides that the food administrator or the President may go in and put those eggs on the market, which could not be done under any law now on the statute books.

Mr. THOMPSON. He could also be reached under the hoarding clause, could he not?

Mr. DOOLITTLE. Absolutely.

Mr. JACOWAY. In answer to the gentleman from Kansas [Mr. CAMPBELL] about prosecuting parties who conspire to raise the prices of food, I will remind the gentleman that Mr. Anderson stated that the day had long since passed when these conspirators would even write each other letters; that the day had long since passed when they would meet in the same hotel or send messengers from one to the other, but he said that the entire thing was done over the telephone, and that it was the most difficult matter in the world to get the evidence that would result in a conviction.

Mr. DOOLITTLE. These conspirators leave no tangible evidence. A successful prosecution is extremely difficult.

Mr. SCOTT of Iowa. I want to make a suggestion, that the Sherman antitrust law is confined to matters of interstate commerce, whereas this bill proposes to go further than that and to cover intrastate matters as well.

Mr. DOOLITTLE. Yes. The bill puts the necessaries of the country on a war basis. Coupled with the first food bill, it guarantees sufficient food, protects the producer of nonperishable food products from loss from overproduction, and gives the consumer assurances of a greatly reduced cost of living. It will restore and retain contentment among our people, keep as a unit our determination to crush the menace of German imperialism, and lend a virile power at home and abroad to our allies and our armies, whom we must feed, to win a complete and speedy victory. [Applause.]

Mr. HAUGEN. Mr. Chairman, I yield to the gentleman from Ohio [Mr. EMERSON].

Mr. EMERSON. Mr. Chairman and Members of the House, when Roosevelt was President I used to feel that oftentimes he transgressed the constitutional rights of Congress by using the "big stick," but since I have been a Member of Congress I realize how little Congress would do if it were not for the constant prodding by the President.

At the second session of the Sixty-fourth Congress I introduced a resolution asking for an investigation of the food-storage warehouses, and the next day I received a telegram from a manager of such a warehouse in Cleveland protesting against my resolution, and asking me if I thought it would pass, to which I replied that he need not worry, as there was no danger of Congress doing anything that it should do upon that subject.

And Congress would not be doing anything to-day if it were not for the fact that the present war, public sentiment, and the President are forcing us to act.

There are apologists who believe that the country would be endangered if a few speculators in food and fuel, with instincts of ravenous wolves eyeing a defenseless flock of sheep, were to have their individual greed curbed in the interests of the public good.

We should fix the amount of profits that can be made upon the handling of food products by the middleman.

We fix the amount of profit that a person can make upon the loaning out of his money. We fix railroad fares and many other charges. What would there be wrong in fixing the price of food in this crisis, or fixing the profits to be made out of the handling of food products.

This is a war of efficiency. It is to be won by the nations that are most efficient. It is a contest as to whether a democratic republic is more or less efficient than a monarchy. The war is going to be won through the efficiency of the victor.

Is the Republic of the United States more efficient than Imperial Germany? That is the question.

The efficiency of this Republic is to be determined largely by the kind of food-control bill the Congress of the United States passes.

Every great nation now at war has found it necessary to regulate the production, distribution, and the consumption of food.

It is a question of the greatest good for the greatest number. It is useless to waste any time discussing the cause of the high prices of food. One word answers that question. It is the "middleman."

The United States Government must act as the middleman during this war, and get the food from the producer to the consumer with the least possible expense.

Uncle Sam must deliver the food f. o. b. "kitchen door." The manipulation of prices while the food products are passing from the farmer or producer to the housewife is the cause of the high cost of living.

It is a question of scientific distribution by the Government. And as Congress is the Government, this question is up to us.

As I have stated, this is a war of efficiency. Men who fight and men who work must be fed, and the mothers of this country must be fed also, and well fed.

Under the present conditions it seems a great extravagance to allow food products to pass through so many hands before reaching the public. By this I mean that the ultimate consumer pays profit to each and every person through whose hands the goods pass.

Now, what must Congress do? Well, the first thing to do is to cut out this hot-air festival we are having in this Chamber every day, get down to business, and mix brains with legislation.

The trouble with this House is that there is too much of a marathon going on between the Members to see which one can put the most words in the CONGRESSIONAL RECORD.

If we would abolish the publication of the CONGRESSIONAL RECORD, we would transact the business in half the time.

There are several things that must be gone into in the consideration of this great question of food control:

First. The production of food has not increased in proportion to the increase of population.

Second. There must be no shipping of food products to neutrals, for fear they may reach the enemy.

Third. Freight rates must not be increased upon food shipments.

Fourth. Preference must be given food shipments, both as to cars and freight rates.

Fifth. We have drafted men to fight, and we must draft men to work in the fields. There are nearly 200,000 prisoners in our prisons who could be used in cultivating the soil. The larger boys could be used upon the farms during vacation time. School children must do their part.

I here quote a little poem that has the right ring:

PLANTING TO-NIGHT.

Many are the backs that are weary to-night
From using the spade and the hoe;
Many are the men who are straining their sight
Watching for the stuff to grow.
Planting to-night, planting to-night, planting
in the old back yard.

The Government itself has ably supported the food speculators, foisting upon the public the specter of shortage and famine, when in reality no famine existed.

Food manipulation and not shortage has taken possession of the whole country, resulting in the greatest food hysteria we have ever undergone.

We are now at war with the greatest military power in the world, and we must be just as efficient in handling the food question as Germany, for Germany has had a food shortage from almost the very beginning of the war, but she has handled the situation with the greatest of efficiency.

Sixth. Fear among the people is one of the greatest dangers we have. Fear causes hoarding and false increases in prices.

Seventh. The Government must teach people how to handle food and which foods are the most nutritious, as well as cheapest. For instance, the food value of corn is very high, and there is enough corn on hand in the United States to feed the people of this country and all of Europe until the next crop is harvested.

Eighth. Food products should be exempted from taxation during this war. To help the farmer get to the housewife is the duty

of this Congress, and it can be done if we work together with that end in view.

Ninth. The greatest patriot to-day is the one who makes 2 bushels of grain or potatoes grow where one grew last year, and especially if this Congress will see to it that those farm products are delivered to the kitchen door.

Simplifying distribution is the duty of Congress.

This bill appeals to me, and I shall support it, as it has some very excellent features. And while it may have some that Members may criticize, as a whole it is very good.

This Government is a government of compromises. Every bill that passes Congress has been compromised somewhere along the line.

Sections 3 and 4 contain some very strong language. They will prevent food hoarding and prevent the purchasing of food products by the enemy for the purpose of destroying same or keeping the same away from the market.

This legislation is to be administered by the President for the public good, and he is given unlimited powers in section 3, which make him practically a food dictator, and that is what we need in this crisis.

Section 4 prevents waste, hoarding, monopoly, manipulation, dealing, discriminating, or conspiring.

If the Government would do some of these things I have suggested, we could regulate the production, distribution, and consumption of food products for the benefit of all the people.

We certainly must do something.

The people will demand that we do something.

We have drafted men to fight, and we must draft the food supply of this country for the benefit of all the people of this country.

We are loaning millions of dollars to other countries. Why not spend some for the benefit of the folks back home here in the United States.

I have stood by the President in this crisis, and propose to stand by the Commander in Chief during this war.

I propose to stand by him by voting for this bill.

Let the people of this country who are to do all the fighting, let the people of this country who are to pay all the taxes, be given some consideration, and I know no better way than by passing this bill.

It protects the food supply from every angle.

In addition to the powers herein enumerated that are granted to the President, section 11 gives him power to regulate exchanges.

Section 10 gives him power to requisition any factory.

Section 9 gives him power to buy food products and hold them for the benefit of the people.

Section 12 gives him power to stimulate the production of food products if he finds it necessary.

Section 13 gives him the power to prohibit the use of food products in the production of alcoholic beverages.

Section 14 gives him the power to use every agency of the Government that may be necessary, and to create such agencies as he may deem necessary.

The law as a whole is well written, and I congratulate the chairman of the Committee on Agriculture and the whole committee for bringing out and reporting to Congress such valuable legislation at a time when it is so much needed.

The CHAIRMAN. The gentleman from Ohio yields back five minutes.

Mr. JACOWAY. I yield to the gentleman from Oklahoma [Mr. THOMPSON] 30 minutes.

Mr. THOMPSON. Mr. Chairman, in my opinion, we are considering the most important subject which has occupied the time of this Congress. We are overwhelmed as we look out on the struggling world. Things have happened and are happening which a few months ago we did not dream were possible. Mankind seems to have gone mad with the wild passions of war. We are engaged in the greatest struggle of all time. No one can forecast with any degree of accuracy when this contest will end or how it will result. Having put our hands to the plow, however, there is no looking back. Our duty is plain. We must win this war no matter how great the cost in blood and treasure. I very greatly fear our people do not realize the tremendous task ahead of them. We are engaged in a bloody struggle with a courageous, resourceful, and mighty people. During three years the soldiers of the German Empire have held at bay the armed forces of practically all Europe, a large part of Asia and Africa, as also Australia and Canada.

Russia, in the throes of internal revolution, was practically eliminated from the contest as we entered it. It will be a miracle if Russia is of future assistance to the allied cause. We should be gratified if she does not actually aid the enemy. It would be a hopeful mind indeed that would expect a vigorous and efficient campaign by a people just released from the thraldom of autocracy. It will reverse the verdict of history if these long-oppressed people are able to contain themselves in the presence of freedom. They are more likely to follow the example of all generations gone before and become intoxicated with their success. Liberty has never been born full-grown. Self-government is not an overnight development. They are plants of slow growth. I read from the dispatches ominous signs of civil strife and bloodshed. The people are divided into classes. There is suspicion and division in their ranks. Unusual and unheard of demands are made. The specter of revolution and anarchy looms before them. I trust they may succeed in establishing a just, an efficient, and a free democracy. I fear they may not. But one thing appears certain to me—we can not depend for final success on the strength of their arms.

The defeat of Germany presents no small task. It calls for the combined resources of our country in money, in supplies, and in blood. Those who in the past have dreamed—or now dream—that it is not a difficult enterprise, had better undeceive themselves. Germany and her allies have an army of more than 12,000,000 men, veterans of many sanguinary fields, splendidly equipped and provisioned. They represent the perfection of fighting efficiency of all time. The armies of our allies—for we are now full partners with those at war with Germany—are perhaps numerically stronger and equally as well equipped, but the larger part of them are fighting in strange countries and on foreign soil. We are also the attacking party. We have before us a long, a bloody, and an arduous contest. Many thousands of our young men, before the struggle is ended, will rest forever under strange skies.

Having said this much in a general way, I pass to a brief discussion of this bill. Why is this legislation necessary, and what does it provide? At this time England and France, Belgium and Italy, Russia and Roumania are doing the fighting for our side. We do not ask, we do not desire that they should continue to do it all. We know, however, that every blow they strike will be one less required of us. The nations engaged on the western front—England, France, and Italy—are bearing the greater part of this burden. They are doing it heroically. They will continue to do it so long as they are supplied with sufficient food. During normal times they import a large part of their food supplies—Great Britain about three-fourths and France about one-half. Now, after three years of war and the terrible devastation it has wrought they are compelled to look beyond their borders for the supplies to support their armies and their civil population. If we supply them with food, they can and will win the war. If we do not, we will be compelled to win it.

The question of a sufficient food supply is therefore of more immediate importance than putting men into the trenches. A proper food supply to our allies may render it unnecessary for us to send large bodies of men to the battle fields.

The question of a sufficient food supply at reasonable prices is not altogether a war question. It is a peace problem as well. For many years the American farmer has not been receiving a sufficient price for his products. On the other hand, the American consumer has been charged outrageous and exorbitant prices for these same products. The system of handling farm products between the producer and consumer has been uneconomical, wasteful, and expensive. It has also afforded opportunities to the evil disposed to manipulate the markets and levy conscienceless tribute on both producer and consumer. The result has been the impoverishment of both and the enrichment of a lot of piratical parasites who toil not but always succeed in spinning. If this war results in destroying this system and establishing in its place an economic and just system of distribution, it will not have been fought in vain.

It is quite an easy matter to paint the evils of the present system. To invent and apply a remedy to those evils is more difficult. We know something is wrong when the farmer receives only one of every three dollars which his product finally costs the consumer; we know something is wrong when a lot of gamblers and speculators can raise and lower the price of farm products without reference to the amount of production or demand for that production; we know something is wrong when the people of the United States, where the food is produced, are compelled to pay more for it than the people of the warring nations of Europe are charged for the same products. When food products in America can be shipped by rail to our ports, unloaded and reloaded into ships and transported oversea, the freight and ocean insurance paid, and sold cheaper in England and France than at home, a wayfaring man, though a fool, knows there is a "bug under the chip" somewhere.

I read the other day a statement, which has since been corroborated by testimony before our committee. The statement reads:

Do you know that right here in Washington you are paying about 35 per cent more for food than you would in London?

An American arrived in Washington to-day from London and brought with him a menu from Simpson's Grand Divan Tavern, on the Strand, as the best argument he could find for a food-control bill in America.

Compared with the menu of the average Washington hotel, the prices were mild. And England has been in the war three years, while the United States hasn't realized that it is fighting.

Here's the way the tourist started to compare figures:

He went into a well-known downtown hotel for luncheon to-day and ordered julienne soup, roast beef, a vegetable, a pudding, and coffee. The waiter brought him a check for $2.05.

"Why, this is preposterous," he protested. "The same luncheon would have cost me $1.50 in London, and London is on rations."

Then he sat down and made a comparison of London and Washington prices, using menus from restaurants of the same class. Here are some of the results:

In London julienne and tomato soups cost 25 cents a portion; here 30 cents. Other soups compare proportionately in price.

In London mushrooms cost 37 cents and here 65 cents. Onions are 8 cents a portion in London and 35 cents in Washington. Comparison of other vegetable prices bring practically the same results.

Lamb chops cost 90 cents here and 72 cents in London. Puddings which cost 30 cents here are 9 cents in London. Jelly is 6 cents at Simpson's; here it is 21. Fruits are nearly 100 per cent higher here than in London. So are coffee and tea.

There can be but one explanation for a condition of this kind: Our system of distribution—handling of food products between the producer and the consumer—is too expensive. It permits too much tribute to be levied on the misfortunes of the people. The food question has for a long time been a most important one to the American people, the producing and consuming public. During normal times it has not been possible to arouse the people to a sense of impending danger. If this great war rivets their attention on the subject we may confidently hope for relief.

Mr. Chairman, the people are slow to anger, but when once aroused and made aware of the outrages they have suffered woe to the highwaymen who have held them up. Our system of handling farm products between the farm and the consumer has both reduced the price to the farmer and increased the cost to the consumer. The immediate effect has been to drive the farmer away from the farm, reduce the amount of production, and pauperize the consumer.

Heretofore I have had occasion to refer to this condition. In a speech on the good-roads bill, February 7, 1914, I said:

It is a demonstrated fact that consumption of farm products is increasing at a much more rapid rate than production. If this consumption continues to increase in proportion to the production during the next three decades as it has during the past three we will be face to face in this country with famine. If we, as we should, are willing to look into the future and face this problem we will begin at this time to encourage and promote every movement that looks toward making farm life more pleasant and agricultural pursuits more profitable. I do not believe there is any other one thing that would more promote "back-to-the-farm" movement than the building of good roads. It has been often said that we have in the United States the best railroads in the world and the poorest dirt roads, and this is true. We have been during all the history of this country neglecting the farmers of the country, the source from which originates all wealth, and giving our attention, governmental and otherwise, to the promotion of the interests of those engaged in other lines of business.

And again on May 13, 1916, in speaking on the rural-credit bill, I said:

The increase of population in the rural districts is not keeping pace with the increase in the cities. The ratio of increase during the decennium between 1900 and 1910 was 3 to 1 in favor of the cities. During the same decade the increase in population in the United States was more than twice as great as the increase in farm products. During the same 10-year period the supply of meat animals—sheep, swine, and cattle—decreased a little more than 7 per cent. The census figures for the same period further disclose that the number of tenant farmers also increased. The average profits of the farmer on invested capital is about 5½ per cent, and the fact that he is compelled to pay an interest rate greatly in excess of his profit explains why so many farmers are abandoning the farms and moving to the congested centers of population. More than 60 per cent of our population reside in cities and towns having a population of more than 2,500 and less than 40 per cent reside in the country and towns containing a population of less than 2,500, and there is actually residing on the farm not to exceed one-third of our population.

Farming is the most important industry in the world. Without the farm all other business would stagnate and die, the railroads would cease to run, the banks and mercantile establishments could no longer operate, and grass would grow in the streets of our cities. No other business can succeed without the farmer, but the farming business can succeed, if left unfettered, without the aid of any other business.

If this war results in remedying this condition, it will prove neither an expensive nor unholy contest. In my judgment the legislation we are now considering goes further toward correcting the evils of our middleman system than it would have been possible to advance during a half century of peace.

What does this bill propose? Many misleading statements of its provisions have been made. I read from page 2 of the minority report on this bill, filed by Mr. HAUGEN of our committee on the 15th of this month. He said:

House resolution 4961 contains many valuable provisions, but it would seem that if these fines, penalties, and hardships may be imposed upon the producer—

To which he raises no objection, provided they are extended to others—

the same control, fines, and penalties should be applied to others.

If Mr. HAUGEN, a member of the committee, who was present at all the hearings and helped to prepare the bill, so far misunderstands its provisions as to contend that the fines and penalties of its provisions are visited on the producer, the general public, who are unacquainted with its provisions, must be pardoned for misunderstanding it.

Mr. HAUGEN. Will the gentleman yield?

Mr. THOMPSON. Yes.

Mr. HAUGEN. Does the gentleman say that it is not the intention to reduce the price which the producer receives?

Mr. THOMPSON. There is only one section in the bill that applies to the producer, and that is section 8, page 8.

Mr. HAUGEN. If the gentleman had listened to the chairman and had read the statements of Mr. Hoover as reported in the press, he would know that the only object of this bill is to reduce the prices of products of the farmer. How can the farmer be benefited by that.

Mr. THOMPSON. I challenge the gentleman to show by the testimony of Mr. Hoover or anybody else, any statement of the President or anybody else, that it was the intention of anybody to reduce the price to the producer.

Mr. HAUGEN. Let the gentleman read the press.

Mr. THOMPSON. I challenge the gentleman to read from the press that it is the intention of anybody to reduce the price to the producer.

Mr. HAUGEN. I will procure a copy of the press and read it into the RECORD.

Mr. THOMPSON. Mr. Hoover was before our committee and the gentleman from Iowa cross-examined him at great length, and Mr. Hoover at no time stated that it was the intention to reduce the price to the producer.

Mr. JACOWAY. Will the gentleman yield?

Mr. THOMPSON. Yes.

Mr. JACOWAY. Did not Mr. Hoover say that before fixing the minimum price he would take into consideration the overhead charges?

Mr. THOMPSON. Of course, everything that entered into the cost of the farmer's products, and in addition to that at a liberal profit to the farmer, and guarantee that.

Mr. HAUGEN. I have no desire to take up the gentleman's time, but I want to call the gentleman's attention to a statement made in the press reporting Mr. Hoover, in which he said that his biggest task would be to reduce the price on flour to $6.60, and that means a dollar a bushel for wheat to the farmer; and a gentleman heard Mr. Hoover say on another occasion that it was possible that it might put wheat up to $1.50 a bushel. The price was then more than $3 a bushel. Can the gentleman tell me where the farmer is to be benefited by having the price of his wheat cut in two? I say it is no benefit; I say it is a hardship.

Mr. THOMPSON. I am in favor of increasing the price of the products and everything of that kind to the farmer. The testimony shows that the farmer got $1.30 a bushel for his wheat, and that was less than $7 a barrel for flour; yet flour was bringing at that time $17.50. Now, who got that other $10?

Mr. HAUGEN. Now, it is proposed to cut the price in two.

Mr. THOMPSON. Nobody proposes that. The Farmers' Union, the National Grange, the great Northwestern Society of Equity, which reaches from Minneapolis to the Pacific coast, which elected a governor in North Dakota, were all in favor of the bill containing the provision for a maximum price. They said they would rather the Government fix the price than to have the speculator fix the price, which he had been doing in the past.

Mr. HAUGEN. Exactly as I stated in the minority report. No objection is made, and the farmers coming before the committee said that "we are patriotic. If it is necessary to make sacrifices we are willing to do so." But a number objected to being singled out and proposed that you shall include others.

Mr. THOMPSON. I do not want the gentleman to make a speech in my time. I will be glad to have the gentleman make a speech, because I heard a speech yesterday by the gentleman from Texas [Mr. YOUNG], which did not touch, side, edge, or bottom of this bill. [Applause and laughter.] He talked about conditions that do not exist, he talked about fixing maximum and minimum prices, and no price is fixed here. We guarantee to the farmer a minimum price, and the farmer can take more than that if he can get it.

Mr. KINCHELOE. Will the gentleman yield?

Mr. THOMPSON. Yes.

Mr. KINCHELOE. I am much interested for the bill. The argument has been made inside of Congress and out that by establishing a minimum price it would eventually become a maximum price.

Mr. THOMPSON. We do not fix a minimum price.

Mr. KINCHELOE. If the President should fix a minimum price——

Mr. THOMPSON. He is not authorized to fix a minimum price. He is authorized to guarantee a minimum, and the farmer can get as much more than that as he can under the law of supply and demand. If there is nothing in the law of supply and demand, if it does not apply, then these gentlemen who have been talking about it are all wrong. Why, I am in favor of the farmer. All of my people are farmers; I am a farmer myself; that is all I know. I would not favor a bill that would rob the farmer; of course not.

Throughout the bill the farmer, the gardener, and other producers of farm products are specifically exempted from the provisions of the bill. In short, the bill is an attempt on the part of Congress to stimulate production by increasing the price of farm products to the farmer and at the same time reduce the high cost of living to the consumer.

Mr. SWITZER. Will the gentleman yield?

Mr. THOMPSON. Yes.

Mr. SWITZER. The gentleman is a member of the committee. I have had constituents who insist on having a maximum rate fixed for some unperishable food products. The gentleman says that that provision has been cut out of the bill. Will the gentleman state why it was eliminated from the original bill?

Mr. THOMPSON. I can only state my own opinion. I do not know whether this is the judgment of the committee.

Mr. SWITZER. I do not say that I am in favor of it.

Mr. THOMPSON. I am in favor of cutting it out. I would not be in favor of doing it if it robs the consumer. The theory of this bill is that if we provide a just system of distribution, so that the middleman shall receive a fair profit and nothing else, then the farmer's product will be increased in value and the cost to the consumer will be reduced at the same time. That is the exact idea, and that is the reason, in my judgment, that provision was cut out. That is the reason I voted for it, and I think that is the reason all members of the committee voted for it.

To do this we have not found it necessary to fix in the bill, or to authorize the President to fix, either a minimum, a fixed, or a maximum price for farm products. The bill seeks to accomplish the result by making it a crime for any person to willfully destroy any necessaries which include food, feed, fuel, and articles required for their production, or to knowingly commit waste or willfully to permit preventable deterioration of any necessaries in or in connection with their production, manufacture, or distribution; to hoard, monopolize, or attempt to monopolize, either locally or generally, any such products; to engage in any discriminatory and unfair, or any deceptive or wasteful practice or device, or to make any unjust or unreasonable rate or charge in handling or dealing with the same; to conspire, combine, agree, or arrange with any person (a) to limit the facilities for transporting, producing, manufacturing, supplying, storing, or dealing in any necessaries; (b) to restrict the supply of any necessaries; (c) to restrict the distribution of any necessaries; (d) to prevent, limit, or lessen the manufacture or production of any necessaries, or to enhance the price thereof; or (e) to exact excessive prices for any necessaries. And it visits on those guilty of hoarding a penalty not exceeding $5,000 fine and imprisonment for not more than two years.

Necessaries are defined to be hoarded when (a) held, contracted for, or arranged for by any person in a quantity in excess of his reasonable requirements for use or consumption by himself and dependents for a reasonable time; (b) held, contracted for, or arranged for by any manufacturer, wholesaler, retailer, or other dealer in a quantity in excess of the reasonable requirements of his business for use or sale by him for a reasonable time, or reasonably required to furnish necessaries produced in surplus quantities seasonably throughout the period of scant or no production; or (c) withheld, whether by possession or under any contract or arrangement, from the market by any person for the purpose of unreasonably increasing or diminishing the price, with the following proviso:

Provided, however, That any accumulating or withholding by any farmer, gardener, or any other person of the products of any farm, garden, or other land owned, leased, or cultivated by him shall not be deemed to be hoarding within the meaning of this act.

In addition to making unlawful these acts and providing penalties therefor, the bill also confers on the President authority to license the importation, exportation, manufacture, storage, or distribution of any necessaries, and in connection with this licensing to prescribe rules and regulations governing the conduct of the business of licensees so as to prevent uneconomical manufacture, inequitable distribution, unjust, unreasonable, discriminatory, and unfair or wasteful rate, charge, or practice, and he is authorized to revoke the license if he should find his rules and regulations violated. The bill also makes it unlawful to engage in this character of business without a license and provides a penalty of not exceeding $5,000 and imprisonment of not more than two years for its violation.

The authority conferred by this provision of the bill is far-reaching. It puts into the hands of the President an instrument which will enable him to drive out of business those who are illegally and unlawfully profiting at the expense of their unfortunate neighbors. They ought to be driven out of business. They contribute nothing to society; they derive their sustenance from contributions which they unlawfully levy on the public. Under this licensing provision it is possible to prohibit and eliminate from every character of business all unlawful, extortionate, unreasonable, unfair, discriminatory, and evil practices of every character and description. This ought to be done, and we ought not to have waited until the coming of this war to do it. The American people—both producer and consumer—should have had relief long ago.

The bill further authorizes the President, whenever any necessaries are hoarded, to proceed against them in the district court of the United States, to condemn and dispose of them in such manner as to provide for their most equitable distribution, the proceeds of their sale to be paid to the owner. This provision gives the President a weapon to compel the disposition of hoarded necessaries in the event the hoarder, in the face of criminal prosecution, should refuse to dispose of them.

Mr. CAMPBELL of Kansas. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON. Yes.

Mr. CAMPBELL of Kansas. How is it to be ascertained under this bill when men are guilty of those practices?

Mr. THOMPSON. I will say this: The gentleman and I are just common, ordinary citizens of the Republic. The President of the United States is supposed to appoint an expert to go out and look after these matters, and if that expert finds that these practices are unreasonable, discriminatory, unfair, unjust, extortionate, then the President, upon the responsibility of that man, provides rules and regulations and they become part of the provisions of this license, and if a man is found to violate those provisions then he should not continue in business.

Mr. LEVER. Just like the Interstate Commerce Commission does.

Mr. CAMPBELL of Kansas. As I understand it, when this agent finds that this particular man is guilty of these unlawful practices, then on the recommendation of the agent the license to do business would be taken away from him?

Mr. THOMPSON. I do not take it that upon the recommendation of this agent that the license would be taken away. The President is elected by more than 100,000,000 people and he is supposed to be one of the greatest men in this Republic. The President when he gets these recommendations, if the man complained of is dissatisfied, can then grant to the man a hearing, and if on the hearing the President says that his practice is unfair or comes within the provisions of the rules the license is revoked.

Mr. CAMPBELL of Kansas. Of course, it is not the contention of my colleague that the President personally would hear complaints of that character?

Mr. THOMPSON. I think either the President would or he would have some man just as large as he is to hear them. I do not think the President would take the judgment of very small men on matters of that kind, because I would not do it myself. I do not believe there is a man in this Republic who would want to revoke the license of men who are doing a decent business in the country.

Mr. CAMPBELL of Kansas. I am asking for information.

Mr. THOMPSON. I understand.

Mr. CAMPBELL of Kansas. This license section has struck me as it has struck the gentleman from Oklahoma, as having a very far-reaching effect.

Mr. THOMPSON. That is true, and, in my judgment, it is the best section in the bill.

Mr. CAMPBELL of Kansas. I am not ready to agree to that until I know how it is to be operated.

Mr. THOMPSON. I am in favor of that section in times of peace, because our people have been robbed so much, the producers and the consumers, by a lot of parasites who operate between them that I want to cut out those parasites for all time. [Applause.]

Mr. DYER. Mr. Chairman, will the gentleman yield?
Mr. THOMPSON. Yes.
Mr. DYER. When the gentleman was interrupted by the gentleman from Kansas [Mr. CAMPBELL] he was saying what conditions could be looked into by the President and regulated. I take it he means only food and fuel, or does the bill take in anything else?
Mr. THOMPSON. Food, feed, fuel, or the products necessary in their production. That is the definition of necessaries in the first section of the bill.
Mr. SLAYDEN. Mr. Chairman, will the gentleman yield?
Mr. THOMPSON. Yes.
Mr. SLAYDEN. If I understand the gentleman's contention, it is that a permit to do business or a license may be withheld from a citizen on the recommendation or by the determination of one man, nominally the President; but in point of fact, as the gentleman from Kansas [Mr. CAMPBELL] suggests, some one else, for the President is too much occupied with even greater matters; but does the gentleman want to confer by law the authority on any one citizen of the United States to deny any other citizen the right to engage in and prosecute any line of legitimate business?
Mr. THOMPSON. I would answer my colleague by saying this: I simply quote the testimony of all of the farmers' organizations. They said that they would rather submit this matter to the President than to submit to the fellows who are trying to make money out of it.
The CHAIRMAN. The time of the gentleman from Oklahoma has expired.
Mr. LEVER. Mr. Chairman, I yield 30 minutes more to the gentleman.
Mr. SLAYDEN. Is that the alternative? Have we reached a condition where one man or one man selected by one man shall determine these things? Are there no other tribunals? If the business is not legitimate, stop the business; but if it is legitimate, give the citizen the right to engage in it, and do not put him at the mercy of one individual.
Mr. THOMPSON. A little later on in my speech I shall answer that question, but I prefer to put a man at the door and guard the horse before the horse is stolen than to try to catch the thief after he has already stolen the horse. That is my position, and that is the position of this bill. We desire to protect the people before they have been robbed rather than try to prosecute a lot of criminals after they have robbed the people—both producer and consumer.
Mr. SLAYDEN. But the gentleman will not prosecute a man for a crime that he has not committed?
Mr. KING. Mr. Chairman, would the distinguished gentleman from Oklahoma yield for just one question?
Mr. THOMPSON. Yes; if the gentleman will cut out the "distinguished."
Mr. KING. Oh, I beg to differ with the gentleman. He is distinguished. I am strongly in favor of this bill and the principles enunciated in it, but why on earth were the packers left out of the bill?
Mr. THOMPSON. Why, it takes in everybody who is trying to rob the people; the packer and everybody else.
Mr. GOODWIN of Arkansas. The packers are in.
Mr. KING. Does it cover meat?
Mr. THOMPSON. Of course; feed and food. Is meat food? Of course it covers meat.
Mr. RUCKER. Not nowadays.
Mr. KING. Would it enable the commissioner to get after the packing interest in Chicago or elsewhere if they are engaged in depriving the farmer of his market?
Mr. THOMPSON. Of course.
Mr. CAMPBELL of Kansas. This is an important bill, and we must take plenty of time for its discussion. Do I understand a license would be granted Armour & Co., Swift & Co., to do business?
Mr. THOMPSON. Sure.
Mr. CAMPBELL of Kansas. If this inspector found that the concerns had been charging more than he thought was right, then their license to do business would be taken away?
Mr. THOMPSON. I would say that after a license had been granted, and it was found they had not complied with the conditions, that the license would be revoked and they could not do business any further.
Mr. CAMPBELL of Kansas. The license specifies the scope within which they must do business. Is that the idea?
Mr. THOMPSON. There is no doubt about that. The license requires them to do business in a certain way, and it would put an end to unfair and discriminatory practices.
Mr. CAMPBELL of Kansas. Will the license also extend to a man from whom I buy the chuck steak I get?
Mr. THOMPSON. The retailer?
Mr. CAMPBELL of Kansas. Yes.
Mr. THOMPSON. It does not.
Mr. CAMPBELL of Kansas. In what way am I protected, because the chuck-steak man is the man who gets my money?
Mr. THOMPSON. The gentleman would not want every farmer in his district restricted by the provisions of this bill, would he, because there are too many farmers there to combine, and these farmers are going to do the right thing? The retailers of the gentleman's district are not going to violate the provisions of the bill; it is the great middlemen, the men who have control of the vast capital of this country, that we are trying to get after in this bill.
Mr. CAMPBELL of Kansas. Why do not you say so?
Mr. THOMPSON. We are saying so just as plainly as we possibly can.
Mr. CAMPBELL of Kansas. What I am trying to find out is who are included in the bill, and I am asking one of the men who has made the bill.
Mr. THOMPSON. The retail men are not and the farmers are not. Is that satisfactory to the gentleman?
Mr. CAMPBELL of Kansas. Well——
Mr. THOMPSON. That is the truth about it.
Mr. HARDY. Exporters, importers, manufacturers, and those named in section 5 are included.
Mr. THOMPSON. There are special provisions for the exclusion of the farmer and the retailer. The bill further authorizes the President to purchase, provide for the production or manufacture of necessaries, store them, provide storage facilities, sell them, and so forth.
It also authorizes the President to prescribe such regulations governing exchanges and boards of trade or other such businesses or institutions as he may find essential in order to prevent undue enhancement or fluctuation of prices, injurious speculation in, or in order to prevent unjust market manipulation or unfair and misleading market quotations of the price of necessaries.
Mr. BLACK. Will my colleague yield?
Mr. THOMPSON. I have a very limited time.
Mr. BLACK. Only one question and I will be very brief. It is in reference to section 9, which gives the President power to requisition supplies where the other machinery of the bill does not exclusively operate. As I understand he can go to any holder of produce——
Mr. THOMPSON. Outside the producer.
Mr. BLACK. There is no exemption.
Mr. THOMPSON. The gentleman does not understand the bill.
Mr. BLACK. I call attention to the fact the only exemption is a natural person, and he may retain as much as he needs for the support of himself and dependents.
Mr. THOMPSON. The other sections of the bill take care of the farmer—the producer.
Mr. BLACK. We have no reference to that section and I think anyone who reads the section will agree that covers the farmers or anybody else.
Mr. THOMPSON. I do not think so.
Mr. DYER. Why would not the farmer be covered?
Mr. THOMPSON. There is only one section of the bill that applies to the farmer, and that provision of the bill is found in section 8, page 8, where he willfully destroys for the purpose of raising the price. That is the only section that applies to the farmer in this bill.
Mr. SLAYDEN. Prevents him destroying?
Mr. THOMPSON. For the purpose of raising prices, that is all.
Much has been said about abolishing exchanges, boards of trade, and so forth. If that were a remedy our task would be easy. But all the testimony before our committee disclosed that exchanges legitimately conducted are not injurious. On the contrary, they are beneficial to both the producer and the consumer. It is the evil practices that have grown up in the operation of exchanges—speculation, manipulation, false information, and other known and unknown methods—that have proven injurious. An exchange honestly conducted is a place where people meet to sell or purchase products for future delivery. The transaction is open and on the square. As actually conducted, only about 1 out of every 1,400 transactions are real; the other 1,399 are wind. The testimony disclosed that the sale of wheat for future delivery on the Chicago Board of Trade amounts annually to more than 70,000,000,000 bushels. The gross amount of wheat, which is practically the only grain dealt in, actually received at the Chicago market annually is less than 50,000,000 bushels. So there is practically 3,000 bushels of wind bought and sold every time 1 real bushel of wheat

changes hands. The incentive for this evil practice is the revenue which the commission men, the board of trade operators, secure. The minimum commission, one-eighth cent per bushel, on this enormous gambling in futures yields annually to these board of trade operators from seventy-five to one hundred million dollars, while the maximum revenue for handling real grain never exceeds $2,500,000. Grain marketing, as carried on under the rules and regulations of exchanges and boards of trade to-day, is largely a matter of gambling and not of real trading.

Under this authority the President can eliminate from our distributive system future trading, short selling, and price manipulation without interfering in any way with the legitimate functions of these exchanges. The undisputed testimony before our committee was to the effect that it would not be wise to wholly abolish them. They have a legitimate function. If they were abolished, there would be no way to ascertain the market value of products; both seller and purchaser would be taking a leap in the dark, and, as the purchaser is the man with the money, the seller is the party who would get the worst of the transaction. This is exactly what happened in 1914 when the cotton exchanges were closed. The farmer took his cotton to town, and there were no market quotations. He was compelled to take exactly what was offered him, and to take that price in trade or other "chips and whetstones."

It is urged that the bill confers too much power on the President. It does confer vast power, but those who criticize the bill in this respect offer no substitute for its provisions. In the face of prevailing high prices to the consumer and the low prices which the producers have heretofore been receiving, I do not understand how those who criticize this bill can stand paralyzed and offer no substitute. The President says, "Give me this power and I will remedy the wrongs." Those who oppose conferring this power and offer no better method seem to be willing to permit the great producing and consuming masses of their countrymen to be robbed and plundered by a conscienceless bunch of speculators and extortioners because they object to conferring authority on some one to stop the robbery. A bill conferring no power would be a worthless instrument in a fight against speculators, hoarders, monopolists, manipulators, and various other species of parasites who grow rich on the misfortunes of others. If these nefarious practices are stopped, power must be given to some one to stop them. The individual robbed can not stop them. He does not know who they are. Their methods are so subtle and refined that it requires an expert to detect them. You can not enact a statute that deters them. They invent new methods as fast as the old ones are exposed and outlawed. The only effective way to handle them is to confer authority on some one to put them out of business and confine them in the penitentiary, and then hold that party responsible if they continue their outlawry. This bill confers such authority on the President, and if after it is enacted the people are not protected they will know exactly who to hold responsible.

The bill further authorizes the President, in order to stimulate production of nonperishable agricultural products within the United States, to guarantee to every producer a fixed minimum price in order to assure the producer a reasonable profit. It does not require the producer to sell at that price if he does not choose to do so. If the law of supply and demand fixes a higher price, the producer can dispose of his products at the higher price. If the law of supply and demand fixes a lower price, the Government must either take the products at the price guaranteed or permit the producer to sell them at the lower price and pay him the difference. The producer is not required to sell at any price. He is left entirely free to exercise his own judgment. The provision was inserted for the protection of the producer, and the reason it was inserted are these:

First. If this war were to close immediately, farm products might be reduced as a result from a quarter to a half in value.

Second. If Germany were to succeed in her submarine warfare and prevent the exportation of farm products from the United States, their value might be very largely, if not wholly, destroyed, as was the value of cotton in 1914.

Third. If the foreign Governments engaged in war were to combine and appoint one purchasing agent and refuse to purchase except through him, our producers would be at his mercy, and he could fix the price at which they would be compelled to sell their products.

In order to avoid any of these contingencies, and guarantee to the producer a profitable price under all circumstances and conditions, this provision was inserted in the bill.

The bill further authorizes the President, at any time he sees fit, to prohibit the use of food, feed materials, or feeds in the production of alcohol, alcoholic, or nonalcoholic beverages. I am sure that no one will assert that this is not a wise provision. Food is more important than drinks of this kind. I tried to amend this provision of the bill so as to prohibit the use of these articles in the manufacture of alcohol, alcoholic, or nonalcoholic beverages during the continuance of the war, but my amendment was rejected.

The other provisions of the bill are largely administrative in character.

There are two ways of protecting the farmer and the consumer. One is to lock the stable door after the horse has been stolen—prosecute or attempt to prosecute the malefactor after the farmer and the consumer have been robbed. The other is to place an armed guard at the stable door before the horse is stolen and drive away the thief. This bill is along the lines of the last method. We confer power which will enable the President to drive the thief, the manipulator, the speculator, out of business, and reduce the overhead charges between the producer and consumer.

The Sunday Post contained an editorial which is in line with this thought. It said:

PROSECUTION V. CONTROL.

The Government has tried so frequently to reduce prices of various commodities by resort to legal prosecutions, and has failed so frequently to get results, that it must be admitted now that some other method is preferable. Invariably the suits have been against large combinations, which, when the facts were brought out in court, were shown to have reduced the cost of production and overhead expense to the point where lower prices were actually put into effect. The fault of higher prices, it was found, must be located elsewhere.

Prevention has always been more effective than an attempt to cure after the evil has developed. Control of food distribution will prevent higher prices, whereas if there is mere reliance upon Federal attorneys to prosecute those who engage in combinations to inflate prices all the legal machinery of the Government will not be effective in restoring quotations to a normal level.

Delay in enacting the pending bills is an incentive to higher prices. It is not merely the natural selfishness of individuals that produces this result. The fear of the consumers contributes to the competition for available supplies, and the result is that productive interests are hard put to it in supplying the demand for two or four months' stock in one or two weeks' time.

Control of food distribution will be an assurance of safety alike to the producer and the consumer. There need be no fear that it will be necessary to exercise all the power implied in the food-control bills. The mere existence of such power will act as a check against unfair practices, against hoarding, and against speculation. The moral influence of having such bills on the statute books will bulwark the educational and cooperative work which is proposed as a solution of the food and fuel problems.

Special interests may be opposed to the bills, but the public generally is for them.

WHY DID WE ENTER THIS WAR?

Mr. Chairman, this legislation is rendered imperatively necessary by the war in which we are engaged. I wish the necessity did not exist. I belong to that class of my countrymen who are commonly referred to as "pacifists." I regret that we found it impossible to remain disentangled from this conflict. I wish it were possible that the bitter cup might have passed from the lips of the American people. We tried in every way possible, short of ignominious, cowardly, and base surrender of our undisputed international rights, to remain out of this conflict. Germany willed it otherwise. She deliberately, in contemptuous disregard of international law, in defiance of the dictates of humanity, and in violation of the morals of God, destroyed our ships and murdered our women and children while in the pursuit of their peaceful missions on the high seas. She notified us that we could no longer travel on the highways of the world, and, when we went about our peaceful task, she sent, without warning, 15 of our vessels and 224 of our innocent men, women, and children to watery graves. She bade us fight or beat a cowardly retreat. She mistook our patience, our long suffering, our forebearance, for timidity. She thought we would not fight. We did not bring on the conflict. We sadly and reluctantly entered into a war which was cruelly and ruthlessly thrust upon us. We had to fight or become slaves. We had to fight or suffer the destruction of the products of our mines, our factories, and our farms. We had to fight or to suffer the universal bankruptcy of our people. We had to fight or show ourselves the cowardly and degenerate sons of inspired and heroic sires, who were ready and willing to die for the right. Had we quailed and accepted the path of ease instead of accepting the call of battle thrust high in our face by the Imperial German Government the days of the Republic would have been numbered. A people who are unwilling to fight and die for freedom will not long enjoy freedom. This has been the inexorable law of God in all ages. Had our forefathers been willing to surrender their rights the War of the Revolution could have been avoided. Had they submitted to taxation without representation; had they permitted the housing of British troops in their homes without their consent; had they submitted to foreign dictation, they could have continued slaves in peace. They did not choose to do this, and we honor them for their choice. They preferred to have a little party in Boston Harbor and spill the tea. They

went to war. They endured seven years of unspeakable hardships. They marched over frozen ground, crimsoned by the blood of unshod feet. They starved and fought and died that posterity might be free. They left us a glorious heritage of heroic deeds. We would not have it otherwise.

In 1812 they went to war to assert their freedom from search and seizure. They could have avoided that contest by a humiliating and cowardly submission, but they did not do it, and it is to our glory that they did not.

There was only one way that we could have avoided this war. We would to-day be at peace had we meekly retired from the sea and thereby confessed our degeneracy and degradation. Had we done so we would have admitted our craven cowardice and brought the blush of shame and humiliation to the face of posterity. We are engaged in a war from which there was no honorable escape—a war of self-defense.

I confess all this talk of our entering the war in order to free the peoples of other countries does not appeal to me. I was unwilling to enter this war except as a last resort and in the necessary defense of our freedom. Kaisers, kings, and czars all look alike to me. If their people are satisfied with their rule—or misrule, whichever it may be—we also should be satisfied. This is not a contest to free other peoples. It is a struggle to retain our own freedom. There has been too much talk in connection with this war about world democracy, the freedom of other peoples, and such like subjects. While we sympathize with those struggling for freedom and the right to rule themselves all over the world, we do not feel it our duty to enter every such war. We ought to be frank and let the American people know the truth. We are in this war not because of any desire on our part but because we were forced into it.

As a neutral nation we were in strict compliance with international law, selling our products to those belligerents who could come to our shores and get them. We sold to Germany the same as we sold to her enemies. The *Deutschland* made two trips to our country last year and returned laden with our products. We sold and delivered at our ports every character of goods—contraband as well as noncontraband. When our vessels carried contraband, they were liable to search and seizure under the well-known rules of international law. The allies blockaded the ports of the central powers and prohibited our vessels from entering them, but in doing so they complied with international law. They did not sink our ships and ruthlessly murder our men, women, and children. They took charge of the ship, took it into port, and subjected it to the judgment of a prize court. Germany did not have control of the seas and could not pursue the same lawful practice. She therefore, without possessing the power to lawfully enforce her orders, declared a blockade of the ports of the allies, and sought to enforce compliance with these orders by sinking without warning neutral vessels loaded with noncontraband and carrying citizens of neutral countries—men, women, and children. She sought by outlawry and terrorism to do what she was unable to do in a legal manner—to drive neutral vessels from the seas, paralyze neutral shipping, annihilate the prosperity of neutral countries, destroy their every industry—agricultural, manufacture, and mineral—throw out of employment the working people and plunge them into universal bankruptcy.

Submission to such conduct was unthinkable. Our fathers fought and died to give us freedom and independence. We would have been unworthy of them had we refused to fight and die to maintain that freedom and independence.

THE METHOD OF RAISING AN ARMY.

Mr. Chairman, I have cast a number of votes at this session of Congress which I would not have cast under ordinary circumstances. I cast them in the light of our surroundings. I did what I thought was the best thing to do to preserve this Government and the liberty of its people.

I voted a few days ago, at the earnest solicitation of the President, to permit him to raise the Army required to fight this war by the selective-draft method. My hostility to large armies and mighty navies in time of peace is well known and has not abated in the least. If this war results in the destruction of militarism, as we are wont to believe, the blood of its heroic dead will not have been shed in vain. If, on the contrary, it enthrones militarism and forever fixes in their places those who claim to rule by divine right, the pendulum of time will have been swung back many centuries.

I want to take a few moments to explain the reasons for the vote I cast. Modern warfare is not the warfare of the past—of history. Wars are no longer settled by a single battle. In modern warfare the men and women at home who supply the food, the clothing, the ammunition, and transportation for those in the trenches on the far-flung battle line, are just as much a necessary part of an efficient army as those at the front. Formerly, this was not so. In the olden times men went into the fighting units or were considered slackers. But in these new days the men on the farm who grow the grain and meat, the men in the factory who produce the clothing and ammunition, the men in the forest and mine who furnish the raw material, and the men on the railroad and ship who transport these products are just as essential to the creation of an efficient fighting machine as the men who handle the guns at the front.

It would be fatal if all were engaged either on the farm, in the factory, the mine, on the railroad, the ship, or the firing line. Those who can render more efficient service on the farm, in the factory or mine, on the railroad or ship, must be left there while the others do the fighting.

I am unalterably opposed to universal compulsory military service in time of peace. I would not oppose universal military training, but I am opposed to large standing armies in time of peace, no matter how created, for they have ever been instruments by which kings and tyrants have enslaved the people. The measure we passed does not establish such a system. The measure, by its terms, is temporary and continues only during the period of the present emergency. I would have voted against it had it not been specifically so limited.

All, I take it, will agree that the war must be conducted in such a way as to insure victory and peace at the earliest moment and that every citizen who receives the protection of the flag should contribute, even to the extent of his fortune and his life, to the victory of his country. Those who do not so agree confess that slavery is to be preferred to freedom if freedom can only be purchased at the price of blood. If it be agreed that the war must be fought speedily, efficiently, and victoriously, it follows that this can not be done without men, and the only question that remains is the proper method to pursue in enlisting these men.

If they be recruited by the volunteer method, who will go? The flower of the country's young manhood, the brave, impetuous, and patriotic youths from field and factory, from mine and shop, from the avenues of transportation and commerce. Young men with widowed mothers to support, young men with wives and children, young men with aged parents dependent upon them. These will lay down their burdens and respond to their country's call. What will be the result? What was the result in England? Every line of industry was paralyzed. The farms lay idle, the factories closed, transportation was disorganized, and the army was helpless for the want of food and clothing, guns and ammunition. England was finally compelled in sorrow to admit her mistake and send thousands home from the front to take again their places in the ranks of industry.

Let us see who fight the wars under the volunteer system. Here is a letter written by the Commissioner of Pensions, the Hon. G. M. Saltzgaber, to the Hon. JOSEPH G. CANNON, on March 20, 1916, and published in the CONGRESSIONAL RECORD March 21, 1916:

DEPARTMENT OF THE INTERIOR,
BUREAU OF PENSIONS,
Washington, D. C., March 20, 1916.

Hon. JOSEPH G. CANNON,
House of Representatives, Washington, D. C.

MY DEAR MR. CANNON: In compliance with your verbal request of to-day, I have the honor to hand you herewith what is believed to be a correct statement of the relative ages of the men who enlisted in the Union Army during the Civil War.

Trusting this will serve your purpose, I am,
Very truly, yours,

G. M. SALTZGABER,
Commissioner.

Age at enlistment, 1861–1865.

Those 10 years and under	25
Those 11 years and under	38
Those 12 years and under	225
Those 13 years and under	300
Those 14 years and under	1,523
Those 15 years and under	104,987
Those 16 years and under	231,051
Those 17 years and under	844,891
Those 18 years and under	1,151,438
Those 21 years and under (these two classes make the total number of enlistments)	2,159,798
Those 22 years and over (these two classes make the total number of enlistments)	618,511
Those 25 years and over	46,626
Those 44 years and over	16,071

Total men enlisted, 2,778,309. The estimated number of individuals in service is given as 2,213,365.

Only 681,208 men 22 years and upward of age fought on the Union side in the Civil War, while 2,097,096 boys under 22 years of age fought, bled, and died in that mighty struggle. Does anyone, can anyone, think this the fair, the just, and the proper way to carry on war? Does anyone think these brave, patriotic,

immature, impetuous boys should do the fighting, while the rich, the idle, the habitues of pool halls, and the frequenters of the golf links, the members of riding and dancing clubs, and bachelors remain at home? In fixing the service age at 21 to 30 the bill enlists mature men and leaves the children at home.

It would be pleasing to all, I am sure, if this war could be fought without an army, without the loss of life, without the expenditure of gigantic sums; but such a thing is impossible. Somebody must go, and a number of those who go must die. Who shall these be and how shall they be chosen? That is the question. Shall it be the children who volunteer, or the mature men, the rich and the idle, the slacker and the bachelor. That the volunteer has always been a good soldier, that he has reflected imperishable glory on our country and its flag, on all the battle fields of the Republic, is not denied. It is affirmed. Those who opposed selective conscription did not propose the volunteer system as a substitute. They recommended a selective system just as in the bill as passed, with a provision permitting the President to call for volunteers while the selective system was being put in operation. The proviso was a sham, a delusion. If they believed the additional men required in this war and those already in the Regular Army and State militia should be raised by the volunteer system, why did they not submit that question squarely? Why did they sugar-coat the issue by submitting the selective-draft system with a permissive volunteer proviso?

The bill passed does not prevent volunteers. It provides for volunteers. It provides for increasing the Regular Army and the National Guard to war strength by the volunteer method. The Regular Army is short at this time 161,519 men of its full war strength. The National Guard lacks 206,349 men of having its full enlistment. Here is presented an opportunity for the enlistment by the volunteer method of 367,868 men. What is happening? From all over the country the enlistment, I am informed, is less than a thousand a day, and practically all of these are from the smaller towns and rural districts. The great cities are not furnishing their quota. The selective system will avoid this condition. No system can be devised which will provide an army without taking men, and no war can be fought without many of these men yielding up their lives. Whatever plan is adopted will be odious, for under its provisions the Army will be recruited, and those who must go to the front and their relatives will imagine that it would have been otherwise but for the system in effect.

It fills my heart with inexpressible sadness to think of those homes with vacant chairs and silent lips. But that is the price of war, and for that reason I have always exerted whatever influence I had in favor of peace.

The big overshadowing question which confronts us is how to successfully and efficiently conduct this war. The President is the Commander in Chief of the Army and Navy, made so by the Constitution. He is charged with the responsibility of conducting the war. For its success or failure the people will hold him to strict account. He said to us he wanted the selective system, that it was the only plan whereby he could conduct this mighty struggle. What was our patriotic duty under these circumstances? Should we have tied his hands and commanded him to bring us victory in the face of his warning? I was unwilling to do so. For these reasons I voted for the selective draft provision. It was not the bill favored and recommended by the Army Board. They recommended that the selective ages should be between 19 and 25. I could never have voted for a bill containing such a provision. I do not believe it consistent with the principles of democratic government to require boys to whom the right of franchise is denied to fight the battles of that Government. This was a matter of principle with me, and where principle is involved there can be no surrender. The President was willing, however, to waive this provision and accept the change in age.

The people elected the President Chief Magistrate of this Nation. They will hold him responsible for the conduct of this war—for its success or failure. If he conducts it successfully, the credit will be his. If there be failures, for these he will be condemned. In the face of the statement that he could not conduct the war successfully under any other than the selective draft plan, I felt it my duty, regardless of the consequences to myself, to give him my loyal support.

RAISING MONEY TO PAY FOR THE WAR.

Mr. Chairman, as I have already said, the real truth with reference to the manner in which this war was forced upon us has not been made plain to the American people; and another thing has also been bothering them, and that is the manner of financing this war.

The first question will take care of itself as soon as the facts are known. The financial question must be cared for by Congress. Up to date all must admit that this war is not any too popular with the people. The fathers and mothers are a little bit hazy about sending their sons across the sea to fight for world democracy. They would much prefer to purify our democracy here at home. When all this talk about world democracy is cast into the scrap heap and the people understand that this war was forced upon us and we are fighting in self-defense, this feeling will largely disappear, but we must see to it in raising revenue that a feeling is not created that a larger part of the burdens are being placed on the shoulders of the common people. The young men, between 21 and 31, who will be called to do the fighting, will very largely come from the common, ordinary homes of the country. Now, if you go into these homes and take their boys—the idols of their hearts—and send them to the trenches to fight and die, and then reach into the pockets of the fathers and mothers left at home and levy a contribution to support the boys at the front, you are certain to create the impression that this is a rich man's war and a poor man's pay and fight. Nothing could possibly be more disastrous than the spread of such a sentiment.

There is but one way that this war can be popularized and that is to let the people know the facts and convince them that everyone is bearing his part of the burden, that there are no financial "slackers." This can be done in only one way—pay the expenses of this war as we go; do not unload it on posterity. If this is a just war, if we were right in entering it, we should be willing to pay its cost and not shift the burden to the shoulders of our children.

The credit system has bankrupted more individuals than all other causes combined, and it is as fatal to a Government as it is to an individual. Money obtained on credit comes cheap. Its burden is not felt; there is no sacrifice in connection with its collection and the people do not really know what is happening. There is no economy in the expenditure of borrowed money. Extravagance runs wild, the burden and mistakes are visited on posterity. Every dollar of this war's burden should be paid as it is incurred. If we are compelled to make sacrifices as we proceed, there will be more care exercised in what we do. I have been alarmed at what has already taken place in the way of expenditures. It seems that everyone connected with the Government is trying to secure some kind of an appropriation under the guise of national defense, and that as soon as the appropriation is secured its expenditure is proceeded with regardless of economy or efficiency. The surest way to call a halt on this mad hysteria of expenditures is to collect the money at the time the expenditure is being made.

Money should also be levied on the wealth of the country. It should be collected by a tax on incomes, on inheritances, and on profits. Those who enjoy incomes, who receive inheritances and collect profits can bear the burdens of this conflict without making any real sacrifice. Every other character of tax should be stricken from the revenue bill, for in the end they are shifted to the shoulders of the consumer.

The common ordinary people of the United States are not in a position to be further taxed, and they can not be without adding to the unpopularity of this war. The people are not blind. They know that the wealth of this country is being gradually concentrated in the hands of a comparatively few rich people. They know also that these rich people will not go into the trenches and fight this war. They are asking the question, "If my son can be conscripted to fight this war, why can not the money of the rich—those who will lose most if this war is lost—be conscripted to pay its cost."

The incomes reported to the Treasury Department in 1915 were:

Classification of incomes.	Number of returns.	Mean gross aggregate taxable incomes.
$3,000 to $5,000	127,994	$506,928,100
$5,000 to $10,000	120,402	903,015,000
$10,000 to $15,000	34,102	426,275,000
$15,000 to $20,000	16,475	288,312,500
$20,000 to $25,000	9,707	218,407,500
$25,000 to $30,000	6,196	190,190,000
$30,000 to $40,000	7,005	245,175,000
$40,000 to $50,000	4,100	184,500,000
$50,000 to $75,000	4,791	299,337,500
$75,000 to $100,000	2,054	179,900,000
	336,652	3,341,140,600

Let us look for a moment at the tremendous profits of corporations which an excess profits tax would reach. I hold in my hand a list of 44 corporations, showing the amount of incomes they received in 1914, before they commenced to receive

the huge war profits, and in 1916, after these profits began to come in:

[Figures shown are net profits earned for the stockholders after deducting cost of materials, labor, depreciation, overhead, interest, and all other charges. All figures are official, having been taken from the companies' annual reports.]

Corporations.	1914	1913	Amount of increase.
American Can Co.	$2,916,339	$7,962,982	$5,046,643
American Smelting & Refining Co.	9,271,565	23,252,248	13,980,483
American Hide & Leather Co.	107,205	1,643,266	1,536,061
American Beet Sugar Co.	452,074	2,445,189	1,993,115
American Locomotive Co.	2,076,127	10,769,429	8,693,302
American Steel Foundries Co.	231,481	3,418,057	3,649,538
American Woolen Co.	2,788,602	5,863,819	3,075,217
American Writing Paper Co.	108,310	2,524,378	2,632,688
Armour & Co.	7,509,908	20,100,000	12,590,092
Atlas Powder Co.	294,150	2,939,790	2,645,640
Baldwin Locomotive Co.	350,230	5,982,517	5,632,287
Bethlehem Steel Corporation.	5,590,020	43,593,988	38,003,948
Barrett Co. (American Coal Products Co.)	1,280,476	4,247,858	2,967,382
Brown Shoe Co.	495,890	1,467,757	971,867
Central Leather Co.	4,876,924	15,489,201	10,612,277
Colorado Fuel & Iron Co.	905,968	2,210,171	3,107,139
Crucible Steel Co.	1,015,039	13,223,655	12,208,616
Cuban-American Sugar Co.	2,705,723	8,235,113	5,539,320
E. I. du Pont de Nemours Powder Co.	4,831,793	82,107,693	77,275,900
General Chemical Co.	2,857,898	12,286,826	9,428,928
Hercules Powder Co.	1,247,255	16,658,873	15,411,618
International Agricultural Corporation.	160,022	1,279,832	1,194,924
International Nickel Co.	4,792,655	11,748,279	6,955,614
Lackawanna Steel Co.	1,652,444	12,218,234	13,870,678
Morris & Co. (packers)	2,205,672	3,832,213	1,626,541
National Enameling & Stamping Co.	548,758	2,417,803	1,869,047
New York Air Brake Co.	641,046	8,214,962	7,573,916
Phelps-Dodge Corporation.	6,664,839	21,974,263	15,309,424
Pittsburgh Steel Co.	416,551	4,564,068	4,147,517
Railway Steel Spring Co.	374,454	3,710,805	3,336,351
Republic Iron & Steel Co.	1,028,748	14,789,163	13,760,415
Sloss-Sheffield Iron & Steel Co.	490,139	1,912,624	1,422,485
Swift & Co.	9,450,000	20,465,000	11,015,000
Texas (Oil) Co.	6,185,974	13,898,861	7,712,887
United States Steel Corporation.	23,496,768	271,531,730	248,034,962
United States Cast Iron Pipe Co.	59,868	1,368,641	1,368,509
United Fruit Co.	2,264,911	11,943,151	9,678,240
United States Industrial Alcohol Co.	653,264	4,884,587	4,231,323
United States Smelting, Refining & Mining Co.	2,265,641	8,898,464	6,632,823
Westinghouse Air-Brake Co.	3,482,994	8,396,103	5,913,109
Westinghouse Electric & Manufacturing Co.	4,058,809	9,666,789	5,607,980
Wilson & Co. (packers)	1,511,528	4,913,873	3,402,345

Let us analyze for a moment these startling increases:

The American Can Co. from $2,916,339 to $7,962,892, a net increase of nearly threefold.

The American Woolen Co. from $2,788,602 to $5,863,819, a net increase of more than double.

Armour & Co. from $7,509,908 to $20,100,000, a net increase of nearly threefold.

Baldwin Locomotive Co. from $350,230 to $5,982,517, an increase of nearly twentyfold.

Bethlehem Steel Corporation from $8,590,020 to $43,593,968, an increase of nearly eightfold.

Cuban-American Sugar Co. from $2,705,723 to $8,235,113, an increase of threefold.

General Chemical Co. from $2,857,898 to $12,286,825, an increase of fourfold.

Lackawanna Steel Co. from a deficit of $1,652,444 to a profit of $12,218,234, an increase of thirteenfold.

Phelps Dodge Corporation from $6,664,839 to $21,974,263, an increase of over threefold.

Republic Iron & Steel Co. from $1,028,748 to $14,789,163, an increase of over fourteenfold.

Swift & Co. from $9,450,000 to $20,465,000, an increase of over twofold.

United States Steel Corporation from $23,469,768 to $271,531,730, an increase of nearly twelvefold.

United Fruit Co. from $2,264,911 to $11,943,151, an increase of fivefold.

United States Industrial Alcohol from $653,264 to $4,884,687, an increase of nearly eightfold.

United States Smelting, Refining & Mining Co. from $2,265,641 to $8,898,464, an increase of over threefold.

Westinghouse Air-Brake Co. from $3,482,994 to $9,396,103, an increase of nearly threefold.

Cost of materials, labor, depreciation, overhead, interest, and all other charges have been deducted to secure these figures.

In addition to income, excess profits, and inheritance taxes the only taxes that are justified are taxes on distilled and rectified spirits, fermented liquor, and wine, which aggregate $151,000,000. The taxes on freight, express, passenger, pipe lines, seats and berths, electric light, gas, telegraph and telephone, advertising, and insurance aggregate $212,500,000, and are taxes which would be shifted to the workers in the long run. A tax upon dissemination of information, through taxing postal matter, is a deplorable admission of fear of general enlightenment. All these, together with all kinds of stamp taxes, should be eliminated from the bill.

A rapidly progressive income tax with an exemption of $4,000 for married persons and $3,000 for single persons, together with the excess profits tax, taxes on liquors, spirits, and so forth, would yield the total revenue which it is estimated is required, $1,810,420,000.

Mr. Chairman, I hope when the revenue bill comes back from another body it will have placed the burden of this war, in a money way, where it should be placed. There is one other thing vital to the successful prosecution of this war, and that is to let the people know exactly what is going on. Do not conceal the truth. Do not keep them in the dark. They have been called upon to make great sacrifices, to send their sons to fight the war. They are entitled to know how those sons are being treated, whether they are fed embalmed beef as they were in the Spanish-American War.

They are also entitled to know how the tremendous sums of money appropriated are being spent—if there is any graft or stealing connected with the expenditures. The Government has already full power to prevent information from reaching the enemy. It has control of the post office, the telephone, the telegraph, the wireless, and the cable.

The Constitution defines a traitor as one who gives aid or comfort to the enemy. On conviction, a traitor is subjected to the death penalty. This affords sufficient protection against information being conveyed to the enemy. No law should be passed which prevents information from being circulated among the people at home whose money is paying the country's bills, and whose sons are fighting its battles. I shall never vote for a bill intended to suppress free speech and a free press.

Mr. Chairman, this war will not be over when the echoes of its hostile guns shall have sunk to silence on the blood-drenched fields of Europe. There will linger in its trail enmity and hatred, unspeakable sorrow and misery. But it has come, and we must meet it with hearts unafraid and councils undivided. In this way only can we hope for its speedy, victorious, and just termination. Those who hesitate, withhold, and oppose now are not contributing to their country's success in this conflict. They are but adding to the burdens of the brave boys who are bearing our flag in triumph at the front.

Speaking as one who contributed all he possibly could to avoid this conflict, with a full realization of what war means, and with sorrow, but not with faltering, I shall vote for a successful prosecution of this war until our flag is respected and American lives are protected the world around. [Applause.]

Mr. HAUGEN. I yield 30 minutes to the gentleman from Illinois [Mr. GRAHAM].

Mr. GRAHAM of Illinois. Mr. Chairman, this bill proposes certain measures leading to a regulation and control of food prices during the war with Germany. It prohibits waste, unfair practices, and monopolies in the production and sale of the necessaries of life, prohibits hoarding, and provides for the regulation or closing of stock exchanges; but its principal distinguishing feature from all other legislation heretofore enacted is that it establishes a control of necessaries—foods, feeds, fuels, and means for producing them—in the Government. To complete and elaborate this power it authorizes the President to license the business of producing and distributing necessaries, to requisition, take over, and operate, when necessary, all or any mines, factories, or plants where necessaries are produced, and confers upon the President two extraordinary powers: The right to establish minimum prices for farm products and the right to prohibit the use of foodstuffs for the manufacture of intoxicants.

This is radical and extraordinary legislation, and confers powers such as were never granted in this Government before. Such legislation is only justifiable in view of some conditions of vital character that require it. That such conditions exist I have no doubt, and in the time allotted to me I desire to state my reasons for such a belief.

It is very evident to anyone that the decision of this war is to go to the belligerent that best conserves its food supply. Practically the whole world is in arms. The vigorous man power of the nations of Europe is not producing, but is destroying, and now we, so long on the margin, are caught and swung out into the mighty maelstrom of war. To be brutally frank about it, it is now a question of something to eat. If we may believe reports in the press, the central powers—at least, the civilian population—are already half starving; the entente nations are on rations.

When we engaged in this war we went to war with the most powerful military nation on earth, with an army trained to all the arts of conflict by two and one-half years of intensive war-

fare. With war declared, we had one of two things to do: Disregard the entente powers and wage our war in our own way or assist the entente nations with money, credit, munitions, and food, and supplement their armed forces with such of ours as we could furnish. We wisely adopted the latter course. Every entente soldier that we feed and arm removes the necessity of an American soldier taking his place. But if we permit them to starve and lack the things that will keep their armies afoot and their navies afloat, the whole mighty burden will fall upon our untrained shoulders. If this is, then, our wisest policy—and who can doubt it—it is equally evident we must, as a very first war measure, take steps to increase, preserve, and properly distribute our food supply. It is absolutely futile for us to expect to do so under our present laws. We have absolutely no laws on the subject, except such as have been passed by this Congress. We have always gone ahead and raised what we pleased on our farms and bought what we wanted to and wasted what we desired and sold wherever and whenever we could get the best prices. There has not even been any State regulation of our food supply, except our new and imperfect pure food laws to prevent adulteration and impure foods. It must be manifest that we can not long continue this policy. If we do not speedily adopt a policy of regulation we shall fail before the war begins.

Under the war clause of the Constitution we now have power to do what is necessary in the conservation and regulation of our food supply. The question now presented is whether we shall do so. There can be but one answer to that question, and that is a decided affirmative. But just how far we ought to go and what steps we ought to take to accomplish the desired end are mooted questions.

A lamentable condition of affairs exists in this country to-day. Since August, 1914, the people of this country have been systematically and in an ascending ratio exploited. There can be no doubt that men and corporations have been fattening at the expense of all of us. The man who speculates and traffics in the food supplies of this Nation and wrings his unconscionable profits from the toilers of the land is a more detestable scoundrel and traitor than he who gives open aid and comfort to the common enemy. [Applause.] For the traitor would only destroy the fighting force of the Nation, while the food speculator would rob the sick and starve the little child and weaken and sap the vitality of his own people. The cost of living has mounted sky-high, until to-day, before we have struck a single blow for the liberty of the world, before a single American soldier has faced the common foe of mankind, we find the necessities of life higher and more costly than almost anywhere else on earth. Before we go across the sea to put down Prussian autocracy and establish there the right of all men to live and enjoy social liberty and freedom, let us do a little fighting here at home, and abolish an autocracy here, the most offensive and indefensible monopoly and manipulation of prices of life necessities that ever existed anywhere.

I want to call your attention to the wonderful increase in the prices of some food necessities of life during the last six years. I quote the price of eggs, butter, cheese, poultry, potatoes, and beef on the open market on the 1st of May of each year at Chicago, as taken from quotations given by the Chicago Tribune. I shall extend this in a tabulated form in the RECORD, but shall content myself now with comparing the prices on May 1, 1914, before the war began, and May 1, 1917: Eggs, on May 1, 1914, sold for 19½ cents per dozen; on May 1, 1917, for 32 cents per dozen, an increase of 64 per cent. Butter, in the same period, increased from 22½ cents to 37 cents per pound, an increase of 64 per cent. Cheese increased from 16½ to 26½ cents per pound, an increase of 60 per cent. Poultry increased from 16 cents to 22 cents per pound, an increase of 37 per cent. Potatoes increased from 72 cents to $2.75 per bushel, an increase of 282 per cent. Loin steak increased from 22 cents to 27½ cents per pound, an increase of 25 per cent; and round steak from 13 cents to 17 cents, an increase of 30 per cent. I might add parenthetically that these figures were taken on the 1st of May and since that time they have steadily increased.

This is a most remarkable and unusual increase in prices. When an increase of from 25 per cent to 282 per cent in the cost of some of the prime necessities of life occurs in such a brief period either some extraordinary conditions create this or the prices are being manipulated. Two reasons are ascribed for this great increase: First, that immense quantities of these foodstuffs have been exported on account of the war, and, second, that there has been a scarcity of production. These claims will bear investigation.

I have procured from the publications of the Department of Commerce and from the Agricultural Yearbooks issued by the Department of Agriculture certain statistics which I shall insert in tabulated form in connection with these remarks, but which I shall not read here. In some cases production has been increased from 1914 to 1917. For instance, the total receipts of eggs at Boston, Chicago, Cincinnati, Milwaukee, New York, St. Louis, and San Francisco in 1914 were 13,150,018 cases, while in 1916 they were 15,820,207 cases, an increase in production of 15 per cent. This probably correctly gauges the egg production. Yet, irrespective of this increase in production, the price rapidly increased. The number of cattle inspected for slaughter increased from 6,724,117 in 1914 to 7,346,709 in 1916, an increase of about 9 per cent. The number of hogs increased from 33,289,705 to 40,287,692, an increase of about 21 per cent. And the total number of animals inspected for slaughter increased from 56,909,387 to 61,286,304, or an increase of about 9 per cent. But, nevertheless, the price soared skyward. Examine this subject and you will find that the price was not at all controlled by the amount produced. In some staples, such as rye and oats, the supply has slightly increased. But the surprising decrease in production has been in wheat, potatoes, and beans. In 1914 we produced 409,921,000 bushels of potatoes, and in 1916 only 285,437,000 bushels, a decrease of about 30 per cent. The production of wheat decreased from 1,011,505,000 to 639,886,000 bushels, a decrease of about 30 per cent. The production of beans decreased from 10,321,000 bushels in 1915 to 8,846,000 bushels in 1916, or a decrease in production of about 20 per cent.

In the same time our population has increased from 98,781,324 to 102,826,309, or an increase of about 4 per cent, which must be taken care of by increased production. If, however, production decreases we must either eat less or buy more elsewhere. With other producing fields cut off by the war the problem is one we must solve by the resources of our own country.

And while I am on this subject let me call attention to the amazing folly of the course of this House in the recent action on the revenue bill. Here, at a time when we are attempting to conserve every ounce of energy we have, we passed an act imposing a duty of 10 per cent ad valorem on food products imported from other countries. Why, no one seems to know. We ought to encourage imports of foodstuffs during this war, instead of discouraging it. Our farmers and producers are protected by a condition that excells any protective-tariff law ever devised, an almost total lack of production in Europe and Asia. If, perchance, we can procure imports of foodstuffs from South or Central American countries, even in limited amounts, every pound imported will aid in conserving our own products. As soon as the war is over then entirely different conditions are presented, and if this people is not to be overwhelmed in a flood of imports we must go immediately to a Republican system of high protective tariffs. But just now the 10 per cent provisions of the revenue bill are foolish, unscientific, and perfectly unjustifiable.

The price of labor has not increased proportionately with the astounding increase in the price of foodstuffs. Since 1912, to illustrate, in the city of Chicago, which is more familiar to me than other localities, there has been an increase of 6 per cent in the wages of bakers, 4 per cent in bricklayers, carpenters 3 per cent, hod carriers 3 per cent, plasterers 1 per cent, teamsters and freight handlers 3 per cent. The present union scale of wages is fixed, in many cases, by three-year contracts. Note the following telegram:

CHICAGO, ILL., *June 16, 1917.*

Congressman W. J. GRAHAM,
Washington, D. C.:

Bricklayers, carpenters, hod carriers, plasterers, and other building trades have received no increases in wages since May 1, 1915, their agreements being for three years, expiring May, 1918. Bakers received $2 a week increase, but this increase was cut down on account of working conditions conceded to employers in settlement of strike. Some of the teamsters' unions have increases not to exceed 10 per cent. It was reported that the freight handlers received 5 per cent increase on piecework; that is, by the tonnage. The freight handlers are not organized. The railway company succeeded in breaking up the union when about to be organized.

E. M. NOCKELS,
Secretary Chicago Federation of Labor.

And yet, while the laboring man has only had the advantage of average increase in his wage, the prices of the food he and his family uses and the clothes he and his wife and children wear have risen amazingly and beyond reason. Imagine, if you can, the position of a man who has a family of three or four growing children to support and educate and a salary of $2 a day to keep them on. Do you say that there are not many such cases? There are millions of them. I imagine there is not a man in this House who saves anything from the salary he now receives. But suppose the salary were $625 a year! The demands of the present-day civilization are greater than they were 50 years ago. Children require more care, more education, more expense than they did then. The wage earners of the country are suffering to-day from the extreme exactions of high prices. At a time when the country is requiring from its manhood the full measure

of devotion and sacrifice, it is incumbent upon us, whom the people have selected as their representatives, to see to it that the country, in turn, deals fairly with its defenders and secures them from conscienceless exactions. [Applause.] Hunger does not breed patriotism, nor does injustice and wrong engender love of country.

Now, while our production has been decreasing, we have those among us who have seized the opportunity to swell their profits by the gains they have made by selling to the allied nations. It has been entirely a cold-blooded proposition. The food supplies that have been bought by the speculator to sell to the allies have not included the producer of them in the profits. The farmer's prices are higher, but his profits have been infinitesimal compared with those of the food speculator. This speculation has not had in mind the necessities of this people but has totally disregarded everything but the profits involved. While production of our principal foodstuffs decreased exports increased. I now insert in my remarks a tabulated statement showing the exports on our food products, eggs, beans and peas, potatoes and meats. The exports of eggs increased from 16,184,849 dozen in 1914 to an estimated export for 1917 of 27,472,656 dozen, or an increase of 69 per cent. The amount of beans and peas exported in 1914 was 314,655 bushels, while in 1917 it is estimated to be 1,987,032 bushels, an increase of 533 per cent. In 1914 we exported 1,794,073 bushels of potatoes, while in 1917 it is estimated we shall export 3,022,644 bushels, or an increase of about 68 per cent. The export of meats increased from 904,000,000 pounds in 1914 to 1,917,349,702 pounds in 1916, or an increase of about 111 per cent.

I take it it does not take much far-sighted wisdom to see what this leads to. It leads to want and starvation and bread riots if it is not curbed. If some one who wants to make his profits can buy 100,000,000 bushels of wheat and sell it to agents of other countries whenever he pleases and without regulation, how long will it be before we in this storehouse and granary of the world, will come to dire want? Already it is commonly rumored Great Britain or agents of the British Government has or have entered into contracts for a considerable part of our wheat crop for 1917, and that our Government might ask some of the allied governments to cancel some of their contracts so that we may get necessary food supplies. Whether this be true or not I do not know. It has been stated to be true, as I understand it, on the floor of the Senate. The Department of Agriculture, in answer to my inquiry on this subject, says:

This bureau does not have any information as to the quantity of the 1917 wheat crop of this country that has already been contracted for by citizens of foreign countries and representatives of foreign governments, etc. I would express my doubt as to whether such information is available anywhere.

Very truly, yours,

NAT C. MURRAY,
Acting Chief of Bureau.

But I do know that such a state of affairs might exist and that our markets to-day are open to the competitive bidding of all the nations of the world; and I know, further, that so careful has been the management of Great Britain that in London to-day many of the necessaries of life are cheaper than they are here. I read from a letter received by me on this subject:

BRITISH EMBASSY,
Washington, May 19, 1917.

The Hon. W. J. GRAHAM,
House of Representatives.

DEAR SIR: I much regret the delay in answering your letter of the 7th instant, but you will understand that with the present mass of business delays are sometimes inevitable.

We have no official account of prices in England in the embassy, but I append a list which has been furnished to me by a person who has recently arrived from the other side. I hope that this may be of service to you.

I am, dear sir,
Yours, faithfully,

CECIL SPRING-RICE.

Beef, sirloin, etc., about 1s. 10d. per pound.
Butter, 1s. 8d. to 2s. 4d. per pound.
Potatoes, old crop (maximum), 1¾d. per pound (3½ cents).
Cured bacon, about 2s. per pound.
Onions, no recollection.
Dried beans, haricots, no recollection.
Flour, about 58s. to 60s. per 280 pounds.

Reduced to terms of American currency this would be:

Beef, sirloin, 44 cents per pound.
Butter, 40 cents to 56 cents per pound.
Potatoes, old crop (maximum), $2.10 a bushel.
Cured bacon, about 48 cents per pound.
Flour, about $8.20 per barrel.

Mr. GILLETT. Will the gentleman allow a question?

Mr. GRAHAM of Illinois. Yes.

Mr. GILLETT. Does the gentleman know whether those London prices were affected by Government control or not?

Mr. GRAHAM of Illinois. Well, I do not know. I know that in France, which I will come to in a moment, there is Government control, and I will allude to that when I get to it. But in England I do not know whether there is governmental control that affects prices or not.

Mr. THOMPSON. If the gentleman will permit, there is Government control in England. The testimony before the Committee on Agriculture showed that there was.

Mr. GRAHAM of Illinois. I am glad to have that information. I will allude to the French matter when I come to that.

Mr. GREEN of Iowa. Will the gentleman yield?

Mr. GRAHAM of Illinois. I will.

Mr. GREEN of Iowa. Does the gentleman know what the freight rate on wheat now is across the ocean?

Mr. GRAHAM of Illinois. No; I do not.

Mr. GREEN of Iowa. I understood, counting the insurance and everything, it was somewhere in the neighborhood of 46 cents.

Mr. GRAHAM of Illinois. The war rate has been unusually high. I do not know what it is. I have not informed myself, I am sorry to say, on that subject.

On the same day I received this letter I asked the prices for the same articles in the public market in Washington. They were as follows: Porterhouse steak, 40 cents a pound; butter, 42½ cents a pound; bacon (sliced), 45 cents a pound; potatoes, $3.75 a bushel; and Gold Medal flour, $17.60 a barrel. Will any man here tell me why potatoes in London, after three and a half years of vicious war, and within waters infested with submarines, should sell for $2.10 a bushel and for $3.70 here? Will you tell me why flour should sell there for $8.20 a barrel and for $17.60 here? I now desire to read you a brief translation of an item in a French paper, L'Économiste Français, of April 28:

The situation does not change, as the mills are working but little. The official prices have been raised in the Department of Seine-et-Oise. In our market (Paris) the tendency is firm, and small purchases are made only at the price of 52 and 53 francs, ready for shipment, Paris district.

Mr. JACOWAY. I would like to ask the gentleman what he considers the remedy for that condition of affairs?

Mr. GRAHAM of Illinois. I will tell you. If I have not answered you before I get through I will pause and answer the question then.

Mr. JACOWAY. Does the gentleman think this bill if enacted into law will solve the situation?

Mr. GRAHAM of Illinois. It will, if it is properly administered, and, as to the administration, I want to say I will express my opinion in a moment on that subject. If this is properly administered it will solve all our troubles.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. GRAHAM of Illinois. I would like a few minutes more.

Mr. HAUGEN. How much time does the gentleman want?

Mr. GRAHAM of Illinois. I think I will have to have about 15 minutes more.

Mr. HAUGEN. While I understood that there was an agreement this morning that there should be no extension, inasmuch as the chairman of the committee has extended time to others, I think I am justified in extending time on this side to those who desire it. I want to be absolutely fair to the chairman and Members on this side who desire time.

Mr. LEVER. I will say to the gentleman that I would like very much if he would extend the time to the gentleman who is speaking, because he has a very ably prepared statement.

Mr. HAUGEN. There are 20 Members on the list, and it will take 20 hours. If it is the purpose to close debate to-morrow night, I will be doing the other Members an injustice.

Mr. LEVER. I feel that we must close debate to-morrow night, even though we run until 12 o'clock. I am going to cut the list that I have very much, and I have extended time only to the members of the committee that I felt were entitled to time.

Mr. HAUGEN. Some of the members of the committee have asked for an hour's time. I do not feel that I am justified in yielding their time to any other Member. I want to be perfectly fair about it. It is immaterial to me.

Mr. LEVER. Let us go along. I would like the gentleman from Iowa to yield to the gentleman from Illinois, because the gentleman from Illinois is presenting a very carefully prepared argument, and we will try to get along somehow or other with the others.

Mr. HAUGEN. How much time does the gentleman desire?

Mr. GRAHAM of Illinois. I think I could finish in 15 minutes, if I am not interrupted.

Mr. HAUGEN. I will compromise with 10 minutes.

Mr. GRAHAM of Illinois. Now, gentlemen, flour is quoted by the 100 kilograms. Hence the prices that are quoted in this article would be equivalent to $8.92 to $9.09 per 196 pounds, taking the franc as equal to 19.3 cents. Thus it will be seen that flour sold in Paris on April 28 for $9.09, and much of the wheat from which that flour was made necessarily grew in America.

Mr. CAMPBELL of Kansas. Mr. Chairman, will the gentleman yield?

Mr. GRAHAM of Illinois. Yes.

Mr. CAMPBELL of Kansas. How much did the wheat sell for?

Mr. GRAHAM of Illinois. In reply to the gentleman's question, I find that there was an act passed in France in July, 1916, which took effect on August 1 of that year, for the period of the year and for the period ending with the demobilization of the French armies, fixing a maximum price of $1.73 a bushel for wheat, so that in France there is a maximum price, and there has been since August, 1916.

Mr. LEVER. It was selling here in April of this year at $2.55 a bushel, and for about that much in England.

Mr. CAMPBELL of Kansas. Then the imported wheat sold for more than the domestic product over there?

Mr. THOMPSON. No, Mr. Chairman; the testimony taken before our committee was to the effect that they had found the maximum price to be absolutely incapable of enforcement and that they had abandoned it absolutely in all the foreign countries.

Mr. LEVER. I believe that is true.

Mr. THOMPSON. The gentleman from Kansas indicated that the imported wheat brought more than the domestic wheat.

Mr. LEVER. Wheat was selling at from $2.45 to $2.55.

Mr. THOMPSON. The maximum price was abandoned altogether.

Mr. CAMPBELL of Kansas. Then maximum price fixing was a failure?

Mr. GRAHAM of Illinois. Yes; that was the experience, and in my opinion it would be no good to try it here, basing my opinion on that experience.

Will you permit me to challenge your attention to the wonderful financiering displayed by our allies when they protect their home markets in this way. If it be true that agents of the allies, or of neutral nations, have contracted for large quantities of American foods or food products, then when our millers go upon the market they find the grain available for milling decreased in amount, and immediately the decreased amount available forces up the price to the miller, and hence the price of flour rises to the American consumer while other nations, protecting themselves by their American contracts, keep down the price to their own people. And to complete the circle, we loan them the money at 3½ per cent which they may use to control our market.

There is another reason why there should be immediate supervision and control of our food supplies. I have no doubt that we are, and have been since the beginning of this war, contributing to the food supply of our enemies, the central powers, through importations into neutral countries, from which countries these supplies get into Germany. To illustrate: We exported no barley to Denmark in 1914, but in 1915 we sent them 4,906,634 bushels; in 1914 we sold to the Netherlands 142,173 bushels and in 1915, 545,997 bushels; Norway, in 1914, imported from us no barley, but in 1915 took 617,744 bushels. We exported to Denmark in 1914, 118 bushels of corn, but in 1915 approximately 11,000,000 bushels and in 1916 approximately 10,000,000 bushels.

Mr. THOMPSON. Right there, if the gentleman will permit, the gentleman said 118 bushels of corn were exported to Denmark. Was it so many thousand bushels?

Mr. GRAHAM of Illinois. No. The Department of Commerce in its report shows 118 bushels, or practically none. I simply quoted it to show how insignificant the amount was. It rose last year to 10,000,000 bushels.

In 1914 we exported to the Netherlands 373,770 bushels of corn, and in 1915, 15,875,674 bushels; Norway, which in 1914 took no corn, in 1915 bought 613,996 bushels; and Sweden, having purchased no corn from us in years, in 1915 took over a million bushels. In oats and rye the same is true. I extend these exports in tabulated form in the RECORD, as follows:

Exports of food products to neutral countries.

	1914	1915
Wheat:		
Denmark.....bushels..	870,433	2,754,746
Greece.....do....	.....	8,768,549
Netherlands.....do....	19,949,519	31,551,992
Norway.....do....	71,895	2,504,051
Spain.....do....	127,871	7,155,971
Sweden.....do....	272,500	4,093,080
Switzerland.....do....	.....	520,720
Oats:		
Denmark.....do....	.....	314,847
Netherlands.....do....	14,388	861,531
Norway.....do....	5,920	706,425
Sweden.....do....	.....	3,340,728

Exports of food products to neutral countries.—Continued.

	1914	1915
Rye:		
Denmark.....bushels..	609,870	3,039,458
Netherlands.....do....	604,290	1,204,257
Norway.....do....	.....	5,563,722
Sweden.....do....	.....	1,582,111
Barley:		
Denmark.....do....	.....	4,906,634
Greece.....do....	.....	623,928
Netherlands.....do....	142,173	545,997
Norway.....do....	.....	465,665
Sweden.....do....	.....	617,744
Corn:		
Denmark.....do....	118	11,169,550
Greece.....do....	.....	31,143
Netherlands.....do....	373,770	15,875,674
Norway.....do....	.....	613,996
Sweden.....do....	.....	1,023,236
Wheat flour: Netherlands.....barrels..	958,063	1,725,837
Bacon: Netherlands.....pounds..	1,718,481	8,284,647
Pickled meats: Europe (except United Kingdom and Germany).....pounds..	1,895,098	7,568,751
Lard: Europe (except Belgium, France, Germany, Italy, Netherlands, and United Kingdom).....pounds..	4,224,200	138,523,515
Pickled pork: Europe (except United Kingdom, Belgium, France, and Italy).....pounds..	1,929,640	11,640,215
Butter: All countries.....do....	3,693,597	9,850,704
Cheese: All countries.....do....	2,427,577	55,362,917
Cottonseed oil:		
Netherlands.....do....	26,994,772	90,979,466
Norway.....do....	6,958,490	26,442,259

Itemized statements of most of above exports are not available for 1916.

Mr. COOPER of Wisconsin. Where did those countries get their wheat and other products before the war began?

Mr. GRAHAM of Illinois. I think a great deal of it came from Russia and some from Germany and some from the Argentine and——

Mr. LEVER. And some from Roumania?

Mr. GRAHAM of Illinois. Yes; some from Roumania.

Mr. GILLETT. And some from Belgium?

Mr. GRAHAM of Illinois. Yes; some from Belgium. In wheat Denmark's imports from us rose from 870,433 bushels in 1914 to 2,754,746 bushels in 1915. The Netherlands took of our wheat in 1914, 19,949,519 bushels, and in 1915, 31,551,992 bushels. Norway increased her purchases from 71,895 bushels in 1914 to 2,504,051 bushels in 1915. Spain increased her purchases from 127,871 bushels in 1914 to 7,155,971 bushels in 1915; Sweden from 272,500 in 1914 to 4,093,080 in 1915; Switzerland from nothing in 1914 to 520,720 in 1915. The same is true with practically all our food products.

Mr. SWITZER. Mr. Chairman, will the gentleman yield?

Mr. GRAHAM of Illinois. Yes.

Mr. SWITZER. Does the gentleman know whether these countries have increased their importations as a whole? While they may have increased from the United States, has there been an increase on their importations of 1915 and 1916 over those of 1910 and 1911?

Mr. GRAHAM of Illinois. I can not tell you. That is the only weak link in my chain of argument. I do not know. I will say to the gentleman that I can not ascertain how much their total importation was. Perhaps the chairman of the committee can tell you. I was curious to see what they were doing with our food.

Mr. LEVER. I am sorry I have not those figures in my head. I have them somewhere in my notes.

Mr. GRAHAM of Illinois. I will tell you about other food products. In 1914 the Netherlands bought 1,718,481 pounds of our bacon, and in 1915, 8,284,647 pounds; in 1914 the Netherlands bought 26,994,772 pounds of our cottonseed oil, and in 1915, 90,979,466 pounds; in 1914 Norway bought 6,985,490 pounds of cottonseed oil, and in 1915, 26,442,259 pounds. The most amazing increases of sales to neutral countries occurred, leading, without question, to my conclusion already stated.

Mr. LEVER. Now, if the gentleman will permit, I think that statement rather answers the question asked by the gentleman from Ohio [Mr. SWITZER], because this country is practically the only country that exports cotton seed.

Mr. GRAHAM of Illinois. Yes. It is surprising to see what they did in the Netherlands, increasing from 36,000,000 to 90,000,000, and also in Norway. The fact seems to be that the Germans were getting it. Gentlemen, that is all there is to that. These most amazing increases of exports to neutral countries lead to that conclusion.

In addition to these drains upon our food resources, let me briefly call your attention to the crop situation. I have already called your attention to the fact that our wheat crop last year was 639,886,000 bushels. Let me read you the following portion of a letter from the Bureau of Crop Estimates:

UNITED STATES DEPARTMENT OF AGRICULTURE,
BUREAU OF CROP ESTIMATES,
Washington, D. C., May 29, 1917.

Hon. W. J. GRAHAM,
House of Representatives, Washington, D. C.

DEAR SIR: I beg to acknowledge receipt of your letter of May 26 in regard to the prospects for this year's wheat harvest. The condition of winter wheat on May 1 was estimated by this bureau to be 73.2 per cent of a normal, and the acreage standing for harvest 27,653,000 acres. This condition and acreage was interpreted as forecasting a yield of winter wheat of 366,116,000 bushels, which compares with an estimated production of 482,000,000 last year, 674,000,000 in 1915, and 495,000,000 the average of the preceding five years. The first statement of this bureau in regard to spring wheat will be issued on June 8. The acreage in spring wheat last year was estimated as 17,956,000 acreas, and the production 158,000,000 bushels; in 1915, 19,161,000 acres and 352,000,000 bushels.

Mr. CAMPBELL of Kansas. Does not the gentleman believe that these abnormal exports that have gone to the central powers are largely the cause of the increase of prices here?

Mr. GRAHAM of Illinois. I think so. If you can stop that drain on our resources we can feed our people and our allies, but we do not want to feed our enemies. Our people should not starve in this country, here in a land of plenty. We are the greatest producing country on earth. We ought to take care of our own people. I say put the power in somebody's hands. I am not responsible for the administration which shall have charge of it.

This letter from the Bureau of Crop Estimates shows that our winter-wheat crop will be 100,000,000 bushels less than it was last year. I know in my wheat country of Illinois, in the uplands, the winter wheat was killed and the farmers plowed it up and put in oats and other spring cereal crops. The same was not true on the lowlands of the Mississippi, but it was true on the uplands, and if the Bureau of Crop Estimates are correct, and there should be a shortage of 100,000,000 bushels, there will be only 539,000,000 bushels produced this year.

Gentlemen of the committee, the powers conferred by this bill are far-reaching. When once conferred, they may be used as instruments of oppression and injustice. I have heard it privately argued that those who must administer this law, if once written in the statutes, are incompetent and will show neither wisdom nor prudence in its administration. This may be true. But for that this Congress is not responsible. Congress can not legislate on every matter that may arise in the control of our food products from time to time. Legislation moves at best, and necessarily, but slowly through these two branches of Congress; there are the minds of many men here, and the majority must concur before bills become laws; this takes time. Many details will arise from day to day that will require quick action. Hence, Congress can do but one thing—confer the power on some representative of the Government for administration. On whom shall it be conferred if not on the President? If he fails or is unfair in the administration of this law, it is a matter that I am not responsible for. If this power was to be conferred on a man of my party, I would not hesitate; Congress is only responsible for the power granted; for the administration of it the people of this country will hold the President and his party responsible when they exercise their right of suffrage at the polls.

My conclusions are these: We are confronted with a great decrease in production of our principal food crop; our rural population has been rapidly decreasing and our urban population increasing; our exports of foodstuffs have greatly increased; our population has rapidly increased; we are involved in a war where we must not only feed ourselves but millions of other peoples. These are serious questions and such as may control the result of this war and they need our most careful consideration. The regulation and control of our food supplies is not only desirable but absolutely necessary. This can not be done by attempting to fix by proclamation or law prices for farmers' products. Let the farmer alone; he is doing all he can to fill our granaries and win the war, and he will do it. Instead of foolish attempts to say by law what he shall get for his crops, encourage production by keeping hands off from him; he knows his business better than we do. The farmer has not been responsible for these high prices. The farmer sold his wheat for $1.15 a bushel that is now selling for $3 a bushel—someone else got the profit. But this Government should at once, either by acts of Congress or through the President acting by delegated power, enact laws or regulations prohibiting exportations of necessaries except as we shall direct, prohibiting hoarding, providing that dealing and speculating in futures shall cease, and that all purchases and sales shall be bona fide, abolishing food speculation and monopoly by the most drastic laws, providing adequate facilities to move necessaries rapidly direct from producer to consumer, and providing stringent and drastic rules against the practice of keeping freight cars standing idle on sidings while the business of the country stagnates and the speculator grows rich.

I believe this bill provides much relief in this direction. There are many things about it I do not like, and I reserve the right to vote on amendments to it as I may think best. But in such a time as this it is essential that we do something, and that we do it soon. And for the reasons I have given I favor the general principles of this bill. [Applause.]

Prices of food products in Germany.

[Figures furnished by Dr. A. E. Taylor, formerly an attaché to the Berlin Embassy.]

German potato price, 1916–17 (out of a short crop), $1.75 per 100 pounds.
Amount received by grower, $1.45 per 100 pounds.
Price of wheat to grower, $1.77.
Price of rye to grower, $1.35.
Price of bread, 78 pfennigs per 1,950-grain loaf (less than 5 cents per pound).

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES.

The committee informally rose; and Mr. RUCKER having taken the chair as Speaker pro tempore, a message from the President of the United States, by Mr. Sharkey, one of his secretaries, announced that the President had approved and signed bills and a joint resolution of the following titles:

On June 15, 1917:

H. R. 3971. An act making appropriations to supply urgent deficiencies in appropriations for the Military and Naval Establishments on account of war expenses for the fiscal year ending June 30, 1917, and for other purposes;

H. R. 291. An act to punish acts of interference with the foreign relations, the neutrality, and the foreign commerce of the United States, to punish espionage, and better to enforce the criminal laws of the United States, and for other purposes; and

S. J. Res. 70. Joint resolution relating to the service of certain retired officers of the Army.

On June 14, 1917:

S. 995. An act to authorize the issue to States and Territories and the District of Columbia of rifles and other property for the equipment of organizations of home guards.

CONSERVATION OF FOOD AND FUEL.

The committee resumed its session.

Mr. HAUGEN. I yield 30 minutes to the gentleman from Iowa [Mr. SCOTT].

Mr. SCOTT of Iowa. Mr. Chairman and gentlemen of the committee, the fact that we are at war has been mentioned with such frequency the last few days as at times to become provocative of a smile. It has been intimated that the American people are hardly yet conscious of that fact. When I look over the vacant seats in this House this afternoon and see about three score men I am almost constrained to believe that we ought to advertise the fact in order that it might be known to all Members of the House.

Mr. ROBBINS. Perhaps the fact ought to be recalled that over 100 Members of the House went to Valley Forge to-day to dedicate a monument, and they ought to be excused.

Mr. SCOTT of Iowa. They are excepted from my remarks. I appreciate highly the patriotic mission and pilgrimage being made to that historic spot.

Mr. LEVER. But the best of us are here.

Mr. SCOTT of Iowa. And it is to be hoped the best of us are here.

Mr. HARDY. I want to suggest to the gentleman that the attendance, although small enough, is a little larger than he says.

Mr. SCOTT of Iowa. Perhaps a little larger, and I am grateful that the gentleman from Texas is here, and that the record now shows that fact. [Laughter.]

The debate heretofore has been fairly well attended, and I know that the membership of the House have approached the consideration of this bill with deep consciousness of their responsibility. No measure that has come before the House since this session convened is of greater or more far-reaching importance to the American people. In this debate it is our duty to discuss this measure fairly, candidly, and fearlessly. No Member not responsible for the present condition of the proposition before the House should hesitate to analyze its provisions or criticize its imperfections; and no Member through feeling of responsibility for its conduct should resent such criticism or defend the measure against any proposed change or modification which bears the impress of wisdom and practicability.

The bill as originally introduced in the House, if I may be permitted to assume its continued identity, was of much broader scope than in its present form. The former embraced a number of classes of very important necessaries of life which are now eliminated. The bill is now confined primarily to foodstuffs and fuel. There are many who would have preferred that the other important necessaries had remained in the bill. The bill was not reported in the form of the original bill referred to the committee with recommendations for amendments, but it is introduced as a new bill by the chairman of the committee and as such has not been referred to the committee. What the parliamentary situation will be in this respect I am unable to predict. If the precedent observed during the consideration of other bills since this session opened is to be followed, it is quite likely that the scope of the bill will not be enlarged by amendment on this floor. The essential object of the measure, however, is not materially altered, and that object is a most laudable one. When a great Nation such as ours enters upon a great war it is confronted with many problems. In this instance one of our first tasks is to mobilize our national resources to the end that all of our national energy may be most effectively directed against our enemy; and that in the meantime the burdens and privations and hardships of our citizens may be reduced to a minimum and be justly and equitably laid and borne. This thought involves the consideration of maintaining an adequate existing and potential supply and an equitable and expeditious distribution of the necessaries of life. It also presents the task of making it possible for all classes of our people to obtain those necessaries at just and reasonable prices.

As I have suggested, the bill when originally introduced embraced foodstuffs, fuel, clothing, boots and shoes, and other necessaries of life. The matter of clothing, shoes, and other necessaries have been excluded from our consideration. The reason for so doing has not been made satisfactorily plain.

Mr. COOPER of Wisconsin. Will the gentleman permit an interruption?

Mr. SCOTT of Iowa. Certainly.

Mr. COOPER of Wisconsin. The omission from the new bill of what was contained in the original bill is very important. Is the gentleman able to assign any reason why these other matters were stricken out?

Mr. SCOTT of Iowa. I am unable to give any explanation. As I said a moment ago, the reason for doing this has not been satisfactorily explained.

Mr. LEVER. Will the gentleman yield?

Mr. SCOTT of Iowa. Certainly.

Mr. LEVER. If the gentleman will permit, I will say to the gentleman from Wisconsin [Mr. COOPER] that these matters were stricken out of the bill because it was suggested in the mind of the committee and also in the mind of Mr. Hoover that there was no one single brain in the world which could handle all that was contemplated in the first bill, and that he was particularly interested in the food proposition, and the committee felt that we ought to acquiesce in his judgment as nearly as possible.

Mr. SCOTT of Iowa. I shall assume, then, at this stage of the consideration of the bill that we have food and fuel only to deal with. It has been said heretofore during the debate that our country has wonderful capacity for producing, but that we are unorganized and have no market facilities, that we are confronted with the necessity of now organizing these things. It is true that we need more efficient and intense organization, but I am not ready to concede that we are exceptionally derelict in the organization of our markets with respect to foodstuffs. On the contrary, I believe we have the framework for the most efficient, systematic, and complete market organization of any nation in the world. A system of markets requires three elements of consideration: First, the ability and means of knowing the extent of our supply, where it is, and in whose hands; second, a marketing system adequate and efficient to handle and distribute the products; and, third, a transportation system reaching every section of the country and to deliver our surplus at ports of export. We have all of these things in a very highly organized state—a state of organization that has grown up naturally responding to existing conditions of our country. No nation in the world has so complete and efficient system of railways as the United States. Our great triple system of markets, beginning at local points, extending to the great primary markets at our centers, and from thence to the seaboard, comprises an aggregate storage capacity for grain of approximately 800,000,000 bushels. Our mills, located in 17 of our principal milling cities, have an aggregate daily capacity of 166,000 bushels. Our export markets have an adequate storage capacity if we will only keep the product moving with reasonable efficiency. New York alone has a storage capacity of nearly 12,000,000 bushels.

The trouble is not, gentlemen, with our market and transportation facilities. It lies with some of our methods and practices. Many of these practices ought to have been corrected long ago, but they have not been and the matter of their correction is now before the Congress for consideration, and I believe that this bill is designed, after proper amendment, to go far in the correction of these evils, so far as foodstuffs are concerned.

Mr. SWITZER. Will the gentleman yield?

Mr. SCOTT of Iowa. Certainly.

Mr. SWITZER. Does not the gentleman think those evil practices should be abolished not only as to food but as to shoes, clothing, and all other products?

Mr. SCOTT of Iowa. Certainly. I think the bill should go much further in that direction than it does since its revision, but I am assuming that we are not to go beyond the limits of the present measure.

In dealing with remedial legislation of this character one of the first problems which is presented to the legislative mind is. How far shall the subject be dealt with by prescribing specific rules of law and of conduct, and to what extent by delegating discretionary powers to the executive branch of the Government? The American mind intuitively prefers prescribing the rules which shall govern the conduct of the individual. We have always cherished the idea that ours is a Government of laws and not of men. We have been reluctant to commit to the arbitrary discretion of any man, however pure and however exalted, both the framework and executing of our rules of conduct. But I recognize that there are instances where the line of demarcation which separate the field of legislation from the field of administration is dim and shadowy, and that there is a twilight zone that requires some elasticity to accommodate.

This bill undertakes to deal with the subject on both of these plans. It not only prescribes specific rules and states specific prohibitions but extends and delegates great discretionary powers to the President to be exercised through instrumentalities responsible only to him. To what extent we are adopting the one plan and to what extent the other will never be known until we have finally construed and interpreted the complicated terms of this bill. It must be first determined whether the preliminary declarations of power and purpose are to be taken as substantive law overreaching the specific provisions which appear later in the bill, or whether the specific provisions of the bill are to be considered as limitations upon the general declarations of power. If we are to assume the first proposition, then the power of the President is almost without limit. In that case the business activities of the individual, the instrumentalities of production and distribution in their minutest detail, and all that pertains to this great subject are committed without restraint into his hands. I am not yet ready to give that construction to the bill. I believe that fair interpretation requires us to come to the conclusion that the specific provisions in the bill are limitations upon the general powers and purposes declared and that these specific provisions are intended as the guide and authority of the administration in the execution of law.

Mr. THOMPSON. Will the gentleman yield?

Mr. SCOTT of Iowa. Certainly.

Mr. THOMPSON. I presume that the gentleman refers to section 3.

Mr. SCOTT of Iowa. Sections 1 and 3.

Now, there are a number of matters that I want to touch upon in the bill, and I may have to ask a little extension of time. First, the question of license. I believe in the main that is a very good measure. The matter of license, however, is a little too limited to suit me. It does not give that extent of power to the President that has been suggested in some of the debate this afternoon. There is no intimation in the section that he can put a man out of business by revoking the license once issued. The license in the bill I believe to be nothing more than a system of registration. The penalty provided is a criminal one. I do not believe that it would be at all consistent with the idea of the bill that the President should undertake to put out of business any of the great institutions that are providing the necessaries of life in this country. The purpose is the contrary of that.

But there are some things that ought to be controlled more effectively. I have in my mind fuel. Why was the miner left out?

Mr. THOMPSON. The miner of coal is not left out. Fuel is covered by this bill.

Mr. SCOTT of Iowa. The gentleman has not read the section with the degree of care that he should. The miner is not covered by the section, neither is the retailer covered. Right on that point I suggest that in the greater part of the consuming territory of our country the large dealers in coal, in large towns and cities, buy from the mines.

Mr. GREEN of Iowa. Will the gentleman designate the section?

Mr. SCOTT of Iowa. It is the license section 5.

Mr. LEVER. Will the gentleman submit to an interruption?

Mr. SCOTT of Iowa. Yes; certainly.

Mr. LEVER. The gentleman makes the statement that the coal miner is not provided for in section 5. Upon what theory?

Mr. SCOTT of Iowa. On the theory that he is not mentioned.

Mr. LEVER. It is mentioned in the language, line 8, where it says "to license the exportation, manufacture, storage, or distribution of any necessaries."

Mr. SCOTT of Iowa. Yes; but you do not say production, and the miner produces; he is not a distributor at all. Your miner is left clear out of the section. The miner sells a great deal of his coal direct to the retailer and delivers it at the mine mouth. I looked this matter up a few days ago and I found the Federal Trade Commission reported a short time ago to Congress that white ash coal at the mouth of the mine was selling for $3.61 a ton. I called up the Interstate Commerce Commission and they told me that the through all-rail rate on that product to the Missouri River was $5.50. That is $9.11 a ton laid down, and from personal knowledge I know that we have been buying coal for $14 and $14.35 a ton, showing a profit between the price at the mine and the retail price of 160 per cent on the total value of the product at the mouth of the mine.

Mr. LEVER. I am very much interested in the gentleman's criticism of the section, because I agree with him that aside from section 3 this section is the most important one in the bill. Would the gentleman construe the word "manufacture" to include the production of coal at the mine?

Mr. SCOTT of Iowa. I certainly would not.

Mr. LEVER. I am not familiar with mines; there are none in my district.

Mr. SCOTT of Iowa. The miner is not included under this section. The miner can sell to the retailer over the whole country and you can not touch the subject at all, notwithstanding the people are mulcted a profit 160 per cent on the total value of the product in one transaction.

Mr. LEVER. I know the gentleman's criticism is an earnest criticism of the matter, and I am trying to get together with him on the proposition. Would it be included in section 3, line 20. I will read the whole section:

SEC. 3. That there is hereby established a governmental control of necessaries which shall extend to and include all the processes, methods, activities of, and for the production, manufacture, procurement, storage, distribution, sale, marketing, pledging, financing, and consumption of necessaries, which shall be exercised and administered by the President for the purposes of this act; and all such necessaries, processes, methods, and activities are hereby declared to be affected with a public interest. And in carrying out the purposes of this section the President is authorized to enter into any voluntary arrangements or agreements, to use any agency or agencies, to accept the services of any person without compensation, to cooperate with any agency or person, to utilize any department or agency of the Government, and to coordinate their activities so as to avoid any preventable loss or duplication of effort or funds: *Provided*, That none of the penalties of this act shall apply to this section.

Mr. SCOTT of Iowa. No; it could only to this extent, that under other sections of the bill the President could commandeer the mine and take possession of the mine, and mine the coal by Government action. That is all he can do under this bill. You can take the mine and run it as a Government concern, but you can not license him and regulate his conduct as can be done with other industries.

Mr. LEVER I am very much in sympathy with the gentleman's idea, and I am try to get it fully in my mind.

Mr. SCOTT of Iowa. That is one feature of the bill that ought to be amended, and I shall offer such an amendment if the committee does not do so before I do.

I want now to touch upon the question of this guaranteed price. A provision for a guaranteed price to the farmer has been put forth as one of our greatest anticipated blessings. It is proposed to give the farmer the benefit of a guaranteed price higher than competitive conditions will warrant. That would be a very nice thing for the farmer if it would work out. Let us see what is the theory of this section. The President, when he deems necessary in advance of the seeding time, will prescribe a guaranteed price for the farmer's product available to everyone who desires to come within the conditions prescribed. But the section does not stop there. The section goes on to provide protective measures for the Government. If the President is of opinion that the Government of the United States is going to sustain loss or incur liability on a guaranteed price, his duty is to protect the Government by levying an import duty, if necessary, but principally by buying the crop, in the discretion of the President.

When you are exercising this guaranteed scheme the President may buy the crop and store it and sell it to anyone at war with any nation with which we are at war, or, in fact, sell it to anyone. Now, let us assume just for a moment that this guaranteed scheme goes into effect, that the President through his agency buys up three or four hundred million bushels of wheat. What are you going to do with it? You can not consume it or dispose of it locally right away. He is going to take advantage

of the storage facilities which you are authorizing him to construct and lease and procure and put the wheat there. What time of the year is he going to fill them? He is going to fill them from the crops of that class of farmer who sells early in the season when the price is low, lower than the guaranteed price would be, otherwise you could not use the guaranteed price. Time passes, one week, two, three, until that class of farmer has marketed his crop, and within these warehouses are stored three or four hundred million bushels of guaranteed wheat. How is the President going to protect the Government of the United States against liability for this guaranty as stated in the bill? He will have to sell it, will he not? To whom will he sell it? I will tell you to whom. We are in a northern latitude. We do not harvest as early as Argentina, as early as Australia or India. In the early part of the season in the foreign market the crop of those countries comes in and meets us in competition. That is why the price of our crop under normal conditions is at a low level during the early part of the importing season. When those harvests have been absorbed and when Europe becomes a little short, she then turns to the great American market, and then, if you gentlemen have observed, the upward trend of the price begins, which is late in the season and on through the winter. It is when we are getting the benefit of the competition of the European demand in our markets that the price advances. What is going to occur, then, with the Government having 400,000,000 bushels of wheat stored, bought earlier in the season at a guaranteed price? Will the Government sell it or hold it?

If the President is going to protect the Government as stated in the bill, he will sell, he will take advantage of that opportunity and the accumulated surplus will pour into the foreign market, taking advantage of the strong demand, and the result will be that the Government supplies the foreign customer and depresses the price. The result will be inevitably that your guaranteed minimum price will at once become your maximum price. There will be leveling influence all along the line. The guaranty will tend to raise slightly the price at the beginning, but it will tend to depress it in the end. Just to the extent that this Government buys and accumulates the cheap product of the American farmer and holds it and stores it and then meets the strong demand of the foreign market later in the season, to that extent you have made the Government of the United States the organized strong competitor of every farmer in the country.

Mr. SUMNERS. Mr. Chairman, will the gentleman yield?

Mr. SCOTT of Iowa. Yes.

Mr. SUMNERS. Suppose the 300,000,000 bushels of wheat had been purchased by private individuals and held, would not the same thing occur when the price went up? Would it not be put into the market?

Mr. SCOTT of Iowa. The price would go up if individuals were permitted to corner the product and manipulate the supply, one of the very evils that we are trying to avert here—the cornering and holding and accumulating—and it would not be held and accumulated to the extent it would if the Government of the United States should accumulate millions of bushels and be able to control the buying and the selling. Do not overlook the fact that all of the buyers of the European nations that are our allies are going to be organized and represented by one man, and he is going to meet Mr. Hoover representing the United States, and those two men are going to sit down at the table and fix the price of the farmer's product in this country so far as the surplus is concerned.

Mr. SUMNERS. Then if the Government did not go into this market and the representative of the nations had offered an agreement and we were buying together, would not this wheat have one less strong competitor, competing against the low price for the wheat?

Mr. SCOTT of Iowa. The gentleman means a competitor for our wheat?

Mr. SUMNERS. Yes.

Mr. SCOTT of Iowa. I have no fear whatever of our being without a buyer from abroad. They will want all of our surplus and more. There is no question about that. The only question is of our delivering it to them under equitable conditions. But the point I am contending for is that this guaranteed price will in fact be the maximum price. Whether we are going to give the farmer who purchases it the benefit of the competition of that market or whether we are going to take it away from him and put it in an organized system of elevators and then sit down to a table with the representatives of the allies and fix a price in a cold-blooded way is the question.

Mr. LEVER. On that point will the gentleman yield, as it is a very interesting argument the gentleman is making?

Mr. SCOTT of Iowa. Yes.

Mr. LEVER. Under present conditions I take it that the wheat business as in the cotton business is greatly distressed, cotton and wheat must be put upon the market at whatever price the market is bringing at the time. Now, if the Government fixes the guaranty of a reasonable profit, do we not in this bill put the farmer, who ordinarily is a distressed farmer, in a position where he is not in distress, and therefore can market his crop in accordance with his own judgment as to prices?

Mr. SCOTT of Iowa. I will answer that question in this way.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HAUGEN. How much more time does the gentleman desire?

Mr. SCOTT of Iowa. Fifteen minutes.

Mr. HAUGEN. I yield the gentleman 10 minutes.

Mr. SCOTT of Iowa (continuing). That in my judgment there will be no dearth of a demand for the farmer's products during the continuance of this war. I believe the competitive conditions will be of more advantage to the farmer than the price that will be fixed by the representatives of the Government.

Mr. LEVER. But the gentleman concedes that there is a large class of farmers who are not now able to take advantage of competition. This bill by its guaranty of a minimum profit would put those farmers in a position to take advantage of the loss of competition.

Mr. SCOTT of Iowa. Well, I do not see it that way when we consider the season's range of prices.

Mr. LEVER. In the past who has been benefited by this competition where it has been free of any limitation as in this bill, the farmer himself or the speculator who stores it?

Mr. SCOTT of Iowa. The competition, as I would like to show a little later on, has redounded—that is, the foreign competition—more to the benefit of the speculator than the farmer, and for this reason, that, as I said a little while ago, the early deliveries of American grain are not exported primarily. They are held until the demand in Europe is strengthened by reason of the depletion of the harvest coming in from other countries, so that two conditions, as I believe, tend to an upward trend of prices in this country after the first rush of the grain from the farm: First, the manipulation of the speculator, who indulges in a multiplicity of sales, which naturally tend to raise prices artificially. Second, a strong demand from the foreign markets later in the season. That is true. Now, I want to be fair in this argument. I think the gentleman's idea is correct that a guaranteed price would help to some extent those farmers who were obliged to sell at the very beginning when the market is in a measure glutted and competitive conditions might bring wheat below the guaranteed point if the guaranteed price is high enough; but, as I say, a little later on it would be all equalized and more, in my judgment.

Mr. LEVER. The other class of farmer does not have to sell except as he gets ready to sell.

Mr. SCOTT of Iowa. Oh, it does not make any difference whether he holds or not. If the Government has a large supply, and all at once the foreign price goes down, it does not make any difference whether he sells or holds, he absorbs the loss. He may hold his wheat until December or January and then offer it, but if the President is there with four or five million bushels to meet the foreign demand he is going to absorb a share of the loss just the same.

Mr. THOMPSON. Will the gentleman yield?

Mr. SCOTT of Iowa. I will.

Mr. THOMPSON. Now, the testimony before our other committee showed that about 90 per cent of the farmers of the country were compelled to sell their products as they were harvested, and therefore these speculators who purchase and take advantage of that fact can purchase at a less price than the parties who held and got the increased price.

Mr. SCOTT of Iowa. I think the gentleman would betray no confidence if he would give the names of those who made that statement.

Mr. THOMPSON. Every representative of every farmers' organization who appeared before the committee—the Grange, the Farmers' Union, the Gleaners, the Equity Association—all testified to that.

Mr. SCOTT of Iowa. Within what length of time?

Mr. THOMPSON. Something like 90 per cent, at the time the crops are harvested.

Mr. SCOTT of Iowa. Why, such a statement is preposterous. We know that last winter, clear into February and March, we could not get cars to move the stuff, it was flowing in such great volume.

Mr. THOMPSON. I will say to the gentleman, if he will yield, that in my State of Oklahoma a greater per cent than 90 sells at the time of the harvest.

Mr. SCOTT of Iowa. What do you raise in Oklahoma that you sell from the machine?

Mr. THOMPSON. Wheat.

Mr. SCOTT of Iowa. How much?

Mr. THOMPSON. About 70,000,000 bushels of wheat.

Mr. SCOTT of Iowa. Less than 30,000,000, I think. And corn?

Mr. THOMPSON. I do not remember. But about 1,000,000 bales of cotton. We sell practically all of our products as they are harvested. There is a mortgage on practically all of it, and farmers are compelled to sell. Therefore the speculators take advantage of that condition and force the price down, purchase it and hold it, and get the increased price.

Mr. SCOTT of Iowa. That is an unfortunate condition in Oklahoma, and such a one as does not prevail in Iowa.

Mr. ELSTON. Does the gentleman believe that the competition should be unrestricted, then, so that the sky would be the limit for the farmers? Where would the consumer come in?

Mr. SCOTT of Iowa. I think the farmer should be placed on the same level as the man who produces clothing, shoes, agricultural implements, steel bridges, or engaged in any other business. I think there should be no discrimination.

Mr. SNYDER. Does the gentleman know of any manufacturer of clothing or shoes, or any other merchandise, that holds the goods for a price?

Mr. SCOTT of Iowa. They have held them for a pretty high price occasionally when I have undertaken to buy.

Mr. SNYDER. There is no such thing in the trade. All that class of goods is sold on a regular season basis. The prices are made, and they go out and sell their goods. As I understand your argument, you want every State to build storehouses so that they can hold this wheat until every man has got to pay $3 a bushel or $5 a bushel for it? I do not think that is the intent or purpose of this act in any way, shape, or form, and ought not to be.

Mr. SCOTT of Iowa. We have in this country storage capacity for 800,000,000 bushels, not counting the freight cars, not counting the farm storage. We have sufficient storage capacity now, if our rolling stock was in just a little better condition, to move any crop that we have ever produced properly and equitably.

Mr. McKENZIE. Will the gentleman yield for a question?

Mr. SCOTT of Iowa. Yes.

Mr. McKENZIE. You have stated that there will be a sufficient demand to take all the wheat of our country, and that if the Government goes out and buys from the farmer who is ready to sell early in the market, and gives him the guaranteed price, and takes this wheat in, then afterwards the farmer who is obliged to hold his wheat will suffer from the fact that the Government will have a great store of wheat to sell to the purchaser of wheat. Now, I want to ask, will the American farmer who has held his wheat and who can receive and must receive the guaranteed price, which means the cost with a reasonable profit, have any reason to complain?

Mr. SCOTT of Iowa. The farmer who holds the wheat?

Mr. McKENZIE. Yes.

Mr. SCOTT of Iowa. He does not receive the guaranteed price under this bill. He sells under competitive conditions.

Mr. McKENZIE. Is it your contention that he will have to compete with the Government?

Mr. SCOTT of Iowa. Yes, sir.

Mr. McKENZIE. Is it the purpose of the Government to sell his wheat for less than they pay for it?

Mr. SCOTT of Iowa. No.

Mr. McKENZIE. If he does not, he will have to receive the guaranteed price. If that is true, and he gets the cost of production and reasonable profit, has he any reason to complain? And would it not be well to let him complain a little bit if we did justice to the great majority of the wheat growers of the country by giving them what it costs them to produce the wheat? [Applause.]

Mr. SCOTT of Iowa. That depends entirely on whether this system is going to work as its friends anticipated. It seems to be understood that the price of the agricultural product is to be fixed in advance. Now, it is proposed to fix or control the prices of commodities generally, and it will be the relative price which the farmer gets which will determine his profit, and that relation will not be established until after the guaranteed price is fixed.

Mr. SUMNERS. Will the gentleman yield there?

Mr. SCOTT of Iowa. Certainly.

Mr. SUMNERS. If instead of the Government buying this wheat a private speculator had bought the wheat, would not he turn it loose upon the high European markets just the same, and would not the effect upon the man who held be just the same?

Mr. SCOTT of Iowa. No private speculator would ever buy that quantity of wheat which it is proposed that the Government will buy.

Mr. SUMNERS. What would become of it if it remained on the market?

Mr. SCOTT of Iowa. It would be divided up among numerous purchasers. One of the purposes of this bill is to do away with the speculator, and if I can have a moment or two on that I will release you from further punishment.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HAUGEN. I will yield to the gentleman five minutes more.

Mr. SCOTT of Iowa. I believe the board-of-trade section of this bill is one of the best sections in it, not that I would regulate the subject in that way, because I am perfectly convinced that we can get along in this country from now to the end of the war without the short sale.

I am firmly convinced that we can restrict dealings in futures to a very short interval. I know what the grain men say. I know what all of the writers say, because the writers on this subject, as a rule, have been without personal experience. They are college professors. They write scientifically, and they prove conclusively that we must have the short sale, we must have the hedge, we must have a long future delivery; and they also accompany their assertions with the proof, and the proof always comes from the speculator. When you read their books you find that they get their information from the men who are in the wheat business, from presidents of boards of trade, grain inspectors, men who are in the grain business for speculation.

They say that we must have a system in this country which enables men in the market to sell what they do not have. I believe we could do business successfully in this country selling only what we do have or expect to procure within a very short interval. [Applause.]

I would write into this bill a specific prohibition against the short sale, unless it was a delivery within three to ten days' time. That is what I would do. The next best thing, of course, if you can not legislate specifically, is to give some man the power to regulate. In other words, to give Mr. Hoover the power to prescribe the rule and regulation. If the membership of this House and the House at the other end of the Capitol are incapable of sitting down and writing a rule that will govern this subject, then abdicate your function, turn it over to Mr. Hoover, and say to him, "Write the rule." When you pass this bill in its present condition, my friends, you are saying just that thing.

Mr. SIMS. Mr. Chairman, will the gentleman yield?

Mr. SCOTT of Iowa. Yes.

Mr. SIMS. I wanted to suggest to the gentleman that I have a remedy that would be absolutely operative, and that would be to levy a tax upon every sale for future delivery, the tax to be refunded when the delivery was made, and then all this speculation would be stricken out. I have tried to get that legislation enacted, but have never succeeded.

Mr. SCOTT of Iowa. I hope the Congress of the United States will have the courage some time to sit down and write into the law a regulation that will put that class of men out of business. It is true Mr. Hoover will write a regulation, but we do not know what Mr. Hoover's views are on this subject. We do not know what kind of a regulation he will write. We do not know whether he is in favor of restricting speculation or whether he entertains the same opinion as those who do business on the Chicago Board of Trade. We must take him on faith, blind faith, gentlemen, when we pass this bill in its present condition. But if we can get nothing else, I apprehend we had better pass it, because we have got a condition now that is as bad as it could be. He can not make it very much worse, and he may help it some. [Applause.]

Now, there is one more feature of this bill that I want to call attention to. It is a matter that has neither been explained by the committee nor referred to in the debate. It will be observed that the first section, which declares the purpose of the proposed law, enumerates "foods, feeds, fuels, and articles required for their production" and then brings them all under one common expression "necessaries." From that point on we find the term "necessaries" in every section of the bill with the exception of the one dealing with the guaranteed price. Then suddenly the language changes. The term "necessaries" is not found in section 12. That section deals altogether with "nonperishable agricultural products." And this section being in its character quite independent of the balance of the bill and capable of standing alone, the expres-

sion "nonperishable agricultural products" is in no way limited by either the enumeration of particulars or the general term "necessaries" found in the first paragraph. "Nonperishable agricultural products" not only takes in food and feed, but it takes in everything that is the product of agriculture—cotton, tobacco, and hemp, for illustration. Now it seems to have been thought necessary to prohibit hoarding and inflict severe punishment upon the men who hoard and conspire respecting the necessaries that are referred to in these other sections of the bill; it seems to have been thought necessary to regulate boards of trade and exchanges upon which necessaries are dealt in and to have given the widest authority for regulation not only of production and manufacture but of consumption of these necessaries. But when it comes to the enlarged class of nonperishable agricultural products no regulation is prescribed whatever. By simply changing the expression in a section from "necessaries" to "nonperishable agricultural products" you relieve such products as cotton, tobacco, and hemp from all the burdens and regulations of the bill and at the same time bring them in on the ground floor with respect to all of its benefits. I have not yet heard this matter explained or a reason given for the plan. Unless some adequate reason is given it seems to me that this bill ought to be corrected to reach every class that falls within the purview of its benefits, and this amendment is offered to correct that inequality in the bill. It confines the operation of this section to the same crops, to the same products, as the other sections of the bill apply to. [Applause.]

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. HAUGEN. Mr. Chairman, I yield 10 minutes to the gentleman from New Jersey [Mr. PARKER].

Mr. LEVER. I would like, Mr. Chairman, to yield at least 15 minutes. Certain gentlemen have been waiting all day to be heard.

Mr. HAUGEN. I suggest that other men over here have been waiting all day, and you have used more time than I. I will yield 10 minutes to the gentleman from New Jersey [Mr. PARKER].

Mr. LEVER. Before he does that I hope the gentleman will permit me to yield 15 minutes to the gentleman from Pennsylvania [Mr. KELLY].

Mr. HAUGEN. Very well.

The CHAIRMAN. The gentleman from Pennsylvania is recognized for 15 minutes.

Mr. KELLY of Pennsylvania. Mr. Chairman and gentlemen of the committee, we have all listened to the rather far-fetched fears, as I think they are, of my good friend from Iowa [Mr. SCOTT] regarding this measure and its possible interference with and disarrangement of world-wide markets; but while we are listening to fears like these the people of America are facing not fears but facts, and tragic facts. The people of America are presenting to this Congress a petition of grievances, and it is written not in letters but in hunger and hardship. The food question is the biggest problem confronting us, and it grows more serious with every passing day.

Mr. Chairman, always and everywhere there has been a close relation between governments and bread. From the days when Pharaoh built his granaries for storing food for Egypt's "seven lean years" down to the overthrow of the Romanoffs in Russia the bread question has been a vital one for the governments of mankind.

The French Revolution was caused by the refusal of royalty to recognize the people's need for bread. When Foulon jeered, "If corn is scarce, the people can eat grass," or Marie Antoinette innocently asked, "If there is no bread, why do they not eat cake?" they expressed both the insolence and the innocence which brought on the mighty catastrophe that changed the history of the world.

English records show many events determined by the food problem, from Wat Tyler's bread riots down to the present day. One of the greatest parliamentary struggles ever known was Peel's successful attempt to abolish the corn taxes. On his retirement from Parliament he said:

> It may be that I shall leave a name remembered sometimes with expressions of good will in the abode of those whose lot it is to labor and to earn their daily bread in the sweat of their brow, when they shall recruit their strength with abundant and untaxed food, the sweeter because it is no longer leavened by a sense of injustice.

Time and again the course of history has been changed by hunger, just as the land of Holland was given over to the sea, when the great dikes were leveled so that the grain ships might bring food to the besieged cities of the Netherlands.

In this great war now raging the question of food is as important as the question of armies. In Russia autocracy was demolished when the bureaucracy, with bursting granaries on every side, told the hungry people that the stoppage of the export trade through the Dardanelles had resulted in a shortage of corn. In a fury the people demanded the bread that was theirs, and when the sudden, brief uprising was over the Czar of all the Russias was without a throne and a new democracy had joined the free nations of the earth.

If there comes a similar revolution in the realm of the Kaiser, it will be under similar circumstances and because the people have been deprived of food beyond human endurance.

In fact, the whole outcome of this war hinges on food supplies. If the allies can be kept from securing food by the activities of the submarines, they will be starved into submission and surrender. It is not too much to say that the future of the world, the course of its history and the direction of its development, depends upon which side can secure adequate supplies of bread.

Nor has America escaped this age-old, world-wide question. The food problem is the most serious which confronts this Nation. Upon the way in which it is met depends vast issues of weal or woe. There is no time to lose in dealing with it, for every hour is big with danger. The strain upon the American citizenship is rapidly reaching the breaking point and immediate action is demanded.

Mr. Chairman, what is the situation? Food prices so high that millions go hungry. The gaunt specter of famine frowning upon America in 1917. Flour at $17 a barrel and a bushel of wheat bringing $3.18 in a frenzied market. Bread selling at prices which spell suffering and want in countless families.

It may seem like a small matter to add a single cent to the price of a loaf of bread. But under certain conditions that one act may be full of menacing possibilities. Experts declare that the addition of 1 cent to the price of a loaf of bread in New York City alone means an extra expenditure of $16,500,000. In America as a whole, that 1-penny raise will mean an increase in the Nation's bread bill of almost a billion dollars.

But it is more than the price of bread that has mounted to dizzy heights. There has been a steady increase in the price of all articles of food until they have become prohibitive as to quantities to maintain normal life and efficiency.

Recently I gave on the floor of the House a comparative review of retail food prices between April, 1914, before the war began, and April, 1917. That report showed such astounding increases as the following: Flour, 107 per cent; corn meal, 100 per cent; sugar, 125 per cent; beans, 185 per cent; lard, 100 per cent; meats, 80 per cent; potatoes, 291 per cent; cabbage, 400 per cent.

The average increase in the retail prices of 60 food items in common use was 85 per cent.

I have here a report covering the comparative prices for October, 1916, and May, 1917. It shows one unvarying trend upward, with prices which had before reached a point which spelled tragedy, mounting still further upward. The entire list of 79 articles shows an increase since last October of 54 per cent. Nor is the end reached yet, for almost every day sees announcement of still further increases in food products which are actual necessities.

What does this mean? It means that the dollar of the consumer will purchase but a meager portion of the food it formerly secured. Even with increased wages the income is in fact smaller than ever, for its purchasing power has been greatly lessened by these high prices.

The Labor Department in a bulletin states:

> A workingman who made $3 a day in 1907, working 10 hours a day, in 1916 worked 9 hours and 36 minutes and drew $3.48, but it cost him $4.17 to buy the same quantity of food his $3 bought in 1907.

Figure the enormous increases in food prices since those figures were prepared, and it is safe to say that it requires $5 to-day to purchase the food that could be bought for $3 10 years ago.

Mr. Chairman, there is neither time nor need to go further along this line. It is a universally admitted fact that food prices are higher than ever before in American history—so high that they form the greatest danger sign on the horizon.

Then what is the reason for such prices? Are they due to the great war now raging? Are they due to the increased production of gold or underproduction of food in this country? All these are given as explanations by theorizers, as well as by those who profit from the situation. But, although each of these causes may have some effect, they do not explain the condition which confronts America to-day.

The fact is that even in the beleagured and ravaged countries of Europe food prices have been lower than in America. If the war itself, or the world-wide influence of increased gold pro-

duction were controlling, these countries would witness the highest prices.

Mr. PLATT. Will the gentleman yield there? The gold has been sent from those countries to this country, and if gold has an influence on those prices, here is where it would be felt.

Mr. KELLY of Pennsylvania. Oh, the gentleman understands that the production of gold is world wide, and if it had a dominating influence it would have affected the nations engaged in war for the last three years, as well as ourselves.

Now, what is the reason? Is it because America, with her boundless territory and fertile lands, has not produced and can not produce sufficient food to supply her own needs? Is America too barren to support her own population? Such a contention is absurd. America has always been the garden spot of the world and it is more so now than ever.

It is stated that a quarter of an acre of ground, under the intensive-farming system of Holland, will support a family of six persons. The entire human race, all the population of this globe, could be divided into groups of six and set down in the center of the State of Texas, each on its quarter acre of ground. Then there would still be left an unoccupied fringe of ground greater than the area of England, Wales, and Scotland, with all the New England States, Maryland, Delaware, and New Jersey thrown in for good measure. The population of the United States, divided into groups of six, could be cared for in the country with an allotment of a 120-acre farm to each group.

And America has not been barren. She has been producing food sufficient to supply the world. From her fields of gold, her orchards, and her gardens she has brought forth the products needed for the sustenance of mankind in such colossal quantities that there is not the slightest legitimate excuse for hunger, or extortionate and oppressive prices anywhere in America.

We are producing more food than ever before and consuming less at the same time. Figures compiled by the Department of Agriculture show that the consumption of edible grain, meats, dairy products, and other foods has decreased during the past three years, even though their production increased.

No. Thousands of Americans have felt the pinch of hunger and suffering, but not because there was not enough food produced. Food riots have raged in many cities, but not because the land refused to yield its abundant harvests. "God give us bread" has been the cry of men and women and children with famished lips, but not because mother nature defeated the productive efforts of the husbandmen.

Then, Mr. Chairman, what is the reason for the exorbitant prices charged for food supplies in every market in America, prices which mean enfeebled life and health? The responsibility rests on the gambler, the grabber, and the grog maker. [Applause.]

I maintain that the main reason is that between the man who produces the food and the man who consumes it stand these parasites, levying enormous toll for their own enrichment. The American public is subject to criminal extortion by food pirates and monopolists and destroyers. Without performing a single act of service, these conspirators are exploiting an entire nation by cornering food supplies and juggling with the very things upon which life depends.

The primary question to-day is not whether sufficient food supplies can be produced to supply not only this country but the other nations dependent upon us. We have been doing that and will continue to do it. The real question is whether the producer and consumer of foods shall be held at the mercy of treasonable and criminal interests, bent solely upon robbing them both.

I am in hearty accord with the efforts of Government officials and others to increase production of foods by increased acreage, home gardening, and other methods. But I insist that the food to be raised shall be protected from the manipulations of pirates of commerce, who would use even this increased production to build unholy fortunes for themselves.

With the great river of food products flowing on its life-giving mission, these gamblers and speculators and monopolists dam up the stream and divert its flow, exacting extortionate prices for the supply as they choose to allow its passage.

We have grown familiar with many phases of the madness of money getting, but this juggling with food supplies is the most ruthless and alarming of them all. It is a return to the barbarism of the Dark Ages. Three times a day it comes to the table of every family in the land and exacts tribute. Through its iniquitous power it holds the lives of men in the hollow of its hand, and no set of men should have that power. I desire to confine my attention now to the gamblers and hoarders. Later I hope to have an opportunity to show the waste of foods in the manufacture of intoxicants.

It is not guesswork that attributes responsibility for high prices to food gamblers and speculators, for every investigation by Federal authorities has established that fact.

The District of Columbia food investigating committee, after a two months' investigation into the increased prices, has but recently made its report to the commissioners. This committee puts itself on record that the element of speculation in foodstuffs has been one of the most potent factors in the enormous increases in prices which consumers have been compelled to pay.

The grand jury investigation of food prices in Chicago established beyond a doubt that there is a manipulation in the handling of eggs in that market, which to a substantial extent sets the price of eggs for the country. Reports of the investigation state that the Chicago butter and egg board is a sham market. A session of a few minutes is held early in the morning. A few sales are made and these sales are marked up on the blackboard as establishing the market price. These prices are then telegraphed over the country and largely influence prices.

Doubt is expressed by the grand jury that even the sales made are bona fide and the prices made certainly do not depend on the supply. During one week in this month prices were 33 cents a dozen wholesale, with receipts of 173,000 cases. During the corresponding week a year ago, with receipts of 170,000, the price was 20 cents a dozen on the board.

Mr. Chairman, I maintain that even in time of peace every American has a right to demand that his Government protect him from the highwayman tactics of the food gambler and speculator. But in time of war, when the Nation is engaged in a mighty conflict, the Government must end such vampire-like activities as a measure of self-protection. [Applause.]

Any system that lays iniquitous tax upon a nation's bread in time of war is treasonable and must be exterminated. These gamblers and speculators not only rob the producer and exploit the consumer, but they are equally destructive in their effects upon the legitimate distributor. The small business men who serve an essential part in the distribution of commodities are nailed like dried beetles to the wall by these manipulators who put prices beyond the reach of possible buyers.

I noted in a Philadelphia newspaper the other day an article which describes a situation which has counterparts in every town and city in America. An excerpt is as follows:

> Near Philadelphia a long-established bakery has supplied the wants of the citizens of a small town. A woman customer found the dispenser of bread, also a woman, in tears. A few sympathetic questions brought the explanation. It was simple. "I have just been obliged to pay $18 for a barrel of flour. I don't know how much higher it is going, but at $18 I am losing money. The price of a loaf of bread now is as high as anyone will pay. I must go out of business. My living is gone."

That same problem confronts every individual baker and retailer. The high prices that put commodities beyond the reach of the buyers, inevitably react disastrously upon the merchants who supply the wants of their communities.

Can anyone doubt that such despoilers are operating to defeat the Nation in war. I submit that the empty flour barrel, either in home or store, which can not be refilled save by paying a monstrous tax to greed, is not an incentive to patriotism. These gamblers in the people's food are making the liberty loan doubtful. They are impairing the taxable strength of the Nation. They are poisoning the patriotic impulse of many citizens. They are sowing bitterness and strife and enmity, and breeding discontent and anarchy. They are furnishing aid and comfort to the enemy. They are double-dyed traitors, for they are waging war on the United States as dangerous as the German submarines. [Applause.]

Mr. Chairman, I admit that I feel strongly on this question. During the Sixty-third Congress, the Rules Committee of the House, of which I was a member, held extended hearings on certain resolutions dealing with grain exchanges and boards of trade in this country. We had before us members and officers of the Chicago Board of Trade and similar organizations. I shall never forget some of the facts brought out at that hearing. Since then whenever I hear these food speculators referred to as gamblers I feel that an apology is due the poker players of the country.

Little bootblacks will shoot craps; lovers of the ponies will play the races; others like shaking dice or playing faro or roulette, and in any of these a man can limit his loss by stopping the play. He can choose his own companions, and has reasonable assurance that in the ordinary gambling den the cards are not marked nor the dice loaded nor the ponies doped. He also knows that if he keeps away from the game he will not lose his money.

But in the great gambling game in foodstuffs the men who have nothing to do with the gambling are the chief losers—the farmers who produce the food and the consumers who eat it.

It is said that there is an excuse for those who bet on horse races, since horse racing develops magnificent horses. But no such excuse can be made for those who bet on the price of the people's bread. That kind of gambling develops nothing but dangerous fortunes for the few and equally dangerous suffering and privation for the many. This gambling is with the farmer's load of wheat, with the flour barrel of the miller, and the loaf of bread in the poor man's pantry, and it has an oppressive influence upon them all.

It was stated at that hearing that more wheat is bought and sold on the Chicago Board of Trade than reaches Chicago in a year. That means that the price of food was being fixed by deals in "shadow" wheat, for the prices are fixed by the blackboard where the gamblers quotations are posted.

Mr. YOUNG of North Dakota. Will the gentleman yield?

Mr. KELLY of Pennsylvania. Yes.

Mr. YOUNG of North Dakota. The investigation that the gentleman speaks of was an excellent one and furnished a great amount of valuable information. I was wondering if the gentleman believed that the Government in this instance in administering this bill will consider it necessary to begin a long investigation? I am hoping that under this bill we can get down to business with the facts that have already been brought out in the hearings without any further investigation.

Mr. KELLY of Pennsylvania. I agree with my friend, and I hope we are through with investigations and probes, and have reached the time to inflict the penalties and put these gamblers out of business. [Applause.]

The sacred "'aw of supply and demand" has no bearing upon their operations. In 1909 there was a bumper grain crop in this country, yet the price of grains averaged 10 cents more a bushel that year than in 1911, a year of greatly lessened production. The price was not fixed by the supply and demand, either of this country or the world. It was fixed by board of trade gamblers, who juggled figures on a blackboard in their gambling dens and thus levied tribute on every American family.

The extent of that tribute can be realized by the further fact brought out at the Rules Committee hearings, that every time these manipulators change the price of grain 1 cent a bushel they thereby change values to the extent of $50,000,000. If they drop the price 1 cent they lower the value of the farmers' product by $50,000,000, or a drop of 10 cents means $500,000,000. Then, when the bulk of the grain has left the farmers' hands, they reverse the process and by every additional cent on the price they increase values to the consumer a full $50,000,000.

Mr. Chairman, here is what S. H. Greely, of Chicago, a member of the Chicago Board of Trade for 20 years, said before the Rules Committee:

> Although the board of trade deals in 25,000,000 bushels of wheat a day, Chicago does not receive on an average more than 25,000,000 bushels of wheat in a year.
>
> I know what trading in grain is. I know what future trading is. I have been in it. I was brought up in it; bred in it from youth. No man on the board of trade that knows anything will deny that in the wheat pit alone, on an average, every day in the year the total amount of the purchases plus the total amount of sales in the futures will total at least 25,000,000 bushels a day, from 9.30 in the morning until 1.15 in the afternoon. There are those who have boasted that they have traded in 20,000,000 a day—a single firm. I, myself, although I have been a little dealer, what you might almost term an "insignificant trader," have many a day traded in 500,000 to 1,000,000 bushels and never thought much about it at the time.
>
> I did not handle the wheat, and there are men in the business to-day, trading in millions upon millions of futures, tens of millions of futures, hundreds of millions of futures, firms that do it every year, that do not know what the color of a warehouse receipt is; they never saw a carload of grain. Mr. Canby the president of the Chicago Board of Trade, is sitting here to-day, and I will challenge him to show by his records where he ever handled 10 carloads of grain since he has been a member.

Now, what does that testimony mean. It means that both producer and consumer are robbed by men who never perform a single act of service in handling food supplies. It means that prosperity is denied those who have toiled faithfully for it and is diverted to those who do not labor but destroy.

The entire system is built upon sham and false pretense. Look at the reasons given for fluctuations in the market. Here are a few headlines of news items that were given to explain rapid changes in the price of grains in the exchanges. "Hot winds in Kansas." "Rain in Argentina." "Crop outlook good." "Crop outlook poor." "Patten selling." "Patten buying." "Heavy snow coming." "Puts were good." "Calls were good." "Margins exhausted." "Cattle scarce." "Hogs plenty." "Money scarce." "Money plenty." "Cars scarce." "Cars plenty." "Armour says wheat a purchase." "Leiter thinks wheat a sale." "Steamer sunk." The headline "War declared" sends up wheat 40 cents. The headline "Peace probable" sends it down 25 cents.

And do not forget that every fluctuation of 1 cent was changing values in this country $50,000,000. Can any man who studies such a system with a view to the common good say one word in its behalf? Is it any wonder that its continued existence without interference by the Government has caused the speculator to turn the American hymn into a version of his own.

> My country, 'tis from thee
> I get the liberty
> And right to sting.
> Long may we work our blight
> 'Neath freedom's holy light;
> Protect us by thy might,
> Great Greed, our King!

Mr. Chairman, hand in hand with the gamblers on stock exchanges and boards of trade work the food cornerers and price boosters. Warehouses are filled to bursting with foods out of the reach of the people. Carloads of perishable products are left on the sidings until they rot, and in some cases great quantities of foods are deliberately destroyed in order to maintain high prices. The whole product of great orchards have been contracted for and then left to spoil untouched. Potatoes have been purchased in the ground and then never dug, simply because their entrance on the market would lower prices.

Both producer and consumer suffer by such vandalism. Here is an article clipped from the Cooperators' Herald, published in North Dakota:

> According to newspaper reports a lady in Dayton, Ohio, purchased a bushel of potatoes at $4. Among these potatoes the lady found one that had been hollowed out, and upon examination found it contained a note stating that the farmer producing the potatoes desired to know the purchaser. The request being granted, the lady was informed that the producer had sold the bushel of potatoes last fall at 69 cents.

In Boston last week 88 corporations and individuals were indicted for conspiring to monopolize interstate commerce in onions. The indictments allege that the supply was hoarded in order to increase prices. United States Attorney Anderson stated that the producers received less than 2 cents a pound while consumers were forcel to pay 10 and 15 cents a pound.

Under such circumstances the consumer is out on the firing line and without a gun. It is undiluted false pretense for these monopolists of food to tell housewives that food products are high because they are scarce, or the crops were poor, or the war is raging.

It is more than false pretense, it is treasonable. These greedy interests are breeders of anarchy. Their activities are dangerous to justice and the public safety. They are traitorous forestallers of bread.

We are told that among savage tribes if one finds a child who is hungry, it is absolute evidence that the chief also is hungry. To-day the hungry children in America simply prove that our gambling and cornering chiefs are fattening at the expense of the helpless. There is something horribly wrong in a situation where those who work hardest have the least of life's necessities, where honest toil is forced to eat a crust while infamous nonproducers pile up evil wealth by doling out small quantities of food at the top-notch price from their storehouses. [Applause.]

Mr. Chairman, I believe that such gambling in the Nation's food is a sin against God and man. It should be prohibited as a deadly crime. I remember that the Bible says that there are three sins that have cried to heaven. The first was the sin of Cain, "The voice of thy brother's blood crieth unto me from the ground." The second was the sin of Sodom. "The cry of it came up to God." The third was the exploitation of the laborers in their weakness. "Behold the hire of the laborers, who mowed your fields, which has been held by you, crieth out, and the cries of them that have reaped have entered into the ears of the Lord of Hosts."

Murder, iniquity, exploitation! All these are combined in the practice of those who gamble in the foods upon which life depends. Their names must be in the bluebook of hell. Their crimes have long gone unheeded and unpunished, but in the light of this world-wide conflagration of war surely this Congress will see the necessity of blotting out forever such a system, begotten in sin and conceived in iniquity.

It is going to take drastic action, but that action is sure from one source or another.

In Chicago, the other day, before an investigating committee, a dealer boldly declared that he had millions of eggs in storage, and that he proposed to keep them there until the price had reached the highest possible point. After giving this information he sneeringly asked, "What are you going to do about it?"

That question is going to be answered. If this Congress makes the craven acknowledgment that it can not or will not curb unscrupulous greed, the people will act for themselves. I believe that unless the Government places its hands upon these necessities of life and says, "Thus far and no farther," a breaking point will be reached by a vast majority of the people of this country. Widespread hunger is always dangerous. It is especially so when there is no legitimate reason for it. There

is hunger now in some places, and it will continue to become more widespread if a few gamblers are longer permitted to control the prices of those foods which every human being must have in order to sustain life. If there is no action here, the myriad monarchs of America will take that which is theirs.

Yes; the Chicago speculator asked a most pertinent question, "What are you going to do about it?"

Congress now has the opportunity to take up that sneering challenge thrown down by the Chicago speculator by ending the nefarious practices of every criminal like him in the United States. Congress will take such action, too, if it has one drop of red blood in its make-up, one spark of desire to do justice to millions of American citizens.

No appeal to inhuman greed, no fond reliance on the law of supply and demand, no hopes pinned to the play of free competition will avail. The entire control of food supplies, production, distribution, and price making must be placed in the hands of the Federal Government.

The ordinary processes have been proven utterly inadequate to meet the food situation. Manipulators have juggled prices and monopolists have cornered foods and gone unwhipped of justice. Prices have been forced by artificial means to a point where hunger and suffering is widespread and growing.

Mr. Chairman, we can not hope to pass details of legislation to deal with every phase of this situation, for such a process is too tardy and tedious to protect those who are suffering or to punish the guilty.

The great staples of food must pass into the hands of the Government—the wheat, corn, rye, oats, barley, sugar, beans, meats, and potatoes. The control must be as complete over the supply, distribution, and prices of foods as control over the Nation's Army and Navy. We want none of the law's delays which mean denial of justice, the necessity of going from one court to another, while the manipulator and monopolists retain their hunger hold upon the people. [Applause.]

Only through such absolute control can the situation be handled. Through it hoarding, monopolizing, and price boosting can be eliminated. Through it preference movement by common carriers can be effected in order to secure a steady and continuous supply. Through it regulations as to the use of food supplies can be enforced. Through it prohibition of the waste of food supplies in the manufacture of intoxicants can be secured. Through it both producer and consumer can be assured a fair price, no more and no less.

Mr. Chairman, gentlemen hold up their hands in horror at the thought of a food "dictatorship." We have had dictatorship by treasonable manipulators of the market long enough. Let us try putting the control in the hands of the Government which represents all the people.

They shout protests against "paternalistic legislation." The very word shows they do not understand the questions involved. There can not be paternalistic legislation save from a despot to a subject people. Laws such as this in a free government are based on the principle of self-help, the action by the people in behalf of the people, the American Government acting at the command of the American people for the common good.

They talk of this legislation being contrary to the principles of democracy. Think a moment. Does anyone deny that the very existence of democracy depends upon the overthrow of autocracy? Then I defy you to find a place on earth where the principle of autocracy is more firmly established than in the haunts of these food gamblers, who juggle heartlessly with the lives and health of men and women and little children. They boast of their "wheat kings" and "egg kings" and "meat kings" themselves, using the very phraseology of autocratic rule.

The fact is that every principle of democracy demands the extermination of these autocrats of foods. Just food prices, untouched by the manipulation of parasites, are due to free men, not as a matter of benevolent kindness but as a matter of absolute right. I have noted in the newspapers recently the following item:

> The settlement price for May wheat, wiped from the board of trade yesterday as a speculative option, was fixed at $3.18 a bushel to-day. The price committee, of which James A. Patten was chairman, met an hour before the opening of the board and fixed upon $3.18 as the proper price for the reason that this was the figure established by competitive bidding at the close yesterday.
>
> There are in the Chicago elevators 219,000 bushels of wheat of the grade required for delivery on contracts. A rough estimate places the amount contracted for at perhaps a hundred times that quantity. Had not the board intervened, probably 99 per cent of these contracts would have had to be settled at any price, even $10 a bushel, demanded by the holders of the contracts, in trade parlance known as the "longs," who held the sellers, or "shorts," absolutely at their mercy.

Mr. Chairman, shall the American people depend for fair food prices upon these monarchs of the pit, who call a halt only when frightened themselves at the dizzy heights to which their manipulations have forced prices? Such a suggestion is an insult to Americans. It means that they must rely wholly upon the spirit of condescension and contempt in the breasts of gamblers, who would act toward the whole citizenship of this country as one would throw a bone to a dog. And they make sure that the bone they throw has been scrupulously cleaned of any particles of nourishment.

No. The American people are not asking favors from food gamblers. They are not supplicating, they are demanding justice. Justice means that the iron hand of a just Government shall be laid upon these evildoers in punishment for their crimes, and the power to repeat them taken away once and for all.

Let us hear no more of this prating that absolute control of food supplies in this crisis will destroy democracy. There can be no doubt but that the joint interest of 100,000,000 Americans in a common storehouse will be more inspiring support to democracy than the continued triumph of food speculators and monopolists whose activities endanger every man's right to life, liberty, and the pursuit of happiness.

Mr. Chairman, it is easy to stand here and talk about theories of government. You can quote stock phrases to prove that the Government should keep its hands off business and not interfere with prices. But what are all your axioms, mottoes, and aphorisms? Words, words, words. Is this a time to argue in froth logic against the Government control of foods, when without such control the Government itself may perish?

Here are the American people, facing widespread hunger and hardship. Yonder are the allies, fighting the battles of democracy and depending upon America for food. To refuse to take the necessary action now is either the malignest or the maddest course imaginable.

Those of you who counsel delay, how long will you wait? Will you wait until there are meal mobs in all the highways and byways? Will you stand inactive in a powder mill while fire is smoking and smoldering all around? Will you still hand out bread pills and milk and water remedies when solid food is imperatively needed?

I want to say to these apostles of the white corpuscle that no halfway measures will avail. The time demands radical and fundamental action. The whole principle of democracy is at stake, and this advocacy now of the "golden" mean is simply an argument for the meanest thing on earth. While it is true that there is no pain like the pain of a new idea to a "standpatter," this is a time when even that excruciating agony must be administered by those who are not paralyzed by a new idea, in dealing with new conditions.

Out of this experience, enforced by war conditions, I am convinced that America will learn a lesson for peace—that the distribution of food supplies can never be justly left to the erratic manipulation of those whose sole aim is to exact the highest possible profit rather than to serve the public good.

Because a man possesses food supplies is not valid reason why he should demand and receive a price fixed by starvation. If a man with a life preserver throws it to a drowning person, has he a right to take all his victim may have to give? Shall he be upheld when he shouts, "A thousand dollars or I let you drown"? The very statement of such a repulsive proceeding is sufficient. Then, neither has the man who possesses food a right to offer starvation or piratical prices as alternatives to the American people in their hour of need.

But if possessors have no such right, what shall we say of the speculator who does not produce nor possess a bushel of wheat but fixes the price of every bushel in the country? Instead of having rights to be protected by government, there is a sacred duty resting upon government to prevent such destructive activities.

The Federal Government must now and in the future undertake and carry on the work of guarding the Nation's food and protecting the people from exploitation in its distribution. The great fundamental basis of our national wealth—our crops—must not be kicked about as a commercial football while values are regulated by gamblers. Grain should no more be subject to such juggling than the national currency.

We shall not need a "dictator" always, but we shall need to prevent manipulation and exploitation in the things upon which the very life of every citizen depends. We shall need to banish the day forever when warehouses burst with unavailable food; when cargoes of unspoiled tropical fruit are thrown overboard; when tons of sound vegetables are left to rot in cars on a siding; when fruits rot unpicked and unused; all because such dastardly tactics will maintain increased prices through an artificial scarcity.

Mr. Chairman, this great war is destined to mark a new era in international politics. May it also stand as a shining landmark in the social and economic life of America. Edward

Everett Hale once said, "There is much talk about abolishing war. Abolish injustice and war will abolish itself." It is a true word. This war rages around the world because of the injustice wrought by crowned irresponsibles, who dreamed of world dominion won by the mailed fist.

We shall go through with this war until that menace is removed from the world, and it is our sacred duty to do so. But no less sacred is it to strike down the injustice at home, the injustice of strong-armed greed. The twin gods of barbarism, Mammon and Mars, must be banished from the world together; they can not be banished separately.

The American Government, even in this storm and stress of war, perhaps because of the storm and stress, has an opportunity that comes but once in an age, to take a 7-league stride toward justice and the assurance of equal opportunity to every man, woman, and child beneath the flag.

May it take action now that will mean simple justice to all in regard to food supplies, and which will mean no injustice to any honest interest of producer, consumer, or merchant. Such action will mean the dawning of a new day for American business, wherein is recognized the truth that any business transaction where only one side prospers is an iniquitous one, when business itself will say:

I come no more in gray disguise,
With grasping hands and greedy eyes,
Living on larceny and lies.

No longer do my mighty hosts
Of ministers and servants boast
Of giving least and getting most.

But now, with eyes, greed can not blind,
With open hands and willing mind,
I live in service to mankind.

And hold him first among the rest
Who bears this motto on his breast:
"He profits most who serveth best."

[Applause.]

Mr. HAUGEN. Mr. Chairman, I yield 10 minutes to the gentleman from New Jersey [Mr. PARKER].

Mr. PARKER of New Jersey. Mr. Chairman, I shall not speak upon the details of this bill. I am chiefly anxious lest in providing for details we limit the general power to preserve the Nation which belongs to the Commander in Chief of the Army and Navy. We do not find legislation of this sort in our books, because our forefathers always recognized that in time of war the Commander had that power. When Washington wanted food during the Revolution, he did not stop at the rights of the States nor rules of law to go and get that food. If he could find food, he went and got it, or if he wanted sulphur or powder or guns and could find them, he went out and brought them to his starving army, and waited to pay for them with what they could. If a general is in charge of a city and it is in a state of siege, he declares a state of siege, which is a military declaration and not a legislative one, and he sees to it that every man in the city works as he wishes him to work, digging trenches or building up the battlements, and he will take the food, store it, and see that it is not wasted, and he will see to it that those who can make necessary articles make them. In olden times it was cartridges that would be made, while now it is everything, from automobiles to steamships. If we have come in these days to a state of siege, which now prevails not merely as to cities but as to whole nations, the same power belongs to the Commander in Chief, and it is a military power. If war is going on and we are short of food and he declares that we are in a state of siege and that food must be preserved, it is every man's duty to do it. In the Civil War we had no law for any such purpose.

The President of the United States ran the railroads. We know that Tom Scott ran the railroads under Stanton. It was not done by law, but done as a means of war. I remember a story in the newspaper, and a very good one, that in the middle of the war they wanted mortar carriages at New Orleans. They had the mortars, but not the carriages. Mr. Lincoln called a telegraph operator to his side at the White House and got in communication with Mr. Abram S. Hewitt, who had been out at a dinner. He told him by telegraph that they had just one mortar carriage. Mr. Hewitt asked where it was and he said at Springfield. Then Mr. Lincoln said that we wanted duplicates right away, so that within a month the mortar carriages could be used. Mr. Hewitt asked that the one carriage be sent immediately to New York and that he would see what could be done. It was sent, and by the time it got there Hewitt had arranged with different iron manufacturers in different places to make different parts by the hundreds, and the mortar carriages were made and every one of them was shipped in a single box car as near New Orleans as it could go, to be carried on passenger trains with the legend "This car not to be sidetracked under penalty of death," and Mr. Stanton meant that when he said it. We do not wait in war for legislation, because legislation has no power to do what we want. Congress can not confiscate a man's goods. We can not confiscate a man's services. We can not tell him to come here and to go there. We can not order him arrested without warrant if he is suspected of aiding the enemy and is to be treated as an enemy. The soldiers and agents of the President in the conduct of the war must do it. I am only afraid as to this bill lest it limit the President too much. I think this bill, instead of saying "there is established a control" should say "there is recognized a control" when deemed necessary by the President in the conduct of the war. Instead of limiting necessaries to particular things like food and fuel do not we know the military authorities had to seize every automobile manufactory in every one of the warring nations so as to get enough? Do we not know that cotton became to our great astonishment the only thing out of which they can make munitions? Do we not know that rubber had to be seized? Do we not know that at this present moment the bells of the churches of Hamburg are being pulled down by the Government in order to get brass and bronze and to get the component metal?

Do we not know that in the conduct of a war everything or anything may become necessary and that the Commander in Chief is not given the power by Congress, but it comes to him from the Constitution? We only recognize his power to commandeer necessaries, and the only limitation in the whole Constitution upon any necessary that he can commandeer is one which says that soldiers shall not be quartered in a house in time of peace nor in time of war except by law. In that respect only have we the right to qualify the power of the military authority. If he says it is a state of siege he can make anything go, if there be necessity—make every power of the Nation go to the benefit of the Nation. Now, I could have wished under these circumstances that this bill had been confined to sections 3, 4, and 5. Take section 3, the first few lines. It says:

There is hereby established—

I say "recognized"—

a governmental control of necessaries—

I would say "in the discretion of the President"—

which shall extend to and include all the processes, methods, activities of, and for the production, manufacture, procurement, storage, distribution, sale, marketing, pledging, financing, and consumption of necessaries, which shall be exercised and administered by the President for the purposes of this act.

Pass that and Congress will recognize the President's military power to be exercised under his own regulations. That includes the power to license. That covers all the necessary articles you have left out, because this bill only mentions food and fuel, and there are plenty more necessaries in time of war. Such a general provision will prevent the necessity of mentioning each article and bringing up the question of whether brewing and distilling shall go on. This is a matter to be determined by the Commander in Chief according to the absolute necessities of the particular time. Some people think that a mild beer is good for soldiers in the field. England has decided that rum is good to revive them after a night in the trenches. Congress can not determine these questions as to each individual case any more than it can tell what your physician must do for your family when you are ill. It must be determined by the military authorities and is not a proper thing in this bill. As I say, I am for the principle of this bill, and I would that it were shortened and that it simply said that the Congress of the United States recognizes and confirms the absolute power which exists in the Commander in Chief to protect this Nation in time of war, and that if he thinks it is necessary, if he declares a state of siege, he may seize, commandeer, and control all of our energies and all of our lives for that purpose. [Applause.]

Mr. LEVER. Mr. Chairman, I yield 15 minutes to the gentleman from Arkansas [Mr. TILLMAN]. [Applause.]

Mr. TILLMAN. Mr. Chairman, the supreme issue now is, What legislation shall be enacted to bring proud Germany to her knees and lift from a stricken world the somber shadow of Prussian imperialism? We are now in the great world conflict, opposed by the deadliest war machine of the centuries. The more vigor we put into our blows the sooner the struggle will be ended. England's greatest poet said:

In peace there's nothing so becomes a man as modest stillness and humility; but when the blast of war blows in our ears, then imitate the action of the tiger.

We are fighting the mad monarch of modern militarism, more of an imperialist than any purple-clad Cæsar that ever bestrode the narrow earth. For more than 40 years this mad king has seen visions and dreamed dreams of world domination. We must give him blow for blow and shot for shot. Now that war is on, down with the dove and up with the eagle! If we fight as we should fight, with all the weapons at our command, we

will win. The cheering news reaches us that Italy, France, and England are facing the insolent foe like heroes, and the bear that walks like a man is pledging anew his determination to stand up and fight like a man. The young manhood of the Nation, choice brave spirits of this day and generation, 10,000,000 strong, has cheerfully registered for conscription. We are conscripting wealth in the revenue bill now pending; now let us pass this food bill desired by the President and Germany will know that we are in earnest.

This is no time for raising technical, constitutional questions utterly without merit. It is no time for threatening Members; it is no time for petty objections or small politics. Let us stand by the administration, led by the foremost man of all the world to-day, the great-hearted Virginian, Woodrow Wilson, pass this bill, and mobilize our food supply as well as the Army and Navy.

There are two provisions in this bill of paramount excellence.

First, it proposes to eliminate as far as may be the century-old noxious parasite, the far-away middleman; and it promises to dispense with the pernicious and sinister activities of the food grabber and gambler, the conscienceless price booster, and likewise it will regulate the grafting, greedy, dishonest commission man in the large cities. And hereon hangs a tale.

My district is in the fruit belt. Washington and Benton Counties, in this district, have more apple trees than any two counties in the world, Niagara County, N. Y., ranking as third. My people have been robbed by commission men for a quarter of a century. A few days ago there came to Washington from Bellefonte, in Boone County, a very intelligent farmer and shipper, Mr. J. F. Hawkins, who knows this subject better than any half dozen men in the House, and who presented to Mr. LEVER, Mr. JACOWAY, and myself an argument in favor of the section in this bill dealing with this subject, now section 5, and at our request reduced his argument to writing, which I will put in the RECORD. It follows:

STATEMENT OF MR. J. F. HAWKINS, OF BELLEFONTE, ARK.

Mr. Chairman, my name is J. F. Hawkins, of Bellefonte, Ark.; occupation, farmer. My object in coming before you is to make known to you certain existing conditions of national importance at this time and to make certain specific charges as to the cause thereof.

The great army of small producers of this country are languishing for want of protection by laws insuring them a square deal in the great market centers. The consumer is paying the price of the high cost of living, but the small producer is not reaping the benefit. There is a lack of confidence on the part of the producer in the wholesale distribution of fruit and produce, which has resulted in the falling off of production in these lines of endeavor, because it is not profitable to continue therein The practice of unfair dealing on the part of a few dealers has caused loss of confidence in all. The large trade organizations, such as the Western Fruit Jobbers' Association and the National League of Commission Merchants of the United States, are in a way largely responsible for this condition, and to that extent it might be called combinations in restraint of trade. It has been my experience that these organizations give aid and protection to unfair dealers by refusing to give to the shipper or his agent information that will enable him to get a square deal on commission-shipped goods. As an example of this particular charge I submit the following statements of fact and evidences thereof:

In August, 1915, we, the Farmers Shipping Co., of Bellefonte, Ark. (of which I am a member), shipped to George E. Ford, a commission man in Chicago, who is a member of Western Fruit Jobbers' Association and the National League of Commission Merchants of the United States, 15 cars of peaches, relying on letters from him, and filed herewith, marked Exhibits 1 and 2. After receiving an unsatisfactory accounting for the 15 cars of peaches, early in September I wrote a letter of protest and received in answer to same letter filed herewith and marked Exhibit 3. Not being satisfied with this explanation, I made a personal investigation of all these shipments, and I herewith submit the sales and other documents showing the transaction in full on three cars:

Car No. 947, F. R. L., marked "Exhibit 4."
Car No. 1919, F. R. L., marked "Exhibit 5."
Car No. 1767, F. R. L., marked "Exhibit 6."

Other cars in these shipments showed the same unfair method. I later made an investigation for other parties shipping to the same man and found the same conditions throughout. To sum it up, I investigated 46 cars shipped to him. I found 52 separate and distinct frauds committed on same. Thirty in the form of cartage charge, where it was not paid by him, and a few items of refund on freight collected by him from the railroad and not reported to the shipper. Twenty-two cars showed they sold for more money than he reported them sold for. Total collections from him on these shipments, $1,485, as shown by copies of releases held by me. As a further evidence of unfair methods of this most unfair dealer I herewith submit a copy of an affidavit of Ford's account sales clerk showing all the details of this fraud. Affidavit marked Exhibit No. 7.

During this investigation I got no assistance from any member of the Western Fruit Jobbers' Association or the National League of Commission Merchants, and some of them flatly refused to tell me the price they paid for these goods. I got the information in spite of their refusal in one case, and as a concrete example of how this shipper loses I hand you the sale on car No. 7358, S. F. B., marked Exhibit 8.

After a careful study of statements and exhibits filed herewith, it will be evident that we were defrauded in the original sale, and that a second fraud was committed in subsequent settlements, and that there is more money yet due the shippers of these goods.

As an illustration of other methods of unfair dealing, I submit a collection of papers representing 29 cars of peaches shipped to the Voelker Product Co., of St. Louis, Mo., in July and August, 1915, by the Hardy Fruit Growers' Association, Hardy, Ark. These papers, taken as a whole, show a studied attempt on the part of the commission company to deceive the shipper and keep them blind as to the real facts attending the shipments and disposal of same.

The sales on this business were all made up to show St. Louis sale and delivery, whereas no such thing occurred. The goods were all reconsigned by the Voelker Product Co. to other commission merchants and by them sold on a commission basis, and all charges made thereon paid by them, and the net return made to the St. Louis company. They then made up and sent the shipper a St. Louis account sale, showing amount sold for, amount of freight paid, and commission, which sale is both false and fraudulent. It is false for the reason that it is not the correct price paid; it is not the correct amount of freight and commission paid. It is fraudulent for the reason that it conceals from the shipper the fact that he has paid another commission to the party who really did sell his stuff and thereby earned a commission, enabling the St. Louis company to collect another commission for which they rendered no service. I submit these papers marked "Exhibit 9."

I have in my possession papers covering 85 cars of peaches shipped by Pope County Produce Co., Russellville, Ark., July, 1915, to the same company and handled in the same way. I have papers covering 17 cars shipped by other parties and handled in the same way, making a total of 131 cars shipped to this company for which a selling charge was made and practically no valuable service rendered by them, and depriving the grower of a sum of money approximated $4,000. This practice is widespread and growing and is generally done by keeping the shippers blinded as to real facts.

A form of contract is sometimes used that carries a joker in it, which, if the shipper is kept hoodwinked, is never needed, but in case the shipper gets wise, and makes a "kick" he is referred to this clause: "Sample contract is herewith submitted marked 'Exhibit No. 10.'"

There are some commission merchants now bold enough to uphold and openly advocate the practice of charging double commission, notwithstanding the fact that the highest courts, without exception since 1851, have held that the practice of commission merchants reconsigning goods to other commission merchants and charging for both services is contrary to common reason and justice.

Three reputable commission merchants of St. Louis made the statement that this was a common practice in St. Louis, and that it is now being done regularly.

Under this system of business it is possible to reconsign the shippers' goods clear out of existence. It is an endless chain and a dangerous one to the producer. I know of a case of this kind where the producer paid three commissions, two to the commission merchants and one to the home man. There are many other forms of unfair dealing by middlemen, but I cite these two, as I have absolute and positive proof to back these statements.

I am not sent here by anyone, and yet in a way I represent many who may not be able to produce the truth along these lines, and I make these statements and present this proof, in the hope that justice may be assured the producer in the future and many be profited thereby.

In my opinion section 6 of House bill 4630 will, if enacted and enforced, remedy a good many evils now existing, and also stimulate the production of fruit and produce. When the small grower finds that he can get a square deal, he will exert himself as he never has before.

In some fruit-growing sections of Arkansas the growers have been cheated out of their fruit year after year and many orchards have been abandoned, especially peach orchards, and unless some legislative protection is given them, peach growing will decline to a point of home consumption.

Mr. Chairman, I hope that I have been enabled to serve you and my people in some small way, and I thank you for this opportunity.

Respectfully submitted.

Exhibit 1 was a letter addressed to me soliciting shipments of peaches and setting forth the advantages to be gained by shipping to him, and saying he was going to give the Arkansas peach deal his own personal attention, and when you can get a commission man to do this you have nothing to fear at this end of the line.

Exhibit 2 was to farmers shipping company and about the same line of hot air.

Exhibit 3 among other things, said, "I think your peaches were sold well. I did the best I could with them and you were extremely lucky to get as much as you did for them."

Exhibit 4 shows Ford's account sale, showing peaches to be sold at 65 cents f. o. b. Also a letter from Bunn Bros., of Rockford, Ill., stating they paid 75 cents f. o. b. In settlement Ford claimed he didn't sell to Bunn Bros., but sold to Will H. Peck, who sold to Bunn Bros., and I lost the $46.90 due me on sale price. Later I wrote to Bunn Bros. asking who they bought this car from and they answered "George E. Ford."

Exhibit 5, car 1915, shows Ford claimed to have sold this car at 50 cents f. o. b., and wrote across the face of the sales account these words, "Tell your shippers this car originally sold for 70 cents. was rejected and resold for 50 cents, and letter from buyer says car arrived in good condition and cleaned up around $1.50, averaged that, and could have been reshipped."

Exhibit 6 contains Ford sales on 1767 at 45 cents f. o. b., and says car sold at 70 cents. rejected and resold for 45 cents. Letter from buyer says it was rejected and rebought at 65 cents.

Exhibit 7 shows Ford accounts sales sheets were fraudulent and were made so on every order and that it had been going on for a period of three years and with reference to all shippers from all points. Also that other commission companies furnished bulk account sales and same were made out by order of Ford to conform to crooked account sales sheet. Also that duplicate sales tickets were made, cars sold in Chicago to show all cash sales and that duplicate cash sales slips and bogus account sales forms were presented in settlement made with me for the purpose of misleading me; also contains other damaging statements of like nature.

Exhibit 8 shows account sales as sold in Chicago. Also statement of Glass Fruit Co., showing they sold in Wausau, Wis. Letters of Glass Fruit Co. (members of the Western Fruit Jobbers Association) positively refusing to tell me the price paid. Upon threat of action they rendered duplicate account sales showing a difference of over $50 and two commissions paid.

I think Exhibit 9 is explained in my typewritten statement of which you have a copy. Hoping I have made myself intelligible to you, I remain,

Respectfully,

J. F. HAWKINS.

Mr. Hawkins said that old section 6, now section 5, will prove a boon to farmers, producers, and shippers, and asks me to

urge Members to vote for it. I respectfully do so. The bill nowhere compels the farmer to sell any product, but allows him to hold as long as he wishes.

Mr. THOMPSON. Will the gentleman yield?

Mr. TILLMAN. I will.

Mr. THOMPSON. Oftentimes, I am satisfied, down in the gentleman's district, where they ship fruit he has observed that after they pay the freight the shipper does not get anything. Oftentimes he has to pay part of the freight.

Mr. TILLMAN. That is very true.

Mr. THOMPSON. And this bill seeks to remedy that.

Mr. TILLMAN. It does, and Mr. Hawkins is of the opinion that the publicity required in section 5, and the licensing of these commission dealers will give the producer a fair show and prove an effective barrier to fraud on the part of commission men given to unfair practices.

Referring to the remarks just made by my friend, the gentleman from Oklahoma [Mr. THOMPSON], I beg to present the actual figures of two or three real transactions showing how producers suffer at the hands of unlicensed and unregulated commission men and transportation companies:

ANOTHER CITATION OF PECULIAR DEALINGS.

Three years ago a farmer shipped to an eastern city 1,050 watermelons, for which he received 5 cents each, net $52.50. The city consumer paid 60 cents each for them, or a total of $630—an advance over the producer's price of $577.50. This is quite too much to go for freight and commission. The man who sweats in the sun and produces this wealth gets next to nothing for it, while the nonproducer gets an immense profit.

The farmer sells his eggs at 20 cents a dozen. The consumer in a dining car or in a first-class hotel pays 12½ cents each for these eggs.

During the peach season a farmer picked 41 baskets of peaches and delivered them to the express company to be sold in New York City at the best market price obtainable. In due time the company accounted. They said the shipment was three baskets short at the destination. For the remaining 38 baskets they accounted as follows:

28 baskets, at 50 cents		$14.00
10 baskets, at 37½ cents		3.75
		17.75
Less express charges	$13.09	
Telegram	.50	13.59
	13.59	4.16 net.

"We inclose $4.16 for the amount," wrote the express company. Now, this gives the farmer between 10 and 11 cents a basket for the fruit, which would hardly pay for the labor involved in picking the peaches. Obviously the farmer was not satisfied, and would do better to let his peaches fall to the ground and rot. And yet there were a great many million people in the eastern cities who were not able to buy all the peaches they wanted.

BREAD RATHER THAN BOOZE.

Another wholesome and commendable feature of this measure is the section giving the President authority to prevent the use of grain for the manufacture of beverages. In this bloody war bread will count for more than beer.

Congress may be criticized for many things, but it will have to its credit the fact that it has driven liquor out of the District of Columbia, out of Alaska; it has curtailed the red king's privileges in the matter of advertising his wares in dry States, in the matter of shipments into dry territory. Whereas hundreds of liquor joints followed our soldiers to the Mexican border, under the present Army bill neither drinking places nor their side evil, social impurity, can exist any longer near where our boys are quartered.

Speaking of war measures against intoxicants, I want to take off my hat to the late Czar of Russia. He made a bid for immortality which ought to be recognized by the world—and will be. They make a strong alcoholic drink in Russia, called vodka. During the war between Russia and Japan—Russia having 200,000,000 people and Japan being a little island in the sea—in a very short time Japan triumphed over that great autocracy. The Japs were sober; the Russians were drunk on vodka. Up there close to the Arctic Circle they are very fond of vodka, a strong alcoholic drink which tastes like fire and smells like hair oil. The Russian soldiers drank much of it. They were brave and numerous, but in a short time the vigorous and brave Russians, drunk on vodka, were compelled to yield to the little sober Japs. This time when the war came on the Czar and his people knew they had to fight against the greatest military power in the world, the greatest war machine on earth; and Nicholas, with a stroke of his pen, wiped out every vodka joint in Russia, and in this war, barring the last few months of inaction, the Russians have made the second best showing of any of the allies against the central powers.

They have a strong liquor in France, called absinthe. It makes a man forget his joys and sorrows for hours at a time. The Frenchmen knew they were going up against that deadly German war machine, which rapidly rolled to Paris in 1870, and so the Government authorities prohibited the use of absinthe in France. And the game little Frenchmen at Verdun, and now fronting the Hindenburg line, have made the very best showing of any of our allies against that wonderful German machine. Why? Because they are sober. [Applause.] When England got into this war her rulers found that they were not getting munitions fast enough. Lloyd-George, that splendid Welshman, one of the great world figures of to-day, began to make inquiries to ascertain why it was that they could not get munitions fast enough, and found that it was because the English workmen were drunk. Lloyd-George remedied that evil, and he gave to the world this great classic. He said:

England is fighting Germany, she is fighting Austria-Hungary and Turkey, and she is fighting alcoholic beverages, but the most powerful and dangerous enemy she has is alcoholic liquors.

Mr. RANDALL. Will the gentleman yield?

Mr. TILLMAN. Gladly.

Mr. RANDALL. I notice the gentleman stated that one of the acts of Congress was to prohibit the advertisement of liquors in dry States. Permit me to call the gentleman's attention to the fact that the Post Office Department has ruled that under the advertising law adopted by the last Congress advertising is not only driven out of dry States but is driven out of dry towns in all wet States.

Mr. TILLMAN. I am very glad the gentleman reminded me of that fact. I know he is a thorough student of this subject. I commend the Post Office Department for that decision. [Applause.]

We have 26 States that are now dry. I will ask the gentleman from California [Mr. RANDALL] if that is not true?

Mr. RANDALL. Twenty-six.

Mr. TILLMAN. Yes; 26. Now, it is time, as a war measure, to put into the hands of President Wilson—and I know that he will invoke it—the power to eliminate the further making of liquors during this emergency. [Applause.] May God speed the day when the red plume of King John Barleycorn will wave no more in all the world. That day is coming as swiftly as the flight of an arrow. Our mothers and sisters, soon to be invested with the regal right of suffrage, will hasten its coming.

Liquor subtracts from our bread supply annually 107,000,000 bushels of grain, 11,000,000 pounds of bread a day—daily bread for 22,000,000 men.

King Alcohol will have but few real mourners when he abdicates his throne. He has been destroying men and women at the rate of 100,000 a year. This haughty red ruler demands of his subject more than any potentate on earth, and when he has stripped him to his foolish hide he kicks him into the street. If one of King John's followers, after paying tribute to him for many a weary year, finally yields to delirium tremens and dies a pauper's death, King John does not even give him swift burial in the potters' field. Generous governments and fair-minded princes pension their soldiers and sailors when they become old and disabled and often provide for their widows and orphans if they fall while serving the state. Individuals and corporations are likewise generous in this way, but you may serve this hard master until money, character, happiness, and life are gone, and King John Barleycorn will not even provide a poorhouse to shelter your helpless wife and babies. [Applause.]

Mr. YOUNG of North Dakota. Mr. Chairman, the gentleman from Iowa [Mr. HAUGEN] requested me to take charge of the time at this point. I will ask the Chair to notify me when I have spoken 30 minutes.

The CHAIRMAN. Very well.

Mr. LEVER. Let me say, Mr. Chairman, that the committee will rise at the conclusion of the gentleman's statement.

The CHAIRMAN. The gentleman from South Carolina states that the committee will rise at the conclusion of the remarks of the gentleman from North Dakota.

Mr. YOUNG of North Dakota. Mr. Chairman and gentlemen, I desire to express appreciation first of all for the courtesies of the chairman of the committee [Mr. LEVER], and also of the Democratic members of the Committee on Agriculture, extended throughout the entire consideration of this bill, and also throughout the period when we were having hearings. In some of the committees of this House I understand the majority members hold executive sessions. That does not happen to be the practice in the Committee on Agriculture. The Committee on Agriculture during the period that I have had the honor to serve upon it has been one where politics has no place. The consideration of this bill has been nonpartisan. I was not able to notice on either side any disposition to seek party advantage.

Mr. Chairman, this great war, this titanic struggle between giant nations, has blotted out the ordinary distinctions between the various classes of society, and to-day, when the Nation is confronted with a peril which the average man has only begun to comprehend, in its imminence and fearfulness, there is but one impulse which actuates all classes—the passion of patriot-

ism. There are distinguished Members upon the floor who represent great metropolitan, great manufacturing, and great commercial interests. I come from a constituency which is almost exclusively agricultural, am a grain grower myself, and therefore speak from the standpoint of the farmer. But I bring to you no less of that spirit of passionate patriotism and eagerness to serve the country from the fields and firesides of the farmers of the Northwest than any that may be voiced by the representatives of commerce. The bugle which calls the boys from the workshops and the farms is that which roused the "embattled farmers," whose first shot at Concord in defense of democracy and liberty was "heard round the world." The Nation whose foundations were laid by farmers has become two-thirds commercial and one-third agricultural. The safety, the prosperity, and the happiness of the people still rest to a supreme degree upon those who produce its food, its wool, and its cotton.

We are not a military nation—yet we are confident of our latent military power. We are in no fear for our Navy nor for the Army to be organized, but there is the greatest peril in the possible shortage of our food supply, due to the fact that the fighting world is making increasing demands upon us for food, and the war is robbing our farms of their vigorous manhood and will continue to take from the furrow and the plow, for the trench and the cannon, the best of our young farmers. Gentlemen, I speak in all seriousness of the embarrassment of our farmers through the taking away of farm help to the Army, and especially to the highly stimulated industries of the cities—the munition factories and allied manufactories where high wages are paid even to unskilled workers.

My mail is loaded with letters from alert, intelligent, and patriotic farmers protesting against conditions which make them powerless to carry on their farm operations for lack of help. Farm wages must be increased in competition with the inflated wages of other lines or we shall see perforce decreased acreage. All other elements of production as well as wages—the cost of farm implements, the cost of clothing, groceries, the cost of everything that farmers must have has greatly increased. The situation as to farm help, already acute, will grow more desperate when the organization of the Army reaches out to take from the farms their proportion of willing, patriotic young soldiers. Those administrative officials charged with the responsibility must give to the situation earnest consideration from the standpoint of broad national necessity.

It is a trite quotation to refer to Napoleon's dictum, that "An army fights on its stomach." Yet common sense teaches us it is true. It is of greater importance to provide increased food supplies than it is even to increase munitions and armament. It is equally important to enlist farmers in agriculture as it is to enlist soldiers in the army, for a hungry nation is a defenseless people, and this war will ultimately be fought to a finish over the dinner tables of the world rather than behind the cannon. Whether the individual farmer realizes the tremendous importance of the part he plays in preserving liberty by the food he produces or not, it is up to Congress and the administration to make no mistake in appreciation of the fact that our chief defense is the American farm. Let us see to it then that conditions are such that will keep the hand as steady at the plow as at the trigger.

I have a letter, Mr. Chairman, that just came in this afternoon from a farmer living near Velva, N. Dak., and I want you to give more than an ordinary hearing to this letter, because it gives an insight into the conditions on many of the farms of North Dakota. My mail has been heavy during the last few weeks, and I have not attempted to abstract these letters or even reflect them in this address; but I am going to read this letter, which, I think, will give you a real view of the problem on the farm, and if it is a problem there that is going to mean decreased production, it is a problem that you, representing other and consuming portions of the country, should take into account. I read:

THE GRANVIN STOCK FARM,
Velva, N. Dak., June 16, 1917.

Hon. GEORGE M. YOUNG,
Washington, D. C.

DEAR SIR: It is quite a while ago since I have written you, and I am going to take the liberty of bothering you once more to assist me in carrying out my farming business. I guess, perhaps, it is not necessary for me to tell you our troubles here in North Dakota with the hired-help proposition. Skilled farm labor is at a premium. According to what I have been reading in the newspapers, a good share of the Representatives in Congress seem to have an idea that you can farm with cripples and fools or practically any kind that can walk on two legs. But this is not so. It takes a man with brains to farm, practically more so than a great many other forms of business. Now, for instance, a banker can possibly use unskilled labor, for the reason that they can give them a close supervision, whereas a farmer operating extensively can not watch each man, for the reason that they must variously be at great distances from one another.

Coming to the subject of which I wish particularly to mention it is this: I have a hired man by the name of Julius A. Hauge, registered under the draft laws as No. 18, precinct 45, McHenry County, N. Dak. This man has been working for me for about eight years, and if he is taken away from me I would not be able to do my bit to carry on my farming business. He has also got a farm of his own. He is unmarried.

Now, I will tell you, Mr. YOUNG, the last crop I had was in the year 1915. At that time I raised 23,000 bushels of wheat, and I sold the bulk of it for 84 to 86 cents per bushel. And in 1916 I raised no crop, and for a fact I do not know what the 1917 crop will bring, as it looks rather dry at the present time. Would there be any chance that this one man that I have got could be left with me to superintend my work? I really think it would be wise for this Government to look into the matter. Furthermore, do you think that he is a subject of this country, being he took out his intention papers eight years ago, and has not taken out his second papers?

Kindly let me hear from you relative to these matters of which I have written, stating what your opinion is, and it will be very much appreciated.

Yours, very truly, H. L. SPILDE.

N. B.—Mr. Hauge, of whom I have made mention, is a very loyal citizen, and will serve for his country if he shall be needed.

Now, I do not pretend to say for a minute, gentlemen, that farmers as a whole should be exempt. That would be preposterous, to take any great class and say that they should all be exempt. But I think that the officers representing the United States who look after this matter of exemptions ought to be men who appreciate at least the need of the production of food, and that they should act with wisdom, caution, and discretion.

The food bill gives a wide control and almost limitless power to the President to be exercised by the food administrator, which will extend to and cover the farmers of the country. The exercise of these powers will affect the business of these farmers in an arbitrary way. They are for the most part men of comparatively small incomes. They are usually called producers, but they are in fact also consumers. The prices upon all things which they buy have gone up. Their expenses of living have increased. Farm implements have also greatly advanced in price. We passed recently in this House a revenue bill which is now being considered in the Senate. This bill provides for the raising of a huge amount of money by taxing the citizens of our country in various ways. It is a fact, however, that much, if not nearly all, the taxes upon the manufacturing and jobbing industries will be passed on to the consumers. In other words, the amount of the tax will be added to the cost of the article sold. Among these consumers are the farmers. Upon them the burdens of war taxation will rest heavily.

Many measures to increase production have been discussed in committee. Representatives of farmers' organizations have appeared before the committee with their well-thought-out recommendations and practical suggestions and their views have been carefully considered, especially by those Members who through years of close association are naturally in close sympathy with the farmers' standpoint.

I am satisfied that the farmers are ready to sacrifice their own conclusions in many respects and to make great concessions to the verdicts of men high in the councils of the Nation. But before we set aside the traditions and teachings of such organizations as the Grange, the Nonpartisan League, the American Society of Equity, and practically every other agricultural unit as to the personal profits of increased acreage and increased production it behooves us to give the experience of men in the business of farming, to experts in agriculture, the same respectful attention that we would accord to experts in medicine if we were seeking the remedy of a bodily disease, or to experts in finance if we were considering banking, or to experts in armament and navigation in connection with the Navy.

The teachings of all farm organizations and practically of all agricultural papers and other agricultural economists is that increased production of farm products, however beneficial it may be to consumers and especially to middlemen handling the crops on a commission per bushel basis, is quite as likely to lower the profits of the farmers as to increase those profits.

A good illustration of this was given to our committee by Dr. Russell, of the Agricultural College of Wisconsin. He said that they ordinarily grew 30,000,000 bushels of potatoes in Wisconsin and usually got 40 cents per bushel, or $12,000,000. He said last year they grew about 14,000,000 bushels and got $1.50 a bushel. In other words, for a half crop they got 75 per cent more than they ordinarily receive for a whole crop. Instances of this kind might be multiplied indefinitely. The farmers had taken such conditions into account and were long prior to this war attempting to obtain reforms in marketing machinery and methods rather than attempting to increase grain production. So when the Government said, "Raise more farm products and we will make you a guaranteed price," they replied, "We haven't asked for a guaranteed price; we want open markets freed from monopoly, from gambling, from dishonest practices, and the

selfish control of those who purchase our products." They said, "We want public storage houses made public not only in name but in fact." Gentlemen, if you want to stimulate the farmers, if you want to send a pleasurable sensation down their spinal columns, give them something they want, not what some self-constituted guardian thinks they ought to have.

Now, what are we giving them by this bill? Government officials assured them that they would have a price for their commodities sufficient to cover the cost of production and a reasonable profit. This bill does not do that. It simply authorizes the President, if he deems it advisable, to establish prices for nonperishable farm products. It is an open secret that the man whom the President is to name for that position has no notion of fixing prices generally for farm products, and that no prices whatsoever will be fixed for the crop of 1917. So that so far as the crop of 1917 is concerned the Government is making no effort to redeem its pledges of fixed, indemnifying prices. But the farmers, accustomed to tribulations, and in spite of the fact that they have patriotically increased their acreage, come up smiling, with the statement that they will accept the legislation with good nature, because they see in it promise of free markets and elevator storage freed from monopoly.

Having failed to make good as to a guaranty of prices in 1917, will the farmers be fooled also as to the character of this legislation in other respects? It is to be noticed that there is nothing mandatory in the provisions in respect to the control of grain exchanges and of elevator storage. The food controller may exercise such control. I hope that all Members of the House anxious to see fair play extended to the farmers will at least see to it that no amendments are permitted to these sections just referred to designed to weaken the measure in case the food controller shall desire to deal vigorously with the grain exchange and storage abuses.

If there ever was a trust, an ironclad combination, it is that existing between the members of the Minneapolis Chamber of Commerce, the owners of big storage elevators, and the owners of flour mills.

The bill contains a provision to punish with heavy penalties any person guilty of destroying food necessaries or withholding them from consumption. But if we are guilty of permitting conditions to exist which lessen production the effect is the same as to destroy what has already been produced, and I intend to point out some of the conditions in the marketing of grain, which to a scandalous degree robs the farmers of the legitimate rewards of their labor, even in times of normal production, but more particularly in case of increased production, and unless we can assure the farmers that those conditions will be regulated and controlled we have no right to ask them for increased acreage and increased yield.

Section 4 of the bill under consideration makes it unlawful to hoard, to monopolize, or attempt to monopolize any necessaries; to engage in any discriminatory and unfair or any deceptive or wasteful practice or device, or to make any unjust or unreasonable rate or charge in handling or dealing in or with any necessaries; to conspire, combine, agree, or arrange with any other person (a) to limit the facilities for transporting, producing, manufacturing, supplying, storing, or dealing in any necessaries; (b) to restrict the supply of any necessaries; (c) to restrict distribution of any necessaries; (d) to prevent, limit, or lessen the manufacture or production of any necessaries, or to enhance the price thereof, or (e) to exact excessive prices for any necessaries, or to aid or abet the doing of any act made unlawful by this section.

If the farmers of the Northwest could be positively assured of the strict enforcement of that paragraph they would feel confident of getting a full measure of the reward for their effort, and they would not hesitate to increase their grain acreage to the full limit of their labor capacity, for it would be impossible to enforce that clause without closing the doors of the most unmerciful and greedy monoply that ever held a strangling hand upon the arm of the producer and the throat of the consumer.

Between the grain raisers of the Northwest and the bread eaters of the world there exists in the greatest grain market and milling center in the world a monopoly uncontrolled, so powerful that it practically dictates what every farmer may receive and what every consumer must pay for the food produced on the broad prairies of the West, the bread basket of the Nation. This is the Minneapolis Chamber of Commerce, unrivaled in the world in its volume of actual grain, and with scarcely a rival in its volume of speculative gambling in fictitious grain.

It is a hydra-headed monster that dominates the finance of the Northwest, dominates the transportation facilities, dominates the press, and dominates agricultural production. It controls the great flour mills of the city, the greatest flour milling center in the world. The alleged public grain elevators of Minneapolis are no more public than is the door of a bank vault whose combination is known only to the officials of the bank. For many years the farmers have been struggling to free themselves from the deadly grasp of this monopoly. It is superior in its decrees to any court; it has the power to fine its members, and by the word of its board of control any member, no matter how powerful or how wealthy, may be put out of business as a penalty for violating its rules, and there is no appeal to any court of law or equity whereby the disciplined member may secure redress. The Constitution of the United States provides that a citizen may not be deprived of his property without just compensation and due process of law. But the Constitution itself is supine in the presence of the Minneapolis Chamber of Commerce, which can deprive and has deprived its members of thousands of dollars and of their established business when they have dared to offend its ruthless power. The greatest military autocracy in its utmost recklessness would blush to exercise the drastic power of the Minneapolis Chamber of Commerce when its members dare defy its edicts.

I know that I am using strong language, but there is not a northwestern farmer who has ever attempted to break the shackles with which he is bound who will not bear out and verify every word I say. I am not making loose statements; I am not standing here for the purpose of heaping abuse upon a great organization; but I am here to say that if we will give to the northwestern grain raisers only what they well deserve and have a right to claim, a free and unmonopolized market for their grain, they will ask no Government guaranty of price; they will ask no artificial stimulation; they certainly will not ask for any favored treatment, for all that they demand is justice and the free operation of the fundamental law of markets, the law of supply and demand. They have never had that for their grain, and the grip of the grain monopoly, in spite of all of the struggles of the farmers, grows stronger year by year.

Nominally there are 550 seats in the Minneapolis Chamber of Commerce. This number has not been increased since the chamber was organized, some 30 years ago. The seats originally cost $100. They have grown in value, so that they are now selling for over $5,000, and many of these seats are held as an investment by retired and inactive members on account of their continual increasing value. That reduces the number of active memberships very materially.

Then some of the larger commission and milling firms own from 2 to 20 seats apiece. In short, instead of their chamber being made up of 550 independent dealers in grain, all of its seats are owned by less than 100 different firms.

Further than that, these 100 firms include their subsidiary companies. There is one group of 13 supposedly separate grain commission companies, all owned by one parent company, and that same parent company has so loaned money to two or three other commission firms as to be able to dictate to them. In short, the Minneapolis Chamber of Commerce is a monopoly controlled by seven powerful firms or companies. Seven men hold the power of a czar over the greatest milling and grain-producing region in the world. This has been testified to in court and uncontradicted, but the courts have no jurisdiction. It has been sworn to in a thorough investigation by the Minnesota Legislature, but the legislature failed to take action. Naturally these seven dictators are men of wealth and power in business circles. Their voice is heard in bank directorates. Their representatives are found in all lines of business throughout the Northwest.

Country banks are encouraged to send the notes of country merchants for rediscount to the Federal reserve bank located in Minneapolis, but has there ever been a farmers' elevator note accepted for rediscount by the Federal reserve bank, even though it bore the individual personal indorsement of every farmer in the township or county? If you think there has been fair treatment accorded by the Federal reserve banks to the farmers' elevators, ask the United States Treasurer, whose correspondence with Gov. Wold, of the Minneapolis Federal Reserve Bank, about a year ago, disclosed a discrimination against the farmers in the interests of the grain monopoly at the terminal markets which was simply scandalous. United States Treasurer Burke went even to the extent of declaring that if conditions were not remedied he would use his influence toward abolishing the Minneapolis Reserve Bank and transferring its business to another. So far as I have been able to learn there has been no change in the discriminating policy against which he complained. The dealers, so long as they behave themselves toward the dictators of the chamber of commerce and of the banks of Minneapolis have no trouble in financing their purchases of the farmers' grain. The dealers are thereby enabled to take over the grain soon after threshing, when the great

volume of shipments depresses the price received by the farmers, and the dealers thereby are enabled to hold their purchases until later in the season, when they can get the benefit of a spread in the market. I have been referring to the Federal reserve bank. Many of the local banks have helped to finance local elevators of farmers.

In recent years farmers have been organizing and building country elevators, but except in a few cases they have not been strong enough financially to finance and hold their grain in their country elevators, and as soon as they ship it to the market it passes out of farmers' hands, for there is no real public terminal elevator in the Northwest, excepting the one-half million bushel elevator of the Equity Cooperative Exchange at St. Paul. There are so-called public elevators, but let a farmer present a carload of grain, or a trainload of grain for that matter, for storage in one of these alleged public elevators, and he is invariably informed that the elevator is full; or if he chances to know of empty bins he is told that they are out of order and must be repaired, and that therefore his grain can not be taken in.

If he goes to the great flour mills to sell his wheat direct to the millers, he is told that the mills confine their purchases to the "regular channels," namely, the chamber of commerce. The individual farmer can neither get storage nor a valid sale for any grain in the greatest grain market of the world. He is at the mercy of the chamber of commerce.

The CHAIRMAN. The gentleman has consumed 30 minutes.

Mr. YOUNG of North Dakota. In the absence of the gentleman from Iowa [Mr. HAUGEN], who left me in charge of the disposal of the time on this side for the remainder of the day, I ask for 30 minutes more.

The CHAIRMAN. The gentleman is recognized for 30 minutes more.

Mr. PLATT. Mr. Chairman, will the gentleman yield?

Mr. YOUNG of North Dakota. Yes.

Mr. PLATT. Does the gentleman know of any farmers in North Dakota who mortgage their crops and have to sell them the minute they are harvested, as told by the gentleman from Oklahoma [Mr. THOMPSON] a little while ago? It is not the usual practice in North Dakota?

Mr. YOUNG of North Dakota. There was a time when pretty nearly every crop in North Dakota was mortgaged. That period has passed, but there is still quite a percentage of farmers who mortgage their crops. I will say this, though, that ordinary notes, ordinary debts of farmers, come due usually October 1, November 1, or December 1 of each year. Those debts, while they are not probably in many cases secured by mortgages on the crop, are such that still, when they become due, there is a little pressure brought to bear upon them to pay them.

Mr. PLATT. Surely.

Mr. YOUNG of North Dakota. I imagine that there are very few farmers in North Dakota who are not in debt during the crop season. When their crop is harvested they haul it to the market, or at least the great bulk of wheat is marketed either from the machine or within, say, two or three months afterwards.

Mr. PLATT. There is no restriction on the farmers of North Dakota in the way of using their land as a basis of credit, as there is in Oklahoma, is there?

Mr. YOUNG of North Dakota. Not at all, that I know of.

Two of my neighbors in Barnes County, Louis Noltimier and Charles J. Lee, three years ago went into Minneapolis to sell four carloads of wheat. I want you to take note of the fact that this is not the case of a farmer who has driven into Minneapolis with a wagonload of wheat, where the great mills might not have the facilities to elevate wheat in those small quantities. This is a case where a couple of my neighbors went to Minneapolis with their wheat contained in the same identical form that wheat is sold to those mills by dealers who belong to the chamber of commerce. They went from mill to mill, asking them to buy this wheat, and they were invariably met with the reply that they bought their wheat through the ordinary channels; that is to say, the chamber of commerce. One of the millers, who was a little bit more frank than the others, said, "We do not care to buy wheat through anybody outside of the chamber of commerce members, because next summer when the wheat supply gets short they might close up our mills."

Now, it would seem, gentlemen, that if there was any place on earth where a farmer ought to be able to sell his wheat to a flour mill it would be in the great city of Minneapolis, the greatest flour-milling center in the world. There is a gentleman sitting here on the floor who is in the flour-milling business, and I do not doubt that he buys wheat from every man who comes to his door and wants to sell it; and in passing judgment on the flour millers and this combination or trust in Minneapolis, I do not want to indicate that I wish to make similar charges against flour millers the country over. The people with whom we have to deal at our terminals where our wheat goes happen to be controlled by that kind of combination. The flour mills refuse to buy our wheat. If we want to sell it to them, we have got to go to some member of the chamber of commerce and give him a rake-off.

If we say, "Well, we will store our wheat in one of these elevators and keep it," we are met with the same wall of opposition. They say, "No; we have not got any room here." They never have any room except when a member of the chamber of commerce asks them to put something in the elevator. So that with absolutely all of the storage, about 55,000,000 bushels of it, under their control, with all the flour mills there in on the arrangement by which they will not buy excepting from the chamber of commerce, they are enabled to form an ironclad combination or trust.

Mr. JAMES. Will the gentleman yield?

Mr. YOUNG of North Dakota. Certainly.

Mr. JAMES. Does the average elevator man belong to the chamber of commerce?

Mr. YOUNG of North Dakota. No; not in the country. They have got to pay a commission to some member of the chamber of commerce to handle their grain. I presented the situation to the Attorney General, and other Members from the Northwest also did so, and later the Attorney General of the United States promised me he would prosecute the Chamber of Commerce of Minneapolis for violations of the Sherman antitrust law. Afterwards he went back on his word.

Now, we are all hoping in the Northwest that under this law we are going to get some relief which we have not been able to get under the Sherman law, and that is why, in spite of the fact that we are not enthusiastic about price fixing, we are going to give our support to this bill.

Mr. PLATT. Will the gentleman yield?

Mr. YOUNG of North Dakota. Certainly.

Mr. PLATT. Is that the case merely with the small farmers, or does that prevail with the big bonanza farmers? Every once in a while I hear a man say—I have heard Members of the House say—"I sold my wheat last week and got $2.50 a bushel for it." What did they mean?

Mr. YOUNG of North Dakota. There is absolutely no farmer in the Northwest big enough to sell his grain to the Minneapolis mills unless he joins the chamber of commerce.

Mr. PLATT. No matter how many bushels he has or how many thousand acres?

Mr. YOUNG of North Dakota. It makes absolutely no difference. It may be that there are one or two men in North Dakota who belong to the chamber of commerce who are big farmers. I doubt, however, if they took out their membership simply for the purpose of selling their own grain, because a membership costs $5,000, and any man who takes out a membership of that kind expects ordinarily to trade actively on the board, or else he could not afford to have the membership. [Applause.]

Now, to refer again to the failure of the Attorney General to prosecute the Minneapolis Chamber of Commerce after he had promised to do so. Have the malign influences which were strong enough to defy the courts of law in the Northwest and influential enough to make the Minnesota legislative investigation a mockery, and to bar country banks from financing farmers through the Federal reserve bank, even power to silence the Department of Justice of the United States? And if so, what reliance can our farmers put upon the enforcement of the provisions of this pending bill?

It is optional with the President, who will act through the controller of foods; but unless the controller, through study or the advice of trusted men, becomes familiar with the operation of the grain market will he comprehend and appreciate the ramifications of this monopoly in time to smite it and demonstrate the sincere enforcement of the law before next year's acreage shall be decided by the farmers? Any wavering, any temporizing, any failure to take tangible action in protecting the farmers from the monopoly prior to next midwinter will make the entire law futile and vain as a remedy for the reducing acreage devoted to food production. During the last census decade the acreage devoted to food production decreased 8 per cent per capita. The farmers have been so often fooled with specious promises, high-sounding phrases, and threats that they are likely to do some thinking for themselves next spring. I wish to say, however, that I have great confidence in the honesty and ability of Mr. Hoover. This view is shared by the delegation of northwestern farmers who were here recently, and whose testimony may be found in No. 9 of the hearings. Upon the return of the delegation a member of the party—the editor of the Courier-News—made a report in which he quoted certain

statements made by Mr. Hoover. As these statements made by Mr. Hoover were very important to the producers of North Dakota and their correctness was questioned, I am glad now to have the confirmation made by Mr. Hoover himself. A copy of the Courier-News is just at hand, in which is this statement:

STATEMENTS CORRECTLY QUOTED IN THE COURIER-NEWS INTERVIEW, SAYS HOOVER.
